5976—II

REPORT

OF THE

COMMISSIONER OF INDIAN AFFAIRS.

OFFICE OF INDIAN AFFAIRS,
Washington, D. C., September 26, 1898.

SIR: The Sixty-seventh Annual Report of the Office of Indian Affairs is respectfully submitted.

APPROPRIATIONS.

The act providing for the current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1899, appropriated \$7,653,854.90, an excess of \$222,234.01 over the amount appropriated for 1898.

The different objects of appropriation are shown by the following comparative table:

Appropriations for the Indian service for the fiscal years 1898 and 1899.

| | 1898. | 1899. |
|--|---------------------|---------------------|
| Current and contingent expenses..... | \$740,040.00 | \$782,840.00 |
| Fulfilling treaty stipulations..... | 3,123,871.74 | 3,250,399.90 |
| Miscellaneous support, gratuities..... | 673,025.00 | 664,125.00 |
| Incidental expenses..... | 80,000.00 | 80,000.00 |
| Support of schools..... | 2,631,771.35 | 2,638,390.00 |
| Miscellaneous..... | 182,912.80 | 238,100.00 |
| Total..... | 7,431,620.89 | 7,653,854.90 |

The variations in the different items for 1899 as compared with those for 1898 are as follows:

Increases:

| | |
|--------------------------------------|-------------------|
| Current and contingent expenses..... | \$42,800.00 |
| Fulfilling treaty stipulations..... | 126,528.16 |
| Support of schools..... | 6,618.65 |
| Miscellaneous..... | 55,187.20 |
| Total increase..... | 231,134.01 |

Decrease:

| | |
|--------------------------------|-------------------|
| Miscellaneous, gratuities..... | 8,900.00 |
| Net increase..... | 222,234.01 |

The following items, though appearing in the Indian appropriation act, being made to accomplish special purposes, can hardly be considered as part of the regular expenses of the service:

| | |
|--|-------------|
| Commission Five Civilized Tribes | \$43,400.00 |
| Telephone line, White Earth Agency | 1,000.00 |
| Commission Crow and other Indians | 15,000.00 |
| Resurveying boundaries Klamath Reservation | 10,000.00 |
| Negotiating with Klamath Indians | 2,000.00 |
| Commission Puyallup Reservation | 2,000.00 |
| Surveying Cheyenne River and Standing Rock reservations .. | 23,000.00 |
| Counsel for Pueblo Indians | 2,000.00 |
| Indian Exhibit, Omaha Exposition | 40,000.00 |

| | |
|-------------|------------|
| Total | 138,400.00 |
|-------------|------------|

Deducting this from the total amount appropriated, there remains \$7,515,454.90, representing the amount appropriated in the Indian bill for conducting the ordinary operations of the Department. The previous annual report showed that the appropriations for the current expenses for 1898 were \$7,342,808.09. To this should be added several amounts appropriated in the deficiency bill for 1898 to meet deficiencies created by increased advertising, higher rates of transportation, and unusual demands upon Indian inspectors. The items are as follows:

| | |
|---|------------|
| Expenses of purchasing goods and supplies, advertising, etc.. | \$5,000.00 |
| Traveling expenses of Indian inspectors | 2,000.00 |
| Transportation of Indian supplies | 75,000.00 |

| | |
|-------------|-------------|
| Total | 82,000.00 - |
|-------------|-------------|

Comparing the two years and taking into consideration the amounts appropriated in the deficiency bill, we have:

| | |
|---------------------------------|----------------|
| Current expenses for 1899 | \$7,515,459.90 |
| Current expenses for 1898 | 7,424,808.09 |

| | |
|--------------------------------|-----------|
| Excess of 1899 over 1898 | 90,651.81 |
|--------------------------------|-----------|

The estimates for the Indian service for the fiscal year 1899 presented to Congress by this office aggregate \$7,375,617.08. The total amount appropriated was \$7,653,854.90. Excess of appropriations over estimates, \$278,237.82.

EDUCATION.

Education is the greatest factor in solving the future status of the Indian. The growth of a healthy educational sentiment among these people will conduce more to their welfare, material prosperity, and

civilization than all other agencies combined. The methods employed to bring about such desirable results are the outcome of serious thought and study, and are the gradual evolution of years of experience in dealing with the Indians. The numerous tribes of Indians throughout the United States are diverse in their manners, customs, and native intelligence, which complex condition of affairs renders any iron-bound rules ineffective. The various systems of educational methods seem successfully to meet these diverse conditions. The subdivision of governmental schools into reservation and nonreservation boarding, reservation and independent day schools appears to meet the exigencies of the situation. The majority of the religious denominations of the country render valuable assistance in this great work by establishing and maintaining schools and churches for the benefit of the Indian children and their parents. Hearty cooperation between these two great forces engaged in a similar work has been very advantageous in simplifying the work of the Indian Office.

The educational branch of the Indian Office has grown from small beginnings until now it is one of the most important under the control of the Department. The appreciation of it as a civilizing influence has grown not only upon the office, but upon the country at large. As at present constituted the system only dates back a generation. In 1877 there were 48 small boarding and 102 day schools, with an attendance of 3,598 pupils. The appropriation for their support was \$20,000. These schools were not systematized and each appeared to be a law unto itself. While the efforts of those engaged were laudable they lacked the cohesiveness of a strong systematic effort well directed. The New York schools were eliminated in 1882 and this office no longer retained control of them. During that year, when the system began to approach that of the present, there were 71 boarding and 76 day schools, with an attendance of 4,714 pupils. This period marks the beginning of an earnest effort for the civilization and advancement of the Indian through the elevation morally and intellectually of his children. These efforts have kept pace with the wonderful growth of our magnificent country until, through the liberality of Congress in pursuance of its enlightened policy in dealing with the Indians, there are now 148 well-equipped boarding schools and an equal number of day schools engaged in the education of 24,325 pupils.

There has been a steady increase in the average attendance and enrollment among the schools for the past twenty-one years, as the following tabulated statement will exhibit:

SUMMARY OF INDIAN SCHOOLS AND ATTENDANCE.

The following table gives a statement of the number of Indian schools, enrollment, and attendance during the past twenty-two years:

TABLE 1.—*Number of Indian schools and average attendance from 1877 to 1898. a*

| Year. | Boarding schools. | | Day schools. b | | Totals. | |
|-----------|-------------------|---------------------|----------------|---------------------|---------|---------------------|
| | Number. | Average attendance. | Number. | Average attendance. | Number. | Average attendance. |
| 1877..... | 48 | | 102 | | 150 | 3, 598 |
| 1878..... | 49 | | 119 | | 168 | 4, 142 |
| 1879..... | 52 | | 107 | | 159 | 4, 448 |
| 1880..... | 60 | | 169 | | 169 | 4, 651 |
| 1881..... | 68 | | 106 | | 174 | 4, 976 |

a Some of the figures in this table as printed prior to 1896 were taken from reports of the Superintendent of Indian Schools. As revised, they are all taken from the reports of the Commissioner of Indian Affairs. Prior to 1882 the figures include the New York schools.

b Indian children attending public schools are included in the average attendance, but the schools are not included in the number of schools.

While this table shows a uniform and steady increase in attendance upon the schools, the natural query presents itself as to the value of the educational method pursued with these pupils. For the purpose of arriving at some definite conclusion, data upon the question was obtained from the different agents. They were requested to make a careful canvass of all returned pupils then living upon the reservations under their charge and submit a brief estimate of the character and conduct of each with reference to the results of their educational course at the school attended, together with such facts or conditions existing in the tribe on the reservation, or in its environment that generally help or hinder returned pupils. The data thus collected were collated with reference to the present physical condition of the returned pupils, and their efficiency as men and women in the ordinary relations of everyday life. The result was surprising, and will bear comparison with similar statistics from white schools. Of the pupils who had attended schools, although only a small per cent graduated, 3 per cent are reported as excellent, or first-class; 73 per cent as good,

or medium; while only 24 per cent are considered bad or worthless, and upon whom the benefits and advantages of school life conferred no appreciable results. The ratio of the good to the bad is remarkable from any standpoint, but is emphasized particularly as showing the value of an educational system which can in a generation develop from savages 76 per cent of good average men and women, capable of dealing with the ordinary problems of life and taking their places in the great body politic of our country. All these thousands of educated Indian boys and girls, speaking the English language, weaned from tribal customs and the iron bands of tradition, can not fail to exert a powerful and far-reaching influence upon the quarter of a million Indians scattered throughout the United States.

It has been suggested that the transfer of an Indian child from the free open-air environment in which he was born would have a tendency to break a naturally strong and vigorous constitution, weaken its vitality, and render the system an easy prey to disease. These statistics do not bear out such a conclusion, as 89 per cent of those pupils who have gone through the schools and returned to their homes are reported to be in good physical condition.

ATTENDANCE.

The enrollment and average attendance at the schools aggregated and compared with the preceding year are here exhibited for the fiscal year 1898.

TABLE 2.—*Enrollment and average attendance at Indian schools, 1897 and 1898, showing increase in 1898; also number of schools in 1898.*

a Decrease.

b Three schools transferred to the Government and contracts made for two schools which were paid by vouchers in previous year.

c Thirty-one public schools in which pupils are taught not enumerated here.

d These schools are conducted by religious societies, some of which receive from the Government for the Indian children therein such rations and clothing as the children are entitled to as reservation Indians

Statistics relative to Indian education among the Five Civilized Tribes and the Indians of New York are not included in the above table, as their schools are not supported from funds under control of this office.

There were conducted during this past year 297 Indian schools under various auspices, of which number 242 were exclusively controlled by the Indian Department, an increase of 8 in the number of Government schools. Two nonreservation boarding schools at Fort Bidwell, Cal., and Chamberlain, S. Dak., and 3 reservation boarding schools at Rosebud, S. Dak., Warm Spring, Oreg., and Red Moon, Okla., have been established. New Government day schools have been organized as follows: San Ildefonso Pueblo, N. Mex.; Shebits, Utah; Independence, Cal.; and 5 on Pine Ridge Reservation, S. Dak. The day schools at Lac Court D'Oreilles and Odanah, at La Pointe Agency, Wis., which were formerly conducted under contract with the Catholics, have been leased from their owners and converted into Government day schools. The day school at Bay Mills, Mich., formerly a Protestant contract school, has been similarly equipped and conducted. The Tonasket Boarding School for the Colville Agency, Wash., having been destroyed by fire, has been discontinued, until arrangements can be perfected with the War Department for the transfer of old Fort Spokane, which has been abandoned by the military. Proper proceedings are now pending for its conversion at an early date into a boarding school for this reservation, it appearing from reports to be admirably located and adapted for this purpose. On account of its proximity to the Crow Agency Montana Boarding School and the dilapidated condition of its buildings, the Montana Industrial Boarding School has been abandoned, pupils and property being transferred to the agency school. The day schools formerly conducted for the Iowa Sac and Fox Indians and for the Warm Springs Indians at Simnasho, Oreg., were discontinued, by reason of the construction of new boarding schools for these Indians. Not receiving sufficient support, the following day schools have been discontinued: Bullhead, on Standing Rock Reservation, N. Dak.; one school on Rosebud Reservation, S. Dak.; Toppenish, on Yakima Reservation, Wash., and two schools on Eastern Cherokee Reservation, N. C.

It is gratifying to note that the net decrease in enrollment of 608 pupils and 586 in average attendance, as shown by the annual report for the fiscal year 1897, has been changed into a net increase of 1,361 and 1,239 enrollment and average attendance, respectively, for the present year. This increase is especially satisfactory in the regular Government schools, where 1,296 more pupils are enrolled than for the previous year. The reservation boarding schools show the largest gain in this respect, where the increase of 765 for the present year is contrasted with the decrease of 377 last year.

Observing that the schools located on the reservations during the last year had not increased in the natural ratio expected, more vigorous measures were instituted. Agents were urged to greater exertions

for the purpose of filling the schools to the limit of their capacity by placing therein every child of school age on the reservation whose physical condition would justify the necessary confinement of school life. Notwithstanding these efforts it appeared that there were influences adverse to education among the older and more conservative Indians of sufficient strength to thwart the desires of this office. Outside influences also conspired to oppose the placing of the children in schools. Under existing regulations agents felt themselves powerless to overcome the strength of the opposition. Efficient means were necessary, and you were requested and did so approve the following circular, which was at once promulgated:

SEPTEMBER 9, 1897.

To Agents and Bonded Superintendents:

When notified by the superintendent of a reservation boarding school, or the teacher of a day school on his reservation, of the fact that a pupil enrolled at the agency on which the school is located has left the school without permission, the agent shall promptly return such pupil to the respective school. Should the parent, guardian, or person harboring the pupil fail or refuse to deliver him, the agency police and school employees, or either of them, are hereby directed to arrest and return such pupil under the orders of the agent. Agency police and school employees are authorized and empowered to arrest and bring before the agent for suitable punishment any person or persons who may hinder them in the lawful performance of this duty. Parents, guardians, and other persons who may obstruct or prevent the agent from placing Indian children of the reservation in the schools thereof shall be subject to like penalties; provided, that this regulation shall not be construed as authorizing the removal of Indian children from their reservations to be placed in a school outside of such reservation without the consent of the parent or guardian of the children, required by law to be first obtained.

When an agent is notified of the return to his reservation of a pupil of a non-reservation school, he shall take the necessary steps to inform himself as to the legitimacy of his return. Should he find that a pupil can not produce satisfactory evidence of proper authority for his return, a full report of all the facts must be promptly made to the Indian Office and the superintendent of the school be notified thereof.

Very respectfully,

W. A. JONES, *Commissioner*.

The wisdom of this course is fully evidenced in the largely increased enrollment and average attendance for these schools, to which attention has been specifically directed.

Pursuing this subject still further, it should be clearly apparent that there is a grave necessity for some legislation looking to the compulsory education of Indian children. With a view to introducing a moderate regulation in this matter, it was suggested that an item be incorporated in the appropriation law that the Commissioner of Indian Affairs should have the right to transfer advanced pupils from the various Indian schools to other and larger schools situated in other States and Territories without the consent of parents and guardians when in his judgment the best interests of such pupils would be subserved. This suggestion, however, failed to secure the approval of Congress. Future developments will undoubtedly emphasize, as the facts of the past and the experience of collecting officials have demonstrated, that a

regulation which will enforce compulsory attendance upon the schools must be enacted. The trend of public and legal thought is away from the traditional idea that the Indian is both a ward and a sovereign to the practical everyday fact that he is simply a ward of the Government; that he is in his tutelage, and requires the tender care and corrective authority which should always be lodged in the hands of a guardian. For centuries he roamed untrammelled a vast domain, his own nature and inherited tendencies drawing him away from the dignity and excellence of Anglo-Saxon civilization—away from those elements of thought and action which have made this civilization the greatest on earth; and yet, under the policy now being pursued, the old Indian, with his blanket and feathers, reeking with the feverish traditions and aspirations of a past glory, gauged by the scalping knife, attuned to the barbaric music of the war dance and buffalo hunt, is permitted to stand in the pathway of his child's entrance into that civilization—to obstruct by ignorance and hereditary impulses the material welfare and prosperity of his offspring and hinder the Government in its efforts to prepare the younger generation of Indians for their incorporation into our complex political organization. The natural love of the Indian father and mother for their offspring is fully recognized, and no violence is done to those bonds of humanity; but no parent, whether red or white, has a moral or legal right to stand in the way of his child's advancement in life; no nation has a similiar right to permit a portion of its embryo citizens to grow up in ignorance and possible vice.

Under the present policy of the Department, and of Congress, as soon as the Indian has arrived at that state of advancement when he can be trusted, although partially, with his own material interest, he is urged to accept an allotment. It is difficult to teach the old Indian the value of education with reference to that allotment. It is not so difficult to prepare his child, and therefore it is axiomatic that the duty of the Government requires, if necessary, its strong hand to force an ignorant parent to allow his child those advantages which will be, not only of absolute benefit to himself, but also an element of safety to the perpetuity of its own institution. All over this broad land public schools are preparing the white boys and girls for the active duties and responsibilities of real life, but, notwithstanding our advancement and learning in this direction, it has been found necessary in some States to enact compulsory school legislation. If such a course is necessary for the white parent, it is of far more importance for the red parent. Remedial legislation along these lines is especially desirable if the full benefits to be derived from the expenditures made by order of Congress are to be attained.

NONRESERVATION BOARDING SCHOOLS.

The location, date of opening, number of employees, rate per annum, capacity, enrollment, and average attendance of the nonreservation Indian boarding schools are shown in the following table:

a 1,500 with outing system.

b Previously a contract school.

In this list are comprised the largest and best equipped schools in the service. Located off the reservations they are usually in proximity to civilized centers. With a more advanced literary curriculum, and extended systems of industrial training, they are designed to receive advanced pupils from the schools and reservations. While it is difficult to adopt a rigid and inflexible rule in this respect, yet it is desirable to confine these schools to the necessities of those children who have passed through the course of study at day schools and reservation boarding schools. Industrial work is developed to a marked degree, and while at many of the schools excellent harness, shoes, wagons, etc., are turned out, yet the educative value of such training is not lost sight of or absorbed for the pecuniary benefit of the school. A good carpenter, shoe or harness maker, tailor, blacksmith, farmer, or other mechanic who has mastered his trade, not as a factory hand but as a journeyman, reflects as much credit upon the school as the graduation of its brightest intellects into teachers, etc. Manual training, the intellectual "know how" of the mechanical trades, is looked upon as a strong force in Indian schools. When the full measure of its importance in the curriculum is understood, and its relation to the life work

of the Indian boy is appreciated, its practical value will be fully recognized. Farming, stock raising, dairying, and kindred pursuits find their places in these schools whenever the environment is favorable to such pursuits. Some of the schools have well-equipped normal departments, which have developed and sent into the service a number of bright boys and girls who are now engaged in teaching their own race with considerable success. The practical education of the girls is not neglected, and they are prepared for the realities of life. Cooking, sewing, repairing, and other domestic arts and economics are inculcated, while great stress is placed upon the preparation for home life. Teach Indian girls to be good wives and home makers, and the result upon Indian character will be unbounded. The placing of Indian boys and girls at service in families of farmers, although for a few months only—the girls instructed in the practical economies of family life, the boys in farming, gardening, stock raising, etc.—has met with abundant success at Carlisle, where it first originated. Other schools have adopted this “outing system” with profit to the pupils, and its gradual extension to the majority of schools will be only a matter of time.

RESERVATION BOARDING SCHOOLS.

While the nonreservation schools are, as a rule, near centers of population, reservation boarding schools are situated on those reserves set apart to the exclusive use of the Indians. Being thus located they come in very close contact with the Indian in all of his varying moods. These institutions present themselves to him as an object lesson of the power and influence of the General Government; they appeal to him through his children, and awaken any smoldering sentiments for the betterment of his and their condition.

Indian boarding schools are far more complex than the average public school. When the closing hour has arrived, teachers and pupils in white schools go to their homes and enjoy around the family circle those pleasures of home life which are characteristic of the American people. The Indian reservation school, on the other hand, must combine both the home and the school—the drudgery of instruction with the multitude of petty annoyances which vex the ordinary household. Raw Indian boys and girls from the camps and tepees must be built up intellectually, morally, and socially—frequently on a very slender foundation. Traditional prejudices must be overcome, the language learned at the mother's breast discounted, and a new character and habit developed. The process is slow and the difficulties many, but with a commendable patience and missionary zeal great results are accomplished in transforming the wild Indian of the plain into a quiet everyday average citizen. The employees of a boarding school away from civilization and its pleasures must devote their entire time and attention to the work of elevating the pupils placed in their charge. Their self-sacrificing devotion to duty is commendable, worthy of praise and emulation.

The reservation boarding school should be a great feeder for the non-reservation boarding schools. Pupils who have passed through its curriculum are then ready for additional advantages. Superintendents of these schools are constantly admonished by the Indian Office of their duty with respect to these advanced pupils. The great majority have readily responded to this policy of Indian education, although at times some, through a mistaken zeal for building up their own school, have not sent to the nonreservation schools as many pupils as their curriculum and excellence of teachers warrant. The reservation and nonreservation boarding schools are coordinates of each other, and their work as it becomes more systematized will develop greater results.

There were 75 of these schools conducted last year upon the various reservations, brief statistics of which are set forth in the following table:

TABLE 4.—*Location, capacity, and date of opening of Government reservation boarding schools.*

The great majority of the reservation schools are well equipped for a literary and industrial training, facilities for the latter being especially emphasized. The character of industrial training at these schools depends largely upon the peculiarities of the tribe and the character of country which they inhabit. In stock-raising countries great stress is laid upon this branch of agricultural pursuit; at other points the growing of cereals and kindred farming is undertaken, while at the schools

in those sections of Oklahoma where cotton can be produced experiments in this direction have been undertaken. At a great many schools located in the so-called "arid" West irrigation farming has been successfully taught by precept and example. In fact, the varied characteristics of the different Indian tribes and the widely separated areas they occupy render the work of industrial training complex, but in the great majority of cases instruction has been satisfactory.

GOVERNMENT DAY SCHOOLS.

The Government day school, presided over by a faithful, patient man and wife, as teacher and housekeeper, provide a method of instruction for Indian boys and girls of incalculable benefit to the system. These schools bring a portion of the "white-man" civilization to the home of the Indian. His children are in daily contact with the old traditions and the new ideas of the school. As a rule, industrial training on a small scale is adopted, and the boys are taught gardening, the use of simple tools, and other elements of industry with which they should become familiar as a means of earning their livelihood in the future. The girls assist the housekeeper in the preparation of a simple noon-day luncheon, and receive from her instruction in the valuable arts of domestic economy. She is taught in a simple way the adornment of the home and the purity of the home life. Unconsciously the little one bears with her back to the rude tepee or hut some small portion of the civilization with which she is in contact and will impart some of it to the older members of the family.

This day-school system is a vigorous element in the uplifting of the Indian. It has many advocates among those interested in Indian education and deserves a fostering care. There are 142 day schools, with an enrollment of 4,847 pupils, and an average attendance of 3,286. The following table gives the location and capacity of the day schools:

a Including Lac Court d'Oreilles No. 3 day, which was a contract school for seven months during this fiscal year.

The principal difficulty in the conduct of day schools is to maintain a regular attendance upon the daily sessions of the school. Teachers are required to exercise tact and patience to bring about this result, but the establishment of the noonday luncheon at a large number of these schools has had the natural result of bringing up the attendance. Frequently the children have long distances to walk between the school and their homes, and, being poorly fed at home, are not in the best of condition to appreciate instruction at the school. The noonday lunch satisfies the natural appetite, and even though there may be no literary aspirations in the mind of the child, the inherent desires will draw him to the school when other means would fail.

INDIANS IN PUBLIC SCHOOLS.

The plan of placing Indian children in the public schools of the country for the purpose of coeducation of the races, conceived in 1890, does not appear to meet with much success. Last year there was a decrease of 100 pupils from the previous year, and this year's report also shows a small decrease. Although the contract rate of \$10 per capita per quarter on the average attendance was thought sufficiently stimulating to induce the public-school authorities to increase the number of these Indian scholars, the experiment has not been the success anticipated. More decided efforts will be exerted during the fiscal year 1899, and the value and practicability of the system fully tested.

The enrollment and average attendance in public schools is shown in Table on page 611, while the following table gives a list of such schools, their location, and the number of pupils for which contracts are made:

CONTRACT SCHOOLS.

It is provided in the appropriation act for the fiscal year ending June 30, 1899—

that the Secretary of the Interior may make contracts with contract schools, apportioning as near as may be the amount so contracted for among the schools of various denominations, for the education of Indian pupils during the fiscal year 1899, but shall only make such contracts at places where nonsectarian schools can not be provided for such Indian children to an amount not exceeding 30 per cent of the amount so used for the fiscal year 1895.

For the fiscal year 1895 there was used for contract schools of all denominations the sum of \$463,505, of which amount \$53,440 was appropriated for schools specifically named by Congress, which leaves a total of \$410,065 as the true amount from which the 30 per cent should be taken. The amount allowed for the two schools at the Osage Reservation (\$11,250), being paid out of Osage trust money, should not, in the opinion of this office, be included in the amount set apart for contract schools, and therefore, upon your approval, that sum has been deducted from the above total, which would leave a new total for 1895 of \$398,815, of which sum I am of opinion Congress intended only 30 per cent to be used for 1899, thus making the sum of \$119,644.50 available for such purpose.

When the schedule for the fiscal year 1898 was prepared, there were

two Protestant schools—the Bay Mills, Mich., \$600, and the John Roberts, Shoshone Agency, Wyo., \$2,160, a total of \$2,760. However, during the past year the school at Bay Mills, Mich., has been discontinued, and no contract was made therefor, which leaves only one Protestant contract school in existence. In order to arrive at the amount which, in the judgment of this office, should be set aside to the Catholic contract schools, \$2,760 was deducted from the total amount of \$119,644.50, which leaves \$116,884.50 for distribution to the various Catholic schools.

It will appear from an inspection of the schedule that the schools have been reduced ratably, rather than to eliminate any particular institution. The reason for this is that the average attendance at nearly all of such schools shows an excess over that contracted for, the number allowed being 1,763 pupils, while the average attendance during the past year was 2,313, indicating that, although reductions have been made in the number allowed, the schools have continued in their particular work.

Contracts have been executed with the different schools for the number of pupils and at the rate and for the amount given in the schedule as follows:

TABLE 7.—*Schools conducted under contract, with number of pupils contracted for, rate per capita, and total amount of contract for fiscal years ending June 30, 1895, and June 30, 1899.*

a Specially appropriated for by Congress.

b Not including the two schools of Osage and two Pottawatomie schools at Sac and Fox agencies, Okla., nor one day school at La Pointe Agency, which was converted into a Government school during the year.

For the reasons set forth in my last annual report, a contract with the St. Louis Boarding School, on the Osage Reservation, for 75 pupils at \$125 per capita, amounting to \$9,375, and also a contract with the St. John's Boarding School, on the same reservation, for 65 pupils at \$125 per capita, amounting to \$8,125—a total of \$17,500—were executed, and payable out of the Osage trust funds.

During the past fiscal year contracts, payable out of the educational fund of the Pottawatomies, have been made with the Sacred Heart Boys' School and the St. Mary's Academy for girls, on the Sac and Fox Reservation, Okla., for 35 boys and 52 girls, respectively, at \$144 each per capita per annum. As this fund is nearly exhausted, I have, with your approval, renewed the contract only with St. Mary's Academy for 45 pupils at \$125 per capita, which will amount to \$5,625. The determination, therefore, of this contract will absorb all of the available portion of this fund. As only one school can be maintained, I have deemed it best that all the money should be used for the benefit of the girls.

The amounts allowed for contract schools, aggregated and compared with former years, and showing the names of the denominations and private parties, are exhibited in the following table:

TABLE 8.—*Amounts set apart for education of Indians in schools under private control for the fiscal years 1890 to 1899, inclusive.*

CHARACTER AND CONDITION OF SCHOOL PLANTS.

An examination of the buildings and plants of the Indian school service, which were erected years ago, shows a deplorable deficiency in construction, sanitary and hygienic requirements, and conveniences. These conditions may be primarily attributed to inadequate and unprofessional methods of the time, as the devising of plans was frequently intrusted to Indian agents or school superintendents, who, in turn, being devoid of the necessary technical qualification, would enlist the services of the agency carpenter or blacksmith or outside person to evolve and formulate projects which should require the best of architectural skill. In some instances, where proper plans and specifications covering material and workmanship were available, no efficient practical superintendence of the work during construction was provided, so as intelligently to enforce the terms of the contract, resulting in the introduction of bad material, careless workmanship, and the present urgent necessity for immediate expenditures looking to the preservation of these buildings.

As intimated in the reports for the past few years, sewer and water facilities, with proper systems of heating and ventilation, were things unknown in the Indian school service, the most pertinent fact being that buildings were an imperative necessity, and these important adjuncts were omitted, either from economy or the lack of appreciation of their advantages to a perfect school system. The omission of these essential elements of construction is now only too apparent, and, considering the hereditary ailments—consumption and scrofula—to which the Indian is predisposed, it has become necessary that good sanitary and hygienic expedients should be as speedily inaugurated as funds are available.

Reports upon school plants indicate that there are evidences that the buildings of the schools have not received the care and attention requisite to their proper maintenance and preservation, in that defects of little moment in their incipient stages, yet if permitted to continue soon develop into injurious proportions, have been overlooked and remedial applications too long deferred. These results no doubt arise in many instances from an overzealous desire on the part of the responsible parties to make a record for economy in the administration of their respective charges. Noting this defect in the administrative system, in the new Indian School Rules its regulation has been provided for. A small leak, slight deterioration in brick or stone work or other matters of a similar kind, if promptly taken in hand would save many dollars to the Government hereafter. There should be a happy medium between extravagance and parsimony, and agents and superintendents have been properly instructed in this matter.

The value, as reported to this office by the agents and superintendents, of the school plants of the service amount to over \$3,000,000, and in all probability the original cost was in excess of this. Much of this property, by reason of its construction under earlier systems, is of

a temporary and perishable nature, and of necessity requires constant attention and adequate expenditures for its preservation and improvement; therefore, at least for several years to come, the amount of funds appropriated for this purpose should not be below the actual necessities, as necessary economy then becomes subversive of good and effective results.

In congregating and sheltering the great number of comparatively helpless children in the various Indian schools, in considering their uncivilized nature and past environment, it becomes a matter of much concern and moral responsibility to so arrange and equip these institutions that they may possess every safeguard against danger known to modern construction. The great majority of the old buildings were without any provisions for escape should a fire take place, in view of which fact, and that the greater number of children are quartered in the upper stories, together with the constant menace of fire from the use of kerosene lamps, prompt and vigorous measures have been taken to introduce fire escapes, standpipe and hose, and other methods for quenching fires in their incipient stages. It being impossible to fully equip all the buildings within a limited time with proper means for fire escape, a circular was issued directing the attention of agents and superintendents to the importance of such measures, and they were told "that where adequate fire protection has been provided it should be placed in charge of some one or more employees whose duty shall be to see each day that the apparatus is in good working order. Where no such provisions have been made, in halls, dormitories, commissary rooms, and wherever there is danger of fire should be placed pails filled with water ready for immediate use. These pails should be filled with fresh water at least twice each week and inspected daily. Supervisors and other inspecting officials are directed to thoroughly investigate this matter at each school, and a dereliction in obeying this order will be considered a grave offense and dealt with accordingly."

For various reasons many of the buildings have been constructed of wood. This practice is not conducive to economy, since the temporary and perishable nature of the material requires greater expense in the nature of repairs, to say nothing of the great danger of destruction by fire, especially where the water supply is not adequate to the necessities of the service. In view, therefore, of these facts, wherever possible, buildings of a permanent nature have been erected, believing it to be for the best interests of both the Government and of the service.

Great attention has been paid to effective sanitation, which can only be obtained through systems of sewerage and auxiliary house plumbing. In the location of new school plants the adequacy and sufficiency of water supply is a matter of primary consideration, and outweighs all others in the opinion of this office for such a site. Coincident with other necessary and modern improvements that are now being introduced and contemplated, much importance has been given the subject

of lighting, both from natural and artificial sources. Windows are so grouped as to furnish light in the most satisfactory manner and with least damage to the eyes. Two methods of improving the artificial system of lighting are available at Indian schools—electricity and gasoline gas. Each of these has been installed and is now in operation at several different schools, although they are of such recent introduction that sufficient time has not elapsed for absolutely practical and concise data to be obtained as a basis for measuring their respective merits as to efficiency and cost. It can, however, be stated without reservation that so far as they have been tried each has proved satisfactory under the conditions imposed. The Pipestone school has been lighted with gas for the past year, and in a very recent report the superintendent expresses himself with great satisfaction at the results attained, so far as the character of light and cost of production are concerned. A similar gas plant has been in operation at the Menomonee school for several months, and reports of equal efficiency have been received. On the other hand, at those places, such as Oneida, Rosebud, Pine Ridge, and other schools of similar class, electricity has proven equally satisfactory. I am satisfied, however, that for the smaller schools and in those sections where coal is very expensive the most economical system of lighting is that of gasoline gas, using the Welsbach burners.

The ring or needle bath system has now been tried at so many schools that it has passed the experimental stage. It is considered by those who use it to be the most economical, efficient, and hygienically satisfactory system of bathing yet invented for use at Indian schools. It is especially satisfactory in eliminating the dangers of contagious infections due to careless attention upon the part of employees.

Order and system being the foundation stone of any proper system of education, too much attention can not be devoted to their early impress upon the minds of the young; nor is the infusion of esthetic principles or the appreciation of the beautiful and artistic to be ignored, since their refining and elevating attributes assist materially in the cultivation and enlightenment of the precepts. Therefore it is deemed important that every detail in connection with the improvement of these Indian schools should be carefully weighed, beautified, and refined—more especially their exterior environments, where the time of the pupil is spent in recreation and pleasure. The school authorities are instructed to have due regard for these principles, to which end unsightly banks and rugged hillsides are made to give place to swarded slopes and plains with flowers and shrubs. At some of the schools, roads and pathways are little better than ditches, and form heterogeneous grid-irons, devised without thought or system, which, taken together with the possible verdureless landscape, present a most doleful and uninviting aspect to the scenery, all of which operates detrimentally upon both pupils and employees. An effort is made to impress upon the school people the necessity for joining the useful to the ornamental, improving the surroundings of the school, and, where possible, the

introduction of the study of horticulture, both as a means of pleasure and a profitable enterprise. The prominence with which road making now appeals to the average citizen of our republic presents the necessity for its introduction on our reservations and at the schools.

RÉSUMÉ OF NEW WORK.

The largest of the new school plants are those in course of erection for White Earth and Vermillion Lake, Minn. They are complete in every detail, and will accommodate each about 150 pupils. After mature deliberation the project for the erection of a new school at Mount Scott, on the Kiowa Reservation, Okla., was abandoned, and in lieu the present schools were enlarged by the addition of a mess hall at Fort Sill, and a dormitory and mess hall at Riverside, and dormitory, mess hall, and other buildings at Rainy Mountain, increasing the capacity of each school fifty or more pupils. A new school building at Cherokee, N. C.; new dormitory and buildings at Flandreau, S. Dak.; Mount Pleasant, Mich.; Greenville, Cal.; Arapaho, Okla., have been constructed; also a new building at Little Water school, Navajo Reservation, with a sufficient water supply. The new schools at Rapid City, S. Dak.; Toledo, Iowa, for the Iowa Sac and Fox Indians; Red Moon and Cantonment, on Cheyenne and Arapaho Reservation, have been completed, and will be opened early in the next school year. A new auditorium at Haskell Institute will be an ornament and useful addition to the plant. Phoenix, Ariz., admirably located for a large southwestern Indian school, has by Congressional appropriation had its school increased from 400 pupils to 600, and new dormitories and other necessary buildings provided for. The school at Clontarf not proving satisfactory as an Indian school, principally by reason of the nearness of its location to Morris, Minn., has been discontinued and merged into the school at that point. Situated in the extreme southwestern part of Utah, and the northwestern portion of Arizona, reside a small section of the Pah Ute tribe, known as Shebits and Kaibabs. A small school has been established for their benefit at St. George, Utah, and excellent results are anticipated with these hitherto neglected Indians. At a great many of the schools, buildings and other improvements of a minor nature have been made, increasing the efficiency and modernizing their equipments. Electric-light plants have been provided at Lac du Flambeau school, Wisconsin, and other points; water, bathing, and ventilating systems, have been introduced at many schools.

PLANS AND SUGGESTIONS FOR IMPROVEMENTS.

During the spring the school plants at Fort Berthold, N. Dak., and at Winnebago, on the Omaha and Winnebago Agency, Nebr., were destroyed by fire, thus depriving the children of those reservations of school facilities. Plans for a new building at Fort Berthold to accommodate 75 pupils, and at Winnebago for 150 pupils, are now being prepared, and these schools will be ready for occupancy September, 1899.

The Kickapoo, Kaus., school, by order of Congress, must be moved, and plans for a building with a capacity of 75, to be erected on the new site, have been prepared. A new school building at Tomah, Wis., is now being erected. Substantial improvements are provided for, in the appropriation law, at Puyallup, Wash.; Salem, Oreg.; Wind River, Wyo.; Pipestone, Minn.; Flandreau, S. Dak.; Tomah, Wis.; Albuquerque, N. M.; Chilocco, Okla.; Genoa, Nebr.; Mount Pleasant, Mich.; Phoenix, Ariz.; Leech Lake and Red Lake, Minn. Plans for carrying on these appropriations are being formulated, and the bulk of the work will be accomplished during the succeeding fiscal year. Out of the general school-support fund the Indian Office contemplates the expenditure of a sufficient sum to radically increase scholastic facilities for the great tribes of the Southwest, and to that end adequate additions will be made to the schools now established for the Pimas, Papagos, Navajos, Moquis, Apaches, at Sacaton, Fort Defiance, Keams Canyon, San Carlos, and Fort Apache. There are on these reservations and adjacent thereto thousands of Indians without any school advantages whatever. Although the cost of building in these sections is very high, yet with the limited funds at its disposal an earnest effort will be made by this Office for remedying existing defects. The Jicarilla Apaches in the northwestern portion of New Mexico are without school facilities of any kind, and plans are now in contemplation for the erection of a boarding school for their uses. Although the Southern Utes are bitterly opposed to the establishment of schools for their children, an effort will be made with them. While governmental efforts for the education and civilization of the Seminoles in Florida are not meeting with adequate results, yet persistent efforts will be continued in order that the fear and aversion which these people entertain toward the Government may be eradicated or abated. At Fort Peck two dormitories are in contemplation, and work on this construction will doubtless be commenced during the year. Bids have been invited for a new girls' dormitory, to be constructed at Morris, Minn., and a project for lighting the plant is now under consideration. Improvements in sewerage, water, etc., at the Menomonee school, Wisconsin, and in buildings at Oneida, are subjects for consideration. Fort Belknap school, Montana, is located at such a distance from good potable water that before any extensive repairs are made the subject of moving the school to a more advantageous site will be considered. A great amount of repairs are necessary and in contemplation.

From the report made upon the Indian school at Perris, Cal., it appears that the site is unsuited to the requirements of a large Indian school. The soil is poor, water facilities are bad, and thus no agricultural, horticultural, or other farming operations—which pursuits the children must follow in after life—can be taught practically. Such a school for southern California is a necessity, and should have at least 200 pupils, which number can readily be secured without great

effort. The present school plant is inadequate, and not in good condition. No estimate for repairs has been made because it was thought unwise to expend any more money upon this plant until the question of its removal had been determined. It is suggested that economy and good service require a change in location of this school, and should Congress authorize the same some suitable site can be readily found in southern California, where all conditions of climate, soil, water, and other essential conveniences, may be met, thus insuring a successful school in an important district.

SUPERVISION AND INSPECTION.

The establishment of two school supervisors' positions in addition to those already allowed has been of material advantage in the administration of the school service. The large and increasing number of schools renders adequate supervision by the old force impossible. In order that the work of the supervisors might be simplified, and give each an opportunity to visit several times each year the schools under his charge, the country was divided into five districts. In this way supervisors can see what progress the schools are making, observe their organization, methods, and morale, and secure sufficient comparative data for keeping the Indian Office fully advised upon the merits or demerits of its system, and the advancement or retrogression of employees and pupils.

During each year many thousands of dollars are expended in the erection of new school plants, and improvements and repairs upon old ones. New sites for schools are to be selected, and special emphasis is placed upon adequate sewer and water facilities. Too frequently the Indian Office in these matters must rely upon the untechnical knowledge of the officials. The amount and character of this work requires the best and most skillful expert inspection in every stage. Congress has recognized this deficiency in another branch of the service by providing that one of the Indian inspectors "shall be an engineer competent in the location, construction, and maintenance of irrigation works." No matter how perfect a plan may be prepared, if the same has not been constructed in a competent, workmanlike manner, the service must suffer. The Government has over \$3,000,000 invested in buildings for Indian schools, and such vast property should be inspected by some one competent to intelligently and skillfully direct and recommend what repairs, improvements, or necessary changes are requisite. It is therefore suggested that such an official be provided for the Indian school service at a salary sufficient to command the services of a competent expert.

INDIAN SCHOOL SERVICE INSTITUTE.

One of the most successful Indian school service institutes in the history of Indian education was held from July 18 to August 5, 1898, at Colorado Springs, Colo. Under the inspiration of the superintendent of Indian schools a large number of workers were brought together for mutual interchange of ideas, thoughts, and suggestions.

SCHOOL APPROPRIATION.

The following table shows the amounts appropriated for Indian school purposes through a series of years:

TABLE 9.—*Annual appropriations made by the Government since the fiscal year 1877 for the support of the Indian schools.*

| Year. | Appropriation. | Per cent increase. | Year. | Appropriation. | Per cent increase. |
|------------|----------------|--------------------|------------|----------------|--------------------|
| 1877 | \$20,000 | | 1889 | \$1,348,015 | 14 |
| 1878 | 30,000 | 50 | 1890 | 1,364,568 | 1 |
| 1879 | 60,000 | 100 | 1891 | 1,842,770 | 35 |
| 1880 | 75,000 | 25 | 1892 | 2,291,650 | 24.3 |
| 1881 | 75,000 | | 1893 | 2,315,612 | .9 |
| 1882 | 135,000 | 80 | 1894 | 2,243,497 | a3.5 |
| 1883 | 487,200 | 260 | 1895 | 2,060,695 | a8.87 |
| 1884 | 675,200 | 38 | 1896 | 2,056,515 | a.2 |
| 1885 | 992,800 | 47 | 1897 | 2,517,265 | 22.45 |
| 1886 | 1,100,065 | 10 | 1898 | 2,631,771 | 4.54 |
| 1887 | 1,211,415 | 10 | 1899 | 2,638,390 | .0025 |
| 1888 | 1,179,916 | a2.6 | | | |

a Decrease.

INDIAN SCHOOL SITES.

Wild Rice River, Minn.—In 1892 the Protestant Episcopal Church, at a cost of \$980.15, erected a building adjoining the Government school at Wild Rice River, on the White Earth Reservation, in Minnesota. The building was used by a mission of that church for teaching Indian women to make lace, and was known as the "Indian lace school." January 28, 1897, the mission proposed to sell the building to the Government for Indian school purposes, and authority was granted March 29, 1897, to expend \$600 in its purchase, payment therefor to be made from the appropriation "Indian school buildings, 1897." A bill of sale to the United States from the Protestant Episcopal Church, by J. A. Gilfillan, its agent, was submitted, which conveyed not only the building but also 3 acres of land surrounding it. This office, however, was found to have no record of the assignment of this tract to the church for any use, and therefore it was deemed best to have the church convey its right in and to said land and the improvements thereon by deed, in lieu of a bill of sale; and, for the purpose of definitely describing the 3 acres and connecting it with the public survey, a survey of that tract was directed to be made.

A quitclaim deed, dated November 4, 1897, from "The Domestic and Foreign Missionary Society of the Protestant Episcopal Church in the United States of America," by Rev. Joseph A. Gilfillan, attorney, conveyed to the United States, for \$600, all its right, title, and interest in and to a certain tract of land lying in Norman County, Minn., described as follows:

Beginning at the southwest corner of the southwest quarter of the northwest quarter (SW. $\frac{1}{4}$ NW. $\frac{1}{4}$) of section number thirty-one (31), in township number one hundred and forty-five (145) north, of range number forty (40) west of the fifth principal meridian; thence north on the west line of said section number thirty-one

(31) a distance of twenty-eight (28) rods; thence east and parallel with the south line of said section a distance of seventeen and a half ($17\frac{1}{2}$) rods; thence south, and parallel with the west line of said section, a distance of twenty-eight (28) rods, to the south line of said section; thence west on the south line of said section, a distance of seventeen and one-half ($17\frac{1}{2}$) rods, to the place of beginning, containing three acres, more or less, together with the frame building situate thereon and the land covered by said building.

The deed was approved by the Department December 1, 1897, and was recorded in the office of Norman County, Minn., March 16, 1898, in Book F, page 569, and is recorded in this office in Miscellaneous Records, Volume IV, page 280.

Red Pipestone Reservation, Minn.—The following paragraph is contained in the Indian appropriation act approved June 7, 1897 (30 Stats., 87):

The Secretary of the Interior is directed to negotiate, through an Indian inspector, with the Yankton tribe of Indians of South Dakota for the purchase of a parcel of land near Pipestone, Minnesota, on which is now located an Indian industrial school.

In compliance with instructions this office submitted to the Department April 25 last a draft of instructions, with detailed information regarding the Pipestone Reservation, for the guidance of the inspector to whom should be assigned the duty of conducting the negotiations.

Flandreau School, South Dakota.—In the Indian appropriation act approved June 7, 1897 (30 Stats., p. 80), Congress appropriated for the school at Flandreau, Moody County, S. Dak., \$8,000 for the purchase of land to be used as an industrial farm, at a price not to exceed \$25 per acre.

August 16, 1897, Leslie D. Davis, superintendent of that school, reported that several desirable tracts lying north of the school lands could be had, which were in a state of thorough cultivation, or were excellent for pasturage. August 28 he was instructed to enter into negotiations with the owners of the several tracts, and, September 24, he submitted a description of the tracts offered him, with the prices asked.

October 6, Supervisor F. M. Conser was instructed to inspect those tracts and report as to their adaptation to the wants of the school. October 27 he recommended favorably the S. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of sec. 16, T. 107 N., R. 48 W., owned by Mr. M. H. Beadles, of Illinois; the N. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ and the E. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of same section, owned by George A. Phillips; and the W. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of said section, owned by the State. In the meantime Superintendent Davis made a supplemental report, October 11, that the N. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ of sec. 21, T. 107 N., R. 48 W., had been offered him at \$25 per acre, a most desirable tract to obtain because it would give free and undisputed access to the river for the sewerage system then in process of construction. Later he ascertained that more than \$25 per acre would be asked for the Beadles tract.

March 7, 1898, the superintendent reported that he had negotiated for the purchase of the Phillips tract for \$4,000, and submitted deed

therefor with abstract of title. This deed, dated March 7, 1898, was submitted to the Department April 16, 1898, and was returned May 21 with the opinion of the Acting Attorney-General that it passed a valid title to the land conveyed, subject to an unsatisfied mortgage of \$1,800 held by the State, which was subsequently shown to have been discharged, and so recorded. May 26, 1898, the Department, having approved the deed, granted authority for the payment of the purchase money. The deed was duly recorded in the office of recorder of deeds, Moody County, S. Dak., June 4, 1898, in Book 15, page 209, and is recorded in this office in Miscellaneous Records, Volume IV, page 366.

Superintendent Davis had also been authorized to purchase the land held by the State, described as the N. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ of sec. 21; but March 24, 1898, he reported that upon examination of county records he found that it was extremely doubtful if he could obtain a satisfactory title to that tract. In lieu thereof he recommended the purchase of the SW. $\frac{1}{4}$ of sec. 16, T. 107 N., R. 48 W., which was better land, and being contiguous to the school grounds would be especially valuable to the school. June 6 he submitted a deed of even date from Albert Faegre and Sarah J., his wife, conveying to the United States for \$4,000 the SW. $\frac{1}{4}$ of sec. 16, T. 107 N., R. 48 W., fifth principal meridian, containing 160 acres. This deed was submitted to the Department June 11, and was returned on the 5th of August with authority for the purchase and with the written opinion of the Attorney-General, dated July 1, 1898, that the deed passed a valid title. This deed was recorded in the register of deeds office for Moody County, S. Dak., volume 15, page 220, on the 12th day of August, 1898, and in this Office in Miscellaneous Records, Volume IV, page 383.

Rapid City, S. Dak.—The Indian appropriation act approved June 10, 1896 (29 Stats., p. 345), authorized the purchase of not exceeding 160 acres of land near Rapid City, S. Dak., at a cost not to exceed \$3,000, upon which to erect buildings for an Indian industrial school.

Inspector James McLaughlin, having been instructed to select a site, reported September 8, 1896, that he had selected 160 acres, located about $2\frac{1}{2}$ miles west of Rapid City, lying in one body, and he forwarded deeds for the same, viz, the west 30 acres of the SW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 3, T. 1 N., R. 7 E., Black Hills meridian, South Dakota, from W. O. Temple and wife, September 4, 1896, for \$380; the west 30 acres of the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ and the SW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of said section 3, containing 70 acres, from Samuel P. Williamson, September 3, 1896, for \$1,860; and the E. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ and the NE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of sec. 4, T. 1 N., R. 7 E., containing 60 acres, from Henry P. Long, August 31, 1896, for \$760. Ninety acres in bottom land were susceptible of irrigation from Rapid Creek and Limestone Creek, through the Temple tract, both streams being reported to have a never-failing supply of excellent water.

The deeds, with abstracts of title, for these three tracts were submitted to the Secretary of the Interior September 19, 1896, and November 27, 1896, the Attorney-General reported that they conveyed a valid

title upon fulfillment of certain conditions, which were complied with. Authority was granted January 4, 1897, for the purchase of the several tracts at the prices specified in the deeds.

The deeds were recorded in the register of deeds office for Pennington County, S. Dak., in Book G—that of Mr. Temple, on page 284; that of Mr. Williamson on page 283, and that of Mr. Long on page 282. In this Office they will be found in Miscellaneous Records, Volume IV, pages 132, 136, and 140.

THE TRANS-MISSISSIPPI INTERNATIONAL EXPOSITION AT OMAHA.

Indian Congress.—The Indian appropriation act of July 1, 1898, (30 Stats., p. 571), contains the following clause:

That the Secretary of the Interior be, and he is hereby, authorized to cause to be assembled at the city of Omaha, in the State of Nebraska, at such time and for such period as he may designate, between the first days of June and November, anno Domini eighteen hundred and ninety-eight, representatives of different Indian tribes, as a part of the Trans-Mississippi and International Exposition, to be held at the city of Omaha, in the State of Nebraska, pursuant to an act of Congress entitled "An act to authorize and encourage the holding of a Trans-Mississippi and International Exposition at the city of Omaha, in the State of Nebraska, in the year eighteen hundred and ninety-eight," approved June tenth, eighteen hundred and ninety-six, for the purpose of illustrating the past and present conditions of the various Indian tribes of the United States, and the progress made by education, and such other matters and things as will fully illustrate Indian advancement in civilization, the details of which shall be in the discretion of the Secretary of the Interior. And for the purpose of carrying into effect this provision the sum of forty thousand dollars, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated; but the Secretary of the Interior is hereby prohibited from making, or causing to be made, any expenditure or creating any liability on behalf of the United States in excess of the sum hereby appropriated.

As showing the purpose and scope of the proposed congress of Indian tribes, I quote the following from a letter of instructions sent to Indian agents in regard to securing the attendance at the congress of representatives of various tribes.

It is the purpose of the promoters of the proposed encampment or congress to make an extensive exhibit illustrative of the mode of life, native industries, and ethnic traits of as many of the aboriginal American tribes as possible. To that end it is proposed to bring together selected families or groups from all the principal tribes and camp them in tepees, wigwams, hogans, etc., on the exposition grounds, and there permit them to conduct their domestic affairs as they do at home, and make and sell their wares for their own profit.

It is represented that the Indian tribes are rapidly passing away or modifying their original habits and industries by adopting those of civilization; that there are yet many tribes within our borders whose quaint habits and mode of life, which have remained practically unchanged since the days of Columbus, are little known to the majority of our own people, and that an assemblage of the kind proposed would not only be beneficial to the Indians participating, but would be extremely interesting, as well as profitable, to the large body of people in attendance.

The first step will be to select the families or groups of Indians who are to represent their respective tribes at the encampment. It is desired that the encampment should be as thoroughly aboriginal in every respect as practicable, and that the primitive traits and characteristics of the several tribes should be distinctly set forth. This point should be constantly kept in view in the selection of the Indians and in the collection of material.

The Indians chosen to attend must be full bloods, and should be good types of their respective tribes, consisting preferably of leading men or chiefs and their families. The latter should be made up of man, wife, and one or two (and never more than three) minor children. While it is desired that family groups and family life should be portrayed, it would be preferable that at least a majority of the delegation consist of adults.

Only Indians of good morals and habits should be selected, and most important of all they must be strictly temperate.

They should bring native dress if possible. They should also bring their native domiciles or the materials with which to make them. They should also bring the necessary articles with which to furnish and decorate their tepees or other domiciles. As this will be a most interesting part of the exhibit the furnishings should be as attractive and complete as possible. The necessary materials for carrying on their native arts should also be brought, so that they may engage in making articles for sale on the grounds. Where this can not be done they may bring things illustrative of their craft in reasonable quantities for sale. Necessary cooking utensils should be brought, and these should be as primitive as possible.

A collection of the implements and emblems of warfare would also be extremely interesting, and where it can be arranged with any degree of completeness it is suggested that such collection be brought. Articles to which a historical interest attaches for any reason should also be brought if practicable.

The Indians will not, of course, be at any expense for transportation to or from the Exposition or for expenses of living while in attendance there, and they will be well cared for.

July 11, 1898, the Department detailed Capt. W. A. Mercer, U. S. A., acting agent of the Omaha and Winnebago Agency, Nebr., to install and conduct the congress of Indian tribes at the Exposition, and on July 13, 1898, granted Mr. J. R. Wise, a clerk in this office, leave of absence without pay and appointed him as assistant manager to aid Captain Mercer at Omaha. From Captain Mercer's report of September 15 the following account of the congress is summarized:

The work of installing the Indians was prosecuted with as much expedition as possible, and on August 4, 1898, the Indian Congress was formally opened, and, although not nearly all of the Indian tribes which it was originally intended to have present were on the grounds, the Indians in attendance and in the parade of that day numbered about 450.

"Indian Opening Day" was a complete success, and the attendance on that day had only once been exceeded during the progress of the Exposition, and that was on July 4. There were present for that occasion about 150 Omahas and about 45 Winnebagoes—all from the Omaha and Winnebago Agency. These were not intended as permanent delegations for the congress, and they returned to their reservations after remaining about ten days. The Indians comprising the permanent delegation at that time numbered about 225, representing about 15 tribes and 18 reservations.

The work of procuring and installing delegations from other tribes was prosecuted without interruption, and at this date tribes are represented at the Exposition as shown in the following table:

| Name of tribe. | Reservation. | Number in delegation. |
|--------------------------------|---|-----------------------|
| Sioux | Rosebud, S. Dak | 48 |
| Do | Crow Creek, S. Dak | 5 |
| Do | Cheyenne River, S. Dak | 9 |
| Do | Lower Brule, S. Dak | 7 |
| Do | Pine Ridge, S. Dak | 10 |
| Do | Standing Rock, North and South Dakota | 9 |
| Blackfeet | Blackfeet, Mont. | 22 |
| Assinaboine | Fort Peck, Mont. | 25 |
| Sac and Fox | Sac and Fox, Iowa | 16 |
| Apache | San Carlos, Ariz | 21 |
| Apache, Jicarilla | Jicarilla, N. Mex | 12 |
| Chippewa | Lac du Flambeau, Wis | 25 |
| Do | Bad River, Wis | 5 |
| Flathead | Flathead, Mont | 15 |
| Kootenai | | |
| Calispel | | |
| Crow | | |
| Sac and Fox | Crow, Mont | 26 |
| Iowa | Sac and Fox, Okla | 33 |
| Ponca | Iowa, Okla | 4 |
| Tonkawa | Ponca, Okla | 30 |
| Cheyenne (Southern) | Oakland, Okla | 10 |
| Arapaho (Southern) | Cheyenne and Arapaho, Okla | 43 |
| Kiowa | Do | 24 |
| Apache (Geronimo's band) | Kiowa and Comanche, Okla | 22 |
| Wichita | Fort Sill, Okla | 22 |
| Omaha | Wichita, Okla | 36 |
| Winnebago | Omaha, Nebr | 31 |
| Pueblo | Winnebago, Nebr | 9 |
| Otoe | Pueblo, N. Mex | 15 |
| Do | Otoe, Okla | 11 |
| Total | | 545 |

Included in the band of Apache prisoners of war from Fort Sill are Chief Geronimo, the famous Apache warrior, and his able lieutenant, Nachie. The various delegations from other agencies also have many prominent men.

Many difficulties were encountered in the work of preparing and installing the Indian Congress, and in making it what it was originally intended by the Department that it should be, namely, a congress of the several Indian tribes of the United States, at which their native customs, habits, mode of dress, domestic life, dwellings, etc., should be portrayed. The greatest difficulty lay in the fact that Congress delayed the appropriation for the purpose so long that insufficient time was allowed to select, equip, and prepare the several delegations. In many cases the Indians were distrustful or did not want to come to the congress. This was especially true of some of the oldest and best types of Indians—the ones that were really most desired as delegates. As a rule, no difficulty was experienced in obtaining any number of mixed bloods or partially civilized representatives, who for many reasons were the least desired.

It required repeated efforts and much persuasion to get Indians of the desired class, such as the Utes, the Bannocks, the Shoshones, the Nez Percés, the Osages, the Navajoes, and Northern Cheyennes. After some of them had been at the Indian Congress camp a few days and

seen the Exposition and its surroundings, no difficulty would have been experienced in getting from their respective tribes delegations of any size desired, including the best men.

The delegations present are, on the whole, well equipped as to camp and outfit, and are most excellent types of their several tribes, and the Indian encampment affords an opportunity for the student of aboriginal Indian life never before presented. It was soon found, however, that this feature was of comparatively little interest to most visitors, who, having seen one or two camps, had seen them all. In other words, the real differences and characteristics of the Indians were of slight interest to the average visitor. A scientific exhibit appeals to but a small percentage of those who attend the Exposition. The greater portion of the people coming to the Exposition visit the Indian Congress, and express the fullest satisfaction. However, what they really want is amusement. They prefer to see the Indians, in their full Indian dress, on parade, conducting their ceremonies, and their dances, or engaging in sham battles. All of these are being provided so far as practicable, and the eager crowds are often larger than the grounds can comfortably accommodate.

For many weeks after the encampment opened the weather was extremely trying. Great heat, accompanied by dry, hot winds, made camp life anything but pleasant. Close upon the heated period came a week of cold, heavy rains, which made it even more disagreeable. But with the coming of clear, cool weather the camp has taken on a new aspect, and conditions are more favorable in every respect.

Indian school exhibit.—From the opening of the exposition on June 1, the work of the Indian Bureau has been represented there by an exhibit in the Government building similar to that prepared for the Atlanta and Nashville expositions. It presents mainly the effort of the office to educate Indians, and for lack both of space and facilities does not undertake to show what progress, outside of the schools, Indians are making in adopting the habits of thought and life, as well as the occupations, which pertain to civilization.

The attempt is made to set forth the aim, scope, and success of Indian schools, both intellectually and industrially. Certain schools were asked to send samples of the regular work of their pupils in schoolrooms and shops. The exhibit is necessarily incomplete in that it can indicate the training given Indian youth in domestic arts and in farming, gardening, care of stock, etc., only by photographs. But the trades are well represented. The course of instruction is shown, and the age and experience of the Indian workman are given. There is blacksmith and wheelwright work, from a bolt to a farm wagon; woodwork, from sloyd to a finely finished cabinet; leather, from the sewing of two pieces together to a complete harness and well-made shoes; needlework, from patchwork and darning to fine embroidery, drawn work and "real" lace,

and complete suits for men and women. Tinsmithing, printing, and painting are also shown.

Class-room papers, from kindergarten exercises and first attempts in English to geometry, physics, bookkeeping, typewriting, and stenography differ little from those that would be furnished by white schools of similar grade, except for early deficiencies in the use of English and perhaps a rather unusually good average in drawing and penmanship.

A new feature of interest is some excellent "studies" in oil by a young woman of the Winnebago tribe who is under careful training and gives promise of becoming an artist of unusual ability. The subjects are taken from Indian life.

Interesting sets of photographs give interior and exterior views of schools, and sets of floor plans and elevations of buildings now in use show the provision which the Government makes for housing its Indian school children.

Fewer schools are represented than in former exhibits, so that the work of each school may be more fully presented. They are: Non-reservation training schools at Genoa, Nebr., Lawrence, Kans. (Haskell Institute), Carlisle, Pa., and Carson, Nev.; reservation boarding schools as follows: Winnebago in Nebraska, Seger Colony and Riverside (Kiowa) in Oklahoma, Oneida in Wisconsin, Crow Creek in South Dakota, and Hoopa Valley in California; also day schools on the Pine Ridge and Rosebud reservations in South Dakota and among the Mission Indians in California.

Under the supervision of Miss Alice C. Fletcher special attention has been given to the installation of the exhibit. For decorative purposes, and also to differentiate the Indian educational exhibit from those of white schools, specimens of native Indian handicraft have been added—blankets, matting, plaques, baskets, pottery, beadwork, articles cut from red pipestone, etc. Out of these a "cosy corner" has been fashioned, and fine color effects have been secured which arrest the attention. The taste and skill displayed in the workmanship of these articles give unmistakable evidence of the native capacity which is ready to respond to the Government offer of instruction in new avocations. They show the aboriginal soil upon which education sows its seeds.

EXHIBITION OF INDIANS.

During the past year the Department has granted authority for the taking of Indians from their reservations for exhibition purposes, as follows:

September 10, 1897, to C. L. Timmerman, secretary of the Morton County Fair Association, to secure a reasonable number of Indians from the Standing Rock Reservation, N. Dak., for exhibition purposes at the State fair held at Mandan, N. Dak. In this case no bond was

exacted, as the fair was under municipal control, and assurances were given (and faithfully observed) by responsible officials in charge that the Government would be at no expense whatever in the matter, and that they would hold themselves responsible for the proper care and protection of the Indians while at the fair, and would insure their safe return to their homes at its close.

January 22, 1898, to Messrs. Cody (Buffalo Bill) & Salisbury to take 100 Indians from the Pine Ridge and Rosebud reservations, S. Dak., for general show and exhibition purposes during the season of 1898. A bond in the sum of \$10,000 was given by this firm.

April 23, 1898, to Mr. George P. Gifford, secretary of the Milwaukee Carnival Association, for permission to secure from 100 to 200 Indians from reservation under the La Pointe Agency, Wis., in order to exhibit "a well-established representative Indian village" on the lake shore at Milwaukee, Wis., during the celebration week of June 27, 1898, commemorative of the fiftieth anniversary of the admission of the State of Wisconsin into the Union. No bond was required in this case, as assurances from the officials in charge of the celebration were given that the Government would be at no expense whatever, and due care would be observed to protect the Indians from immoral influences, etc., and to return them safely to their homes. In several other cases authority was granted for Indians to attend industrial exhibitions or local celebrations.

As stated in previous reports, whenever engagements with Indians for general exhibition purposes are made their employers are required to enter into written contracts with the individual Indians obligating themselves to pay such Indians fair stipulated salaries for their services; to supply them with suitable food and clothing; to meet their traveling and needful incidental expenses, including medical attendance, etc., from the date of leaving their homes until their return thither; to protect them from immoral influences and surroundings; to employ a white man of good character to look after their welfare, and to return them to their reservation without cost to themselves within a certain specified time. They are also required to execute bond for the faithful fulfillment of such contracts.

As usual, several applications for authority to take Indians away from home to be exhibited have been refused. Unless great care is exercised in granting such privileges the Indians taken are liable to suffer from neglect or bad treatment.

COMMISSIONS.

Chippewa Commission.—The Chippewa Commission, which now consists of but one member, D. S. Hall, has continued its work of allotting lands to Chippewas in Minnesota, and of removing to the White Earth Reservation such Indians as can be induced to make their homes there.

During the year ending August 31 last 565 allotments of 80 acres each have been made by the commission, as follows:

| | |
|---|-----|
| On White Earth Reservation to— | |
| White Earth Mississippi..... | 71 |
| Gull Lake Mississippi..... | 7 |
| Mille Lac Mississippi..... | 32 |
| Leech Lake Pillagers..... | 20 |
| Otter Tail Mississippi..... | 28 |
| Pembinas..... | 4 |
| White Oak Point Mississippi..... | 10 |
| Cass Lake and Winnebagoish Mississippi..... | 4 |
| On White Oak Point Reservation, to White Oak Point Mississippi... | 22 |
| On Winnebagoish and Mississippi Reservations, to White Oak Point Mississippi..... | 367 |

Changes have been made in allotments previously assigned Indians, as follows:

| | |
|----------------------------------|-----|
| White Earth Mississippi..... | 61 |
| Mille Lac Mississippi..... | 22 |
| Gull Lake Mississippi..... | 9 |
| Otter Tail Mississippi..... | 20 |
| Leech Lake Mississippi..... | 3 |
| Pembinas..... | 1 |
| Fond du Lacs..... | 4 |
| White Oak Point Mississippi..... | 1 |
| Total..... | 121 |

The Indians induced and helped to remove to White Earth are: Leech Lake Pillagers, 30; White Oak Point, 5; Mille Lacs, 24. Seven houses, costing \$75 each, have been built for removed Indians, and five others are in process of erection.

Considerable effort has been put forth to induce the Mille Lac Chippewas to go to White Earth, but with only meager success as yet. Commissioner Hall hopes that quite a number will remove thither this fall.

The expenditures made by the commission between September 1, 1897, and August 31, 1898, are:

| | |
|--|------------|
| Salary with traveling expense and board of one commissioner ... | \$4,745.00 |
| Salaries of one allotting and removal agent, interpreter, and clerk | 1,500.00 |
| Salaries of regular employees, 1 allotting agent and clerk, 1 teamster, and 1 tinsmith | 2,023.55 |
| Salaries of surveyors on various reservations | 924.50 |
| Salaries of irregular employees, such as acting removal agents and laborers | 113.00 |
| Paid for subsistence supplies for issue to removals..... | 1,501.14 |
| Paid for hardware, farming implements, wagons, etc | 869.31 |
| Paid for work cattle and cows | 275.00 |
| Paid for garden and farm seeds | 165.78 |
| Paid for house buildings for removals and improvements..... | 621.00 |
| Paid for rent of a warehouse at White Earth and offices wherever required..... | 144.00 |

| | |
|--|-------------|
| Paid for blank plats, and other material for office use..... | \$38. 51 |
| Paid for feed and drugs for team and repairs to harness and wagon, and for fuel and light and repairs to office and barn..... | 301. 40 |
| Paid for transportation and board of removals, visiting Indians and reimbursements of traveling expenses of allotting and removal agents | 795. 30 |
| Total | 14, 017. 49 |

Crow, Flathead, Northern Cheyenne, Uintah, and Yakima Commission.—The Indian appropriation act approved July 1, 1898 (30 Stats., p. 571), contains the following provision:

For continuing the work of the commission appointed under the act of Congress approved June tenth, eighteen hundred and ninety-six, to negotiate with the Crow, Flathead, and other Indians, fifteen thousand dollars, the same to be available for the payment of salary and proper expenses of said commission from and after the date when the appropriation of ten thousand dollars made by the act of June seventh, eighteen hundred and ninety-seven, was exhausted, and said commission shall continue its work and make its final report thereon to the Secretary of the Interior on the first day of April, eighteen hundred and ninety-nine, and upon that date the commission shall cease.

In the annual report of last year I stated that Samuel L. Taggart, of Dubuque, Iowa, replaced Charles G. Hoyt as a member of the commission. Mr. Taggart has since been appointed a special agent of this office and Mr. Hoyt has been reinstated as a commissioner; the other members of the commission are Benjamin F. Barge and James H. McNeely.

February 5, 1898, the commission submitted to the Department an agreement made with the Indians residing on the Fort Hall Reservation, Idaho, for the cession of a portion of their surplus lands. The agreement was referred by the Department, February 12, 1898, to this office for report, and on the 21st of that month this office submitted a draft of a bill for the ratification of the agreement. It was introduced into the Senate (No. 4073, Fifty-fifth Congress, second session) and was favorably reported by the Senate Committee on Indian Affairs. A full history of the matter is contained in Senate Doc. No. 169, Fifty-fifth Congress, second session.

The commission also concluded an agreement with the Uintah and White River Utes by which they sold, ceded, and relinquished to the United States necessary lands for the use of such of the Uncompahgre Utes as might conclude to remove to the Uintah Reservation. This agreement was submitted by the Department to the Senate January 21, 1898, with recommendation that it receive the favorable action of Congress (Senate Doc. No. 80, Fifty-fifth Congress, second session), but no action appears to have been taken thereon by Congress.

The commission is still in the field, and it is trusted that it will complete its work by the 1st day of next April.

Five Civilized Tribes Commission.—The Curtis act, referred to hereafter, added largely to the duties of the commission to the Five Civilized

Tribes. Among other things it devolved upon them the work of allotting the lands of the five tribes; also it made the enrollment of each tribe by the commission conclusive as to the membership of that tribe. The commission spent several months last year in Washington looking after legislation affecting the Five Tribes, and especially assisting in the preparation of the Curtis bill. They are now in the Indian Territory engaged in the duties assigned them by previous acts of Congress as well as by the Curtis act.

By the Indian appropriation act for the current fiscal year the membership of the commission was reduced from five to four, and Frank C. Armstrong tendered his resignation. The commission now consists of Hon. Henry L. Dawes chairman, Archibald S. McKennon, Tams Bixby, and Thos. B. Needles.

Puyallup Commission.—The Indian appropriation act approved July 1, 1898 (Public No. 175), contains the following clause relative to the Puyallup Commission:

For compensation of the commissioner authorized by the Indian appropriation act approved June seventh, eighteen hundred and ninety-seven, to superintend the sale of land, etc., of the Puyallup Indian Reservation, Washington, who shall continue the work as therein provided, two thousand dollars.

The former Puyallup commissioners (Messrs. Anderson, Renfroe, and Alexander) were relieved from duty, as stated in last annual report, on December 1, 1896. All of the official papers, documents, etc., in their possession were turned over to the superintendent of the Puyallup Indian School, who was acting Indian agent. He made collections of some deferred payments due on certain lands sold, both allotted lands and agency-tract lots and blocks, and reported the same to this office—the funds from the allotted lands being for distribution among the parties entitled, and the agency-tract funds for deposit in the Treasury to the credit of the tribe.

Clinton A. Snowden, of Tacoma, Wash., was appointed by the President on June 22, 1897, to be commissioner to look after lands of the Puyallup Indian Reservation, and instructions, approved by the Department, were furnished him July 27, 1897. He has been engaged since that time in conducting the sale of Puyallup lands, collecting deferred payments due upon such lands previously sold, obtaining further consents of allottees to the sale of portions of their lands not needed for homes, and determining who are the allottees and true owners, including heirs of deceased allottees, etc.

All the funds specially appropriated by Congress for the expenses of this work have been exhausted, but July 13, 1898, the Department decided that the necessary expenses of the sale of both allotted and agency lands could be paid out of the proceeds of those already sold and of those to be sold hereafter, except the salary of the commission, which is provided for by special appropriation. The sale of these lands is not rapid, and the collections of deferred payments are coming in slowly.

Uncompahgre Commission.—May 26, 1898, Erastus R. Harper was appointed commissioner in the place of James Jeffreys. The work of the commission in making allotments to Uncompahgre Utes is referred to on page 42. It is anticipated that the commission will complete its work during this month.

Uintah Commission.—July 14, 1898, Messrs. Erastus R. Harper, Ross Guffin, and Howell P. Myton, members of the Uncompahgre Commission, were appointed commissioners to allot lands to Indians upon the Uintah Reservation in Utah, and to negotiate for the cession of the lands remaining unallotted under the provisions of the act of June 4, 1898 (30 Stats., p. 429).

Instructions for their guidance in making allotments were submitted to the Department August 6, 1898, and approved August 10, 1898. It is not expected that they will enter upon duty as members of the Uintah Commission until they shall have completed their duties on the Uncompahgre Reservation.

SALE OF LIQUOR TO INDIANS.

My last annual report mentioned several investigations made by Special Agent R. J. W. Brewster, of the Department of Justice, into the sale of intoxicating liquors to Indians in Oklahoma and Nevada. Similar investigations have since been made by him at the Round Valley Agency, Cal.; Nez Percé Agency, Idaho; and in the Indian Territory, where it was found that parties were engaged in the wholesale debauchery of Indians by the introduction and sale of intoxicating beverages.

At Round Valley, Agent Brewster found an exceptionally bad state of affairs, and through his efforts seven persons were arrested and held to trial on the charges of introducing liquor into the Indian country and furnishing it to Indians. Five of them have been convicted and sentenced. It was also found that the school superintendent, who acts as agent, had to contend not only with liquor traffic among the Indians, but also with other forms of iniquity, so that, owing to his activity in endeavoring to suppress them and to protect his Indians from the demoralizing influence of their white neighbors, his life was continually in jeopardy, several attempts having been made to assassinate him.

Special Agent Brewster was no less successful in his investigation at the Nez Percé Agency. Several arrests were made there of persons charged with introducing liquors within the prohibited territory and selling it to Indians, and many against whom warrants had been issued fled the country in order to avoid the punishment that was sure to follow. This office has not been informed of the results of trials of the parties arrested, but it is believed that the cases made out were so clear that the parties must have been convicted and punished.

Although the United States attorney for the southern division of the Indian Territory had reported that no intoxicating liquors were being sold within his jurisdiction, the first place touched by Special Agent Brewster—Ardmore, in the Chickasaw Nation—was found to be infested with liquor dealers. A number of saloons were running in open violation of the law, and he seized there some 206 barrels of bottled beer in the possession of two wholesale dealers. The condition was found to be but little better at other towns in that nation. A number of persons were arrested by reason of the evidence obtained by Mr. Brewster, and many have been convicted and sent to the penitentiary.

The most serious disclosure was the fact that some of the officers of the court were frequently intoxicated, especially one United States commissioner by the name of Kean, at Purcell, Chickasaw Nation, who, at the time of the investigation, arrived at Purcell to hold court in such a state of intoxication as to be unable to perform his duties. This man was removed by Judge Townsend when the matter was laid before him by Special Agent Brewster, as were also two other persons, members of the bar at that place. It also appeared from this investigation that the only person at Wynnwood who had authority to suppress the liquor traffic and to make arrests therefor was an Indian policeman by the name of Walner, and he was found by Mr. Brewster in such a state of intoxication as to be hardly able to walk. This man was summarily dismissed by order of this office as soon as the facts were ascertained.

Complaints have been received from the superintendent in charge of the Florida Seminole Indians of the traffic in intoxicating liquors with these Indians, and steps have been taken through the Department of Justice to suppress it. These reports came to hand some months ago, and no further complaints have since been received.

At Devils Lake Agency a very unfortunate case occurred in connection with the drinking of some lemon extract purchased by Indians of that agency at a place near the reservation. With a report dated April 20, 1898, Mr. F. O. Getchell, agent at Devils Lake, transmitted to this office a sample of lemon extract, with the statement that of three Indians who drank some of it, one had died, and the others had lost their sight and were otherwise suffering severely. The matter was submitted to the Department April 30, 1898, with the recommendation that the Department of Justice be requested to issue instructions to the United States attorney for North Dakota to endeavor to secure the punishment of the parties furnishing the extract to the Indians if sufficient evidence could be produced to bring the matter within the statutes prohibiting the sale of intoxicating liquors to Indians. A sample of the lemon extract was inclosed to be forwarded to the Agricultural Department, with the request that it be analyzed, and later a larger quantity of the extract was obtained for the use of the chemist.

August 8, 1898, the Secretary of Agriculture reported the result of the analysis, from which it was shown that wood spirit was used in the manufacture of the extract. His letter is as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, D. C., August 8, 1898.

SIR: I have the honor to report the following results of an investigation made in the chemical division of this Department of a sample of lemon extract purchased at Minnewaukon, N. Dak., and which was sent to us as of the same kind that caused the death of an Indian at the Devils Lake Agency at Fort Totten, N. Dak.

The alcohol was distilled off from a small portion of the sample, and the residue obtained was administered to a dog, after dilution with water. There was no effect whatever, showing the nonpoisonous nature of the nonvolatile portion of the material. The quantity given to the dog was equivalent to more than a pint for a man weighing 130 to 140 pounds.

An attempted determination of the percentage of alcohol in the extract gave such an unusual result that it was evident that some other substance beside ordinary grain alcohol formed the basis or solvent of the extract. A careful test by the most approved methods was therefore made for methyl alcohol (wood spirit), with the following result: The first test was the oxidation test, by means of which there should be formed, in the presence of ordinary ethyl alcohol, ethyl aldehyd, which has a characteristic odor and reduces silver nitrate but slightly under the conditions of the experiment. In the presence of methyl alcohol formic acid is formed, which reduces silver nitrate very abundantly. The test was made not only with the sample of lemon extract, but also with samples of methyl and ethyl alcohol of known purity. There was decided evidence of the formation of formic acid in the case of the sample of lemon extract, both from its characteristic odor and from the marked reduction of silver nitrate, showing the presence of methyl alcohol in the original material.

The latest and perhaps best test for methyl alcohol, in the possible presence of ethyl alcohol, is that of A. Lam, reported in the *Zeitschrift für Angewandte Chemie*, February 8, 1898, page 125. This process consists in the conversion of the methyl alcohol into methyl iodid and the ethyl alcohol into ethyl iodid, purifying the product, and determining its specific gravity. Mr. William H. Krug, who performed the laboratory work, carefully prepared a sample of iodid of the unknown alcohol radicle contained in the lemon extract, and also iodids from samples of methyl and ethyl alcohol of known purity. Of these preparations, the careful determination was made of the specific gravity and boiling points. The results, both of the lemon extract and of the pure materials, are shown in the following table:

| | Sp. gr. at 15.5° C. | Boiling point. |
|--------------------------------|------------------------|-------------------|
| | | ° C. |
| Iodid from lemon extract..... | 2.2742 | 43.5 |
| Iodid from methyl alcohol..... | 2.2725 | 43.5 |
| Iodid from ethyl alcohol..... | 1.9441 | 72.4 |

The boiling point of methyl iodid, reported by Bernstein, is 44° C., and that of ethyl iodid 72.34°. These results show that the alcohol contained in the lemon extract was probably all methyl alcohol. The nature of the solvent used in the preparation of the lemon extract which caused the death of the Indian at Fort Totten is therefore very evident. The quantity of the material available was not sufficient to determine the degree of purity of the wood spirit which had been used in the preparation of the extract. While wood spirit in its crude form is very poisonous, its poisonous properties are largely due to the impurities contained in it, and not to the methyl alco-

hol, which forms its prominent ingredient. The degree of refinement of the article used, therefore, is important, and it is to be regretted that enough of the material might not have been had to determine this point.

Of interest in this connection is the case of poisoning by drinking lemon extract, which occurred in the last ten days at Ripley, W. Va. An inquiry has been sent there in regard to the name of the physician who attended the case, with the hope of obtaining for your use a statement of the symptoms exhibited by the gentleman who died from the use of lemon extract.

Also of interest are the cases of poisoning which occurred recently at Camp Alger from the use of methyl alcohol. A request has been sent to the Secretary of War for a statement of the medical officers in charge in regard to the symptoms exhibited by the soldiers who had drunk the wood spirit.

Any further information which these inquiries may bring will be forwarded to you promptly on its arrival.

Respectfully,

JAMES WILSON, *Secretary.*

THE SECRETARY OF THE INTERIOR.

A copy of the foregoing letter was transmitted August 24, 1898, to the Department with recommendation that it be forwarded to the Department of Justice in connection with previous correspondence on this subject.

From the special report of Maj. William H. Devine, brigade surgeon, First Division Hospital, Second Army Corps, the following extract relating to cases of poisoning from drinking wood alcohol by soldiers at Camp Alger, referred to in the above letter from the Secretary of Agriculture, has been furnished this office by the Department of Agriculture, viz:

Cases Nos. 3 and 4.—Privates John Shiffen and John J. Lee, Company G, Seventh Ohio Volunteer Infantry, were admitted soon after noon on July 25, 1898, with symptoms of acute poisoning. Both men were able to walk into the ward and admitted, when confronted with the query, that they had, in lieu of whisky, drank wood alcohol diluted with water and sweetened. Shiffen and Lee were but two of a number of privates in this regiment who drank this concoction, but having indulged in it to much greater degree than almost any of the others they were more seriously affected. One of their companions did, however, die in his regimental hospital. The symptoms which these two men presented were gastric pain of an acute character, relieved at times by cessation of the pain; almost persistent vomiting, dryness of the mouth and throat, though the tongue and buccal cavity seemed moist. An inordinate and insatiable desire for water, which is characteristic of poisoning cases of this class, was noticeable in both men, who drank eagerly the water that was given them, only to vomit it a few moments after its reception into the stomach. Temperature of both men normal when admitted and did not rise above 99° at any time. The speech quite coherent, but the eyes with dilated pupils, incapable of recognizing either persons or things only a few feet distant. Shiffen, after an awful struggle, in which he tossed about incessantly, crying all the while for water, gradually sank into unconsciousness, in which state he died at 7.30 p. m. the same day. For an hour before death he was almost pulseless, heart dirotic, and toward the last Cheyne-Stokes breathing.

Lee died at 2 a. m. on the morning of the 26th, after evidencing practically the same effects of the poisoning as did Shiffen. His temperature at 9 o'clock p. m., five hours before death, registered 93.4°, but after the application of hot-water bags rose to 95.3°. It is believed that both men died from an acute nephritis, although no necropsy was permitted. Both men, it was learned, had been drinking the wood

alcohol for two days before admission, but no alarming symptoms made their appearance until the conclusion of thirty-six hours' time. Shiffen died six hours after admission and Lee thirteen hours after.

Treatment: Before admission, strychnia hypodermatically for stimulation and bismuth and egg albumen as a sedative and antemetic; at First Division Hospital, strychnia, hot-water bags, friction, emulcents, etc.

WILLIAM H. DEVINE,
Major and Brigade Surgeon,
Surgeon in charge First Division Hospital.

ALLOTMENTS AND PATENTS.

The progress made in allotment work since the last annual report is as follows:

ON RESERVATIONS.

During the year patents have been issued and delivered to the following Indians:

| | |
|---|-------|
| Sioux of the Crow Creek Reservation, S. Dak..... | 10 |
| Sioux of the Devils Lake Reservation, N. Dak. (including three previously issued, but not delivered) | 96 |
| Mission Indians on the Temecula Reservation, Cal | 85 |
| Omahas, Nebraska | 8 |
| Sac and Fox of the Missouri, Kansas and Nebraska..... | 8 |
| Winnebagoes, Nebraska..... | 5 |
| Chippewas, Lake Superior, Lac Court d'O'Reilles Reservation, Wis. | 18 |
| Yakimas, Washington..... | 1,713 |

Allotments have been approved by this office and the Department and patents are now being prepared in the General Land Office for the following Indians:

| | |
|--|-----|
| Chippewas of Wisconsin, Bad River Reservation..... | 135 |
| Sioux of the Devils Lake Reservation, N. Dak..... | 260 |
| Indians of the Hoopa Valley extension (connecting strip) California. | 478 |

Schedules of the following allotments have been received in this office, but have not been finally acted upon:

| | |
|--|-----|
| Sioux, Rosebud Reservation, S. Dak..... | 844 |
| Chippewas, Lac du Flambeau Reservation, Wis..... | 135 |

The condition of the work in the field is as follows:

Otoe Reservation, Okla.—The schedule of allotments made to the Otoe and Missouri Indians, which had been submitted for Department approval April 6, 1895, was returned November 4, 1897, with instructions that Special Allotting Agent Helen P. Clarke be directed to proceed to the Ponca Agency and, in connection with the agent, adjust existing difficulties in regard to these allotments. Instructions were accordingly submitted for Department approval November 12, 1897, and Miss Clarke soon after entered upon duty. Up to the 30th of July she had made 191 allotments; the number of allotments on the previous schedule was 395. The persistent opposition of a large faction of the tribe to the holding of lands in severalty renders the progress of the work slow and tedious.

Klamath Reservation, Oreg.—The work on this reservation has been continued by Special Agent John K. Rankin, who prior to July 23 last had made 305 allotments, which, added to the 755 made by Special Agent Worden, makes a total of 1,060, or 42 more than the total number of Indians of the reservation as given in the last annual report. Doubtless many absentees have returned to the reservation in order to claim their right to an allotment thereon. It is thought that the field work should be completed at an early date.

By decision of the circuit court of the United States, published in full on page — of this report, the lands in this reservation which are covered by the grant to the State of Oregon have been declared subject to allotment to Indians.

Umatilla Reservation, Oreg.—May 4, 1897, this office instructed Agent Harper, of the Umatilla Agency, to allow certain Indians, some 40 or 50 in number, who were not present when allotments were made to the Indians on the Umatilla Reservation, to make selections of lands to be allotted them there. Agent Harper failed to complete this work before his successor, Mr. Wilkins, was appointed, and May 28 last this office instructed Agent Wilkins to take up the work where Mr. Harper left off and carry it to conclusion. Agent Wilkins has not yet submitted his report.

Lower Brulé Reservation, S. Dak.—It was stated in the last annual report that about 550 of the Lower Brulé Sioux had gone to the Rosebud Reservation, S. Dak., and that it was expected that these Indians would finally be settled on that reservation, south of and near White River, where they had formerly resided. Also that, in view of the removal of these Indians, it would be necessary to readjust the allotments made to the Indians remaining on the Lower Brulé Reservation. Under a clause contained in the Indian appropriation act of 1897, Inspector James McLaughlin was sent to South Dakota to negotiate agreements between the Lower Brulé and Rosebud Indians for the surrender by the latter to the former of the lands selected by the Lower Brulés south of White River.

Agreements were concluded by him by which the differences between those two bands of Indians were adjusted, and a bill to ratify these agreements was drafted by this office and introduced into the Senate (Senate bill 4623, Fifty-fifth Congress, second session), and was favorably reported by the Senate Committee on Indian Affairs. A full history of this matter, with agreements, reports, council proceedings, map, etc., may be found in House Doc. No. 447, Fifty-fifth Congress, second session. For further information, see also Senate Report No. 1266 of the same session.

When these agreements shall have been ratified by Congress, steps will be taken to readjust allotments on the Lower Brulé Reservation, and also to make allotments to the Lower Brulés located on the Rosebud Reservation.

Rosebud Reservation, S. Dak.—The work on this reservation has continued during the year under the direction of Special Agent William

A. Winder, who, up to July 30, had made 2,305 allotments. Special Agent John H. Knight has recently been assigned to assist him, in order that the progress of the work may be hastened. There remain to be made some 1,200 allotments.

Sioux ceded lands.—May 6, 1896, Special Allotting Agent William A. Winder transmitted to this office a schedule of 15 allotments to the Sioux residing or entitled to reside on the Old Ponca Reservation, Nebraska Strip, Nebr., embracing the following families: Barker, Whiting, Anderson, and Lewis. The schedule was forwarded to the Department June 7, and was approved June 10, 1898, with instructions that patents issue.

March 10, 1897, Allotting Agent Winder transmitted to this office a schedule of 10 allotments made to Sioux residing or entitled to reside on the Sioux ceded lands in South Dakota. This schedule, which embraced two families—Scissons and Boucher—was transmitted to the Department June 9, 1898, and was approved on the 11th of that month, with instructions that patents issue in the names of the several allottees. On August 4, 1898, the Commissioner of the General Land Office transmitted the patents to this office, and they will be transmitted to the United States Indian Agent at an early date for delivery to the parties entitled.

June 28, and August 4, 1898, Allotting Agent Winder was instructed in regard to making allotments to an Indian named John Bob Tail Crow and his children on the Sioux ceded lands. This tract, covering 1,251 acres, was occupied and claimed by them when the Sioux agreement of March 2, 1889, took effect by the proclamation of the President dated February 10, 1890. Shortly afterwards several white men filed homestead entries upon these lands, and a contest in behalf of the Indians was initiated before the local land office. By appeal the case came before the General Land Office, where a representative of this office made a personal argument in favor of the Indians, based upon the evidence submitted. From the Land Office the case was again appealed, to the Secretary of the Interior, who sustained the decision of the Commissioner of the Land Office in favor of the Indians. Again the Indians nearly lost their lands by the attempt of the white men to purchase them for a paltry consideration, which this office refused to allow. The lands were finally allotted to the Indians, and schedule of allotment was forwarded to the Department for approval on the 8th of this month.*

Uncompahgre Reservation, Utah.—Owing to the early beginning of winter, the commission appointed under the act of June 7, 1897 (30 Stats., 62), to make allotments to Uncompahgre Utes was unable to make any allotments on the Uncompahgre Reservation prior to the 1st of April, 1898; and on that day all the lands therein, except those containing gilsonite, asphalt, elaterite, or other like substances, became

*These allotments were approved by the Department, September 28, 1898.

open for location and entry under all the land laws of the United States. A number of allotments were, however, made to the Uncompahgres on the Uintah Reservation.

As soon as the weather permitted the commission commenced the work on the Uncompahgre Reservation. May 19, 1898, the chairman was instructed that where Indians were in actual possession of lands and had improvements thereon, such lands, whether surveyed or not, should be allotted to them to the extent of the quantity to which they were respectively entitled.

The commission reports that it has made 283 allotments to Uncompahgres, 75 being on the late Uncompahgre Reservation and 208 on the Uintah, except that in a few allotments tracts were selected from both reservations. There are about 300 Uncompahgres yet to be allotted.

June 16, 1898, in accordance with the request of the Commissioner of the General Land Office, the chairman was instructed to furnish the register and receiver at Salt Lake City with a list of the allotments already made on the former Uncompahgre Reservation, and of such as the commission should make thereafter as soon as they should be completed, in order that entries might not be allowed upon lands occupied by and in possession of Indians.

From informal information received from the commission it is believed that it has made many allotments to Indians who were not in occupation of the lands allotted, but were unwilling to remove to the Uintah Reservation. I doubt whether there is any authority of law for making such allotments, and am of the opinion that there is also some question as to whether even the Indians in possession of lands could lawfully be allotted after the 1st of last April. To remove all doubt it is suggested that Congress should be asked to legalize the allotments on the Uncompahgre Reservation made after the 1st day of April, 1898. As there appears to be no demand for the lands in the reservation except those containing asphaltum, etc., which are not open, there would appear to be no objection to such legislation.

Yakima Reservation, Wash.—Upon the report of Agent Lynch, of the Yakima Agency, that small bands and families of Indians were scattered over the central part of the State of Washington, who rightfully belonged upon the Yakima Reservation, Special Allotting Agent William E. Casson was instructed, November 1, 1897, to proceed thither for the purpose of making allotments to such of these Indians as could be persuaded to locate on the reservation. July 30 he reported that he had made 471 allotments, and on the 31st that he expected to complete the work on the 20th of August.

Shoshone Reservation, Wyo.—John T. Wertz, of Omaha, Nebr., is engaged in completing the Shoshone allotments. Up to July 23, 1898, he had made 78. His predecessor, John W. Clark, of Georgia, had made 1,310 allotments on that reservation. The completion of this work has been somewhat retarded by the delay in making the official surveys of certain townships and fractional townships necessary for allotments.

According to the last annual report there are on this reservation 1,687 Indians—Shoshones, 872; Arapahoes, 815. As 1,388 allotments have been made there are 299 yet to be made, provided all the remaining Indians conclude to accept them.

OFF RESERVATIONS.

In last year's report I referred to the fact that Special Allotting Agent Kinnane and his successor, George A. Keepers, had been engaged in the investigation of alleged fraudulent Indian allotment applications in the States of Minnesota and Wisconsin. It was charged that such applications had been made by mixed bloods in order to obtain the timber and for speculative purposes, rather than for agriculture and grazing. Agent Keepers has continued his investigations and ascertained that many applications were made for the purpose indicated and on that account he has recommended their cancellation. In transmitting his report and the accompanying testimony to the General Land Office, this office has uniformly concurred in his recommendations. The Land Office has already finally canceled many of the allotment applications, and others are held for cancellation. The respective applicants have been notified of such action by the local land officers and will be given an opportunity, at a hearing ordered for such purpose, to establish their rights, if they have any, to the lands involved.

Some twelve or fifteen applications were found to have been made by full bloods in good faith for lands for homes.

Originally there were about 400 of these alleged fraudulent applications to be investigated, located principally within the Duluth, Minn., land district. January 18, 1898, this office called upon Agent Keepers for a report of the number of applications then in his hands for investigation, and January 31, 1898, he replied that he had some 175 then on hand and that it was often very difficult to find the Indians and obtain their testimony, especially as the Indians whose applications were then on hand were widely scattered, some of them living in what is known as the "Rainy Lake Country," others in the southern part of Minnesota, and still others in different parts of Wisconsin. He further stated that he was pushing the investigation as rapidly as possible and that as he investigated each application he would report upon it.

In my last report I stated that William E. Casson, of Wisconsin, was instructed August 4, 1897, to proceed to Burns, Oreg., for the purpose of making allotments to Indians in the Burns local land office district and adjacent localities. In that district he made 110 allotments to Piutes, a remnant of the tribe which formerly occupied the Malheur Indian Reservation. Schedule of these allotments was submitted to the Department May 14 and was approved May 17, 1898, and a duplicate thereof was transmitted to the General Land Office with request that patents issue in the names of the several allottees, and when issued that the same be sent to this office for delivery to the parties entitled.

Upon completion of his work in the Burns district, Oregon, Special Agent Casson was instructed, as has already been stated, to proceed to the Yakima Reservation, Wash., for the purpose of completing allotments to the Indians there, and also of making allotments to non-reservation Indians located upon the public domain in the southern portion of that State. In connection with his reservation work he has given some attention to Indian homesteads in contest and to nonreservation-allotment matters in that section.

June 18, 1898, this office transmitted to the Department a schedule of allotments to nonreservation Indians residing in Susanville, Cal., land district, the allotments being numbered from 766 to 927; but Nos. 884 to 907 were in conflict, and Nos. 783, 784, 785, and 808 had been canceled. June 21, 1898, this schedule was approved (with the exceptions noted) by the Acting Secretary of the Interior, and duplicate thereof forwarded to the General Land Office in order that patents might issue in the names of the several allottees, the same to be transmitted to this office for delivery to the parties entitled.

These, with the 110 allotments made in the Burns district, Oregon, make 272 allotments to nonreservation Indians which have been made and approved since last annual report. Other applications are now on file in this office which will receive early consideration.

The number of allotment applications received by this office by reference from the General Land Office is not quite so large as usual. It is to be inferred from this that most of the Indians located upon the public domain who have knowledge of their rights under the general allotment act, as amended, and of the method of procedure to secure an allotment, have made application for lands. However, there are yet many Indians living upon the public lands who have not applied for allotments, and if they are to be advised of their rights and assisted in making applications it will be necessary to send some Government official among them for that purpose. Allotting Agent Keepers will be assigned to this duty upon the completion of the work already assigned him, and perhaps Allotting Agent Casson, unless it should be deemed important to keep the latter upon reservation allotment work.

INDIAN HOMESTEADS.

As heretofore reported to the Department, a few Indians have made entries under the Indian homestead laws of 1875 and 1884. Such entries were made principally before the approval of the general allotment act of February 8, 1887. Indian entrymen are slow in making final proof and obtaining title to their lands, and thus it frequently happens that white men institute contests against Indian homestead entries. The usual number of such cases have received consideration by this office during the year. As stated in my last report, it is difficult to protect the Indian in his rights, because he is ignorant and is unfamiliar with the public land laws; yet in many cases the homes of Indians have been saved to them.

Winnebago Homesteads in Wisconsin.—In the annual reports of this office for the years 1895, 1896, and 1897 the status of the homestead entries and selections by the Winnebago Indians of Wisconsin, the laws under which they were made, and the necessity for their investigation were set forth in detail. It is gratifying to state that all except 8 of these original entries and selections, in number 680, have been finally disposed of. Of these, 7 are in a fair way for final disposition, the Indians having paid their fees for final proof. The Indian claiming the eighth, being absent from the State, has taken no steps to complete his entry.

Since the investigation of the original Winnebago homestead entries was completed, in 1896-97, about 40 other Winnebago Indians have taken up homesteads under the act of 1875 (18 Stats., 420), and the Winnebago act amendatory thereof approved January 18, 1881 (21 Stats., 316). These entries were made by the Indians in order that they might hold their rights to annuities, as provided in said acts. Final proof of these entries can not be made, of course, by the Indians until the proper time has elapsed under the public-land laws. Such proof should be completed within the statutory period—seven years from date of entry.

IRRIGATION.

Gila Bend Reservation, Ariz.—Nothing has been done in the matter of supplying this reservation with water since the date of my last annual report, neither has any information in addition to that given therein been obtained except a report of Special Allotting Agent Claude N. Bennett, forwarded to the Department September 4, 1897, which gives a brief description of the different canals on the reservation, all of them at present of little or no use to the Indians. On the 7th of this month the office recommended that Inspector Graves be instructed to investigate the matter and report the most feasible plan for supplying these Indians with water.

Navajo Reservation, Arizona and New Mexico.—April 9, 1898, George Butler, the superintendent of irrigation for the Navajoes was advised that the fund specially appropriated by Congress for Navajo irrigation purposes would be about exhausted at the close of the fiscal year which ended June 30 last, but that possibly \$5,000 might be taken from the general irrigation fund for his work during the fiscal year 1899. He was directed to submit a plan showing the character of the work which he could probably accomplish with that sum and the benefits which would result, and to submit the proposed plans to the acting agent for the Navajoes for his consideration.

July 5, 1898, the superintendent, with the hearty approval of the agent, recommended the expenditure of \$3,500 in the completion of the Red Lake system of irrigation. This comprises a reservoir containing 618.5 acres, known as the Red Lake Reservoir, and the ditches leading therefrom, which, together with Black Creek and the ditches therefrom, are planned to irrigate 995.4 acres of land divided into five separate tracts.

Superintendent Butler also recommended that, after completing this system, the remainder of the year and of the money be devoted to the numerous Indians who come to him from all parts of the reservation to ask aid in their small projects for the construction of small storage ponds and ditches to water from 10 to 15 acres. July 28 the Department was asked to authorize the expenditure of \$3,500 for the Red Lake system, but it decided to authorize the expenditure of the \$1,500 on small ponds and ditches and to delay action in regard to the Red Lake system until after it should have been examined by Inspector Graves, who has general supervision of Indian irrigation.

Southern Ute Reservation, Col.—The subject of irrigation for the Southern Utes is taken up under the head of Southern Utes on page 73.

Fort Hall Reservation, Idaho.—November 5, 1897, Lieutenant Irwin, in charge of the Fort Hall Agency, reported that the Idaho Canal Company, in compliance with the terms of its supplemental contract of October 2, 1896, had completed the two diverting dams across the Blackfoot River, and had delivered the second 100 cubic feet of water per second at the point designated in said contract. December 18, 1897, he reported that liens had been filed against the company, amounting in the aggregate to some \$13,944. December 28, 1897, the Department authorized the payment to the company of the second installment due under the terms of its contract being \$37,500, less \$15,000 to be retained until the company should file satisfactory evidence that the liens and indebtedness had been discharged. January 18, 1898, the Department authorized this office to cause an account to be stated in favor of the company for the aforesaid sum of \$15,000, Lieutenant Irwin having informed the Department that the claims against the company had been settled, excepting for small amounts which could be settled at any time.

Previous to this, a change having been made in the officers of the company, and one of the sureties on its bond having become bankrupt, the company gave a new bond, which was approved by the Department December 13, 1897.

April 12, 1898, the office made a report on a communication from J. H. Brady, of St. Louis, Mo., dated March 18, 1898, in which he stated that he had entered into a contract with the Idaho Canal Company to complete its canal to Ross Fork Creek, according to the terms of its contract with the Government, and that he expected to do so, but that the financial condition of the company led him to believe that it would be unable to pay him for this construction until such time as it should receive the third and final payment of \$22,500 from the Government. He therefore suggested that if it was the desire of the Department to have the contract completed at once or as soon as practicable he was ready and willing to do the work if the Government would so change the contract with the company as to enable it to be paid the \$22,500 as soon as the work should be completed and approved by the Department, instead of waiting for the expiration of a year from the date of the

second payment, according to the terms of the contract. The office reported that it was decidedly opposed to any further modification in the terms of the contract.

April 15, 1898, Lieutenant Irwin reported that during the two preceding months liens and suits aggregating \$16,887.64 had been filed against the company and that a mortgage for \$50,000 had been given on the portion of the property known as the Government Canal; that it had also a bonded indebtedness of \$300,000, and that on March 29, 1898, the affairs of the company had been placed in the hands of a receiver—A. B. Scott, its former secretary. He reported these facts for such action as might be thought necessary to insure full compliance by the company with the terms of its contract, fearing that such complications might injuriously affect the interests and rights of the Government by interfering with the continuous delivery of water upon the reservation. This information was submitted to the Department April 22, 1898.

In accordance with Department instructions Agent Irwin was directed, May 13, 1898, to make an investigation and ascertain the status of the several liens and whether any of them had been satisfied. He was also directed to have the two contracts of the company recorded in the proper county records, which has been done.

July 7, 1898, C. A. Warner, who had succeeded Lieutenant Irwin as agent, reported that the Idaho Canal Company was not doing any work on the reservation toward the fulfillment of its contract and did not seem to be making any preparation to begin the same in the near future. July 26, 1898, the office reported the above information to the Department with the recommendation that Inspector W. H. Graves be sent to the Fort Hall Reservation to investigate the condition of the company and make recommendation as to the best course to be pursued. It seems probable that legal steps will have to be taken to protect the interests of the Government and the Indians.

Crow Reservation, Mont.—March 10, 1898, W. H. Graves, superintendent in charge of the construction of irrigation works on this reservation, reported that the ditch on the east side of the Big Horn River was not only a large and expensive undertaking, but would easily take rank with the most extensive and best constructed irrigation works in the country and would supply an unusually fine body of valley land, about 45,000 acres of the best portion of the Crow Reservation; that about 12 miles of the upper portion of the canal was finished, or very nearly so, with a head gate well under way; that the expenditures up to that time had been \$175,156.35, and that to complete it would require the sum of \$138,500. Speaking of the good effect upon the Indians resulting from their employment on the ditches, he said:

In payment for lands ceded to the Government they receive semiannually in cash about \$6 each. To receive this they are required to go from the respective districts throughout the reservation in which they live to the agency and there remain until the payments are made. To do this many of them travel long distances, and the

expense is often greater than the amount they receive. Most of them spend the money they receive immediately at the trader's store for useless and unserviceable trifles. The money they receive from this source is of little, if any, value whatever to them. They realize this and many of them working on the irrigation ditches will not take the time nor trouble to go for their money, preferring to leave it or give it to others. On the other hand, the money they receive as wages for their labor on the ditches, the money they earn, they regard much more highly and expend with much more care and discretion. They receive it in sums sufficiently large to enable them to accomplish some desired end. Scores of them have by this means supplied themselves with good horses, wagons, and harness. Some have bought their own farm machinery and a few have built their own houses.

April 16, 1898, Capt. G. W. H. Stouch, acting agent in charge of the Crow Agency, forwarded to this office a petition signed by some 113 adult males, representatives of the Crow tribe, addressed to the Department as follows:

The undersigned, adult males and representatives of the Crow tribe of Indians, of Montana, assembled in council at St. Xavier Mission, on the Crow Indian Reservation, Mont., for the purpose of discussing the welfare of the Crow tribe, respectfully represent:

That the irrigating ditches now under construction under the direction of the superintendent of the Crow Indian Survey, lying east of the Big Horn River, on the Crow Reservation, are now nearly completed. The work has been conducted in the most thorough and substantial manner under a competent superintendent, and a very large sum of money has been spent thereon. A comparatively small sum will now complete these ditches so that they can be used by us, and that water can be taken out on our land. As the ditches are now they are of no use to us whatever. All work has been stopped for lack of money, and unless you can help us all our work of the last few years will be thrown away. With sufficient water we can raise large crops of hay and grain and support ourselves and our families.

The Government ration issues formerly issued to us by the agent have been stopped. The troops have been taken away from Fort Custer, and we have now no market for the wild hay which can be raised without water, and which we formerly sold to the soldiers. If you can not help us to get money, so that we can water our lands and raise crops, we shall soon be without anything to eat; and it will then cost the Government more money to feed us during this year and next year than it would now take to finish our ditches, so that we can feed ourselves. We ask you to take enough money, out of any moneys of any sort belonging to the Crows, to complete these ditches, or one of them.

We have worked hard and have tried to do like the whites, and to support ourselves and our families. We have sent our children to school, and have tried to do everything that the agent and the superintendent of the ditches have asked. If you can help us a little now that we so much need it, the Crows will always remember you as their best friend.

Some \$20,000 remained available for the work, and Superintendent Graves was instructed, April 19, 1898, to use this fund to place the ditch in the best possible condition to withstand the deterioration that would necessarily follow the suspension of the work for a considerable period.

April 26, 1898, the office recommended legislation authorizing the diversion of \$120,000 from the annuity fund of the Crow Indians, to be expended under the direction of the Secretary of the Interior in the completion of the irrigation system on their reservation, but no action

was taken thereon by Congress. Believing that this is a highly important work and that the expenditure of their funds for its completion will result in much more benefit to the Indians than their use in any other way, I shall, at the beginning of the next session of Congress, renew that recommendation.

When the work is completed the Indians can be allotted their lands in severalty, and they will doubtless be willing to cede a considerable portion of their reservation.

Mr. Graves having been recently appointed an inspector, Mr. W. B. Hill has been placed in charge to continue the work under instructions of April 19 to his predecessor.

Fort Belknap Reservation, Mont.—June 7, 1898, the Department granted authority for the Fort Belknap agent to expend not exceeding \$32,210 in the construction of a system of irrigation known as system No. 1 and in repairs to the Peoples Creek system. The Department also stated that it appeared that the extension of the Peoples Creek system, at an estimated cost of \$2,970, was very much needed, and said that if work on the extension could be carried on while that on system No. 1 was in progress it might be included in the expenditure authorized. The Department also suggested the advisability of considering the agent's recommendation that another system (No. 2) be constructed immediately. After correspondence with Agent Hays the office recommended, July 27, 1898, that authority be granted for the construction of system No. 2 at a cost not to exceed \$34,963, which authority was given September 12. These expenditures are all payable from funds belonging to the Indians.

Fort Peck Reservation, Mont.—In a report upon the Fort Peck Agency dated August 4, 1897, Inspector McConnell called attention to the absolute necessity for an extensive system of irrigation on this reservation if the Indians were ever to become self-supporting. As the Indians had no funds of their own the office recommended, December 8, 1897, that Congress be asked to appropriate the sum of \$140,000 for the construction of a system of irrigation on the Fort Peck Reservation; but favorable action was not taken by Congress. It is represented that the Indians are desirous of ceding a portion of their reservation so as to obtain funds for irrigation, but it is doubtful if there is any existing authority of law for negotiating with them. The matter will be further considered with a view of obtaining such authority if it be deemed necessary and advisable.

Miscellaneous.—The bulk of the appropriation for irrigation for the fiscal year 1898 has been expended as follows:

| | |
|---|---------|
| Southern Ute, in Colorado..... | \$8,500 |
| Uintah, in Utah..... | 9,210 |
| Wind River, in Wyoming..... | 1,525 |
| Yakima, in Washington..... | 1,946 |
| Flathead, in Montana..... | 3,598 |
| Pyramid Lake and Walker River, in Nevada..... | 900 |
| Navajo, in Arizona..... | 500 |
| Western Shoshone, in Nevada..... | 500 |

It is believed that the appointment of an inspector "competent in the location, construction, and maintenance of irrigation works," which is provided for in the last Indian appropriation bill, will result in a much more intelligent and economical disbursement of irrigation funds than has hitherto been possible. I am also of the opinion that the Department is fortunate in securing for this position the services of an engineer so thoroughly competent, reliable, and honest as Mr. W. H. Graves, whose services as superintendent of the irrigation construction on the Crow Reservation for the last seven years have received the highest commendation.

LOGGING ON RESERVATIONS.

White Earth Agency, Minn.—From time to time under the act of February 16, 1889 (25 Stats., 673), authority has been granted by the President for the Indians of the White Earth and Red Lake diminished reservations to cut and sell dead timber standing or fallen on those reserves. In my last annual report a statement was made of the logging operations of the Indians during the season of 1896-97 under the authority granted by the President on September 24, 1896.

A clause in the Indian appropriation act of June 7, 1897 (30 Stats., 90), provides for the granting of authority by the Secretary of the Interior for the Indians in Minnesota to sell dead and down timber as follows, viz:

The Secretary of the Interior may, in his discretion, from year to year, under such regulations as he may prescribe, authorize the Indians residing on any Indian reservation in the State of Minnesota, whether the same has been allotted in severalty or is still unallotted, to fell, cut, remove, sell, or otherwise dispose of the dead timber, standing or fallen, on such reservation or any part thereof, for the sole benefit of such Indians; and he may also in like manner authorize the Chippewa Indians of Minnesota who have any interest or right in the proceeds derived from the sales of ceded Indian lands or the timber growing thereon, whereof the fee is still in the United States, to fell, cut, remove, sell, or otherwise dispose of the dead timber, standing or fallen, on such ceded land. But whenever there is reason to believe that such dead timber in either case has been killed, burned, girdled, or otherwise injured for the purpose of securing its sale under this act, then in that case such authority shall not be granted.

Under this provision the Commissioner of the General Land Office, who has control of the ceded Chippewa lands in Minnesota, prescribed certain regulations to govern the logging operations of the Indians on the ceded lands during the season of 1897-98, which were approved by the Department September 28, 1897. It is ascertained from communications received from the General Land Office, and the accounts of the United States Indian agent at the White Earth Agency for the fourth quarter, 1898, that timber to the value of \$253,304 was cut and sold during the season. Of this amount 15 per cent was deducted for stumpage and for the purpose of paying certain expenses incident to the logging operations.

October 30, 1897, the Department granted authority under the above-quoted provision of law for the sale of dead timber on the diminished White Earth and Red Lake reservations, under regulations previously in force to govern the logging operations of those Indians. Under this authority the office approved twelve contracts for the sale of dead timber on the diminished White Earth Reservation aggregating 15,500,000 feet for \$77,500, and three contracts for timber on the diminished Red Lake Reservation aggregating 4,500,000 feet for \$22,500, aggregating \$100,000 for the total amount of timber contracted for. It appears, however, from Agent Sutherland's accounts for the fourth quarter, 1898, that some of the Indians operating on the diminished reservations cut timber in excess of the amount called for by their contracts, so that the total value of all the timber cut on the two reservations was \$110,596.32. Of this amount 10 per cent was deducted for stumpage charges and has been deposited in the Treasury as miscellaneous receipts, class three, for the benefit of the Chippewa Indians of Minnesota.

The whole amount thus deposited by the agent on account of timber operations on both ceded lands and diminished reservations was \$46,246.38, and the total value of timber sold by the Chippewa Indians of Minnesota was \$363,900.31.

La Pointe Agency, Wis.—The logging on the Lac du Flambeau Reservation by J. H. Cushway & Co., under the various authorities heretofore granted, has proceeded without incident of note.

Very little logging has been done on the Lac Courte d'Oreilles Reservation, nearly all the timber having been cut during the previous season. Such contracts as have been made between Mr. Turrish, the authorized purchaser on that reservation, and some of the allottees were for the purpose of gathering up the scattered timber remaining on only a very few allotments.

No change has occurred in logging matters on the Bad River Reservation, except so far as they have been affected by the relinquishment, by 24 allottees, of old allotments from which the timber had been burned and the making of new allotments to them, as authorized by Department letter of September 14, 1897. The list of new allotments was reported by Captain Scott, the acting agent, on December 31, 1897; was forwarded to the Department with the recommendation of this office on February 11, 1898, and was approved by the President February 23, 1898. The patents therefor were issued on June 13, 1898, and were transmitted to S. W. Campbell, the new agent at La Pointe Agency, for delivery to the allottees, with letter from this office dated August 5, 1898. Contracts were made by the allottees with Mr. Justus S. Stearns, the authorized purchaser of timber on the Bad River Reservation, for the sale of timber on these new allotments, and the President having, under date of April 29, 1898, authorized it, these contracts were approved by this office.

In my last annual report I made a statement of the steps taken looking to the sale by the Indian allottees of the Red Cliff Reservation of

the timber on their allotments, and quoted the regulations prescribed by the Secretary of the Interior to govern the sale under an authority granted by the President on July 28, 1897. Under those regulations Captain Scott advertised for bids for the purchase of the timber. In answer to this advertisement (which was inserted in several newspapers) four bids were received as follows, viz:

Frederick L. Gilbert (estimated on the quantity of timber of different kinds supposed to be on the allotments), \$416,662; D. J. Arpin and William Scott, \$266,447.50; Charles Crogster & Co., \$262,300.37; O. A. Ritan, \$224,300.

The prescribed regulations required that all timber cut upon the reservation should be sawed in a mill to be erected upon the reservation. In his bid Mr. Gilbert proposed a modification of those regulations to the extent of permitting the immediate removal from the reservation, for manufacture outside, of a considerable quantity of burnt timber which had been cut by the Indians during the logging season of 1896-97 and which was at the time in the lake at the mouth of the Red Cliff River. On his part he agreed to saw at the mill, before the expiration of three years, a like quantity of timber cut from lands outside the reserve. September 23, 1897, the Department accepted Mr. Gilbert's bid, and on the same date this office advised Captain Scott of its acceptance. Mr. Gilbert having filed a bond in the penal sum of \$50,000, with the American Surety Company of New York as surety, which was approved by the Department October 21, 1897, he was permitted to proceed with the making of his contracts and the erection of his mill. It is understood that the mill has been erected and is now in working order. Seventy contracts for the sale of timber have been approved.

I should add that the regulations of July 29, 1897, overlooked the fact that a number of the allottees were minors, and consequently no provision was made for the sale of the timber on their allotments. In order to meet the situation the Department, June 13, 1898, modified these regulations by adding to paragraph 3 the following:

And provided, That where an allotment belongs to a minor the timber thereon may be sold as provided in these regulations under contract executed by the father of such minor, if he be alive, and in case he be dead then by his mother, and if both the father and mother of such minor be dead his timber may be sold under a contract executed by his legal guardian, if one has been appointed by the courts, and if no guardian has been appointed the Indian agent shall be authorized to make such contract: *And provided further*, That the proceeds of the sale of timber on allotments of minors shall be held by the agent, as other moneys received by him on account of the sale of timber on the Red Cliff allotments, to the credit of such minors, respectively, and shall not be subject to draft until said minors shall have reached the age of 21 years, respectively, except that the Commissioner of Indian Affairs shall have the power to authorize the use of such proceeds of the sale of the timber in special cases if, in his judgment, the facts and circumstances in such special cases warrant the same.

The agent shall keep, in a well-bound book to be provided for the purpose, separate accounts with each Indian minor for whom he may so receive funds, in which accounts he shall charge himself with all sums received, giving dates, from whom

received, amount received, and quantity of timber, and take credit upon proper vouchers for all authorized disbursements. And at the end of each quarter, with his regular quarterly cash accounts, but separately and disconnected therefrom, he shall render an account showing correctly and in detail these receipts and disbursements. And upon each transfer of the agency the outgoing agent shall pay over to his successor all such funds for which he may then be responsible, taking proper receipts therefor to be filed with his accounts. And his successor shall charge himself with the funds so received and account for the same as herein provided.

June 17, 1898, Captain Scott was informed of this amendment of the regulations and instructed to permit the making of contracts for the sale of the timber on the allotments of minors in accordance therewith.

Menomonee Reservation, Wis.—August 11, 1897, the Department, on recommendation of this office, granted authority for the agent of the Green Bay Agency, Wis., to employ Menomonee Indians to carry on logging operations on their reservation for the season of 1897–98, under the provisions of the act of June 12, 1890 (26 Stat. L., 146). They were to cut and bank on the rivers and tributaries of the reservation 16,000,000 feet of pine timber, or so much thereof as might be practicable, under the rules and regulations that governed similar operations the previous year.

Acting under this authority, the Menomonee Indians, under the direction of Agent George, cut and banked 10,135,000 feet of logs on the Wolf River and tributaries and 5,865,000 feet of logs on the Oconto River, and on February 12, 1898, the agent was authorized to advertise the logs for sale. March 15, Agent George submitted an abstract of bids received, and March 21 they were submitted to the Department with the recommendation that the following be accepted: Bid of Stephen Radford, of Oshkosh, Wis., for 10,135,000 feet of logs on Wolf River and tributaries, at \$12.03 per 1,000 feet, and bid of Perley, Lowe & Co., of Chicago, Ill., for 5,865,000 feet of logs on south branch of Oconto River, at \$13.60 per 1,000 feet. The Department, March 23, 1898, accepted the above bids, and the sale of logs to them was confirmed. This average of \$12.81½ per 1,000 feet is an increase of \$2.61½ per 1,000 feet over that for the season of 1896–97.

The State of Wisconsin, April 13, 1898, attached all the logs cut and banked on the south branch of the Oconto River, claiming that of the 16,000,000 feet of logs cut on the reservation during the year a large amount had been cut from lands belonging to the State. Messrs. Perley, Lowe & Co. immediately furnished a bond of indemnity in the sum of \$25,000, in order that they might not be embarrassed in disposing of the logs which they had bought. June 15, 1898, Mr. E. G. Mullen, chief inspector of State lands for Wisconsin, presented the claim of the State of Wisconsin for damages by reason of the cutting and removal of certain pine timber from the swamp lands within the limits of the Menomonee Indian Reservation, which were ceded to that State on November 13, 1865, Patent No. 8. This statement was transmitted to the Department June 16, 1898, and next day the Department directed

that a commission, to be composed of the United States Indian agent at Green Bay Agency, the superintendent of logging, a scaler, an agent of the Department, and agents of the State of Wisconsin, of Perley, Lowe & Co., and of Seymour W. Hollister of Oshkosh, Wis. (purchasers of the logs from Perley, Lowe & Co.), go upon the lands described, for the purpose of ascertaining the exact quantity of timber cut and removed which was involved in this claim. July 13, 1898, the report of that commission was transmitted to the Department, the commission certifying: "A careful examination has been made with respect to the illegal cutting of timber, and it is found that there has been cut and removed from lands belonging to the State of Wisconsin 1,044,500 feet, board measure, of pine timber and logs."

It has been the custom in the vicinity of the agency, where a trespass of cutting timber has been committed that was not malicious or willful, to settle with the owner of the timber for what the standing trees or stumpage were worth. In view of this fact, it was recommended as the most equitable procedure that, as the standing trees or stumpage on the lands claimed by the State were worth about \$8 per 1,000 feet, the State of Wisconsin should settle on that basis, if it had a just claim. The Department, July 25, 1898, approved the report of the commission as to the amount of pine timber and logs cut and removed from the lands belonging to the State of Wisconsin within the Menomonee Indian Reservation, and also approved the recommendation that the trespass should be settled upon the basis of \$8 per 1,000 feet, the net value of the timber. July 27, 1898, the Indian agent at Green Bay Agency was directed to require Perley, Lowe & Co. to deposit the sum of \$25,000, being the balance of the amount due on their contract for the purchase of logs on the Menomonee Indian Reservation, their bond of indemnity to be returned to them after making such deposit. On the same date the chief inspector of lands of the State of Wisconsin was informed of the approval of the report of the commission as to the amount of the timber cut and removed, and also of the authorization by the Department of the settlement of the trespass upon the basis of \$8 per 1,000 feet, and the chief inspector was requested to take the necessary steps to have the State of Wisconsin present a claim, through its proper officers, for the payment for 1,044,500 feet of pine timber and logs improperly cut and removed from lands belonging to the State.

LEASING OF INDIAN LANDS.

For the terms on which Indian lands can be leased, see the annual report for 1897 (p. 40).

UNALLOTTED OR TRIBAL LANDS.

Since the date of the last annual report the following leases of tribal lands have been approved:

Crow Reservation, Mont.—In the annual reports for 1895–96 will be found a list of six grazing leases on this reservation, five of them for the

period of five years from June 30, 1895, and one for the period of four years from June 30, 1896. Since that date one additional lease has been executed in favor of Paul McCormick for range No. 3 for the period of five years from January 1, 1898. Estimated area, 199,000 acres; annual rental \$6,984.90. The lease was approved July 20, 1898. It was executed in lieu of a lease in favor of Portus B. Weare covering the same land.

Kiowa and Comanche Reservation, Okla.—Twenty-three grazing leases and one grazing permit have been executed, as follows:

| Lessee. | Acres. | Term. | Annual rent. |
|--------------------------------|----------|---------------|---------------|
| Grazing leases: | | | |
| | | <i>Years.</i> | |
| Samuel B. Burnett | 306, 789 | 1 | \$30, 678. 90 |
| William F. Waggoner..... | 592, 610 | 1 | 59, 261. 00 |
| Jay H. Stine | 25, 432 | 3 | 2, 543. 20 |
| James H. Nail | 90, 658 | 3 | 9, 065. 80 |
| Hezekiah G. Williams..... | 24, 078 | 3 | 2, 407. 80 |
| Thomas F. Woodward..... | 5, 000 | 3 | 500. 00 |
| William A. Wade | 105, 892 | 1 | 10, 589. 20 |
| Asher Silberstein | 30, 883 | 3 | 3, 088. 80 |
| Eli C. and Joseph D. Sugg..... | 333, 431 | 3 | 33, 343. 10 |
| John W. Light | 70, 000 | 1 | 7, 000. 00 |
| Frank B. Farwell | 100 | 3 | 10. 00 |
| Peo Medrano | 200 | 3 | 20. 00 |
| Hezekiah G. Williams | 10, 000 | 1 | 1, 000. 00 |
| Emmet Cox | 3, 640 | 3 | 364. 00 |
| Ridgely & Brown | 8, 500 | 3 | 850. 00 |
| George W. Conover | 6, 000 | 3 | 600. 00 |
| John W. Light | 77, 000 | 1 | 7, 759. 20 |
| Thomas B. Biggers | 12, 000 | 3 | 1, 200. 00 |
| James Myers | 15, 000 | 3 | 1, 500. 00 |
| William F. Deitrich | 2, 000 | 3 | 200. 00 |
| Roswell F. Halsell..... | 59, 581 | 1 | 5, 958. 10 |
| Giles H. Connell..... | 97, 696 | 3 | 9, 769. 00 |
| Thomas S. Moffett..... | 9, 168 | 3 | 939. 72 |
| Grazing permit: | | | |
| Asher Silberstein..... | 2, 000 | a 9 | 200. 00 |

a Months.

The last two leases, to Connell and Moffett, have not been acted upon by this office.

Wichita Reservation, Okla.—Twelve grazing leases have been executed and approved, each for the term of one year from April 1, 1898, as follows:

| Lessee. | Acres. | Annual rent. |
|---------------------------|---------|--------------|
| Walter G. Williams | 11, 000 | \$900. 00 |
| Robert Curtis | 1, 500 | 1, 200. 00 |
| Thad Smith | 4, 000 | 320. 00 |
| Charles B. Campbell | 8, 256 | 660. 48 |
| Lyon F. Bingham | 32, 000 | 2, 140. 00 |
| Willis A. Halloway | 57, 400 | 3, 444. 00 |
| Edward F. Mitchell..... | 6, 000 | 360. 00 |
| Reuben M. Boreland | 22, 500 | 900. 00 |
| Walter D. Oliver..... | 50, 000 | 2, 000. 00 |
| John B. Kelsey | 15, 000 | 600. 00 |
| Lyon F. Bingham | 6, 500 | 290. 00 |
| Charles S. Williams | 5, 000 | 250. 00 |

As certain portions of the Wichita Reservation could not be leased under regular leases, so far as practicable informal permits were issued for these lands, as follows:

| Permittee. | Number of stock. | Time. | Total payment. |
|-----------------------|------------------|--------------------------|----------------|
| W. J. Wilson | 300 | Apr. 20 to June 1 | \$20.00 |
| J. W. Price | 200 | May 1 to June 1 | 10.00 |
| R. L. Jennings | 40 | Apr. 15 to July 15 | 20.00 |
| A. F. Robertson | 145 | May 15 to Nov. 15 | 43.50 |
| J. H. Sands | 5,000 | 1 year | 200.00 |
| E. D. Henderson | 2,500 | do | 125.00 |
| C. A. Aldridge | 640 | do | 38.40 |
| Smith Bros. | 1,000 | do | 50.00 |

Omaha and Winnebago Reservations, Nebr.—Thirty-one farming and grazing leases on the Omaha Reservation and 36 on the Winnebago Reservation, each for the period of one year from March or May, 1898, are described as follows:

| Lessee. | Acres. | Annual rent. | Lessee. | Acres. | Annual rent. |
|---------------------------|----------|--------------|----------------------------------|--------|--------------|
| OMAHA RESERVATION. | | | WINNEBAGO RESERVATION—continued. | | |
| James E. L. Carey | 9,316.56 | \$2,794.97 | Alfred J. Anderson | 40 | \$12.50 |
| Swan Olson | 3,631.22 | 1,325.39 | Joseph Farrens | 77.63 | 36.90 |
| John R. Latta | 880 | 334.40 | Oscar Bring | 320 | 180.00 |
| Jesse W. Tipton | 145 | 145.00 | John Ahlers | 36.55 | 27.41 |
| Thomas M. Senter | 255.53 | 110.00 | George Harris | 80 | 80.00 |
| Celestine B. Kuhn | 400 | 100.00 | Frank B. Hutchens | 119.88 | 92.66 |
| Abbie F. Nichols | 80 | 60.00 | John Baptist | 120 | 30.00 |
| Artemesia Frost | 80 | 20.00 | Alexander Nixon | 200.25 | 50.06 |
| Guy T. Graves | 293.35 | 73.30 | John Jay Kellog | 269.02 | 72.50 |
| James Grant | 80 | 20.00 | James McHenry | 120 | 42.00 |
| Jay F. Dodd | 185 | 86.75 | Anna Mix Payer | 40 | 10.00 |
| Dwight Sherman | 39.55 | 9.89 | Frank Rejman | 40 | 40.00 |
| Henry C. Dunagan | 240 | 72.00 | Swan E. Kenando | 40 | 30.00 |
| Amos Walker | 160 | 56.00 | Michael Regan | 40 | 40.00 |
| Paylard H. Park | 240 | 60.00 | Michael J. Rea | 153.62 | 118.95 |
| Frank B. Hutchins | 135.53 | 1,015.90 | Charles Raymond | 40 | 10.00 |
| Frank Grant | 40 | 10.00 | Fred Riedler | 199 | 157.00 |
| William Hamilton | 40 | 10.00 | Ernest J. Smith | 160 | 40.00 |
| Phillis A. Hull | 160 | 120.00 | William Stanage | 40 | 20.00 |
| Benj. Merrick | 80 | 20.00 | John T. Wheeler | 80 | 30.00 |
| Josiah Fields | 40 | 20.00 | Oscar F. Waggoner | 80 | 20.00 |
| Walter Edwards | 34.53 | 8.63 | Cornelius J. O'Conner | 661.20 | 208.25 |
| Jay F. Dodd | 130 | 97.50 | Irving J. Brown | 797.48 | 239.24 |
| Fred Cayon | 40 | 10.00 | James Momer | 520 | 156.00 |
| James Black | 80 | 20.00 | Winfield S. Flanders | 996.80 | 348.88 |
| Harmon Barber | 40 | 20.00 | Henry T. Twyford | 102.75 | 51.36 |
| James E. Blenkiron | 120 | 120.00 | Ernest J. Smith | 440 | 176.00 |
| George Channcey | 280 | 70.00 | Emil Magnuson | 160 | 100.00 |
| George Midkiff | 240 | 60.00 | Chas. M. McKnight | 240 | 90.00 |
| Willie A. Dodd | 320 | 80.00 | Gottfried Fuchser | 80 | 65.00 |
| Christopher Tyndall | 80 | 20.00 | Robert Dingwall | 40 | 14.00 |
| WINNEBAGO RESERVATION. | | | Joseph Corey | 80 | 20.00 |
| John Allbaugh | 40 | 20.00 | Adolphe Boesen | 29.80 | 8.94 |
| John W. Holingulst | 200 | 100.00 | Harmon Barber | 36.58 | 14.63 |

The annual report for 1896 mentioned one five-year lease for farming purposes on the Omaha Reservation and one five-year lease for farming purposes on the Winnebago Reservation, from March 1, 1896. The first is in favor of Mrs. Rosalie Farley, a member of the Omaha tribe, for 12,002 acres, at an annual rental of \$6,001.09 for the first three years and \$9,001.03 for the remaining two years. The other is in favor

of Nick Fritz, for 2,240 acres, at an annual rental of \$1,120 for the first three years and \$1,680 per year for the remaining two years.

Osage and Kaw Reservations, Okla.—Twenty-three grazing leases on the Osage Reservation and three on the Kaw Reservation are executed for the period of three years from April 1, 1898. They are described as follows:

| Lessee. | District number. | Acres. | Annual rent. |
|----------------------------|------------------|--------|--------------|
| OSAGE RESERVATION. | | | |
| Thomas J. Moore..... | 7 | 46,000 | \$4,600.00 |
| George M. Carpenter..... | 3 | 23,000 | 2,800.00 |
| Virgile Herard..... | 10 | 25,280 | 2,528.00 |
| William R. Whitesides..... | 16 | 28,400 | 2,840.00 |
| Thomas Leahy..... | 15 | 15,000 | 1,500.00 |
| Adolph C. Stich..... | 20 | 20,000 | 2,000.00 |
| Albert J. Adam..... | 11 | 30,720 | 3,070.00 |
| John Lee..... | 8 | 9,000 | 900.00 |
| Joseph R. Pearson..... | 12 | 10,000 | 1,000.00 |
| Edward T. Comer..... | 13 | 16,320 | 1,632.00 |
| Lorrin B. Moreledge..... | 18 | 9,600 | 960.00 |
| Edgar A. Allen..... | | | |
| Adolph C. Stich..... | 2 | 25,120 | 2,512.00 |
| Green J. Yeargain..... | 15 | 2,000 | 200.00 |
| Thomas Leahy..... | 9 | 14,360 | 1,436.00 |
| Maggie Lawrence..... | 5 | 12,000 | 1,200.00 |
| Mortimer L. Mertz..... | 4 | 60,000 | 6,000.00 |
| George J. Bird..... | | | |
| Mortimer L. Mertz..... | 6 | 25,000 | 2,500.00 |
| James H. Carney..... | 14 | 4,800 | 480.00 |
| Sylvester J. Soldani..... | 9 | 20,000 | 2,000.00 |
| Philip Beard..... | | 7,000 | 700.00 |
| William J. Leahy..... | | 4,000 | 400.00 |
| Charles N. Prudom..... | | 4,000 | 400.00 |
| Thomas B. Jones..... | 17 | 15,040 | 1,504.00 |
| KAW RESERVATION. | | | |
| Isaac D. Harklerood..... | 4 | 8,300 | 830.00 |
| William F. Smith..... | 3 | 9,000 | 900.00 |
| George T. Hume..... | 1, 2 | 48,289 | 4,828.00 |

Ponca and Otoe Reservations, Okla.—Six grazing leases on the Ponca Reservation and four on the Otoe Reservation are each for the period of three years from April 1, 1898. They are described as follows:

| Lessee. | Pasture. | Acres. | Annual rent. |
|----------------------------|-------------------------------------|--------|--------------|
| PONCA RESERVATION. | | | |
| Frank Witherspoon..... | West Ponca..... | 31,000 | \$2,500.00 |
| William F. Smith..... | East Ponca..... | 30,000 | 1,800.00 |
| Charles Liegerot..... | | 78.34 | 19.60 |
| Henry E. Bouton..... | | 320 | 48.00 |
| Fred H. Lobdell..... | | 400 | 60.00 |
| William H. Vanselouse..... | | 680 | 102.00 |
| OTOE RESERVATION. | | | |
| Isaac T. Pryor..... | East half of West Otoe..... | 20,000 | 1,300.00 |
| Do..... | East 43,000 acres of East Otoe..... | 43,000 | 2,700.00 |
| Julian Morris..... | West 10,000 acres of East Otoe..... | 10,000 | 600.00 |
| Frank Witherspoon..... | West half of West Otoe..... | 20,000 | 1,300.00 |

Frank Witherspoon and Isaac T. Pryor are to relinquish to the Otoe Indians all their interest in and to the pasture fence now around the West Otoe pasture; and Julian H. Morris is to relinquish his right,

title, and interest to the fence around the west 10,000 acres on the Otoe Reservation to the Indians, said fence to be valued at \$4,000, approximately; and the said parties are to pay as additional rental for the lands covered by the said leases the sum of \$900 per annum, one-half on April 1 and one-half on October 1 of each year during the life of the leases.

Eastern Shawnee Reservation, Ind. T.—Two mining leases and one grazing lease have been made. The two former are for the purpose of mining for lead and zinc, each for the period of five years from May 10, 1897. The consideration is 10 per cent of all products mined. They are executed in favor of Francis C. Lee, John E. Shepherd, and Nathan Nichols, respectively. The grazing lease for 60 acres is in favor of John T. Clay for the period of three years from March 1, 1898. The consideration is \$4.80 per annum.

Uinta Valley Reservation, Utah.—There is one grazing lease in favor of the Strawberry Valley Cattle Company. The term is one year and three months from June 1, 1898. The annual consideration is \$7,100.

ALLOTTED LANDS.

Since the date of the last annual report the following leases of allotted lands have been approved:

Cheyenne and Arapaho Agency, Okla.—Ninety-eight farming and grazing leases. The length of term is generally three years. The cash consideration paid the allottees at this agency ranges low—from 15 cents to \$1 per acre per annum—the principal part of the consideration consisting in improvements to be placed upon the land by the lessees.

Green Bay Agency, Wis.—One farming lease on the Oneida Reservation, which has been extended for one year from May 1, 1898. The lease is executed in favor of Charles F. Peirce, Superintendent of the Oneida Indian Industrial School, the land being leased for the use of that school. The consideration is \$2.50 per acre for 40 acres.

La Pointe Agency, Minn.—Two leases on the Fond du Lac reservation in favor of the Eastern Railway of Minnesota, for gravel pits. They cover 3 and 6 acres, respectively, for the term of three years. The consideration is \$75 and \$85, respectively, for the full term.

Nez Percés Agency, Idaho.—Seventy-four farming and grazing leases and three business leases. The terms are from one to three years for farming and grazing leases and three years for business leases. The consideration ranges from \$1 to \$2.50 per acre per annum for farming and grazing lands. The prices paid for business leases are \$60 per annum for 45 by 150 square feet, \$240 for 300 feet square, and \$120 for 50 by 200 square feet. Seventeen farming and grazing leases have been executed upon which no action has been taken.

Omaha and Winnebago Agency, Nebr.—Two hundred and six farming and grazing leases on the Omaha Reservation and 137 on the Winnebago Reservation. The prevailing period is three years, though some

have been executed for one and two year periods, respectively. The prices are about the same as last year, ranging from 25 cents per acre for grazing lands to \$2.50 per acre for the best farming lands. For raw, unbroken lands the average price is 75 cents per acre per annum. For average farming lands where small improvements have been made the prevailing price is \$1.25 per acre.

Ponca, Pawnee, etc., Agency, Okla.—No leases have as yet been approved for this agency, though 111 farming and grazing leases were submitted to the Department for approval by Agent Sharp with letter of February 12.* They were sent to a special agent of this office for investigation as to the adequacy of the consideration. They have been returned by the special agent with the statement that 36 are "fair value," and those 36 leases are now pending before the Department for approval. The remaining 75 leases have been returned to the agency for the purpose of having new leases executed in their stead at increased rates, as recommended. During the month of June Agent Sharp submitted 112 more farming and grazing leases for approval. They have been returned to John Jensen, the present agent, for investigation as to the adequacy of the consideration.* The leases are for Ponca, Pawnee, and Tonkawa lands, and are for three years. The consideration averages 50 cents per acre per annum, though for lands already under cultivation it ranges from 75 cents to \$1.25 per acre.

Puyallup Reservation, Wash.—Seven farming and grazing leases. The term is generally two years. The consideration ranges from \$1.97 to \$10 per acre per annum.

Quapaw Agency, Ind. T.—Two farming and grazing leases by the Eastern Shawnee allottees, 4 by the Senecas, and 1 by the Wyandottes. The length of term is from one to three years. The cash consideration ranges from \$1.50 to \$2 per acre per annum. In some cases certain improvements are to be placed on the lands by the lessees. One mining lease has been executed by the Modoc Indians. The term is five years. The consideration is 10 per cent of all tripoli and other minerals mined.

Sac and Fox Agency, Okla.—Sixty-three farming and grazing leases by the Absentee Shawnee allottees, 49 by the Pottawatomies, 55 by the Sac and Foxes, 16 by the Iowas, and 33 by the Kickapoos; also 3 business leases by the Sac and Fox Indians. The length of term is from one to three years. The cash consideration ranges from 15 cents per acre per annum for the poorest grazing lands to \$3 per acre for the best farming lands. In some instances certain improvements are to be made by the lessees in addition to the cash consideration. The price paid for business leases is \$5 per annum for 25 by 150 square feet, \$12.50 for three-eighths of an acre, and \$20 for 1 acre.

*Since the above was written 40 of the 111 leases have been approved by the Department; also 84 out of the 112 sent to the agent have been returned and approved. Seventeen others have been returned by the agent for approval.

Santee Agency, Nebr.—One farming and grazing lease for the term of three years. The annual rental is 31½ cents per acre.

Sisseton Agency, S. Dak.—One farming and grazing lease. The term is three years. The annual consideration is 31½ cents per acre.

Umatilla Agency, Oreg.—Twenty farming leases—4 by the Umatilla, 9 by the Walla Walla. and 7 by the Cayuse allottees—one of which is for 300 acres off the school farm. The consideration in the school farm lease is one-third of the crop raised. The annual rental for the remaining 19 leases ranges from \$1.25 to \$2 per acre. The terms are two and three years, respectively.

Sixty-three farming leases, the consideration in which ranged from 70 cents to \$2.68½ per acre per annum, were returned to the agent—22 on January 24, and 61 on April 6—for a personal investigation as to the adequacy of the consideration, because it was thought that the lands should command a higher rental. No report has as yet been received as to the result of his investigation.

Yakima Agency, Wash.—Ten farming and grazing leases. The term is three years. The cash consideration ranges from 25 cents to \$1.35 per acre per annum. In some instances the lessees are to place certain improvements on the land in addition to the cash consideration.

Yankton Agency, S. Dak.—Nine grazing leases. The term is generally three years. The cash consideration is 10 cents per acre per annum.

Tabulated, the above information as to leases of allotted lands may be given as follows:

| Reservation. | Kind of lease. | No. of leases. | No. of years. | Rate. |
|---|------------------------|----------------|---------------|--|
| Cheyennes and Arapahoes, Okla. | Grazing and farming .. | 98 | 3 | 15 cents to \$1 per acre per annum. |
| Oneidas, Wis | Farming..... | 1 | 1 | \$2.50 per acre for 40 acres. |
| Fond du Lac Chippewas, Wis. | Gravel pits | 2 | 3 | \$75 and \$85. |
| Nez Perces, Idaho | Farming and grazing .. | 74 | 1 to 3 | \$1 to \$2.50 per acre per annum. |
| Do | Business..... | 3 | 3 | \$60, \$240, and \$120 per annum. |
| Omahas, Nebr | Farming and grazing .. | 206 | 1 to 3 | 25 cents to \$2.50 per acre per annum. |
| Winnebagoes, Nebr..... | do | 137 | 1 to 3 | Do. |
| Puyallups, Wash | do | 7 | 2 | \$1.97 to \$10 per acre per annum. |
| Poncas, Pawnees, Otoes, and Tonkawas, Okla. | do | 152 | 3 | 50 cents to \$1.25 per acre per annum. |
| Eastern Shawnees, Ind. T.... | do | 2 | 1 to 3 | \$1.50 to \$2 per acre per annum. |
| Senecas, Ind. T | do | 4 | 1 to 3 | Do. |
| Wyandottes, Ind. T..... | do | 1 | 1 to 3 | Do. |
| Modocs, Ind. T | Mining | 1 | 5 | 10 per cent of minerals mined. |
| Absentee Shawnees, Ind. T.. | Farming and grazing.. | 63 | 1 to 3 | 15 cents to \$3 per acre per annum. |
| Pottawatomies, Ind. T | do | 49 | 1 to 3 | Do. |
| Sac and Fox, Ind. T..... | do | 55 | 1 to 3 | Do. |
| Do | Business..... | 3 | 1 to 3 | \$5, \$12.50, and \$20 per annum. |
| Iowas, Ind. T | Farming and grazing.. | 16 | 1 to 3 | 15 cents to \$3 per acre per annum. |
| Kickapoos, Ind. T | do | 33 | 1 to 3 | Do. |
| Santee Sioux, Nebr | do | 1 | 3 | 31½ cents per acre per annum. |
| Sisseton Sioux, S. Dak | do | 1 | 3 | 31½ cents per acre per annum. |
| Umatillas, Oreg | do | 4 | 2 and 3 | \$1.25 to \$2 per acre per annum. |
| Walla Walla, Oreg | do | 9 | 2 and 3 | Do. |
| Cayuses, Oreg | do | 7 | 2 and 3 | Do. |
| Yakimas, Wash | do | 10 | 3 | 25 cents to \$1.35 per acre per annum. |
| Yankton Sioux, S. Dak | Grazing | 9 | 3 | 10 cents per acre per annum. |

INDIAN LANDS SET APART TO MISSIONARY SOCIETIES.

Tracts of reservation lands set apart during the year for the use of societies carrying on educational and missionary work among Indians are as follows:

Lands set apart on Indian reservations for the use of religious societies from August 20, 1897, to August 31, 1898.

| Church or society. | Acres. | Reservation. |
|---|-----------------|---------------------------|
| Methodist Episcopal..... | (a) | Klamath, Oreg. |
| Roman Catholic | 160 | Gila Bend, Ariz. |
| Do | 1 | Gila River, Ariz. |
| Do | 1 | Salt River, Ariz. |
| Do | 40 | Rosebud, S. Dak. |
| Do | 40 | Do. |
| First Presbyterian of Lapwai, Idaho..... | b $\frac{1}{2}$ | Lapwai, Idaho. |
| Methodist Episcopal South | 10 | Kiowa and Comanche, Okla. |
| Associated Executive Committee of Friends on Indian Affairs. | c 40 | Otoe, Okla. |
| Domestic and Foreign Missionary Society of the Protestant Episcopal Church. | 80 | Rosebud, S. Dak. |

a Lot on tract reserved for agency purposes.

b On tract reserved for agency purposes.

c Set aside in 1887 to Woman's Home Missionary Society of Methodist Episcopal Church, and surrendered in 1898 in favor of Committee of Friends on Indian Affairs.

RAILROADS ACROSS RESERVATIONS.

GRANTS SINCE LAST ANNUAL REPORT.

Since the date of the last annual report Congress has granted railroad companies rights of way across Indian reservations as follows:

Indian and Oklahoma Territories.—*Nebraska, Kansas and Gulf Railway Company.*—By act of Congress of March 30, 1898 (30 Stats., 347, and p. 415 of this report), the above-named company was granted right of way through Oklahoma and the Indian Territory, beginning at a point to be selected by said railway company along the south line of the county of Harper, State of Kansas, and running thence in a south and southeasterly direction by way of Kingfisher, over the most practicable route through the Indian Territory and the Territory of Oklahoma, to a point at or near Denison, State of Texas, thence to the city of Galveston, said State, with the right to construct, use, and maintain such tracks, turn-outs, sidings, and extensions as said company may deem it to their interest to construct along and upon the right of way and depot grounds herein provided for.

Denison, Bonham and New Orleans Railway Company.—By act of Congress of March 23, 1898 (30 Stats., 341, and p. 411 of this report), the above-named company was granted right of way through the Indian and Oklahoma Territories, beginning at a point to be selected by said railway company on Red River, near Denison, in Grayson County, in the State of Texas, and running thence by the most practicable route

through the Indian Territory in a northerly direction to the southern boundary of the State of Kansas, at some point in the south line of Chautauqua County, in said State, with the right to construct, own, and maintain and operate a branch line of railway, beginning at a point not exceeding 35 miles north of Red River, on the main line, thence in a northwesterly direction to Fort Sill, in Oklahoma Territory, with the right to construct, use, and maintain such tracks, turn-outs, branches, sidings, and extensions as said company may deem it to their interest to construct.

Missouri, Kansas and Texas Railway Company.—By act of Congress of June 27, 1898 (30 Stats., 493, and p. 424 of this report), the above-named company was authorized, at its sole expense, to restore the South Canadian River to its original channel under the already constructed bridge of said company, and to that end to straighten and shorten the river above said bridge by excavating and constructing a channel for the river through and across sections 28 and 29 of township 9 north, range 15 east, subject to the conditions mentioned in said act.

Kansas, Oklahoma and Gulf Railway Company.—By act of Congress of June 27, 1898 (30 Stats., 492, and p. 424 of this report), the above-named company was granted right of way through the Chilocco Indian School Reservation in Oklahoma.

By act of Congress of June 4, 1898 (30 Stats., 431, and p. 00 of this report), all railway companies operating lines of railroad through the Indian Territory were authorized to enter into contracts for the use or lease of the railroad and other property of any railroad company whose line may now or hereafter connect with its line, upon such terms as may be agreed upon by the respective companies, and to use and operate such road or roads in accordance with the terms of such contract or lease, but subject to the obligations imposed upon the respective companies by their charters or by the laws of the United States or of the State or Territory in which such leased road may be situate: *Provided*, That the terms of this act shall not apply to parallel or competing lines.

Omaha and Winnebago Reservations, Nebr.—*Omaha Northern Railway Company.*—By act of Congress of March 26, 1898 (30 Stats., 344, and p. 414 of this report), the above-named company was granted right of way through the Omaha and Winnebago reservations, subject to the usual conditions and restrictions.

Colville Reservation, Wash.—*Kettle River Valley Railway Company.*—By act of Congress of June 18, 1898 (30 Stats., 475, and p. 423 of this report), the above-named company was granted right of way through the north half of the Colville Reservation, subject to the provisions of the act of Congress of March 3, 1875 (18 Stats., 482).

Washington Improvement and Development Company.—By act of Congress of June 4, 1898 (30 Stats., 430, and p. 422 of this report), the above-named company was granted right of way through the Colville Reservation, subject to the usual conditions and restrictions.

GRANTS REFERRED TO IN PREVIOUS ANNUAL REPORTS.

Indian and Oklahoma Territories.—*Chicago, Rock Island and Pacific Railway Company.*—By act of Congress of March 17, 1898 (30 Stats., 327, and p. 410 of this report), the above-named company was granted an extension of three years from the 1st day of April, 1898, within which to construct the branch lines of road provided for in the act of Congress of February 27, 1893 (27 Stats., 492), provided that the company shall construct at least 50 miles of said railway within one year after the passage of the act, and subject also to the condition that the station grounds shall be limited to 2,000 feet in length for each station. On June 20, 1898, the company forwarded a draft for \$1,593 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Gainesville, McAlester and St. Louis Railway Company.—By act of Congress of July 7, 1898 (30 Stats., 715, and p. 457 of this report), the above-named company was granted the right to commence the construction of its line of road as soon as a map of definite location of the route from the Red River to near South McAlester shall have been filed with and approved by the Secretary of the Interior, provided that a map of definite location of the road from South McAlester to Fort Smith shall be filed and approved before the construction of that portion of the road shall be commenced.

Fort Smith and Western Coal Railroad Company.—By act of Congress of June 7, 1898 (30 Stats., 433, and p. 423 of this report), the above-named company was granted an extension until December 31, 1900, within which to construct its line of road, as provided for by the act of Congress of March 2, 1896 (29 Stats., 40).

Denison and Northern Railway Company.—As mentioned in the annual report for 1896, the above-named company was granted right of way through the Indian Territory by act of Congress of July 30, 1892 (27 Stats., 336). By act of Congress of March 29, 1898 (30 Stats., 00, and p. 415 of this report), the company was granted an extension of a further period of one year from the passage of the act within which to comply with the provisions of the original act.

Choctaw, Oklahoma and Gulf Railway Company (formerly the Choctaw Coal and Railway Company).—February 24, 1898, the Secretary of the Interior approved a map of definite location of fractional section No. 12, extending eastward from Wister Junction a distance of about 6½ miles to a junction with the Kansas City, Pittsburg and Gulf Railroad; also a plat of station grounds at the latter junction, designated "Choctaw Junction." August 2, 1898, the company tendered a voucher in the nature of a draft for \$328.50 in payment for right of way, at the rate of \$50 per mile, for fractional section No. 12, above referred to. On August 5, 1898, the Secretary of the Interior approved the plat of additional station ground at South McAlester. September 7

the company tendered a voucher in the nature of a draft for \$2,038.50 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Gulf, Colorado and Santa Fe Railway Company.—July 6, 1898, the company tendered a draft for \$1,500 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Southern Kansas Railroad (leased to the Atchison, Topeka and Santa Fe Railway Company).—June 25, 1898, the company filed in the Department a voucher in the nature of a check for \$85.50 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Denison and Washita Valley Railroad Company.—June 30, 1898, the company tendered a draft for \$150 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Kansas and Arkansas Valley Railway Company.—June 30, 1898, the company submitted a draft for \$2,444.55 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898.

Kansas City, Pittsburg and Gulf Railroad Company.—January 14, 1898, the Department approved the map of definite location of the branch line of road of the above-named company from near Oak Lodge Station, on the main line of the road, to the east line of the Indian Territory at a point directly opposite the town of Fort Smith, Ark. On July 16, 1898, the company tendered a draft for \$1,930.68 in payment of the annual tax of \$15 per mile for each mile of road constructed through Indian lands for the fiscal year ending June 30, 1898. September 13 the company tendered a voucher in the nature of a check for \$751.50 in payment for right of way of branch line of road from near Oak Lodge to Fort Smith.

St. Louis and Oklahoma City Railroad Company.—March 16, 1898, the Department approved a map showing a change in the location of line of road of the above-named company through the Creek Nation, said change in location lying between survey stations 678 + 70 and 1371 + 69 as shown on the original map of definite location, which was approved October 24, 1896. July 2, 1898, the company tendered a draft for \$12.50 in payment of the annual tax of \$15 per mile for the first 10-mile section of constructed road for the fiscal year ending June 30, 1898. July 14, 1898, the company tendered a draft for \$500 in payment for right of way for the first 10-mile section of the road. July 16, 1898, the Department approved the schedule of damages to land of individual allottees of the Sac and Fox Agency, Okla., for right of way through their allotments. August 24 the company tendered a draft for \$1,362.50 in payment of balance due for right of way through the Creek Nation.

White Earth and other Chippewa Reservations, Minnesota.—*Duluth, Superior and Western Railway Company.*—March 25, 1898, the Acting Secretary of the Interior approved two amended maps showing the definite location of the line of road of the above-named company through the Chippewa Reservation; and on the same date he approved an amended map of definite location of the line of road through the White Earth Reservation. On April 23, 1898, Hon. Darwin S. Hall, Chippewa commissioner, and John H. Sutherland, esq., agent of the White Earth Agency, were instructed to determine the tribal damages and to act with and for the allottees in determining the individual damages resulting from the location and construction of the road through the above-named reservations. Their report concerning the matter has not yet been received.

St. Paul, Minneapolis and Manitoba Railway Company.—March 10, 1898, the Secretary of the Interior approved the map of definite location of the above-named company through the Chippewa Reservation. On April 23, 1898, Hon. Darwin S. Hall, Chippewa commissioner, and John H. Sutherland, esq., agent of the White Earth Agency, were instructed to determine the tribal damages and to act with and for the allottees in determining the individual damages resulting from the location and construction of the road through the Chippewa Reservation. Their report under said instructions has not yet been received.

Brainerd and Northern Minnesota Railway Company.—On February 2, 1898, John H. Sutherland, esq., United States Indian agent of the White Earth Agency, was instructed to assist the individual allottees of the Leech Lake Reservation, Minn., in negotiating with the above-named company for right of way through their allotted tracts. His report has not yet been received.

San Carlos Reservation, Ariz.—*Gila Valley, Globe and Northern Railway Company.*—By act of Congress on January 13, 1898 (30 Stats., 227, and p. 407 of this report), the above-named company was granted an extension until February 18, 1900, within which to construct its line of road through the San Carlos Reservation. On March 1, 1898, the council proceedings of the San Carlos Indians, giving their consent to the construction of the road through the reservation, were approved by the Secretary of the Interior, and by the President on March 3. On March 7 the maps of definite location of the line of road through the reservation were approved by the Acting Secretary of the Interior. March 25 Acting Agent Rice, of the San Carlos Agency, by direction of the Secretary of the Interior, was instructed to pay the compensation agreed upon between the company and the Indians to the male adults of the tribe of 14 years old and over, share and share alike.

Red Cliff Reservation, Wis.—*Bayfield Harbor and Great Western Railway Company.*—August 13, 1898, the President approved two right-of-way deeds in the nature of an easement in favor of the above-named company covering certain allotted lands on the Red Cliff Reservation.

These additional deeds were made necessary by a slight change in the location of the road. August 16 the Secretary of the Interior approved the amended map of definite location showing the change referred to in the deeds. This change in location affected but two allotments in the northwest quarter of section 25, township 51 north, range 4 west.

Sioux Reservation, S. Dak.—*Chicago, Milwaukee and St. Paul Railway Company.*—By act of Congress of June 25, 1898 (30 Stats., 748), the Secretary of the Interior is authorized and directed to return and refund to the above-named company the sum of \$15,335.76, deposited by the company with this Department in payment for right of way and depot grounds through certain lands which were afterwards ceded to the United States, and which lands the company claimed that it had never secured or used.

CONDITIONS TO BE COMPLIED WITH BY RAILROAD COMPANIES.

In the construction of railways through Indian lands a systematic compliance with the conditions expressed in the right-of-way acts will prevent much unnecessary delay. I therefore quote the requirements, which have been stated in previous reports. Each company should file in this office—

(1) A copy of its articles of incorporation, duly certified to by the proper officers under its corporate seal.

(2) Maps representing the definite location of the line. In the absence of any special provisions with regard to the length of line to be represented upon the maps of definite location, they should be so prepared as to represent sections of 25 miles each. If the line passes through surveyed land, they should show its location accurately according to the sectional subdivisions of the survey; and if through unsurveyed land, it should be carefully indicated with regard to its general direction and the natural objects, farms, etc., along the route. Each of these maps should bear the affidavit of the chief engineer, setting forth that the survey of the route of the company's road from ——— to ———, a distance of — miles (giving termini and distance), was made by him (or under his direction), as chief engineer, under authority of the company, on or between certain dates (giving the same), and that such survey is accurately represented on the map. The affidavit of the chief engineer must be signed by him officially and verified by the certificates of the president of the company, attested by its secretary under its corporate seal, setting forth that the person signing the affidavit was either the chief engineer or was employed for the purpose of making such survey, which was done under the authority of the company. Further, that the line of route so surveyed and represented by the map was adopted by the company by resolution of its board of directors of a certain date (giving the date) as the definite location of the line of road from ——— to ———, a distance of — miles (giving the termini and distance), and that the map has been prepared to be filed for the approval of the Secretary of the Interior, in order that the company may obtain the benefits of the act of Congress approved — (giving date).

(3) Separate plats of ground for station purposes, in addition to right of way, should be filed, and such grounds should not be represented upon the maps of definite location, but should be marked by station numbers or otherwise, so that their exact location can be determined upon the maps. Plats of station grounds should bear the same affidavits and certificates as maps of definite location.

All maps presented for approval should be drawn on tracing linen, the scale not less than 2,000 feet to the inch, and should be filed in duplicate.

These requirements follow, as far as practicable, the published regulations governing the practice of the General Land Office with regard to railways over the public lands, and they are, of course, subject to modification by any special provisions in a right-of-way act.

INDIAN DEPREDAATION CLAIMS.

The number of Indian depredation claims of record in this office is 8,007. At the date of the last annual report there were 4,260 claims remaining in the office to be disposed of in accordance with the act of March 3, 1891 (26 Stats., 851). Since then, up to June 30, 1898, the papers on file in 62 claims have been transmitted to the court and 6 claims have been reported as having been previously transmitted to Congress. There remain, therefore, 4,192 claims to be disposed of in accordance with the act aforesaid.

Considerable work devolves upon the office in the care and custody of the papers, making transfers of claims to the court with reports thereon, keeping proper records, and furnishing miscellaneous information to interested parties. During the past year there have been more calls than usual for information by attorneys, claimants, and others interested in the prosecution of Indian depredation claims.

In the last annual report it was stated that \$1,120,680.29 had been appropriated by Congress for the payment of judgments of the Court of Claims rendered in pursuance of the act of March 3, 1891. By act of July 7, 1898, \$331,771.55 was appropriated for the same purpose, making the total amount appropriated for the payment of judgments of the Court of Claims \$1,452,451.84. The records of the office show that up to June 30, 1898, judgments have been paid and charged against those appropriations amounting to \$1,144,863.77.

A few small judgments have been paid and charged against the tribal funds of different tribes in accordance with the sixth section of the act of March 3, 1891.

At the last session of Congress there was introduced House bill No. 6712, "To amend an act entitled 'An act to provide for the adjudication and payment of claims arising from Indian depredations,' approved March 3, 1891." The first paragraph of the act of March 3, 1891, now in force, providing for the adjudication of claims, reads as follows:

All claims for property of citizens of the United States taken or destroyed by Indians belonging to any band, tribe, or nation in amity with the United States, without just cause or provocation on the part of the owner or agent in charge, and not returned or paid for.

The proposed amendment substantially provides for adjudicating three classes of claims not provided for in the act of March 3, 1891, viz: (1) All claims for property of any "inhabitant" of the United States; (2) claims for property merely "damaged," and (3) claims against Indians not "in amity" with the United States.

In office report on this bill dated May 6, 1898, after reciting the

laws heretofore passed relating to Indian depredation claims, particularly with reference to the questions involved in the proposed amendment, attention was called to the fact that while possibly it may have been the intention of Congress prior to March 3, 1885, to consider claims of "inhabitants" as well as claims of "citizens" of the United States against tribes in amity with the United States, yet the act of 1885 plainly provided only for the investigation of claims of citizens, excluding claims of "inhabitants;" as did also the act of 1891. (*Johnson v. The United States*, 160 U. S., p. 546.)

Attention was also invited to the fact that while it has been the policy of the Government for the past century to make provision for the satisfaction of just and bona fide claims for property taken or destroyed, yet no provision has ever been made for the adjudication of claims for property merely "damaged."

Senate bill 897, which was introduced in the Fifty-third Congress, first session, contemplated amendments similar in effect to House bill 6712, but it never became a law. It proposed to omit from the first paragraph of the act of March 3, 1891, the words "in amity with the United States." With the same end in view, House bill 6712 proposes to insert "or which had, prior to such taking or destruction, entered into any treaty of amity, peace, or friendship with the United States." In the same report of May 6, reference was made to the case of *Marks et al. v. The United States et al.* (160 U. S., p. 297 et seq.), and it was stated that if the above-quoted clause of House bill 6712 were enacted into law, Indians actually at war with the United States would be compelled to pay, out of their annuities and trust funds, claims for property taken or destroyed by them during the existence of war, a policy contrary to all former policies of this Government.

There are no doubt many claims that have been rejected which would be allowed if the proposed amendments were adopted, and possibly some of them were just and proper at the time the depredations were alleged to have been committed; yet they were not adjudicated under the laws then in force, and the changes in the condition of the affairs of the Indians which have taken place since a large portion of these depredations were committed, and the difficulty the Government would now find in verifying the evidence of the claimants, in view of the great length of time which has elapsed since the commission of the depredations, would render the injustice to the present generation of Indians many-fold greater than any injustice which the claimants would suffer under the law now in force. Not only would it impose an unreasonable hardship upon the present generation of Indians, who are trying amid adversities to advance in civilization, by compelling them to make compensation for depredations committed by their ancestors while in a state of savagery, but it would take millions of dollars from the United States Treasury to pay claims, of which many would at least seem questionable.

ASSAULT UPON NAVAJOES, ARIZONA.

A detailed statement was given in the last annual report of an assault upon sixteen Navajo families who were tending their flocks in the grazing district bounded on the east and north by the Little Colorado River and on the west by the Colorado River, a portion of the tract being within the boundaries of the Grand Canyon, National Park. From this district they were ejected by the officials of Coconino County, Ariz., with alleged losses to their flocks and herds. Since that time this office has received a report on the subject from the acting agent of the Navajo Agency, and also, by reference from the Department, has received reports from the United States district attorney for Arizona and from the governor of that Territory. The Indian agent contends that the Indians sustained considerable loss in their forcible removal by the county officials, while the district attorney and governor claim that no harm was done to the Indians, either in person or property. On these reports no action has yet been taken and the office is in doubt whether under the circumstances civil action should be instituted to recover damages which it is alleged the Indians sustained to their property.

MISSION INDIANS, CALIFORNIA.

During the year patents have been issued for the Temecula allotments. No new allotments have been made in the field, nor have the allotments which were made several years ago on the Rincon, Potrero, and Capitan Grande reservations been completed, because the plats of survey have not yet been furnished by the General Land Office. The proposed exchange of lands with the Southern Pacific Railroad Company, affecting four reservations, has not yet been completed, this part of the business being also before the General Land Office.

Additional tracts of land are needed for several of the reservations. It was the duty of the Mission Indians Commission, under the act of January 12, 1891, to select as reservations for the several bands or villages of Indians the lands that were at that time in their possession and occupation. But this the commission failed to do in several cases, and it was found that the failure could be remedied only by a special act of Congress. In compliance with Department instructions, this office prepared and submitted, January 5 last, draft of bill authorizing the Secretary of the Interior to cause to be patented to the Mission Indians such tracts of the public lands in the State of California as he shall find upon examination to have been in the occupation of the Indians, and are now required and needed by them, and were not selected for them by the commission. This draft is contained in Senate Doc. No. 54, Fifty-fifth Congress, second session.

KILLING OF UTES IN COLORADO.

On the 24th of October, 1897, when a party of Ute Indians from the Uintah and Ouray Reservation in Utah were hunting on the north side of Snake River in Colorado, two of them were killed and two were wounded by a squad of game wardens of Colorado. Immediately, the newspapers contained the usual startling accounts of an Indian outbreak; that the Utes were on the warpath, and settlers in southwestern Colorado were fleeing for their lives, etc.

November 1, Capt. W. H. Beck, U. S. A., the acting agent for the Uintah and Ouray Agency, who was then in this city, received the following telegram from the clerk whom he had left in charge of the agency:

Two White River Utes were killed and squaws wounded in first encounter, as reported; have heard of the second encounter. Dr. Reamer left last evening to attend the wounded squaws. Indians here are much agitated. I respectfully ask that you request troops be stationed at agency at once.

In accordance with Captain Beck's recommendation the War Department was requested to direct such movement of the troops at Fort Duchesne as would assure protection to the agency, and suppress any hostile demonstration which the White River Utes might attempt to make; which request was complied with.

November 3, 1897, this office recommended that an inspector be sent to the Uintah and Ouray Agency to ascertain the facts, and Special Indian Agent E. B. Reynolds was ordered to make such investigation. December 16, 1897, he rendered his report, of which the following is a summary:

On the 23d of November, at the Uintah Agency, he took the statements of the Indians, and, according to the uncontradicted testimony of Ungut sho one Star, four men and three women were in camp 3 miles from what is known as Thompson's ranch, while the rest of their party were out hunting. On the morning of October 26 Star and So on a munche Kent, on their way to Thompson's ranch, met and had a little conversation with two white men, one of whom was armed with a Winchester rifle and pistol. A short distance farther on they saw a squad of men whom they knew to be game wardens, whereupon they turned back to the camp. So on a munche Kent got away, but Star was captured and disarmed by the wardens, who took him with them to the camp. Upon their arrival at the camp, about 10 a. m., they immediately covered Shinaraff and Coo a munche with their rifles, and afterwards told the Indians that they wished them to go to Thompson's, and endeavored to arrest the men, who resisted and got away. In the afternoon, three or four hours after their arrival, the wardens commenced firing on the Indians, and, after killing two men and wounding two of the women, left the camp. The Indians who had escaped or were out hunting returned and buried the dead, and all started that evening for the agency, traveling all night.

Special Agent Reynolds next visited the place where the killing occurred (150 miles from the agency) and took the testimony of all but one of the wardens connected with the affair and also of a few others, examining each one by himself. From their statements it appeared that W. K. Wilcox, game warden of Routt County, had been notified by the chief game warden of Colorado that Indians from Utah were probably killing game in violation of law and should be arrested unless they left the State. Proceeding with a Mr. McCormack toward Bear and Snake River Valley, Mr. Wilcox was informed at Maybell that the Indians numbered probably 100. He therefore sent back for an additional force to assist him. Two days later, October 24, ten wardens, all but Thompson and Armstrong armed, with two others, decided to visit the Indian camp, but before doing so Thompson and a man named Templeton were sent ahead to try if possible to induce the Indian men to come to Thompson's ranch to meet the wardens and talk over matters. On their way thither they met Star and another Indian, had some conversation, and went on. Meantime the wardens had concluded to follow slowly, and soon came in sight of the two Indians which the advance party had met. One of them turned immediately and started in the direction of the camp. The other was overtaken and disarmed and taken to the camp, which the party reached about 10 o'clock in the morning. There they found six Indian men, eight or ten women, and a few children. All the men were armed, and some of the women had arms in their tents. Two deer, still undressed, many deer hides, with some beef hides, and a quantity of deer hair, were found in the camp.

The Indians were notified that they must leave the State or be arrested. After some time, attempt was made to disarm and arrest them, which the Indians resisted. Then, to quote from the report of the special agent:

In the final attempt to arrest the Indians, an Indian, unexpectedly to all, fired his gun at one of the wardens, Al Shaw, and as he was about to fire, a warden, Mr. Kimberly, standing near Shaw, struck the gun to one side, and the shot missed Shaw and hit a woman. At this moment the firing was commenced by the wardens and Indians, which was participated in by about only five or six of the wardens and lasted but a few minutes, and when it had ceased, it was found that some Indians had been killed and some wounded, and Shaw was lying on the ground in a senseless condition, having been stricken down by the Indian who had fired the first shot. The wardens then went away to Thompson's ranch.

The wardens deny that they fired the first shot or that they drew their rifles on the Indians before the firing commenced, and on the whole the special agent is inclined to accept their version of the affair as against that of the Indians, and to acquit the posse of anything deliberate or malicious in the killing. Some of them have homes on the Bear and Snake rivers and have lived there for years.

The affair created great turmoil in that vicinity, and women and children were taken to Lay, 25 miles distant, and remained there until the excitement subsided.

This was the old hunting ground of the Utes before they were removed from Colorado and they have always depended on game for no small part of their food and clothing. They can not understand why they should be shut out from it during certain seasons of the year by State laws, especially when the right to hunt game in this region was guaranteed to them by a treaty with the Government, which provided that such right should be inviolable and continue so long as game existed there. However, the United States Supreme Court has held, in *Ward v. Race Horse* (163 U. S., 504), that the admission of a State into the Union annuls such treaty rights. Therefore the Utes could legally be held by the officials of the State of Colorado to be violating the game laws. The testimony shows that the Indians were aware that their hunting was liable to be objected to, and that they had been for some time rather apprehensively on the lookout for the "buckskin police," and had made inquiries as to what they would be likely to do to them.

SOUTHERN UTES, COLORADO.

No change in the affairs of the Southern Utes has taken place since my last report. The patents for allotments have not been issued, nor have the surplus lands been opened to settlement.

The work of making irrigating ditches for the allotted tracts is rapidly approaching completion and will, it is thought, be finished this season.

A work of considerable magnitude and importance will be the irrigation of the diminished reservation which is to be occupied by the portion of the tribe that refused to take allotments. The Indian appropriation act of June 7, 1897 (30 Stats., 62), authorized conference with the Montezuma Valley Canal Company, or other parties, for the purpose of securing a supply of water for this reserve. United States Indian Inspector Wright, having looked into the matter under Department instructions, submitted a report dated November 4, 1897, inclosing a proposition from the Montezuma Valley Canal Company to furnish the needed supply. The inspector's report and accompanying proposition were submitted to Congress by Department letter of February 7, 1898 (see Senate Doc. 124, Fifty-fifth Congress, second session). Under the provisions of an item in the Indian appropriation act for the current year, the Department is authorized to make investigation as to the practicability of providing a water supply for irrigation purposes on the diminished reserve, and this investigation is now being made, I am informally advised, through the agency of the Geological Survey.

SEMINOLES IN FLORIDA.

The Department approved, April 16, 1898, the deed from Frank Q. Brown for a tract in southern Florida, described as section 32, township 47 south, range 33 east, which was purchased for the Seminoles, and was referred to in the last annual report as requiring further papers

before being submitted to the Department. No further purchases of lands for these Indians have been made.

In all, the following lands have been purchased:

Sec. 25, T. 47 S., R. 32 E.; sec. 32, T. 47 S., R. 33 E.; secs. 23, 24, 25, 26, 35, and 36, T. 48 S., R. 32 E.; secs. 12, 18, and 24, T. 48 S., R. 33 E.; and secs. 7, 16, and 34, T. 48 S., R. 34 E.—fourteen sections.

My last report referred to the fact that many of the Seminoles had homes upon lands which had been patented to the State of Florida as swamp lands, and that this office, in its report of May 26, 1897, had made the following recommendation:

Where Indians are known to be located upon specified tracts, such tracts should be exempted from patent; that no person or corporation shall have color of right to deprive the Indians of their ancient possessions. * * *

I also have the honor to recommend that there be inserted in the patent to be issued to the State a clause expressly reserving the rights of the Indians to the occupancy of lands possessed and improved by them at the date of the patent, that purchasers of lands may have notice of the rights of Indian occupants.

From "Land Decisions," Vol. 26, p. 117, it is learned that office report of May 26, 1897, was submitted to the Assistant Attorney-General for the Interior Department, May 28, 1897, who, on January 31, 1898, rendered an opinion, of which the syllabus reads as follows:

If it is made to appear that lands have been erroneously included in a certified swamp land list, and the patent has not issued thereon, the action of a preceding Secretary of the Interior in approving such list may be corrected by his successor.

The status of the Seminole Indians, as occupants of public lands in the State of Florida, is too indefinite in character to receive recognition in patents issued under the swamp grant.

Lands occupied and cultivated by said Indians can not, however, be held as of the character contemplated by said grant, and if, on due investigation, lands so occupied and improved appear to have been certified to the State under said grant, the certification thereof should be revoked.

June 8, 1898, the Commissioner of the General Land Office transmitted to this office the report of Inspector A. J. Duncan, dated March 19, 1898, on the subject of lands for the Seminole Indians of Florida, in which he recommended:

First. That the following public lands be reserved for the use of the Seminole Indians, to be held in trust for them during their occupancy. (1) All the public lands, hammocks and islands and the legal subdivisions of the marsh lands of which they constitute a part, which when surveyed would approximately be in T. 45, 46, 47, 50, 51, 52, and 53 S., R. 34 E., and in T. 45, 46, 47, 48, 49, 50, 51, and 52, S. R. 35 E. (2) What is known as Pine Island, with the adjacent hammocks and the marsh lands of the legal subdivisions of which they constitute a part, approximately situated as follows: Secs. 15, 16, 21, 22, 27, and 28, T. 50 S., R. 41 E. (3) All of what is known as Long Key, with the adjacent islands and marsh lands of the legal subdivisions of which they constitute a part, approximately situated as follows: Secs. 1 and 12, T. 51 S., R. 40 E., and Secs. 7, 8, and 9, T. 51 S., R. 41 E. (4) All of what is known as Miami Jims Island, with all the adjacent hammocks and marsh lands of the legal subdivisions of which they constitute a part, approximately situated as follows: NE. $\frac{1}{4}$ sec. 35 and the NW. $\frac{1}{4}$ sec. 36, T. 53 S., R. 40 E. (5) All the public lands and marsh lands of the legal subdivisions of which they constitute a part, approximately situated as

follows: Secs. 24, 25, and 36, T. 50 S., R. 41 E., and secs. 1 and 12, T. 51 S., R. 41 E. (6) All of what is known as Harneys Key and the marsh lands of the legal subdivisions of which it constitutes a part, approximately situated as follows: SE. $\frac{1}{4}$ sec. 6 and SW. $\frac{1}{4}$ sec. 5, T. 53 S., R. 40 E.

Second. That a survey be made of all the unsurveyed lands approximately described above for the purpose of more definitely determining their character, situation, etc.

Third. That there be purchased for the use of the Seminole Indians, to be held for them during their occupancy, other lands adjacent to the hammocks and lands in first tract above described, not to exceed 56,000 acres and at a price not to exceed 20 cents an acre.

Fourth. That so much of the moneys appropriated on hand and unexpended for the education and civilization of the Seminole Indians, and hereafter to be appropriated, be applied to the purchase of the lands above referred to.

Fifth. That such isolated tracts as have already been purchased for the use of the said Indians be exchanged for other lands, in order to form a compact tract or reservation as part of the above.

Sixth. That the amount set aside for these Indians, including marsh lands, shall not exceed 350,000 acres.

Seventh. That in case the above land, hammocks, islands, etc., recommended to be reserved for the Seminole Indians be not sufficient and suitable for their support, that the said survey be extended to the southern or other parts of the Everglades, as may be determined upon in the future by the honorable Secretary.

Eighth. That the present site of the agency be removed to such a point within the purchased or reserved lands at such time as may be determined upon, and that a suitable and sufficient quantity of land be reserved for agency purposes, not to exceed 320 acres.

Ninth. That proper measures be instituted immediately for the purpose of carrying out the above recommendations.

I have not been advised what action has been taken by the Department or the General Land Office upon the foregoing recommendations.

INDIAN TERRITORY UNDER THE CURTIS ACT.

This act, which was approved by the President on June 28, 1898, entitled "for the protection of the people of the Indian Territory, and for other purposes" (30 Stats., p. 475, and p. 425 of this report), is probably the most important piece of legislation and will have the most far-reaching effect of any act that has been passed by Congress relative to Indian affairs since the passage of the act of February 8, 1887 (24 Stats., 388), known as the general allotment act.

The Curtis Act provides for many radical changes in the government of the Five Civilized Tribes and the regulation of affairs in the Indian Territory. Its principal features are:

First. The enlargement and extension of the jurisdiction of the United States courts for the Indian Territory so as to include all causes of action irrespective of the parties, and so as to give those courts jurisdiction to try certain suits by or against the several tribes.

Second. The conferring of jurisdiction for police purposes on the courts and municipal authorities of Fort Smith, Ark., over a certain portion of the Choctaw Nation lying between the corporate limits of

Fort Smith and the Arkansas and Poteau rivers and extending up the Poteau River to the mouth of Mill Creek.

Third. The making of the enrollment of the tribes by the commission to the Five Civilized Tribes, known as the Dawes Commission, conclusive as to the membership of each tribe. This provision will, when executed, determine definitely the membership of the tribes and dispose of all claims to citizenship, which, as stated in another part of this report, have complicated the question of intruders.

Fourth. The allotment of lands in severalty to the members of the tribes by the Dawes Commission, so far as the use and occupancy of the lands may be concerned, reserving all minerals for the benefit of the tribes.

Fifth. The leasing by the Secretary of the Interior of the mineral lands of the different tribes under regulations to be prescribed by him.

Sixth. Providing for the incorporation of cities and towns in the Territory under the provisions of chapter 29 of Mansfield's Digest of the Statutes of Arkansas, if not already incorporated under said chapter.

Seventh. Providing for surveying and laying out town sites and for the appraisal and sale of town lots within the Territory.

Eighth. Providing for the payment of all rents and royalties due and payable to the tribes into the Treasury of the United States to the credit of the tribes, respectively, under regulations to be prescribed by the Secretary of the Interior, and prohibiting the collection of the same by any individuals for the tribe, but permitting the leasing by individuals of their allotments, except as to minerals.

Ninth. Prohibiting the payment of any moneys on any account whatever to the tribal governments for disbursement; providing that the payment of all sums to members of the tribes shall be made by a disbursing officer of the Government, under the direction of the Secretary of the Interior; and declaring that per-capita payments to be made direct to individuals shall not be liable to the payment of any previously contracted obligation.

Tenth. Directing the enrollment of the freedmen of the Chickasaw Nation and the allotment of lands to them, subject to the determination of their rights under the treaty of 1866 (14 Stats., 769), in a manner to be provided hereafter by Congress.

Eleventh. Declaring all grazing leases made prior to January 1, 1898, to be terminated on April 1, 1899, and all farming leases made prior to January 1, 1898, to be terminated on January 1, 1900, and all leases made subsequently to January 1, 1898, to be void and null.

Twelfth. Authorizing the segregation of 157,600 acres of lands in the Cherokee Nation for the Delawares, subject to the adjudication, by the Court of Claims and the Supreme Court, of the rights of the Delawares in a suit to be brought by them, and giving those courts jurisdiction to try such suit.

Thirteenth. Prohibiting the enforcement of the laws of the various tribes by the United States courts in the Indian Territory.

Fourteenth. Authorizing the permanent location of an Indian inspector in the Indian Territory, who may, under the authority and direction of the Secretary, perform any duties required by law of the Secretary of the Interior relating to affairs therein.

Fifteenth. The abolition of all tribal courts in the Territory, and prohibition of all officers of said courts, after July 1, 1898, from performing any act theretofore authorized by any law in connection with those courts, and from receiving any pay for same, and directing the transfer of all civil and criminal causes then pending in the tribal courts to the proper United States court in the Territory. By a proviso this provision as to courts is suspended as to the Choctaw, Chickasaw, and Creek nations until October 1, 1898, and by reason of action taken by the Choctaw and Chickasaw tribes, under other provisions of the act (mentioned below more specifically), the clause of the act abolishing tribal courts will not go into effect as to the Choctaw and Chickasaw courts.

Sixteenth. The remainder of the act is devoted to the ratification, with amendments, of the agreement between the Dawes Commission and the Choctaw and Chickasaw nations, dated April 23, 1897, and of the agreement between that commission and the Creek Nation, dated September 27, 1897.

These agreements were ratified in the Curtis Act, with amendments, and are to go into effect if ratified before December 1, 1898, by a vote of the members of the nations, to be had at the next general election called for the purpose, with the proviso that on the ratification of those agreements the general provisions of the act shall apply to those nations only where the same do not conflict with their agreements.

By a vote of the citizens of the Choctaw and Chickasaw nations at a special election held on August 24, 1898, the Choctaw and Chickasaw agreement,* as amended, was ratified, and August 30, 1898, its ratification was proclaimed as follows by the board appointed in accordance with the Curtis Act to canvass and count the vote:

A PROCLAMATION.

Whereas, by section 32 of an act of Congress, entitled "An act for the protection of the people of the Indian Territory, and for other purposes," approved June 28, 1898, it is provided "That the agreement made by the commission to the Five Civilized Tribes with commissions representing the Choctaw and Chickasaw tribes of Indians on the 23d day of April, 1897, as herein amended, is hereby ratified and confirmed, and the same shall be of full force and effect if ratified before the 1st day of December, 1898, by a majority of the whole number of votes cast by members of said tribes at an election held for that purpose." And further, "That the votes cast in both of said tribes or nations shall be forthwith returned, duly certified by the precinct officers, to the national secretaries of said tribes or nations, and shall be presented by said national secretaries to a board of commissioners consisting of the principal chief and national secretary of the Choctaw Nation, the governor and national secretary of the Chickasaw Nation, and a member of the commission to the Five Civilized Tribes, to be designated by the chairman of said commission, and said

* For agreement see page 435.

board shall meet without delay at Atoka, in the Indian Territory, and canvass and count said votes, and make proclamation of the result;" and

Whereas, on the 24th day of August, 1898, such an election was held within said tribes, in compliance with the laws of said tribes and said act of Congress; and such commission, composed of Green McCurtain, principal chief of the Choctaw Nation, and S. J. Homer, national secretary of said nation; and R. M. Harris, governor of the Chickasaw Nation, and L. C. Burris, national secretary of said nation; and T. B. Needles, member of the commission to the Five Civilized Tribes, assembled at Atoka on the 30th day of August, 1898, and then and there proceeded to canvass and count the votes cast at said election, as required by law; and said commission hereby proclaim that there were cast for said agreement 2,164 votes, and against said agreement 1,366, there being a majority of 798 votes for said agreement.

Now, therefore, by virtue of the authority in us vested by said law, we do hereby proclaim said agreement duly ratified by the members of said tribes in accordance with the terms and provisions of said act of Congress.

GREEN MCCURTAIN,
Principal Chief of Choctaw Nation.
SOLOMON J. HOMER,
National Secretary Choctaw Nation.
R. M. HARRIS,
Governor Chickasaw Nation.
L. C. BURRIS,
National Secretary Chickasaw Nation.
T. B. NEEDLES,
Commissioner to the Five Tribes.

Done at Atoka, Ind. T., this 30th day of August, A. D. 1898.

This office is not informed that any special election has been called by the executive of the Creek Nation to vote on the ratification of the Creek agreement as amended, and has no knowledge as to what steps, if any, have been taken with a view to obtaining a vote of the Creek citizens on that question.

The agreement with the Choctaw and Chickasaw nations as amended and ratified deals with all the subjects affected by the Curtis Act and makes provision for the settlement of the affairs and interests of the nations in a manner but little differing from the act. The most important differences between the act and agreement are:

First. By the agreement all lands susceptible of allotment are to be appraised and graded, before being allotted, according to values rather than areas. The act makes no provision for appraisal and grading.

Second. Patents are to be issued to the allottees by the principal chief of the Choctaw Nation and the governor of the Chickasaw Nation jointly. Under the act the Secretary of the Interior shall "confirm" the allotments.

Third. Allottees are given the right to alienate certain portions of their allotments after one, three, and five years. Under the act allotments are to be inalienable.

Fourth. Arrangements for the survey, appraisal, and sale of town lots differ only in providing in the agreement for one commission for each nation instead of one for each city or town.

Fifth. In the agreement the coal and asphalt within the limits of the Choctaw and Chickasaw nations are to be leased by two trustees to be

appointed by the President, one on the nomination of the principal chief of the Choctaw Nation and one on the nomination of the governor of the Chickasaw Nation. These leases are to be for thirty years instead of fifteen, as provided by the act. All leases heretofore made by the national agents of the Choctaw and Chickasaw nations are confirmed and all leases with individuals are annulled.

Sixth. The tribal governments of the Choctaw and Chickasaw nations are continued in existence in a modified form for the period of eight years from March 4, 1898.

The agreement with the Creek Nation, which, as stated above, has not yet been ratified, makes substantially the same provision as to allotments, title, town sites, etc., within the Creek Nation as the agreement with the Choctaw and Chickasaw nations.

No regulations have as yet been prescribed under the Curtis act, but a draft of regulations to govern leasing of minerals under section 13 was prepared in this office under informal instructions from the Department and was informally submitted for Department consideration. Neither have regulations under the Choctaw and Chickasaw agreements been prescribed. As Congress did not, before adjournment, provide any appropriation to meet the expense of the execution of the act or of the agreement when ratified, and as the execution of either would entail some considerable expenditures, it is doubtful whether anything can be safely done to that end further than to prepare for prompt action when Congress shall provide the means for the purpose.

While no general regulations have been prescribed, arrangements have been made by the Department for the execution of the provisions of the act requiring immediate attention, viz, those relating to collection of and accounting for the revenues of the tribes. July 21, 1898, the office was instructed by the Department, as a provisional arrangement, that all rents and royalties arising upon such contracts, leases, permits, etc., as were in force at the time of the passage of the act would, until otherwise provided, be collected by the Indian Agent for the Five Tribes on the basis of such contracts, leases, etc., and the proceeds paid into the Treasury of the United States to the credit of the respective tribes, in compliance with the provisions of the act. Agent Wisdom, of the Union Indian Agency, was given directions, July 23, 1898, to carry out this provisional regulation of the Department, and a copy thereof was furnished to each of the executives of the Five Tribes. July 26, 1898, the Department explained that said provisional regulation was intended to cover also any import taxes, per capita assessments, or other charges upon cattle imposed by the laws of the respective tribes, and instructions to that effect were given Agent Wisdom by telegraph July 28, 1898.

By an act approved July 1, 1898, Congress ratified the agreement entered into on December 16, 1897, between the Dawes Commission and the Seminole Nation, which agreement had been previously ratified by that nation. This agreement, which will be found on page 60 of this

report, in its general provisions does not differ greatly from the Choctaw and Chickasaw agreement heretofore discussed.

One of its provisions, however, entails upon the Government the duty of making an effort to enlarge the Seminole Reservation, and is as follows, viz:

It being known that the Seminole Reservation is insufficient for allotments for the use of the Seminole people upon which they, as citizens holding in severalty, may reasonably and adequately maintain their families, the United States will make effort to purchase from the Creek Nation, at \$1.25 per acre, 200,000 acres of land immediately adjoining the eastern boundary of the Seminole Reservation and lying between the North Fork and South Fork of the Canadian River, in trust for and to be conveyed by proper patent by the United States to the Seminole Indians upon said sum of \$1.25 per acre being reimbursed to the United States by said Seminole Indians, the same to be allotted as herein provided for lands now owned by the Seminoles.

No provision has been made by law for the opening of negotiations with the Creek Nation for the purpose, but it is thought that the Dawes Commission, now engaged in the exercise of their duties in the Indian Territory, will have the authority under their general powers to make an agreement with the Creek Nation for a cession of a part of their lands on the west, to be added to the Seminole Reservation.

INTRUDERS IN THE INDIAN TERRITORY.

In my last annual report a full statement was given of the status to date of intruders in the Five Civilized Tribes. Since then, although nothing directly has been done in the matter, the entire situation has been changed.

A provision of the Indian appropriation act of July 1, 1898, has an important bearing on the intruder question in that it authorizes appeals in all citizenship cases from the courts in the Indian Territory direct to the Supreme Court of the United States. Under this provision, as before remarked, the vexed question of citizenship, which more than anything else has complicated the intruder question, will be finally determined by the courts. Moreover, the extensive and radical modifications of tribal government and ownership in the Five Civilized Tribes, caused by the Curtis Act, as set forth above, will probably so dispose of the intruder question as to obviate the necessity for any removal of intruders being made.

SALE OF PEORIA AND MIAMI LANDS, INDIAN TERRITORY.

The Indian appropriation act approved June 7, 1897 (30 Stats. p. 72), provides—

That the adult allottees of land in the Peoria and Miami Reservation in the Quapaw Agency, Indian Territory, who have each received allotments of two hundred acres or more may sell one hundred acres thereof, under such rules and regulations as the Secretary of the Interior may prescribe.

The prescribed rules were adopted July 10, 1897, and the first approval of such conveyances was made October 5, 1897. There have been approved by the Department up to August 5, 1898, thirty-two conveyances of land by the Peoria Indians, amounting to 2,684.57 acres, at a valuation of \$27,653.90, an average of \$10.30 per acre, and sixteen conveyances by the Miami Indians, amounting to 1,411.05 acres, at a valuation of \$12,505, an average of \$8.86 per acre, making in the aggregate a sale of 4,095.62 acres of land for \$40,108.90, an average of \$9.79 per acre.

TITLE TO LAND PURCHASED BY THE SAC AND FOX INDIANS IN IOWA.

Since 1857 the Sac and Fox Indians have purchased at various times with their own funds sundry tracts of land in Iowa, trust deeds for which were made, some in the name of the governor of the State and some in the name of the Indian agent; a few deeds were made in trust for certain named Indians which were undoubtedly intended for the tribe.

In settling the status of these Indians the question of jurisdiction over their lands has arisen, and, in order to secure a just recognition of their rights, the legislature of the State of Iowa, in January, 1896, ceded to the Federal Government jurisdiction over the Iowa Indians and their lands. The United States Indian agent for the Sac and Fox Agency, Iowa, and the governor of the State of Iowa, were thereby authorized to transfer by deed of conveyance, for the use and benefit of said Indians, the legal title held by them in trust, respectively, and the trusteeship of the lands of the Sac and Fox Indians of Tama County, Iowa, to the Secretary of the Interior and his successors in office.

By the Indian appropriation act approved June 10, 1896 (29 Stats., p. 331), the United States "accepts and assumes jurisdiction over the Sac and Fox Indians of Tama County, in the State of Iowa, and of their lands in said State, as tendered to the United States by the act of the legislature of said State, passed on the 16th day of January, 1896, subject to the limitations therein contained."

The records of this office showed that the following sixteen tracts of land were held by these Indians, viz:

1. Deed, dated November 13, 1876, from Lewis Carmichael to the governor of Iowa, in trust for the use and benefit of the Sac and Fox Indians of Iowa, the E. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ of sec. 29, T. 83 N., R. 15 W., except the right of way of railroad and Tama Hydraulic Company; also the west 24 acres of the NW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 32, T. 83 N., R. 15 W., Iowa, containing in all 144 acres, more or less; consideration, \$2,600.

2. Deed, dated November 11, 1876, from Andrew Jackson and Catharine, his wife, to the governor of Iowa, in trust, etc., the SE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W.; consideration, \$800.

3. Deed, dated November 14, 1876, from David Toland and Nancy, his wife, to the governor of Iowa, in trust, etc., the following-described land, viz: Commencing at the center of sec. 31, T. 83 N., R. 15 W., thence N. on quarter-section line 39.91 chains to the NW. corner of the NE. $\frac{1}{4}$ of said sec.; thence E. 14 chains to the south bank of the Iowa River; thence S. $12^{\circ} 40'$ E. along said bank 4.50 chains; thence S. $53^{\circ} 40'$ E. along said bank 3 chains; thence S. $73^{\circ} 40'$ E. along said bank 3 chains; thence N. $81^{\circ} 40'$ E. along said bank 5 chains; thence E. along said bank 3.23 chains; thence S., parallel with the west line of said quarter section, 34.10 chains to a point 50 links south of the quarter-section line; thence W. 25.53 chains; thence N. 50 links to the quarter-section line; thence W. 2.84 chains to place of beginning; except 5 acres at the SW. corner of said NE. $\frac{1}{4}$ and 5 acres of timber in the north part of said quarter section, sold to Allen Davidson; also excepting 4 acres in the northeast corner, 8 rods wide east and west and 80 rods long north and south; also 2.75 acres in the southeast corner of said described land; containing in all 89 acres, more or less; consideration, \$2,500.

4. Deed, dated April 2, 1883, from John D. Wright and Hannah A., his wife, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust for the Fox or Mesquawkee tribe of Indians, of Tama County, Iowa, the SE. $\frac{1}{4}$ sec. 25, T. 83 N., R. 16 W., viz., containing 160 acres of land, being the same land conveyed to said Wright by Theodore Schwab and wife, and recorded in Book 6, pages 189 and 190; consideration, \$4,000.

5. Deed, dated March 21, 1883, from Philip Butler and Emma, his wife, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, all that part of the NW. $\frac{1}{4}$ and W. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., which lies south of the Chicago and Northwestern Railway, exclusive of 11.25 acres owned by the Tama Water Power Company, containing 181.7 acres of land, more or less; consideration, \$3,101.94.

6. Deed, dated December 4, 1882, from Wesley Croskrey and Sarah, his wife, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, the east 56 acres of the N. $\frac{1}{2}$ of the NW. $\frac{1}{4}$ (except 4.23 acres off the north side for railroad); and the east 30 acres of the west 60 acres of the S. $\frac{1}{2}$ of the NW. $\frac{1}{4}$ (except 2.73 acres lying south of the north bank of the Iowa River); and the west 10 acres of the S. $\frac{1}{2}$ of the NE. $\frac{1}{4}$, and the east 20 acres of the S. $\frac{1}{2}$ of the NW. $\frac{1}{4}$; also, commencing at the southeast corner of the west 10 acres of the S. $\frac{1}{2}$ of NE. $\frac{1}{4}$ of sec. 32, T. 83 N., R. 15 W., thence S. 6 chains, thence S. $67^{\circ} 30'$ W. 5.88 chains to north bank of the Iowa River, thence N. $62^{\circ} 45'$ W. along said bank 19.20 chains to the quarter-section line, thence east on said quarter-section line 22.41 chains, to place of beginning, the last-described tract containing 10.96 acres, and in all 120 acres, all lying in sec. 32, T. 83 N., R. 15 W.; consideration, \$3,000.

7. Deed, dated May 23, 1883, from Mary A. Gallagher, widow of William Gallagher, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, the undivided one-third of the NW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 29, T. 83 N., R. 15 W.; consideration, \$166.67.

8. Deed, dated May 23, 1883, from Mary A. Gallagher, as guardian of Anna Cora and William S. Minor, heirs of William Gallagher, in virtue of authority vested in her by the circuit court of Tama County, Iowa, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, the undivided two-thirds of the NW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 29, T. 83 N., R. 15 W.; consideration, \$333.33. This deed was approved by the said court May 26, 1883, and ordered of record in probate records No. 2, page 216.

9. Deed, dated February 19, 1883, from J. A. Berger and Minerva, his wife, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, the SW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 20, T. 83 N., R. 15 W.; consideration, \$500.

10. Deed, dated February 22, 1883, from James Burge and Ellen S., his wife, to Buren R. Sherman, governor of Iowa, and his successors in office, in trust, as above, the SW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$, the W. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$, the W. $\frac{1}{2}$ of the NW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$, and 4 acres off the E. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$, commencing 24 rods south of the northeast corner, thence west 40 rods, thence south 16 rods, thence east 40 rods, thence north 16 rods to the place of beginning, all in sec. 30, T. 83 N., R. 15 W., containing 24 acres; consideration, \$600.

11. Deed, dated June 15, 1892, from John Fife and Anna J., his wife, to Horace Boies, governor of Iowa, and his successors in office, in trust for the Sac and Fox Indians in Iowa, the SE. $\frac{1}{4}$ of sec. 31, T. 83 N., R. 15 W., except the west 2.84 chains thereof, also except the north 50 links of the west 113 rods thereof, together with the east 39.25 acres south of the Iowa River, of the E. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of sec. 31, T. 83 N., R. 15 W., containing 187 acres of land, more or less; consideration, \$10,285. Recorded in Book 100, page 111, recorder's office, Tama County, Iowa.

12. Deed, dated July 21, 1892, from H. J. Stiger and Carrie E., his wife, to Horace Boies, governor of Iowa, and his successors in office, in trust for the Sac and Fox Indians in Iowa, the W. $\frac{1}{2}$ of the SW. $\frac{1}{4}$, the NE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 4, the S. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of sec. 5, the N. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of sec. 8, all in T. 82 N., R. 15 W., containing 280 acres; consideration, \$9,800. This deed is recorded in Book 100, page 154, recorder's office, Tama County, Iowa.

13. Deed, dated July 21, 1892, from same vendors to same vendees in trust, etc., the following lands: E. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of sec. 8, T. 82 R. 15; E. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of sec. 8, T. 82, R. 15; the NW. $\frac{1}{4}$ and the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 9, T. 82, R. 15, purporting to convey 240 acres; consideration, \$7,680. This deed is recorded in Book 100, page 153, recorder's office, Tama County, Iowa.

14. Deed, dated October 12, 1892, from John N. Adams and Lucy R., his wife, to same grantee, in trust, etc., the SE. $\frac{1}{4}$ of the NW. $\frac{1}{4}$, the S. $\frac{1}{2}$ of the east 28 acres of the SW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$, and the NE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, and the N. $\frac{3}{4}$ of the SE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, all in sec. 19, T. 83 N., R. 15 W., containing 124 acres; consideration, \$3,503. This deed is recorded in Book 100, page 380.

15. Deed, dated October 12, 1892, from Daniel S. Hinegardner and Mary J., his wife, to the same vendee in trust, etc., the SE. $\frac{1}{4}$, except 6 acres railroad and 4 acres south of the Iowa River, in sec. 24, T. 83 N., R. 16 W., and the south 6 acres of the west 12 acres of the SW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$, and the S. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, and commencing at the SW. corner of the SE. $\frac{1}{4}$ of sec. 19; thence north on quarter-section line 7.10 chains, S. 69° 30' E., 6.31 chains S. 50° 10' E., 6.78 chains to south line of said section; thence west 11.31 chains to beginning, containing $4\frac{1}{8}$ acres; and all that part of the NW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ and the N. $\frac{1}{2}$ of the NW. $\frac{1}{4}$ of sec. 30, that lies north of the Chicago and Northwestern Railway, except 5 acres in the northeast corner thereof, commencing at the NE. corner of the NW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of said sec. 30; thence west 20 rods, south 40 rods, east 20 rods, north 40 rods to beginning, containing 27.5 acres; all in T. 83 N., R. 15 W., and containing in all 197.625 acres of land; consideration \$5,928.75. This deed is recorded in Book 101, pages 256, 257.

16. Deed, dated October 21, 1892, from Sarah C. Connell, Mary C. Forker and Allison, her husband, William M. Connell and Addie L., his wife, William C. Walters and Mary H., his wife, to the same vendee in trust, etc., the NE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$; the south 5.75 acres of the W. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$; the west 3 acres of the north 14.25 acres of the W. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$; the SW. $\frac{1}{4}$ of the SE. $\frac{1}{4}$; the S. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ of sec. 13, and the NW. $\frac{1}{4}$ and the NE. $\frac{1}{4}$ and all of the SW. $\frac{1}{4}$ that lies north of the Chicago and Northwestern Railway, containing 124 acres, all of [in] section 24; all of the above land being in T. 83 N., R. 16 W., and containing in all 612.75 acres; consideration \$20,067. This deed is recorded in Book 101, page 254.

By reference to the annual reports of this office for the year 1867, page 347, and 1884, page 100, it appeared that tracts of land other than the 2,480.075 acres contained in the above enumerated sixteen tracts had been purchased, owned, and claimed by these Indians, and it was important that this office should have a record of all deeds conveying land to them. The United States Indian agent, Horace M. Rebok, was instructed, July 18, 1896, to have an examination made to date of the deed records for Tama County, Iowa, from and including the year 1857, which appeared to have been the earliest land purchase made by these Indians.

After making a preliminary examination of the records, Agent Rebok reported, July 25, 1896, a record of about thirty additional deeds conveying seventeen tracts of land belonging to these Indians, a certified

copy of which would cost \$45. Authority was granted by the Department, July 31, to have certified copies made of such conveyances of land, whether the same were held in trust or otherwise.

On the 12th and 14th of November, 1896, Agent Rebok forwarded certified copies of thirteen deeds for land in Iowa purchased by these Indians, viz:

1. Deed, dated July 13, 1857, from Philip Butler, David Butler, and Isaac Butler, guardian for William Butler and Ozias Butler, minors, conveying to James W. Grimes, governor of the State of Iowa, and his successors in office, in trust for the following-named persons, Indians, and their heirs, forever, viz: Kath a nuk wah, Ku no chalk, Kaha nah, Ma ta na quash, and Pol a cato, for \$1,000, the W. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., of the fifth principal meridian, Iowa, containing 80 acres.

2. Deed, dated October 31, 1865, from James Burge and Ellen S. Burge, his wife, conveying to W. M. Stone, governor of the State of Iowa, in trust for the tribe or band of Musquaka Indians, living in Tama County, Iowa, for certain timber trees on the Butler tract and on the land conveyed, the NE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., containing 40 acres.

3. Deed, dated May 31, 1867, from Hannah King and Samuel A. King, her husband, conveying to Leander Clark, special United States agent for the Sac and Fox Indians, and his successors in office, in trust and for the use and benefit of said Indians, for \$2,000 the SE. $\frac{1}{4}$ of the NE. $\frac{1}{4}$, the N. $\frac{1}{2}$ of the NE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$, and the N. $\frac{1}{2}$ of the SE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., containing 80 acres; also 19 acres in the NE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of the same section. Commencing at a point 8 rods north of the southwest corner of NE. $\frac{1}{4}$ of SE. $\frac{1}{4}$; thence east 20 rods; thence south 8 rods; thence east 60 rods; thence north 40 rods; thence west 80 rod; thence south 32 rods to the place of beginning, containing in the aggregate 99 acres.

4. Deed, dated May 14, 1868, from William Croskrey and Rachel J., his wife; Wesley Croskrey and Sarah, his wife; Joseph Croskrey and Sarah Ann D., his wife, and Jacob Croskrey and Caroline, his wife, conveying to Leander Clark and his successors in office, in trust for the use and benefit of said Sac and Fox Indians, for \$3,500, the W. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ and the SW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 29, T. 83 N., R. 15 W., containing 120 acres, excepting therefrom the 100 feet right of way to the Cedar Rapids and Missouri River Railroad Company.

5. Deed, dated June 2, 1869, from Philip Butler and Emma, his wife, and David Butler, conveying to Leander Clark and his successors in office, in trust for the use and benefit of the Sac and Fox Indians residing in Iowa, for \$1,600, the W. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., containing 80 acres.

6. Deed, dated November 3, 1876, from Lewis Carmichael (single), conveying to the governor of Iowa, in trust for the use and benefit of

the Sac and Fox Indians in Iowa, for \$2,600, the E. $\frac{1}{2}$ of the SW. $\frac{1}{4}$ and the SE. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 29, T. 83 N., R. 15 W., except right of way of railroad and Tama Hydraulic Company; also, the west 24 acres of the NW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 32, T. 83 N., R. 15 W., containing 144 acres. See deed No. 1 of first list, which does not contain a full description of the land, omitting the SE. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of sec. 29.

7. Deed dated October 12, 1880, from Normand Lewis and Elizabeth L., his wife, conveying to Joseph Tasson, for \$900, the NW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of sec. 32, T. 83 N., R. 15 W., containing 40 acres.

8. Deed dated January 9, 1888, from Andrew Jackson and Catherine, his wife, conveying to the governor of the State of Iowa, in trust for the use and benefit of the Sac and Fox Indians in Iowa, for \$434, all of the NW. $\frac{1}{4}$ of sec. 31, T. 83 N., R. 15 W., lying north of the Chicago, Milwaukee and St. Paul Railway, containing 10.85 acres.

9. Deed dated March 11, 1892, from George W. Louthan and Jane his wife, conveying to Joseph Tasson, for \$70, the following-described tract of land: Commencing at a point 20 rods east of the northwest corner of the SW. $\frac{1}{4}$ of the NE. $\frac{1}{4}$ of sec. 32, T. 83 N., R. 15 W., thence south 40 rods, thence east 20 rods, thence north 40 rods, thence west to the place of beginning, containing 5 acres.

10. Deed dated July 9, 1896, from H. A. Shanklin and Gertrude, his wife, conveying to Francis M. Drake, governor of Iowa, and his successors in office, in trust for the Sac and Fox Indians of Iowa, for \$200, the SE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of the SE. $\frac{1}{4}$ of sec. 30, T. 83 N., R. 15 W., containing 10 acres.

11. Deed dated November 12, 1896, from David Toland and Nancy, his wife, quitclaiming to the governor of the State of Iowa, and to his successors in office, in trust for the use and benefit of the Sac and Fox Indians in Iowa, for \$1, all their right in and to the NE. $\frac{1}{4}$ of sec. 31, T. 83 N., R. 15 W. (See deed 3 in first list.)

12. Deed, dated November 14, 1896, from John Fife and Ann J., his wife, quitclaiming to the governor of the State of Iowa, and his successors in office, in trust for the use and benefit of the Sac and Fox Indians in Iowa, for \$1, all their right in and to the E. $\frac{1}{2}$ of sec. 31, T. 83 N., R. 15 W. (See deed 11 in the first list.)

There are eight small tracts, containing about 50 acres, within these Indian purchased lands, which are owned by whites; one tract of 1 acre, four of 5 acres each, one of 4, one of 10, and one of 15 acres, which can be secured at a cost of from \$5 to \$30 per acre, the variation in price arising from quality of soil and location of land. I would respectfully recommend that steps be instituted for the purchase of said lands by securing options thereon.

In reporting deed 1, Agent Rebok held that the conveyance had been made to the five Indians and their heirs, instead of to the tribe, and suggested that authority be given to institute suit in equity in the district court of Tama County, Iowa, to have the title to this land

quieted in the Sac and Fox Indians of Iowa. In reply the office suggested that the Indian agent obtain the consent of the Indians for paying the expenses of prosecuting such suit, inasmuch as the Department had no fund at its disposal for that purpose, and section 189 of the Revised Statutes forbids the employment of counsel by the Government. To that end the agent called a council of these Indians November 21, 1896; but while all of them who knew anything about the transaction testified that the land was bought by the chiefs for the entire tribe and from the funds of the tribe, yet they were unwilling to allow or incur the expense from tribal funds of a suit to recover or quiet title in the tribe.

Here the matter rested until October 7, 1897, when Inspector A. J. Duncan reported that nothing was being done toward securing title to those lands in the Indians, which was a very important matter to them. This office, on the 16th of February, 1898, reported in detail the history and status of those lands and recommended that action be delayed in securing a deed from the governor for such other lands as were held in trust by him until he could convey all the lands which he held in trust for these Indians. The office also recommended that request be made of the Department of Justice to instruct the district attorney for Iowa to consult with Agent Rebok and to enter suit for a change of title from the five Indians to the whole tribe. If this was done and the deed was corrected by the court in favor of the whole tribe, and this office was furnished an exemplified copy of the court proceedings and of the corrected deed, steps might then be taken to have the governor of Iowa and the Indian agent execute deeds of conveyance in accordance with the legislation enacted June 10, 1896. On the 7th of March, 1898, the Department advised this office that request had been made of the Attorney-General as recommended, and March 21 Agent Rebok was furnished a copy of a letter from the Hon. Attorney-General, dated March 10, 1898, stating that H. G. McMillan, esq., United States attorney for the northern district of Iowa, at Dubuque, had been directed to consult with him and to enter suit for said change of title.

When the court acts upon this matter steps will be taken to secure deeds of conveyance for all of their lands from the governor of the State and from the Indian agent, the lands to be held in trust by the Secretary of the Interior, for the use and benefit of the Sac and Fox Indians in Iowa.

ATTACK BY PAPAGOS ON EL PLOMO, MEXICO.

April 18, 1898, the State Department informed the Interior Department that the United States consul at Nogales, Mexico, had reported that 40 Papagos from the United States had attacked the village of El Plomo, Mexico, on April 14 last, with the supposed object of frightening the settlers and stealing their cattle.

In compliance with your instructions of April 19 this office telegraphed the United States Indian agent of the Pima Agency, Ariz., to

investigate the matter, and on April 22 he was further instructed by mail as follows:

In addition to my telegraphic instructions of April 19, I have to direct that you exercise the utmost vigilance and watchfulness to prevent the Indians under your charge or within reach along the Mexican border from in any way interfering with or in any manner molesting the persons or property of the citizens of Mexico and from going into Mexican territory.

It is not improbable that evil-disposed persons, taking advantage of the disturbed conditions in the country, will endeavor to incite the Indians to acts provocative of ill feeling on the part of our neighbors on the other side of the line. The affair at El Plomo may possibly have been instigated with that object in view, and perhaps by Spanish sympathizers.

There are a large number of nonreservation Papagos living in the country south and west of Tucson with whom we have had but little official intercourse. However, when they have been visited by agents of this Department they have been found to be tractable and well disposed. It is to these Indians especially that your attention is directed. I think a friendly visit to them at this time would have a good effect, and you are accordingly directed either to go in person or to send a trusted and intelligent employee of the agency to visit them and report upon their condition, etc. It might be well to take one or more of the nonreservation Papagos with you, but of this you must be the judge. Should you discover any feeling of unrest or unusual excitement among them, wise counsel on your part will doubtless have a good effect.

You will keep this office duly informed of the situation along the border and acknowledge the receipt of these instructions.

The agent reported May 11, 1898, that there had been no trouble since the attack on El Plomo, in which no one was killed or wounded; that the trouble was caused by the Sonora Indians, who returned to Mexico to get their stock which they left there when they fled to the American side about a year ago, owing to some trouble; that they did not show fight until they had been fired upon by the Mexicans, who obliged them to flee without obtaining their stock, which is still in possession of the Mexicans; and that he was satisfied there would be no further trouble or outbreak.

Inspector C. F. Nesler was also requested by the Department to make an investigation of the matter, and on May 27 he reported that he had in custody twenty-five Papagos who were engaged in the attack on El Plomo; that four of the Indian ringleaders were, upon his request, held by the United States commissioner at Tucson for the United States grand jury, which would meet in September, to be tried for violation of United States statute 5286; that he deemed this sufficient punishment for them, and had instructed the assistant United States district attorney to enter a nolle pros. as soon as they were brought to trial; that the balance of the party, twenty-one in number, had been sent to Sacaton and turned over to the clerk in charge of Pima Agency, to be confined until further orders, and that he had assured the Mexican authorities that these Indians would be properly punished.

Special Agent Taggart, in charge of Pima Agency, was asked for a report on the status of these Indian prisoners, and June 22 last he replied that the offense of the Indians had been somewhat exaggerated,

and while it might be desirable for reasons of state to hold them as prisoners, yet under the circumstances, as known and believed by the people in the vicinity of his agency, such treatment of them was unnecessary and unjust, particularly so as some of them had families to support and could get employment if released at that time. He also stated that they have always been friendly to this Government, self-sustaining, and honorable and truthful to a marked degree, were not criminals and were not aware of having committed any offense, and that unless there was more to the recent affair than was apparent in that section of the country, he was of the opinion that they ought at once to be released and allowed to return to their homes on parole.

The question as to their continued imprisonment was submitted to the Department in office letter of June 8 last, and June 10 the Department directed that eleven of the prisoners, who were adjudged to have been the least guilty in the attack on the Mexican village, be released on their solemn promise and agreement to avoid further disturbance and not again to cross the international boundary line; also that the ten sent to the Phoenix school, Arizona, and put to work making bricks, be kept in custody for three months from the date of their capture and then paroled on the same conditions as were the others. Their term of imprisonment expired on July 27, and they have been paroled and allowed to return to their homes.

Concerning the four ringleaders, the Department directed that they be held for trial, as recommended by Inspector Nesler, and they are in the custody of the agent.

NORTHERN CHEYENNE RESERVATION, MONT.

The Indian appropriation act approved July 1, 1898, contains the following section providing for an investigation of affairs upon the Tongue River Reservation, in Montana:

SEC. 10. That the Secretary of the Interior be, and he is hereby, directed to send an inspector of his Department to the reservation of the Northern Cheyenne Indians, in the State of Montana, and said agent shall be instructed to make a full and complete report to the Secretary of the Interior upon the conditions existing upon said reservation, said report to be available for use on or before the fifteenth day of November, eighteen hundred and ninety-eight.

It shall be the duty of the said inspector to ascertain if it is feasible to secure the removal of said Northern Cheyenne Indians from the present reservation to some portion of the Crow Indian Reservation, in the State of Montana. He shall also ascertain and report in detail the number and names of the white settlers legally upon the Northern Cheyenne Reservation, the number of acres of land owned by them, its location, and the value thereof, and of the improvements thereon. Also the number and names of white settlers who are alleged to be illegally settled upon the reservation, the circumstances attending their settlement thereon, and their location. He shall also enter into negotiations with the white settlers upon said reservation, who have valid titles, for the sale of their lands and improvements to the Government; and he is hereby authorized and empowered to make written agreements with such settlers, which agreements shall not be binding until ratified and approved by the Secretary of the Interior. He shall also make recommendations as

to the settlement of the claims of such white settlers as have gone upon said reservation under circumstances which give them an equitable right thereon.

He shall investigate the subject of fencing in the said reservation, and shall indicate the lines such fence should follow and the estimated cost of same, and shall report upon the number of cattle and sheep which may safely be pastured within the limits recommended to be fenced. He shall further report upon and make recommendations with reference to any and all matters which in his judgment have any bearing upon the question of securing an equitable adjustment of the difficulties now existing upon said reservation, and with especial reference to bringing about a satisfactory settlement with the white-settlers, both as to the sale of their lands to the Government and the adjustment of the reservation limits.

July 29, 1898, this office submitted to the Department for approval a draft of instructions for the guidance of an Indian inspector in the investigation of matters pertaining to the Northern Cheyenne Indians under the provisions of the above section. On August 3, 1898, this office was advised that they had been forwarded to United States Inspector James McLaughlin, with directions to make the contemplated investigations.

PUEBLOS IN NEW MEXICO.

Zuñi Grant.—By reference to the annual report of the Commissioner of the General Land Office for the year 1880, page 658, it appears that the Zuñi pueblo was granted to the inhabitants of the pueblo in 1689, by Spain, and the claim therefor was approved by the surveyor-general of New Mexico, September 25, 1879, and a survey made of its exterior boundaries in 1880. Its area was found to be 17,581.25 acres, and its location in Valencia County, N. Mex. It does not appear that the grant was approved by the Department or by Congress, although the matter was referred to Congress by the Department December 7, 1880, and no patent has ever been issued for that grant.

By an act of Congress entitled "An act to establish a Court of Private Land Claims, and to provide for the settlement of private land claims for certain States and Territories," approved March 3, 1891 (28 Stats., p. 854), provision was made in the sixth section of the act for the confirmation of title to all lands under Spanish grant in New Mexico that had not been confirmed by Congress or decided upon legal authority. By the twelfth section all such claims were to be presented within two years from the date upon which the act took effect, otherwise to be considered as abandoned and forever barred. As no petition was filed by the Indians for this pueblo, or by the Government in their behalf, it would appear that their claim to title in said pueblo is forever barred unless the second clause of the thirteenth section shall protect them in that title. It provides that "no claim shall be allowed that shall interfere with or overthrow any just or unextinguished Indian title or right to any land or piece."

Capt. J. L. Bullis, acting as Indian agent for the Pueblo and Jicarilla Agency, advised this office, September 22, 1896, that he had ascertained from the governor of the Zuñi pueblo that all their deeds, documents,

etc., were lost. Later he reported that certain papers relating to the Zuñi grant had been found in the office of the surveyor-general of the Territory of New Mexico, and he recommended that, in case Congress should decline to take action in the matter, a suit be instituted in the United States Court of Private Land Claims, then sitting at Santa Fe for the settlement of land grants in New Mexico. The matter was reported to the Department, January 27, 1897, with the recommendation that the case be referred to the Commissioner of the General Land Office for an expression of his views as to what method should be adopted to secure the title of the Zuñi pueblo grant in and to the Zuñi Indians.

The Department on the 9th of March informed this office that the Commissioner of the General Land Office saw no way by which the title to the grant could then be confirmed to the Indians, except by special act of Congress, either confirming the claim outright or permitting suit to be brought against the United States in the Court of Private Land Claims, notwithstanding the limit for such actions fixed by the act of 1891. Holding that it seemed but fair and just to the Indians that the necessary steps be taken to secure their homes to them, as had been done in the case of other Indians similarly located, the Department directed that a draft of the necessary legislation be prepared to be submitted to Congress.

For use in the preparation of such draft the Commissioner of the General Land Office, April 24, 1897, furnished this office with the following copy of the transcript of the records of the claim of the Zuñi Indians for land in New Mexico, furnished by the surveyor-general of that Territory in his letter of November 20, 1880:

Transcript of Indian Pueblo Grant V, in the name of the pueblo of Zuni, in New Mexico.

Date of grant, September 25, 1689.

Date of surveyor-general's approval, September 25, 1879.

Transmitted to the General Land Office by the surveyor-general of New Mexico, November 20, 1880.

Letter No. 75342.

GRANT GIVEN TO ZUNI—YEAR 1689.

At the town of Our Lady of Guadalupe del Paso del Rio del Norte, on the twenty-fifth day of the month of September, year one thousand six hundred and eighty-nine, his excellency, the governor and captain general, Don Domingo Jironza y Petroz de Cruzate, declared before me that whereas within the reach of his authority which he has in New Mexico and of his power over the Queres Indians and over the apostates, and that after having fought all the other Indians of the Pueblos, an Indian called Bartolome de Ojeda, who was the one who distinguished himself most in battle, succoring all points, surrendered himself, finding himself wounded by a gunshot and an arrow, and being already disabled I ordered him to be taken and caused that they should heal him with great care so that he might be examined and state on his confession the condition in which is found the pueblo of Zuni and the other apostates of that kingdom, and as the Indian is versed in the Castillian language, is apt, and can read and write, and as he was the same who had conducted General Pedro de Renero de Possada to that pueblo, he being then on his way back

for this place, and he being in the house of Field Marshal Baninguas Mendoza, he was overtaken by the said Indian, and being brought into my presence I ordered that under oath he declare what is his name and whether he is disposed to confess the truth in so far as he might know and might be interrogated.

Questioned what is his name, where he is a native of, what is his age and his occupation, and whether he knows how Zuni is, he stated that his name is Bartolome de Ojeda and that he is a native of the Province of New Mexico, at the pueblo of Zia, and must be twenty-one or twenty-two years of age, a little more or less, and that he has not had any other occupation than the practice of agriculture, and that he knows how Zuni is because he was an apostate in that kingdom, and this he answers.

Questioned what are the boundaries which Zuni is known to have on account of the crops it has on the Rio Teguello, and whether the pueblo recognizes as its own, because of having crops or because of choice, and whether the Indians will again commit another infamy (torn) other priests, like the one they committed upon the custodian priest (torn), the other priest whom they killed by shooting, and the deponent answers no, that although it was true that all the pueblos had committed violence (torn) priests of the church and that when the war was in Zia all the Indians were there, but that with what had happened to them last year he judged it was impossible that they fail to give obedience; wherefore there were granted by his excellency the governor and captain-general, Don Domingo Jironza Petroz de Cruzate, the boundaries that I here state, on the north one league on the east one league and on the west one league and on the south one league, and these being measured from the four corners of the pueblo. And this his excellency provided, ordered, and signed before me, the present secretary of state and war, to which I certify.

DOMINGO JIRONZA PETROZ DE CRUZATE.

Before me,

PEDRO LADRON DE GUITARA,
Secretary of State and War.

SURVEYOR-GENERAL'S OFFICE,
Santa Fe, N. Mex., December 31, 1878.

The foregoing is a correct translation made by me from the original grant in Spanish on file in this office, in Private Land Claim V, in the name of the Indian pueblo of Zuni.

DAV. J. MILLER, *Translator.*

INDIAN PUEBLO OF ZUNI.

| | | |
|-------------------------------|---|-----------------------|
| INDIANS OF THE PUEBLO OF ZUNI | } | Private Land Claim V. |
| v. THE UNITED STATES. | | |

Before the United States surveyor-general for the district of New Mexico, in the matter of the investigation of the claim of the Indians of the pueblo of Zuni to a tract of land in Valencia County, in the Territory of New Mexico, had under the authority of the eighth section of the act of Congress approved July 22, 1854, and the treaty of Guadalupe Hidalgo.

The original title papers, consisting of the grant made September 25, 1689, by Domingo Jironza Petroz de Cruzate, governor and captain-general of the province of New Mexico, to the Indians of the pueblo of Zuni, was filed in this office July 3, 1875, for them, by B. M. Thomas, United States agent for the Pueblo Indians.

These Indians claim the land given them under the said grant of 1689, and it is said still continue to cultivate portions of the tract, though the pueblo or town referred to in the concession was abandoned many years ago, the inhabitants removing to their present residence, known as Zuni Nuevo or New Zuni, situate between 3 and 4 miles to the northwest. The pueblo of Zuni is referred to in the report of James S. Calhoun, then Indian agent, to the Commissioner of Indian Affairs, under date of October 4, 1849, and which is referred to in letter of August 21, 1854, of instructions to the surveyor-general of New Mexico from the Commissioner of the General Land Office.

The grant document is believed to be valid, and it evidently bears the genuine signature of Governor de Cruzate, who was at that date governor and captain-general of the province. The approval of the grant would be in pursuance of the policy of the Spanish Government, from which it was obtained, and, under the conditions of the treaty of Guadalupe Hidalgo, it is obligatory upon the Government of the United States to recognize the rights of the pueblos in the premises. The grant is therefore approved to the inhabitants of the pueblo Zuni to the extent of 1 league of 5,000 varas in each direction from the four corners of the pueblo proper.

A transcript of all the papers in the case in triplicate will be transmitted for the action of Congress in the premises.

Surveyor-general's office, Santa Fe, N. Mex., September 25, 1879.

HENRY M. ATKINSON,
Surveyor-General.

SURVEYOR-GENERAL'S OFFICE,
Santa Fe, N. Mex., September 25, 1880.

The foregoing is a correct transcript of all the papers on file in this office in Pueblo Claim V, the Indian pueblo of Zuni.

HENRY M. ATKINSON,
Surveyor-General.

April 30, 1897, the acting Indian agent for the Pueblos, Capt. C. E. Nordstrom, furnished this office a copy of such correspondence on file in the surveyor-general's office as related to the Zuñi pueblo grant, as follows:

On this 19th day of April, 1880, before me, Walter G. Marmon, a notary public in and for the county of Valencia, Territory of New Mexico, personally appeared Frank H. Cushing, of lawful age, and who, having been by me first duly sworn, deposeth and saith in answer to the following interrogatories:

Question. State your name, age, and place of residence.

Answer. My name is Frank H. Cushing; my age is 23 years, and I reside at Zuñi, in Valencia County, Territory of New Mexico.

Question. Are you acquainted with the Zuñi pueblo grant; and if so, how long have you known it?

Answer. I am; by reputation and through reference to it in contemporaneous documents now in possession of the "Cazique of the House of Zuñi."

Question. Do you know the location of the old pueblo of Zuñi; and if so, where is it situated?

Answer. I do; it is situated on a high table-land in a southeasterly direction from the present village of Zuñi, and distant about 3 miles therefrom.

Question. How do you know of its location?

Answer. From a personal knowledge and general reputation.

Question. Have you any interest in said grant?

Answer. I have not.

(Signed.)

F. H. CUSHING.

Subscribed in my presence and sworn to before me this 19th day of April, 1880.

[SEAL.]

WALTER G. MARMON,
Notary Public.

On this 19th day of April, 1880, before me, Walter G. Marmon, a notary public in and for the county of Valencia, Territory of New Mexico, personally appeared Pedro Pino, of lawful age, and who, having been by me first duly sworn, deposeth and saith in answer to the following interrogatories:

Question. State your name, age, and place of residence.

Answer. My name is Pedro Pino, my age is 75 years, and I reside at Zuñi, in Valencia County, Territory of New Mexico.

Question. Are you acquainted with the Zuñi pueblo grant; and if so, how long have you known it, and where is it ("the old pueblo of Zuñi") located?

Answer. I am—since I can remember—on a high mesa southeast of the present Indian town of Zuñi, and distant about 3 miles.

Question. Have you any interest in said grant; and if so, what interest have you?

Answer. I have, as one of the heirs.

PEDRO (his x mark) PINO.

Subscribed in my presence and sworn to before me this 19th day of April, 1880.

[SEAL.]

WALTER G. MARMON,
Notary Public.

Other papers furnished were the same as those furnished by the General Land Office.

Witch Hanging in Zuñi Pueblo.—In my last report reference was made to the arrest of a number of the Zuñi Pueblo Indians for "witch hanging." February 25 last the acting Indian agent for the Pueblo Agency forwarded to this office a copy of a letter dated February 24, from the United States attorney for New Mexico, stating that the five principal men engaged in the witch hanging had been indicted; that four were then in jail in Los Lunas, and a warrant had been issued for the other one; that the petit jury was discharged on the second day of the term and, as the indictment was not returned until the third, there would be no chance for a trial until the last of September, 1898. The acting agent had reported February 3 that there was no further need for the presence of the troops which had been detailed to make the arrests and to preserve the peace afterwards.

Counsel for Pueblos.—July 12 last the Department authorized the employment of Mr. George Hill Howard, of Santa Fe, as counsel for the several pueblos in their land and other matters, under an item in the Indian appropriation act for the current year.

PYRAMID LAKE INDIANS, NEVADA.

The Indian appropriation act, approved July 1, 1898 (30 Stats., p. 594), contains the following clause relating to the Pyramid Lake Reservation, and the inhabitants of the town of Wadsworth located thereon:

That the inhabitants of the town of Wadsworth, in the county of Washoe, State of Nevada, be, and they are hereby, authorized to proceed and acquire title to the town site of such town under the provisions of section twenty-three hundred and eighty-two of chapter eight of the Revised Statutes of the United States, relating to the reservation and sale of town sites on the public lands, and on compliance with the provisions of such town-site laws the inhabitants of said town of Wadsworth shall acquire title in manner and form as provided by the statutes aforesaid: *Provided*, That the proceeds of the sale of the land in such town site shall be paid into the Treasury, and be used by the Secretary of the Interior for the Piute Indians of the Pyramid Lake Reservation: *Provided further*, That if there are any Indians residing in said town and in possession of lots of ground with improvements, they shall have the same rights of purchase under the town-site laws as white citizens: *And provided further*, That the tract of land situated near to and north of the town of Wadsworth, and upon which is located the Pyramid Lake Indian schoolhouse, containing one hundred and ten acres, more or less, shall be, and hereby is, reserved from the town site hereby established, unless it shall be determined by the Secretary of the Interior that said tract is not needed for Indian school purposes.

It will be observed that it is provided that any Indian residing in said town site and in possession of lots of ground with improvements shall have the same right to purchase under the town-site laws as white citizens; also that the tract of land situated near to and north of the town of Wadsworth, upon which is located the Pyramid Lake Indian school, containing about 110 acres, is reserved from the town site established, unless it shall be determined by the Department that the tract is not needed for Indian school purposes.

July 27, 1898, the Indian agent of the Nevada Agency was furnished with a copy of the act, and directed to notify the Indians of its provisions, and to assist any who might be residing within the town site and be in possession of lots of ground and improvements to obtain title thereto under the town-site laws. Steps have been taken, also, to ascertain whether the school tract is still needed for school purposes.

INDIANS IN NEW YORK.

No change has been made in the condition or political status of the Indians in the State of New York during the past year. The chief obstacle to the betterment of their condition, namely, the claim of the Ogden Land Company, still exists, with no apparent prospect of its being soon removed.

Mention was made in my last annual report of the difficulties that were continually growing out of individual property rights, and that effort would be made to have the New York legislature amend the laws so as to give litigants in property matters the right to appeal from the Peacemakers to the State courts. A petition for such amendment, numerously signed by the Indians, was transmitted to the Department January 8 last, and was, I am informally advised, transmitted to the governor of New York January 13.

A matter of considerable interest to the Indians is the collection of the moneys due from the leasing of town lots in the six villages of the Allegany Reservation. Under existing law these moneys are paid to the treasurer of the Seneca Nation, to be expended for the benefit of the whole people. But it is alleged by many prominent members of the nation that the money is not properly expended, and that when funds are distributed many Indians do not get their share. To remedy this wrong a faction of the Seneca Nation had a bill introduced at the last session of Congress, the purpose of which was to have all lease moneys collected by the United States Indian agent. This bill (S. 2888) was favorably reported on in office letter to the Department, March 10, 1898, and passed the Senate and is now pending in the House.

On April 11 last the Supreme Court of the United States rendered a decision in the case of the New York Indians against the United States. The Indians had sued the United States to recover the value of lands in Kansas which had been set apart as a reservation for them by their treaty of 1838. These lands had never been occupied by the Indians and had been sold by the Government and the proceeds placed

in the United States Treasury. Suit was first brought in the Court of Claims in which judgment was rendered against the Indians. The Supreme Court reversed the judgment of the Court of Claims and remanded the case to that court with instructions to enter a new judgment in favor of the Indians for the net amount actually received by the Government for the Kansas lands less the amount to which the Tonawanda Senecas would have been entitled and less other just deductions. By their treaty of November 5, 1857, the Tonawanda Senecas surrendered their interest in the Kansas lands and their pro rata share of the fund provided for removal to Kansas. In anticipation of a call by the Court of Claims this office on May 5 last submitted to the Department a statement showing the basis upon which the settlement with the Tonawandas was made.

TURTLE MOUNTAIN CHIPPEWAS, NORTH DAKOTA.

Ratification of the agreement concluded with the Turtle Mountain Chippewas October 22, 1892, is still delayed, and the Indians therefore continue to be in an unsettled condition, not knowing what to do or to expect. The ratification of this agreement has been repeatedly urged.

A bill (House 9282) was introduced during the last session of Congress referring to the Court of Claims the claim of these Indians for payment for about 9,000,000 acres in North Dakota which they declare have never been ceded by them. It was favorably reported by the House Committee on Indian Affairs (House Report 820), and is still pending.

TORTURING AND BURNING OF SEMINOLES IN OKLAHOMA.

Early in January, 1898, alarming reports appeared in the newspapers of an impending outbreak by the Indians of the Seminole Nation along the borders of Oklahoma on account of outrages perpetrated in that vicinity. After a searching investigation it was found that the threatened disturbance was due to the burning of two Seminole Indian boys at the stake by a mob of white men from Oklahoma in revenge for the killing of one Mrs. Leard, a white woman living in the Seminole Nation. The facts as to the murder of this woman and the burning of the Indians are briefly stated by Leo E. Bennett, United States marshal, in his report to the Attorney-General, as follows:

On the evening of December 30, 1897, Mrs. Leard, or Laird, a white woman, residing on the "McGeisy farm," 20 miles west of Wewoka, Seminole Nation, and probably 5 or 6 miles east of the post-office of Maud, Okla., was visited by an Indian, who asked to borrow a saddle. This was refused him. He tarried a while, and Mrs. L. became uneasy at his presence and ordered him away. He left, but very soon after returned, and entering the house unannounced picked up a gun and attempted to shoot the woman. The gun failed to fire, and Mrs. L. started to run, whereupon he struck her with the gun, breaking the

stock from the barrel. He then picked up the barrel of the gun, and as she passed out the door he struck her several times in quick succession, the force of the blows crushing her skull, and from which she died. The Indian then stepped into the house and made a search for money, but did not find any. He then went out of the house, and drawing the woman's infant of a few months from under her dead body he put the child in the house and left the place.

The only persons present were the woman and the Indian and the woman's children, the eldest a lad of 8 years, the next a girl of 4 years, and the infant. It was not possible for the children to get their mother's body into the house, and it lay outside during the night. Upon the coming of daylight of the following morning the little boy hastened away to the neighbors for assistance. Upon his return with some of the neighbors it was found that the hogs had gotten into the yard and had partially devoured the body of the woman. The body was then cared for and decently interred and a messenger dispatched for the husband of the woman, who was several miles away. Mr. Leard was accompanied to his home by a number of persons from Oklahoma, and as soon as the burial services were closed those present organized a posse to hunt down the woman's murderer. This posse was heavily armed, and rode all over the western border of the Seminole Nation, taking into custody nearly every Indian who came across its path. All were taken before the little boy for identification, and many of them he was able to state positively did not do the bloody deed. Others he was doubtful in so clearly stating their innocence, and all such Indians were then tortured in an effort to make them confess that they were the ones or had had something to do with the crime.

Finally a confession of guilt was extorted from Palmer Sampson, an ignorant, full-blood Seminole Indian, who also implicated Lincoln McGeisy. The latter denied the charge and until the very last declared his entire innocence. The mob held these boys (for I am advised they were about 18 or 19 years of age) several days, and on the night of Friday, January 7, carried them over into Oklahoma, and chaining them together by their necks with chains, securely fastened them to a tree and piled hay and brush around them, and about 3 o'clock of the morning of the 8th set fire thereto and burned them alive. They continued to burn for about twelve hours, and when found by a searching party their legs and arms were burned from their trunks. The tree was cut down Saturday (8th) afternoon and their remains taken to the Seminole Nation and buried, still chained together.

The first information received of there being any trouble in that country reached me on Saturday night (8th) in a telegram from Deputy Marshal Buchner, who was at Holdenville, and who wired me that there was a raging mob in the Seminole Nation, and asked for instructions. I immediately endeavored to ascertain the cause of the disturbance, and was advised of the death of the two boys as above related, also that the mob had burned the farmhouses on the McGeisy place. The mob having dispersed before this information reached me, I consulted with United States Judge William M. Springer, and wired my deputies at Holdenville and Wewoka to meet United States Commissioner Fears at Wewoka and obey his orders concerning an investigation. Commissioner Fears went to Wewoka on the 10th and at once issued process for witnesses and a warrant for the interpreter who had served the purposes of the mob. On the 10th I also wired Assistant United States Attorney Parker, then at South McAlester, requesting him to proceed to Wewoka and aid in the investigation. Mr. Parker did so. I would

have personally proceeded to the scene, but could not see the necessity for so doing at the time the information reached me. I was also preparing to transport some prisoners from Muscogee to the penitentiary and had all arrangements made to leave with them.

On the night of the 11th telegrams reached me describing scenes of bloodshed and terror because of an alleged uprising of the Indians, it being positively set forth that the town of Maud, Okla., had been burned and that more than twenty-five men, women, and children had been murdered by the Seminole Indians. This information was traced directly to the telegraph operator of the Choctaw, Oklahoma and Gulf Railway at Earlsboro, Okla., who gave them out as facts. * * * About noon I received telegrams from my deputies and other officials then at the scene of the alleged trouble that the reports sent out by the operator at Earlsboro were all fakes and wholly unfounded, but had been circulated for the purpose of creating a sentiment to shield the members of the mob who came from Oklahoma and burned the two Indian boys. Commissioner Fears also wired me that there was no necessity for my going to Wewoka, as all was then being done that was possible to discover the identity of those who composed the mob.

Mr. Fears advised me that he had issued certain subpoenas and warrants and that he had no doubt the facts would be developed. That night (12th) I received a telegram from one of my deputies that he had reached Wewoka with one of the parties, and asked instructions as to disposition of prisoner. I directed him to take the prisoner and subpoena witnesses before Commissioner Fears at Eufaula. That night I left for Boonville, Mo., Columbus, Ohio, and Washington, D. C., with United States prisoners. I am advised, under date of the 16th, that one of my deputies has secured a full list of the names of all persons who were implicated in the burning of the two Indians, together with the names of witnesses to the crime, and that the whole matter has been presented to the grand jury, now in session at Vinita. I have this list of names before me, but for obvious reasons deem it proper to omit giving them in this connection. Three or four of those on the list were residents of the Indian Territory, but the majority of the mob was made up of residents of Oklahoma.

I desire to assure you that every officer connected with the United States courts in the northern district of Indian Territory will use all lawful means at his and their command to bring the guilty party before the bar of justice. In another communication I will present to you certain suggestions which are, in my opinion, proper for your attention.

It may not be out of place for me to advise you at this time of the fact that along the eastern boundary of Oklahoma, within 200 yards, in some cases a mile, from the westline of the Seminole and Creek nations there have been established a great many whisky joints, from which there are daily sold to these Indians many gallons of the vilest of whisky and of alcohol. Such places are located at Maud, Violet Springs, Earlsboro, Keokuk Falls, Stroud, etc. Nearly all the crime along the western portion of my district arises from the presence of these saloons just across the line, and I believe that fully one-half of the whisky introduced in the northern district comes from Oklahoma. The officers of this district hope to secure the cooperation of the official of Oklahoma in putting a stop to this traffic by the prosecution of those who are engaged therein, and steps in this direction were taken several weeks since.

In response to a resolution of the Senate of January 20, 1898, asking that the Attorney-General and the Secretary of the Interior inform the

Senate as to what steps had been taken to ascertain the facts in the case and to punish the alleged offenders, information and copies of correspondence were given, which will be found in Senate Docs. Nos. 98 and 99 (parts 1 and 2), Fifty-fifth Congress, second session.

In the latter part of January last Hon. John T. Brown, principal chief of the Seminole Nation, officially advised the Department of the outrages perpetrated upon members of the nation, and requested, "in view of article 18 of the treaty with the Creeks and Seminoles dated August 7, 1856, whereby the Seminole Nation was promised protection and guaranteed indemnity for all injuries resulting from invasion or aggression," that a suitable person be appointed to ascertain and report the facts as to the burning of the two young men and the inhuman torture of other Seminole Indians, and also to ascertain and report upon the amount and value of the property destroyed or stolen by the mob, to the end that indemnity might be made by the United States for injuries sustained.

Article 18 of the Seminole treaty proclaimed August 29, 1856 (11 Stats., p. 704), provides as follows:

The United States shall protect the Creeks and Seminoles from domestic strife, from hostile invasion, and from aggression by other Indians and white persons not subject to their jurisdiction and laws; and for all injuries resulting from such invasion or aggression full indemnity is hereby guaranteed to the party or parties injured out of the Treasury of the United States, upon the same principle and according to the same rules upon which white persons are entitled to indemnity for injuries or aggressions upon them committed by Indians."

In accordance with Department instructions of January 24, 1898, Dew M. Wisdom, United States Indian agent of the Union Agency, Indian Territory, was directed by this office, January 27, to make the investigation, and was instructed as follows:

In accordance with the above instructions, you will at once make the desired investigation in the premises. Of course, you will take sufficient time in this work to make it thorough and complete; and, so far as possible, all the evidence obtained should be supported by proper and sufficient proof in the form of affidavits, etc. It is presumed in this case that many claims will be made for damages, and great care should therefore be taken in investigating the same, to the end that none but those justly entitled thereto shall be reported to this Department.

The method of procedure in making this investigation will be left largely to your own judgment and discretion; but it is desired that all parties to this unfortunate affair should be given a full hearing, and should be allowed to submit such evidence in relation thereto as they may have or wish to offer.

The agent's reply of March 29, 1898, was transmitted to the Department in office letter of April 4 last. In this report the agent stated in effect that Thomas S. McGeisy and Mrs. Sukey Sampson were the only parties who suffered any loss of property or damage to property at the hands of said mob, and that the following parties, Peter Ossanna, Kenda Palmer, Billy Coker, Chippie Coker, Cobley (or Copley) Wolf, George P. Harjo, Samuel P. Harjo, Duffy P. Harjo, Johnson McKaye, Sever Parnoka, John Washington, George Kernells, Thomas Thompson, Johnny Palmer, Sam Ela, Sepa Palmer, Shawnee Barnett, and Billy

Thlocco, and Moses and Peter Tiger, were arrested and otherwise maltreated in their persons by said mob of United States citizens; that he was unable to obtain affidavits or statements from the two last named, for the reason that they were in prison at Fort Smith, Ark.; that Palmer Sampson, son of the said Mrs. Sukey Sampson, and Lincoln McGeisey, son of said Thomas F. McGeisey, were the two Seminoles who were chained to a tree and burned to a crisp in the most fiendish manner by the mob; that Mrs. Sukey Sampson lost a horse, bridle, and blanket valued at \$80; that Mr. McGeisey lost two houses, a barn, some sheds and other outhouses, a well, some fencing, corn, lot of books, trunks, clothing, and house and kitchen furnishings, all of which he values at \$2,515.65, and that with the exception of the valuation of \$1,250 placed upon the "frame and hewed log house" by Thomas McGeisey, which he, the agent, thinks is fully double what it is really worth, the valuations are approved.

The act of Congress approved July 1, 1898, making appropriations for sundry civil expenses of the Government for the current fiscal year, contained the following provision:

To enable the Secretary of the Interior to cause an examination and investigation to be made of outrages and injuries alleged to have been perpetrated on individual Indians belonging to the Seminole tribe by an armed mob or band of lawless persons who invaded the Seminole country during the months of December, eighteen hundred and ninety-seven, and January, eighteen hundred and ninety-eight, and if, upon such examination and investigation, it shall appear that outrages and injuries have been so perpetrated and that the United States is under treaty obligations to pay for such outrages and injuries, he shall ascertain the amount which should be properly paid said Indian or Indians, or their legal heirs or representatives, and pay such sum or sums as he may deem just and reasonable, and for such purpose a sum not exceeding twenty thousand dollars is hereby appropriated.

As all the facts in the case are now before the Department, it is thought that indemnity will soon be paid by the Government to members of the Seminole Nation injured by the mob of lawless whites in this disgraceful occurrence. Further, the whites guilty of the outrages are now being prosecuted by the Department of Justice.

SALE OF CITIZEN POTTAWATOMIE AND ABSENTEE SHAWNEE LANDS, OKLAHOMA.

Up to the 2d of August, 1897, there had been approved by the Department (under the act of August 15, 1894, authorizing these Indians to dispose of their patented lands) 258 conveyances, aggregating in area 29,438.05 acres, valued at \$174,782.09. Between August 2, 1897, and August 5, 1898, there have been approved by the Department 95 conveyances by the Citizen Pottawatomie Indians, at an average of \$4.71 per acre, viz, 88 in Pottawatomie County, aggregating 7,903.06 acres, for \$37,142.50, and 6 in Cleveland County, aggregating 740.43 acres, for \$2,763.13, and 1 in Oklahoma County, 80 acres, for \$1,281.25. During the same period there have also been approved by

the Department 25 conveyances by the Absentee Shawnee Indians, at an average of \$6.98 per acre, viz, 22 in Pottawatomie County, aggregating 1,611.97 acres, for \$11,142.80, and 3 in Cleveland County, aggregating 320 acres, for \$2,350. The total is 120 conveyances, covering 10,655.46 acres of land, for \$54,679.68, or an average of \$5.13 per acre. The total sales of lands by these two tribes of Indians since the passage of the act of August 15, 1894, are 378, aggregating 40,093.51 acres of land, for \$229,461.77.

This office and the Department have given much thought to the adoption of some regulation which would not entail unreasonable expense upon the purchaser and yet would secure to the Indian the payment of the consideration money for the land transferred. Since Congress authorized these Indians to dispose of their lands many deeds have been filed in this office which have borne strong evidence of bad faith on the part of purchasers, and, in some instances, the Indians, through ignorance or duress, have been in collusion with the purchasers in endeavoring to secure the approval of the deed of conveyance by the Department. Notwithstanding all the precautions that have been adopted, in requiring a deposit with the United States Indian agent, or in some reliable national bank, of the whole of the purchase money for the land conveyed, complaints arise that the Indians do not always obtain from the bank the whole amount named in the certificate of deposit, especially in cases where it is impracticable for the agent to accompany the Indian when his certificate of deposit is paid to him.

To forestall schemes between the vendee and the bank of deposit for discounting the certificate of deposit some have adopted the method of collecting through their local banks, but attempts are made to evade this and to overreach the Indian by making the certificate of deposit payable to the Indian rather than to the order of the Indian. I am satisfied that, with the safeguards that have been thrown around these transactions, frauds upon the Indians in making payment for their lands are becoming less frequent, and it is hoped that they may finally be eliminated.

Requests have been made from time to time for legislation allowing those members of the Pottawatomie tribe of Indians who took allotments in severalty under the act of May 23, 1872 (17 Stats., 159), the same privilege of selling any portion of their land in excess of 80 acres as was accorded those Pottawatomie Indians who took land under the general allotment act of February 8, 1887 (24 Stats., 388). The act of 1872 provides that the lands allotted thereunder—

shall be alienable in fee, or leased or otherwise disposed of only to the United States, or to persons of Indian blood lawfully residing within said Territory with permission of the President, and under such regulations as the Secretary of the Interior shall prescribe.

Whenever it shall appear for the best interests of these Indians who took allotments under the act of 1872 that they should dispose of any

portion of their land, I am of the opinion that they should have the legal right to sell the land to whomsoever they please, for the best price obtainable, under rules and restrictions to be prescribed by the Secretary of the Interior, and not be restricted to purchasers "of Indian blood lawfully residing in Oklahoma Territory." With a view to the relief of these Indians, I respectfully recommend that Congress be asked to amend the act of 1872 so as to authorize these Indians to sell their land upon the same terms as are provided in the act of August 15, 1894 (28 Stats., 295).

OSAGE ANNUITY ROLL CONTESTED CASES.

As a matter of record, it is thought best to give the following brief history of these contested cases:

February 6, 1895, the acting agent of the Osage Agency transmitted a resolution of the Osage national council, which charged that "many persons by means of false testimony have succeeded in obtaining from their national council * * * citizenship in the Osage Nation;" and which appointed a delegation to visit Washington and asked that the Department appoint a competent person to investigate the Osage rolls, to the end that all persons found to be illegally thereon should be stricken off. The council further appropriated \$2,000 to defray the expenses of the desired investigation. In forwarding this resolution, with his favorable recommendation, the acting agent stated: "The relations existing between the full-bloods and half-breed Indians are of such a nature as to require a final and authoritative settlement of the rights of the half-breeds. In my opinion the full-bloods will not listen to any proposition for allotment until this is done."

This duly authorized Osage delegation visited Washington about the 1st of March, 1895, and personally laid the matter before the Department. March 11, 1895, this office, in a report to the Secretary of the Interior, recommended that a person of ability and legal training be appointed to make the desired investigation. The Secretary replied, March 13, 1895, that it would first be necessary to have the Osage Indians, through their counsel, present a list of those persons charged with being unlawfully upon their rolls, "together with the reasons upon which the council expected to sustain the charges," and he added: "When the examination takes place, no evidence will be allowed to sustain an attack upon the citizenship of one already upon the rolls which is not covered by the written specifications." The Osage delegation was, on March 15, 1895, notified of the Secretary's action.

March 20, 1895, this office submitted to the Department a further communication from the Osage council asking early action in this matter and that an inspector be sent to make an investigation. The Secretary, however, in his reply, April 12, 1895, adhered to his former decision requiring that a list of names be submitted with the reasons for the charges made, since it was made by law the duty of the Depart-

ment, acting in a semijudicial capacity, to determine what names are illegally upon the Osage rolls. The Osages, April 23, 1895, were advised of this decision, and August 19, 1895, their acting agent submitted on their behalf a list of the names of 446 persons claimed to be unlawfully upon their rolls, which was submitted to the Department September 12, 1895.

The Department obtained the authority of the President to allow an expenditure of Osage moneys for this investigation and Messrs. Washington J. Houston, of North Decatur, Ga., and Clarence E. Bloodgood, of Catskill, N. Y., were appointed as commissioners. The latter commissioner, however, declined the appointment, and Mr. George Y. Scott was appointed in his stead.

February 19, 1896, the Department requested this office to prepare instructions for these commissioners, and the following day they were submitted to and approved by the Secretary. These instructions contained the following paragraph which fixed January 1, 1888, as the date back of which the investigation should not go:

You will not, however, take up and investigate cases of persons charged to be illegally or improperly upon the Osage rolls who were admitted to the same prior to January 1, 1888, even though their names may appear on the list furnished by the Osage council hereinbefore referred to. However, if during the course of your investigation any case or cases should be brought to your notice of persons having gained admittance thereto by *manifestly flagrant fraud*, prior to that date, you will take testimony and submit proof thereon, with your findings and recommendations, as in other cases, for the information of this Department.

Additional instructions were submitted and approved by the Department April 30, 1896, in which the date was changed by the Secretary to January 1, 1880. The paragraph relating thereto reads as follows:

You will take up and investigate all cases of persons charged to be illegally or improperly upon the Osage rolls who were admitted or placed thereon, by adoption or otherwise, since January 1, 1880, but no case of any person so admitted or placed thereon prior to that date. Nor will you take up for investigation the cases of children admitted or enrolled either before or since January 1, 1880, who were minors at the time of the admission or enrollment of their parents or who have been born since the 1st day of January, 1880.

Some time in June, 1896, the commissioners returned to this city, having completed their work at the Osage Agency, and made separate reports to the Secretary, who referred the same to this office, November 26, 1896. Eighty-two names were added to the original list of 446 by reason of the change of the date from 1888 to 1880. Of the 528 names upon then challenged list prepared by the Osage national council, 296 were reported as exempt by reason of having been enrolled prior to 1880.

The remainder, 232, who were investigated by the commission were reported as follows by Mr. Houston: 80 rights as Osages proved by evidence, and recommended sustained on roll (3 dead); 5 erroneously entered on challenged list, and cases therefore dismissed; 147 without evidence to sustain enrollment, and recommended stricken off the roll

(2 dead). Mr. Houston submitted with his report a "memorial" dated June 6, 1896, from the Osage national council, signed by about two-thirds of the entire tribe, known and designated as full-blood Indians, in which they protested against restricting the examination to those enrolled since 1880, and stated that such limit precludes "the possibility of arriving at any settlement that will be final or satisfactory to all parties at interest." They therefore requested as a matter of justice that all persons upon the list presented by them be investigated.

Mr. Scott's individual report, dated July 16, 1896, appeared to have been prepared some time prior to his colleague's. He reported as follows upon the 232 names investigated: 80 rights as Osages proved by evidence and recommended sustained by Mr. Houston were similarly recommended; 147 (recommended stricken off by Mr. Houston) were disposed of as follows: 68 rights to citizenship proved by evidence and recommended sustained on roll (one dead); 74 rights to citizenship not proved by evidence and recommended stricken off (one dead); 5 not reported on, children of white men married to Indians after law of 1888.

December 29, 1897, this office returned the voluminous testimony and evidence in the cases to the Department, with the recommendation that but 92 of the 232 persons investigated be stricken from the Osage rolls, the balance, 140, to be retained upon the rolls.

The cases were then referred to the assistant attorney-general, who rendered an opinion April 6, 1898, which upon motions of some of the attorneys was modified and a new opinion given. June 15, 1898, he found but 25 persons to be unjustly and illegally upon the Osage rolls, the remainder, 207, to be entitled to be retained thereon. In view of this final decision, the United States Indian agent of the Osage Agency was instructed July 12, 1898, in reference to continuing those contestees on the Osage annuity rolls who were found entitled thereto, and striking off those who were found not so entitled.

BOUNDARY OF KLAMATH RESERVATION, OREG.

Favorable action was not taken by Congress at its last session upon the recommendation of this office and the Department that the Klamath Indians be compensated in the sum of \$532,270 found to be due them by the commission appointed under the act of June 10, 1896 (29 Stats., 321), on account of the erroneous survey of the boundaries of their reservation. Provision was made, however, for the "resurvey of the exterior boundaries of the Klamath Reservation (so called) in the State of Oregon, in accordance with the provisions of the first article of the treaty" of October 14, 1864. Moreover, the Secretary of the Interior was directed to "negotiate through an inspector with said Klamath Indians for the relinquishment of all their right and interest in and to any part of said reservation, and to negotiate with them as respects any and all matters growing out of their occupation of said reservation

under said treaty;" also, to "ascertain what portion of said reservation is occupied by citizens of the United States, and for what purpose, and under what title."

July 15, 1898, I recommended that the Commissioner of the General Land Office be instructed to cause the boundary lines of the reservation to be surveyed in accordance with the provisions of the treaty of October 14, 1864, as ascertained by the commission named above. I also recommended that the deputy surveyor be instructed not to establish any permanent monuments except such as may be necessary to replace those that have been obliterated on that portion of the established line which coincides with the line determined by the commission. The lands outside the established boundaries have been opened to public settlement and entry, and to a considerable extent are occupied by settlers who have acquired title. Therefore permanent monuments on that part of the line which does not coincide with the established boundary would be worthless and confusing. It is not proposed to dispossess these settlers, who are in no way at fault, but to compensate the Indians for the lands lying between the boundaries established by the approved but erroneous survey, and those determined by the commission to be the correct boundaries intended by the treaty. The only possible object in surveying the latter boundaries is to ascertain the correct area of the lands erroneously excluded from the reservation.

From the fact that a resurvey is directed, it is presumed that Congress is not satisfied that this area was correctly ascertained by the commission, for which reason it is thought that the negotiations authorized should not be undertaken until this area is determined by the resurvey.

FISHERIES IN WASHINGTON.

As stated in the annual report of last year, a suit was commenced and prosecuted against the Alaska Packers' Association et al., to prevent interference by that association with the fishery rights of the Lummi Indians at the ancient fisheries located on the reef at Point Roberts, Wash., which were reserved to them by the treaty of January 22, 1855 (12 Stats., 928). The suit was decided against the Indians, and the Attorney-General directed that an appeal be taken. No information has since been received from the Department of Justice in regard to this case.

DANIEL PULLEN AND THE QUILLEHUTE RESERVATION, WASH.

Many years ago Daniel Pullen, a white man, obtained the consent of the Quillehute Indians to establish a temporary residence and make improvements on the lands claimed by them. Having once obtained a foothold, he proceeded to make certain entries of the reservation lands used and occupied by him. A contest arose out of that action, which,

after some years, was finally decided by the Department in favor of the Indians. The Indian agent of the Neah Bay Agency, Wash., was then instructed to put the Indians in possession of their land, whereupon Mr. Pullen sued out a writ of injunction in the United States circuit court, district of Washington, northern division, against the Indian agent, John P. McGlynn, to restrain the agent from removing him from the Quillehute Reservation. May 2, 1898, William H. Brinker, special United States attorney, employed by the Attorney-General as special counsel in the case, reported to this office that he had pushed the case to trial and had succeeded in securing a final decree, rendered April 30, 1898, dissolving the injunction and dismissing the bill filed by the plaintiff, and that the way was then clear for this office to direct the United States Indian agent to remove Mr. Pullen or his tenants from the lands in controversy.

The Washington Fur Company was involved in the case of Pullen, and its rights on the reservation were also passed upon, in determining the rights of Mr. Pullen, by departmental decision of March 1, 1893. (Public Land Decisions, vol. 16, p. 210, et seq.)

May 12, 1898, Samuel G. Morse, the successor of Agent McGlynn, was instructed to serve notice upon Mr. Pullen, his agents or tenants, to remove within a reasonable time from the lands in controversy and beyond the boundaries of the Quillehute Reservation, taking with them their families and all personal effects. If they failed or refused to comply with this notice, he was told that he should forcibly eject them from the lands in controversy and from the reservation also, provided his police force was sufficient to justify him in taking this action; if not, he should report the facts to this office for further instructions.

June 24, 1898, Agent Morse reported that the removal of the personal effects of Mr. Pullen, who was then absent in Alaska, had been accomplished; but that the Washington Fur Company had upon the reservation some 60 or 70 tons of goods, which it would be difficult for them to remove, because they were situated 40 or 50 miles down the coast from Seattle, Wash., and only occasionally could schooners run down to that point, loaded or unloaded. July 12, 1898, he was instructed to give the company ample time to remove their goods.

August 1, 1898, United States District Attorney Gay, for the district of Washington, notified this office that on July 8, last, there was served upon Agent Samuel G. Morse a restraining order based upon the petition of complaint and affidavit of Sutcliffe Baxter in the case of Leman S. Mayer, as receiver of the Washington Fur Company, and that he had prepared a demurrer thereto, which had been sustained by the court; but that the court, however, had allowed the complainant thirty days in which to file a new petition or complaint. The attorney stated that he could interpose another demurrer, and thus fight the whole matter over again.

It is trusted that the partial victory already obtained by the Government will be made complete when the second demurrer in this case

comes to be argued before and passed upon by the court, and that the Indians will finally be put in possession of all the lands to which they are justly entitled.

STOCKBRIDGES AND MUNSEES, WISCONSIN.

In my last annual report I discussed the embarrassment experienced by reason of the fact that certain tracts of land which have been allotted to Indians within the Stockbridge and Munsee Reservation are claimed by the State of Wisconsin under the swamp-land act, and under decision of the Assistant Attorney-General for the Interior Department a relinquishment of these lands can be had only through the voluntary act of Wisconsin.

There is now pending in Congress a bill (S. 3094) providing for the adjustment of swamp-land grants in the State of Wisconsin, on which this office reported on the 17th of last March. This bill contemplates the relinquishment by that State of all swamp lands within Indian reservations in exchange for other lands to be granted the State in lieu thereof. It is to be hoped that it will become a law at the approaching session of Congress.

Very respectfully, your obedient servant,

W. A. JONES, *Commissioner*.

The honorable SECRETARY OF THE INTERIOR.

PAPERS ACCOMPANYING REPORT OF COMMISSIONER
OF INDIAN AFFAIRS.

REPORTS OF AGENTS AND OF SCHOOL SUPERINTENDENTS IN CHARGE OF AGENCIES.

REPORTS OF AGENCIES IN ARIZONA.

REPORT OF COLORADO RIVER AGENCY.

COLORADO RIVER AGENCY,
Parker, Yuma County, Ariz., August 8, 1898.

SIR: I have the honor to submit my first annual report for the Colorado River Reservation for the fiscal year ending June 30, 1898, as follows:

Location.—The reservation is located on the Colorado River, about nine-tenths of the area being on the Arizona side of the river and the remaining tenth in California. The north limits are about 80 miles south of Needles, Cal., and the south limits are about 130 miles north of Yuma, Ariz. The reservation comprises about 240,000 acres, and extends in a narrow strip for 60 miles along the river.

Topography and soil.—More than three-fourths of this area is bottom land, with an average elevation of 10 feet above the ordinary water level of the river. The remaining one-fourth is mountain and mesa. Most of the valley land is naturally fertile and could be made very productive by irrigation. With a great river running through it American enterprise will some day solve the problem of getting the water out over this magnificent valley, which without irrigation is worthless.

Climate.—With an average elevation of less than 300 feet above sea level, and surrounded on every side by a rainless desert, the Colorado River Reservation is one of the hottest places on the globe. From June 1 to October 1 there are usually not a dozen days when the maximum temperature is below 100°, and frequently from 120° to 125° in the shade is recorded. Except on a very few nights, however, the temperature drops sufficiently to make the nights quite pleasant. From October to June the climate is delightful, save for occasional sand storms and rare rains. The average annual rainfall is less than 5 inches, and most of it comes during the months of January and August.

Inhabitants.—Of the five tribes originally allotted to this reservation only one section of the Mohave tribe have ever been induced to locate permanently upon it. These number 683; of the remaining Mohaves, nearly all live from 80 to 125 miles above the reservation in the vicinity of Needles, Cal., and Fort Mohave, Ariz. These Indians, numbering about 1,300, have always been nominally connected with the agency. Between these two groups of the Mohaves, about 40 miles above the agency, are located the Chimehuevis, a band of about 150. These are a southern branch of the Piutes and are progressive Indians, having wholly adopted civilized dress, including shoes, hats, and style of wearing their hair. They receive no aid from the Government except that they come to the agency for medicine and medical treatment.

Census.—The following is a summary of the census recently carefully taken of the Indians living on the reservation:

| | |
|---|-------|
| Males above 18 years of age..... | 203 |
| Females above 16 years of age..... | 227 |
| School children between 6 and 16..... | 166 |
| Males, all ages..... | 348 |
| Females, all ages..... | 335 |
| Mohaves on reservation..... | 683 |
| Mohaves near Needles and Fort Mohave (estimated)..... | 1,300 |
| Chimehuevis in Chimehueva Valley..... | 141 |

General characteristics.—The Mohaves in general are willing to work at hard manual labor for self-support. In this respect they are said to be superior to any other

American Indians. To this virtue may be added a quiet peaceable disposition and an unusual degree of honesty. On the other hand they are improvident, slow to receive new ideas, tenacious in holding on to old superstitions, and have naturally but slight perception of morals.

Nonreservation Mohaves.—The Mohaves living in the vicinity of Needles and Fort Mohave are in a deplorable condition as to morals and progress toward civilization. As the agent can only reach them after a four days' trip up the river in a rowboat, they receive practically no benefit from the agency. They retain all their old-time superstition and barbarous customs and have added to them the vices of a border railroad and mining town. Drunkenness, gambling, and prostitution prevail to a shocking extent. Some 200 of the men are employed by the Santa Fe Railroad Company in their shops, yards, and construction and section gangs, for which they receive annually nearly \$60,000 in wages. Yet their material condition is growing steadily worse. They live under sheds made of sticks in summer and sweat houses or artificial caves in winter. When one of their number dies all his property, ponies, etc., is burned along with the body. In addition, relatives sacrifice large amounts of property, buying calicoes, silks, and clothing to add to the splendor of the funeral pyre. This custom, along with drunkenness and gambling, absorbs all the Indians' earnings and leaves the children and the aged destitute.

Reservation Mohaves.—On the other hand, the reservation Mohaves are making considerable progress in civilization. Practically every family has a comparatively comfortable adobe house, with chimneys, glass windows, and doors. Almost without exception they wear civilized dress, have ceased to paint, and do little tattooing. They have discarded their medicine men and have altogether ceased burning property at funerals, although they still cremate their dead. This is never done until after the agency physician has been notified and, when practicable, inspected the remains, and the funeral is conducted under police regulations. Drunkenness is absolutely unknown on the reservation and I have never heard of liquor being brought on the reservation. About one-third of the adult males wear their hair short (including all Government employees) and the number is increasing.

Morality.—I do not believe that the morals of the reservation Mohaves are as bad as has been pictured. They are a very jolly, easy-going race, fond of gossip and scandal. This last characteristic has, in my judgment, led to erroneous opinions. To disprove the common opinion as to their morals can be offered the fact that the census records and careful inquiry does not disclose a single instance of birth in several years where the father and mother were not living together as man and wife. Of the total population there are but four of mixed blood on the reservation. They are not polygamists, but the younger Indians are disposed to discard their wives and take others, a practice which the agent is endeavoring to break up. Orders have been issued that in case of separation neither can remarry under six months. I have found this quite effective.

Religion.—Until recently no religious denomination has ever attempted to work among these Indians. During the past two years M. J. Hersey, an Episcopalian, has labored effectively among them. In March last some 125 were baptized, and arrangements were on foot to build a church building. Unfortunately, plans were slow in maturing and Mr. Hersey received an offer to labor in a more advanced field and left the reservation the latter part of April. It is to be hoped that this or some other denomination will see fit to continue work in this promising field.

Agriculture.—The productive resources of the reservation are at present limited to about 70 acres of land, irrigated by a very defective steam pump, and to some small strips of lowland along the river and lagoons, irrigated in part by overflow in June and in part by carrying water in pails and pouring on the crops. From 200 to 400 acres are brought under cultivation by this means with varying success, depending upon the extent of the overflow. In about one year in three the river does not rise sufficiently to do much good, and some years the overflow is so great that a large part of their plantings are washed away.

Irrigation plant.—The irrigation of the 70 acres has been attended with great difficulty. The pumps or water elevators now in use are of a type never successfully used anywhere and are constantly breaking down. The white farmer and general mechanic devote at least two-thirds of their time to keeping them in repair, and they consume from five to ten times as much fuel to irrigate the same amount of land as the type of pump in common use for irrigation purposes. I have recommended the purchase of a new centrifugal pump that will irrigate 400 acres with less fuel than is now used, and hope for favorable action from the Department. With such a pump these Indians will become almost self-supporting.

The fuel used to run the irrigation pumps, about 400 cords of wood per year, is all furnished by the Indians. The pumps are run by the Indians under the direction of the farmer, and they also keep the ditches in repair and irrigate their land

intelligently. On irrigated land wheat yields an average of 35 to 40 bushels per acre. Corn yields about the same, while melons, pumpkins, and sorghum yield fabulously. Melons are a chief article of diet from June 15 to January 15—seven months of the year.

With 400 acres under irrigation, and with the construction of a small gristmill, to be operated by the irrigation steam plant, the Indians of the reservation will almost be able to support themselves.

Delivery of supplies.—The agency and school supplies are now brought in by steamboat, which makes two or three trips per year for the purpose, charging \$1.25 per hundredweight from the railroad. Flour, barley, and the heavier school supplies are usually brought in promptly by about September 1. It is very difficult to secure the delivery of the dry goods, clothing, drugs, and smaller school supplies that arrive at Yuma and Needles later in the year, for the reason that the quantity is too small to make profitable trips for the steamboat. This year such supplies were not obtained until April and then only by sending the Indians for the goods with rowboats. This caused great inconvenience to the school, as it was almost impossible to keep the pupils' last year's clothing repaired so that they could remain in school.

For next year the Department has authorized the delivery of all supplies at Needles, Cal., and the transportation from that point to the agency by rowboats. This will not only secure prompt delivery, but will add about \$2,000 annually to the earnings of the Indians of the reservation.

Difficulties of travel.—The greatest drawback to the agency is the difficulty of getting in and out. The only practicable means is by rowboat with Indian oarsmen from Needles, Cal., a distance from 85 to 100 miles. In the summer season the trip down from Needles can be usually made in one day, but from October 1 to April 1 two days are required. To get up to Needles usually requires four days, the Indians dragging the boat from the banks and cliffs by means of ropes. The current is in most places too strong for rowing upstream. During high water, from May 15 to July 15, one can only get out by being rowed downstream to Yuma, as boats cannot be towed upstream. It is possible to get in and out on horseback from Yuma, a distance of 175 miles, over the trail used by the mail riders, but the trip should only be undertaken by those accustomed to horseback riding over rough roads. Usually the steamboat runs to take out employees about July 1 for their annual vacation.

Agency buildings.—The agency buildings are all of adobe, built in 1869, and are surrounded by a high adobe wall. They are plastered on the exterior and white-washed. All are connected together in an odd way by verandas and courts, making a rather picturesque "white city." The buildings, though poor and rather inconvenient, have been kept in a fair state of repair, and will probably prove sufficient for the future needs of the agency if sufficient schoolroom is provided to relinquish those portions of the agency buildings now used for school purposes.

Improvements in school plant.—During the past year the school plant has been improved by rebuilding and enlarging one of the old school buildings that had passed into disuse. It is now used for a boys' dormitory, and has ample room for 60 boys, including sitting rooms, bath, and wash rooms, and room for the industrial teacher. This building is of adobe, 50 by 78 feet, covered with corrugated iron roofing, lined with asphalt paper to keep out the heat. It is lime plastered both inside and out, has new floor, doors, and windows. It was rebuilt at an expense to the Government of \$1,005 for material, all the labor being performed by the employees and pupils.

The main school building, built in 1891, is also of adobe. It is two stories high, 40 by 80 feet, with rear one-story wings, containing kitchen, bathrooms, etc. It is covered with a painted shingle roof, surmounted by a tower and belfry, and has verandas along the south front.

Among minor improvements may be mentioned the fitting up of a new store-room for school supplies in the old boys' dormitory, the building of two new frame water-closets for pupils, the first they have ever had, and some improvements in the drainage for the school laundry.

There is urgent need for an additional schoolroom and assembly hall, sewing room, and quarters for employees. Plans and estimates have been submitted for a building covering the requirements, and favorable action is hoped for at an early date.

School work.—The agency boarding school has been quite successful during the past year, running with little friction. The children have been kept free from all contact with camp life and the attendance has been uniform and practically up to the enrollment. For practical results I am sure no reservation boarding school can show better returns with the facilities at hand.

During the past year there has been no serious trouble in the affairs of the agency. Employees have worked with harmony and all employees have done their duty, in my judgment, to the best of their ability. Outside of vexations and annoyances growing out of the failure to deliver supplies and the slowness and unsatisfactory nature of the delivery of beef cattle under contract, the year's work has been a pleasant one to the agent.

Only one crime has occurred during the year on the reservation. This was a murderous attack on two of the agency police April 18 by Joe Welch, an Apache-Mohave, and his grown son. The police were returning a 12-year-old son of Welch's that had run away from school, when they were set upon by the father and brother and both seriously stabbed. One of the police, after he was down, shot Welch in the thigh and he was soon after captured. The son escaped and fled the reservation, but was recently captured and brought in by the police.

There has never been a court of Indian offenses on this reservation, and minor troubles have been adjusted by the agent to the general satisfaction of the tribe.

There are no white traders here, but five full-blood Indians keep small stores, bringing in their goods in rowboats four or five times a year. It would be better if the business could be restricted to one or two, as the trade is small for five and the opportunity for the improvident to get credit is greatly increased where there are so many anxious to sell. The agent and employees have labored to discourage unlimited credit with some success.

In conclusion I desire to express my thanks to the Department for the uniform courtesy with which I have been treated, practically every recommendation that I have made having been granted. I also feel under obligation to the corps of efficient agency employees, who have always cheerfully performed their duties and have done all in their power to make the administration of the affairs of the agency a pleasant task for the agent.

The report of Superintendent Bacon, of the agency boarding school, accompanies this report.

Respectfully submitted.

CHARLES S. McNICHOLS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF COLORADO RIVER SCHOOL.

COLORADO RIVER BOARDING SCHOOL,
Colorado River Agency, Ariz., July 1, 1898.

SIR: I have the honor to submit this, my third annual report of this school, for the fiscal year ending June 30, 1898.

School was opened September 6, 1897, with an enrollment of 65, which was increased during the succeeding four days to 82, our former number. With the exception of one boy and one girl who had died during vacation, and seven who were rejected on account of ill health and disease contracted in camp, all of last year's pupils returned. The policy of keeping the children as much as possible from the influences of camp life was continued and a steady and regular attendance maintained, which contributed much toward our success.

Realizing that "eternal vigilance" is the price that must be paid for any degree of success in this work, persistent effort was made to secure English speaking, which has resulted in a more extended vocabulary and a better understanding of the language among the pupils.

Health.—There were five cases of serious illness during the year, two of which (girls) terminated in consumption with a fatal result. The school was visited with an epidemic of la grippe during the latter part of April and first half of May, and two girls developed cases of tuberculosis. Our genial agency physician, Dr. Martin, deserves much praise for his zeal and untiring efforts in behalf of all who required his services.

Literary.—The work in the schoolroom has been very satisfactory. A regular system, in accordance with the plans of the syllabuses, has been vigorously pursued with a definite purpose in view. The interest of the children was aroused, and they seemed anxious to complete the work and secure promotion, with the result that nearly all advanced to a higher grade. Good discipline was maintained. The exercises of the evening hour were varied to conform to the best interest and advantage of the pupils. They consisted of language lessons, study, needlework, and pleasure. Frequent informal programmes were carried out by pupils, who volunteered to read, recite, or sing, and the improvement was very marked in several ways. The natural diffidence of Indian children was overcome to a great extent, better order prevailed, and they learned to become better listeners.

Industrial.—The work in this department could be much improved by better facilities. Boys were detailed to help the agency mechanic, and exhibited quite an aptitude for the work. Under the supervision of the industrial teacher the boys haul and prepare all wood used by the school, make repairs, keep grounds in order, dig trenches and sink holes for drainage, and work in the school garden.

Rabbits persisted in appropriating all garden plants as soon as out of the ground; but by repeated plantings, and by weaving arrow weeds into the barb wires (which partially kept them out), beets, onions, carrots, parsnips, and some lettuce and radishes were raised.

Matron.—Girls were regularly detailed for work in the sewing room, laundry, kitchen, and girls' dormitories. I had all tables in the dining room cut down to a seating capacity of eight

each, and provided with tablecloths and napkins. In addition to regular details a large boy was placed at the head of each table (eleven in number) to dish meat, vegetables, etc., and a large girl as table matron. Each matron was held responsible for the care, cleanliness, and appearance of her table and dishes. The improvement in cleanliness and table manners by this arrangement over the old long tables covered with oilcloth, was very apparent. A small cook stove was placed in the kitchen to enable each girl, in turn, to learn to prepare meals for her family of eight.

The sewing room has been in charge of the agent's wife as temporary seamstress. Considerable assistance was rendered in this department by the lady teacher and by the assistant matron with a class of small girls. The number of articles manufactured and the material used are as follows:

| Articles: | | Material used: | |
|----------------------------|-------|-------------------------|--------|
| Aprons..... | 210 | Apron check.....yards.. | 987 |
| Bags— | | Bedticking.....do.... | 31 |
| Laundry..... | 1 | Crash.....do.... | 185 |
| Sewing..... | 20 | Denim.....do.... | 157 |
| Curtains..... | 62 | Drilling.....do.... | 10 |
| Drawers.....pairs.. | 8 | Elastic tape.....do.... | 72 |
| Dresses..... | 173 | Flannel— | |
| Dresses, girls' night..... | 59 | Canton.....do.... | 50 |
| Garters.....pairs.. | 109 | Wool, blue.....do.... | 56 |
| Napkins..... | 217 | Wool, gray.....do.... | 10 |
| Pants, boys'..... | 9 | Wool, red.....do.... | 49 |
| Paulin..... | 1 | Gingham.....do.... | 545½ |
| Pillow slips..... | 22 | Jeans.....do.... | 26 |
| Sheets..... | 19 | Linen, table.....do.... | 55 |
| Sheets, beef..... | 2 | Sheeting.....do.... | 822 |
| Shirts, boys'..... | 8 | Shirting.....do.... | 197 |
| Skirts..... | 18 | | |
| Sleeve holders..... | 16 | Total..... | 3,252½ |
| Tablecloths..... | 35 | | |
| Towels..... | 167 | | |
| Waists, girls'..... | 182 | | |
| Total..... | 1,338 | | |

The work in the laundry was performed as usual by Indians from the camps, assisted by the girls detailed for that purpose. Under such instruction it would not be reasonable to expect much improvement in this line of work, nor much advancement in English speaking and civilization. It is too much like "the blind leading the blind." I hope my continued protests against this drawback in this school, added to the agent's recommendations, will result in securing the appointment of a white laundress the coming year.

Improvements.—A new roof was placed on an old building and other needed repairs made, thus transforming an almost useless structure into a very fair boys' building, containing two dormitories, industrial teacher's room, small office for superintendent, small sitting room and bathroom. Two closets were made in the wide hall for clothing and a wash room in one end of the same. The repairing of this building affords dormitory capacity for 100 pupils, and enabled us to increase our enrollment on April 20 to 93, making the average for the year 83.9.

Improvements necessary to successfully accommodate the above number are: One school-room large enough for an assembly room, sewing room, employees' sitting room, a laundry, and five rooms for employees. Some of the rooms in the girls' building could then be used as a sitting room for the girls, which is absolutely indispensable, as they have no place in which to have a fire during the winter months.

The laundry, as at present situated (joining on to the boys' building), is a breeder of disease germs, and one should be built farther from the other buildings. The old laundry can be repaired for a boys' sitting room and the small one now in use be utilized as a room for the Indian assistant cook and engineer.

Our bathing facilities (one large tank for the boys and one for the girls, where several are plunged in like so many sheep) are disgraceful in the extreme. I would urge that the ring, or "rain bath," with proper heating apparatus, be furnished at once.

To those employees who have accorded me their earnest support, and to whom most of our success during the year just closed is due, I extend my thanks.

In concluding this report I wish to express my heartfelt appreciation of the uniform kind treatment and support accorded me by United States Indian Agent Charles S. McNichols, and to thank him and all of the agency employees for the interest they have manifested in our work, and for their assistance in making it successful.

Thanking your office for favors granted, I am, very respectfully,

WORLIN B. BACON, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through Charles S. McNichols, United States Indian Agent).

REPORT OF FORT APACHE AGENCY.

FORT APACHE, ARIZ., *August 1, 1898.*

SIR: I have the honor of reporting the affairs at this agency for the fiscal year ending June 30, 1898, as follows:

By an act of Congress June 7, 1897, the Fort Apache Reservation was segregated from the San Carlos Reservation and made a separate agency. This reservation embraces all the territory north of Black River, including within its bounds the White Mountain Apache Indians proper.

On the 30th day of June, 1898, by a careful census, the following number of Indians were counted:

| | |
|--|-------|
| Males of all ages | 836 |
| Females of all ages | 1,002 |
| Total | 1,838 |
| Males above 18 years of age | 385 |
| Females above 14 years of age | 625 |
| School children 6 to 18 years of age | 563 |
| Population this year | 1,838 |
| Population last year | 1,814 |
| Increase in population | 24 |

The following number of domestic animals are owned by the Indians of this reservation:

| | |
|---|-------|
| Horses | 4,426 |
| Cattle | 735 |
| Mules | 60 |
| Burros | 238 |
| Chickens | 243 |
| Greatest number of horses owned by one person | 150 |
| Greatest number of cattle owned by one person | 300 |

Streams.—The principal streams on this reservation flow into Black River or its tributaries. They are the Bonita and Turkey creeks, in the eastern part; the East and North forks, forming White River; Cedar and Carrizo creeks in the central part, and the Cibicu and Canyon creeks in the western part. The streams are separated by high ranges of mountains. The valleys are narrow, but fertile, and susceptible of a high state of cultivation under proper irrigation. Along these streams are the settlements, and in the valleys under a crude system all the produce except hay is grown.

Buildings.—This part of the reservation was, up to the time I took charge, October 17, 1897, a subagency. The affairs were being managed at San Carlos, 90 miles away, with an almost impassable mountain range between them. To make this a separate agency had been the subject recommended and discussed by the agent for several years, and the conditions which prevailed when I took charge proved the wisdom of these recommendations.

On my arrival I found all the effects of the subagency had been lately moved from the post to the North Fork of White River, 4 miles away. Little preparation had been made for the accommodation of the agent and employees. A storeroom, physician's residence, wheelwright's shop and cottage, and a small dispensary were all the agency buildings on the ground. The employees were badly quartered, some of whom sought shelter at the school, already overcrowded.

My first work was to lay off permanent grounds for agency buildings, and begin, with my limited force, the erection of quarters. I have completed at present one 4-room cottage for employees' quarters, one oil house, stable and corral, guard-house, carpenter shop, slaughterhouse and corral, and fences around agency grounds and pasture. This work was done by agency employees and irregulars. The amount of money expended for the latter was less than \$300.

With Indian labor, including prison labor, about 20 acres of bottom land was cleared adjacent to agency grounds and put under irrigation for the use of Indian employees. About 1 mile of stone fence was built by prison labor, serving the double purpose of clearing the grounds of rocks and inclosing them in part with a substantial fence. All the grounds around the agency have been practically cleared of rocks and rubbish, walks built, and placed in as good condition as the time would permit.

I have the framework completed for two more buildings, one to be used for an office and the other for employees' quarters. These buildings will be pushed to completion as soon as I am able to secure doors, sash, and builders' hardware. The urgent need of an agent's residence has been thoroughly discussed in all my monthly reports, as well as by special requests. It is to be hoped the Department will not let the summer go by without erecting this much-needed building.

The present system of hauling water in tanks and barrels for agency and school use creates an emergency that should be met promptly. At this time of the year the water is unfit for use after standing a few hours, and will certainly result in harm. This subject has been discussed in all my monthly reports, and the matter

was given considerable attention by Inspector Nesler on his visit to this agency. I believe the cheapest and most practical means of supplying water would be by water power. The conditions are distressingly bad in the respect to water supply, and should have the early attention of the Department.

Sawmill.—The sawmill was in bad repair on my arrival here, making it necessary to shut down for several weeks to put it in condition. During the work of repairing the mill the teams were laying in a supply of logs. With the exception of a few weeks during the winter months, when ice prevented, the mill has been doing excellent work. There have been manufactured since I took charge 101,000 feet of lumber, most of which was milled, and 64,500 shingles. Both the lumber and shingles are superior in quality to that furnished by mills outside the reservation.

Gristmill.—The gristmill was nothing more than a storehouse for the machinery on my arrival. I have had it put in condition for grinding corn, but doubt the utility of the mill until the Indians can be persuaded to raise wheat. This ought to be encouraged. I believe wheat can be grown here without irrigation on the uplands. The necessary requisite to start this industry is seed wheat. I am informed that some years ago seed was furnished these Indians, but the want of proper instruction in preparing the ground and planting resulted in a failure. Discouraged by this attempt, they have entirely stopped planting it.

Indians.—During the past year the Indians have been quiet and industrious. There was but one case of felony on the part of Indians. This was a case of the theft of a cow from a settler. The Indian admitted his guilt and was promptly turned over to the county authorities.

There have been a great many conditions for tiswin making, this being general among all the Indians. I found it being made in almost every camp when I came here; even the little children had acquired the habit of drinking it. I instituted a vigorous warfare on it by raiding camps day and night. In every case where tiswin was found it was destroyed, together with the cans used in its manufacture. All persons found in the camps were compelled to work time at the agency or sawmill. In this manner, by constant vigilance, the manufacture of tiswin has been reduced to a minimum. It has not been entirely stopped, but where on my first raids it was found openly in large quantities it is now confined to small quantities, made in some isolated retreat in the mountains, away from the probable search of the police. Even these places are often raided, and it has had the effect of reducing the manufacture to such an extent that I am well pleased with the results.

The Indians this year have sold to the Government the following products of their labor, receiving the prices named:

To the War Department:

| | |
|---|------------|
| 798,494 pounds hay, at \$1.05 per 100 pounds..... | \$8,384.19 |
| 210,090 pounds hay for bedding, at \$1 per 100 pounds.. | 2,100.90 |
| 200,012 pounds corn, at \$2.29½ per 100 pounds..... | 4,586.68 |
| 2,537½ cords wood, at \$2.75 per cord | 6,977.78 |

| | |
|-------------|-----------|
| Total | 22,049.55 |
|-------------|-----------|

To Interior Department:

| | |
|---|----------|
| 2 tons charcoal, at \$40 per ton..... | \$80.00 |
| 270 cords wood, at \$2.75 per cord..... | 742.50 |
| 49 tons hay, at \$25 per ton | 1,225.00 |
| 66,000 pounds corn, at \$2.50 per 100 pounds..... | 1,650.00 |
| 807 pounds beans, at \$4.75 per 100 pounds | 38.33 |

| | |
|-------------|----------|
| Total | 3,735.83 |
|-------------|----------|

| | |
|--|-----------|
| Grand total to War and Interior Departments... | 25,785.38 |
|--|-----------|

In addition to this, some of the Indians living near the border of the reservation have sold their products to cattlemen. I have no means of computing the amount thus disposed of. It is, however, comparatively small.

There is on this reservation estimated to be 1,230 acres of land under cultivation, 120 acres of which were cleared this year. There have been built and repaired during the year 20 miles of wagon road and 18 miles of irrigation ditches.

The Indians on this reservation are very poor. They have received no assistance from charitable institutions, and, barring the meager support in the way of subsistence furnished by the Government, they are dependent entirely upon their own resources. The post and agency is their market, and there is not enough money paid by the Government for their products to support them for more than

a few months. Next year will undoubtedly bring extreme want to many of them. I am informed, since the removal of three companies of troops from the post, there will be no wood purchased by the War Department next year. This will reduce their income very perceptibly.

They can and do raise more grain than is needed by the Government. The grain crop heretofore being mostly corn, I have endeavored and in a measure succeeded in persuading them to raise barley in order that they may be able to supply the post with all the grain purchased there. There are two reasons for this: it would not only increase their revenue, but would lessen the manufacture of tiswin by leaving a smaller supply of corn to carry over. A large per cent of the corn left on their hands is disposed of in this way.

It will be difficult to get them to raise any other grain than corn until some aid is given them in building irrigation ditches that will water large tracts of land. Where a farm consists of not to exceed 15 acres the owner will not take kindly to a diversity of crops. He will plant it all to corn and take the chances of disposing of it. There are large tracts of excellent land almost clear of timber and brush on the mesas above the rivers which could be converted into the most productive farms if water was supplied. It would not require a large outlay of money to do it; besides, the Indians would gladly do the work at small wages.

The land on the north fork of White River alone that could be redeemed has been deviously estimated from 15,000 to 25,000 acres. It would require a skilled engineer to survey the ground and locate the dam, but there is no question of its feasibility. The project is too great an undertaking for the Indians, and unless the Government takes it in hand this land, which would furnish a permanent support for the greater part of the tribe, will remain a grazing ground for the Indian ponies and burros.

I do not believe there is a more industrious people anywhere than these Indians, where there is a promise of reward for their labor. I have never called upon them for work when I had something to give them in return that they did not respond in greater numbers than I could accommodate. In letting contracts for wood or hay I am forced to allowance each one to so many cords or pounds, and they invariably furnished more than their allowance. I have seen these women cut hay with a knife far up on the sides of the mountains, load it on the back of a burro, and carry it as far as 20 miles to market. This they will do with nothing more than a handful of pine nuts and a few roasted leaves of the succulent mescal plant for their daily ration. There are many instances where women faint from weakness while at work, and withal they are the most patient people I have ever met.

Such a people deserve assistance, and with help in the proper way they would soon become not only self-supporting but many of them would accumulate property. When it is remembered that these Indians were placed on this reservation with absolutely nothing—the most hated of all the western Indians, kept strictly within the limits of their reservation, with no market but the army post, and that what they now have is the result of their own labor, and considering the obstacles they had to overcome in this mountainous country—little as it seems, they have done exceedingly well.

I would recommend that if possible they be given the contracts to furnish all the grain, hay, wood, etc., for the War and Interior Departments; that they be permitted to haul the freight so far as they are able, and that they be aided in improving their stock and a start given them in cattle raising.

Education.—The capacity of the boarding school is 43 pupils, calculating on proper air space, whereas we have accommodated 69 during the year. With a school population of 563 our work is only begun. The school is not happily located, and the buildings so utterly bad in every respect I could not, in justice to the Department, make other recommendations than the building of an entirely new plant. It seems to me a waste of means to attempt to put the present buildings in anything like a serviceable condition.

Owing to the fact that these Indians live in settlements along the streams, it is my opinion that day schools would be of great advantage to them. I would recommend that there be at least four day schools established on the reservation—one on East Fork, one on Cedar Creek, and one each on Carrizo and Cibicu.

Missionary.—The German Lutheran Church is the only religious society represented on this reservation. They have erected a neat cottage on the ground allotted to them on the east fork, and the missionary in charge is doing a good work.

Court of Indian offenses and police.—There is no court of Indian offenses, all cases being heard by the agent. This requires a great deal of time and patience, but as it needs promptness and firmness in dealing with these Indians, I am not sure that an Indian court would be successful. There have been 132 convictions for various offenses, with the result of 1,940 days of prison labor.

All policemen are required to keep their hair short, to wear full uniform when on duty, and to dress in citizens' clothes when off duty. This transformation from Indian dress cost me a few policemen, who resigned rather than meet the requirements, but I found others who were willing to take their places, and I now have a very efficient and genteel appearing force. The police have done good work the past year, but the want of forage for their horses has been a great hindrance to efficient work. I would recommend that full rations be issued to the police horses from November 1 to May 1 of each year.

Health.—I am well pleased with the progress of these Indians in accepting the treatment of the agency physician. The following report will show to what extent the superstitious cantations of the medicine men have been superseded by rational treatment:

| | Reser- vation. | School. | Total. | Births. | Deaths. |
|--------------------------|-------------------|---------|--------|---------|---------|
| Number patients treated: | | | | | |
| Males | 461 | 83 | 544 | 2 | 1 |
| Females | 393 | 30 | 423 | 6 | 2 |
| Total | 854 | 113 | 967 | 8 | 3 |

During the months of April and May there was an epidemic of influenza, which caused much suffering among the Indians and resulted in quite a number of deaths. Smallpox threatened us at the same time, and many cases of successful vaccination were made. These epidemics appear to be superinduced by a want of proper nourishment. During the early spring months the Indians have little else to eat than parched corn.

Trespassing.—There has been considerable trouble in preventing the settlers, along the north line of the reservation in particular, from using this reservation as a free range for their stock. Under former conditions, with a small police force, little could be done to prevent trespassing, and the settlers for long distances from the reservation had looked upon this country as a part of the free range. I have made vigorous efforts to remedy this, and have so far succeeded as to call down upon my head the maledictions of these offenders. I am indebted to the Department of Indian Affairs and the commander of the post for valuable assistance in this matter.

Whisky traffic.—This business was in a flourishing condition during the fall and winter months, until I was able to catch one party red-handed on the reservation. In this case the parties were sent to Holbrook, but were turned loose by the county authorities for want of jurisdiction. It had a salutary effect on the others, and the business is stopped.

There is great need of a United States commissioner and deputy United States marshal on this reservation, there being no peace officer for the Government nearer than Globe. Violators of the law, knowing the difficulties in the way of a successful prosecution, take advantage of prevailing conditions. In January last a party of desperadoes took refuge in the western part of this reservation and defied the police. They were hunted down by a sheriff's posse from Holbrook. A fight ensued and one of the desperadoes was captured. A party of soldiers under Lieutenant Murphy was sent over, and they were driven from the reservation. Owing to the mountainous surface of this reservation it is used extensively by this class of men as a place of refuge. They are constantly a menace to the peace and good order of the reservation.

Forests.—The greater part of this reservation and a large area of the adjacent country is covered with a splendid forest of pine, oak, cedar, etc., which should be protected. I would recommend that such special action be taken as will preserve these forests from the wasteful destruction now in operation.

Cliff dwellers.—Within the bounds of this reservation are many ruins of what is generally known as the home of the cliff dwellers. Some bear unmistakable evidence of vandalism, while the majority, being located in remote parts of the reservation, have not been disturbed. I have found in them evidences of an ancient race of people. Bows and arrows, evidently shaped with stone knives, and pottery wholly unlike anything modern are often found in or near these ruins.

I could not in justice to the employees close this report without some word of praise for the energy and willingness with which one and all have aided in building up this agency. To them is due their full share of the credit for whatever success I may have attained.

To Lieut. Col. Michael Cooney and his successors, as commanders of the post, I

am indebted for many courtesies and useful suggestions in the management of affairs here. I owe special thanks to the Department of Indian Affairs for its patience and good offices.

Very respectfully,

CHARLES D. KEYES,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF INDUSTRIAL TEACHER IN CHARGE OF HUALAPAI AND YAVA SUPAI.

HUALAPAI INDIAN AGENCY,
Hackberry, Ariz., July 30, 1898.

SIR: I beg to submit my third annual report of the Hualapai and Yava Supai Indians, and the three day schools under my charge.

HUALAPAI.

Morals.—A steady if not rapid advancement has been made by the Hualapais toward a higher moral tone during the year. The effort toward improving and elevating their moral and mental condition has been directed along certain lines that seemed most easily followed and of greatest importance, while but little has been attempted at betterment of their condition in other directions. As previously reported to you, it has appeared to be almost a superhuman task to attempt to lift the Hualapai from all the degrading and undesirable characteristics and failings of his savage nature at one and the same time; and so, in viewing the sins and shortcomings that so easily beset him, we have been constrained to select from them the greatest, most powerful influences that have tended to degrade his moral and physical nature—those that are most potent in preventing his advancement in civilization.

The two vices which upon the surface at least appear to be the worst enemies of this tribe are whisky and sexual immorality. To stamp out and eradicate these two vices is no easy task, and though my energies, aided by the very efficient police service at my command, have been exerted untiringly, firmly, almost cruelly in this direction, the results have not been what some might have expected. There are those who imagine that the savage nature of the Indian may be changed, its evil instincts eradicated and supplanted by Christian virtues in a short time by careful training. My experiences do not lead me to such conclusions. Time, labor, patience, unceasing, earnest effort may and will in the end accomplish great results; but in sudden, radical changes in the Indian character and instincts I have no great faith. It is pleasing to note the decrease in the prevalence of intoxication and its twin vice among these people, for nothing good or true can find a lodgment in a nature defiled with them.

But little assistance from the civil authorities has been received in suppressing drunkenness, and only such means as were at our own disposal could be used. First, I have tried to induce them as far as possible to leave the towns and mining camps for at least eight or nine months of the year, where whisky is plenty and can always be had for money. They have been induced to go to such springs or creeks, on or off the reservation, as would furnish water for irrigating, and there plant and cultivate such crops as they can. Now nearly every family has a small garden with a barbed-wire fence around it, irrigating ditches, and a brush hut near by. Here they are away from the corrupting influences that too frequently accompany a frontier civilization, and which an Indian is only too prone to adopt. Here, when not engaged in planting or preparing the land, one member of a family is sufficient to attend to the crop, irrigate, etc., and the others usually roam over the hills and valleys in search of grass seeds, fruits, and nuts, with which they help to piece out a living, a large percentage of which is provided now by themselves, and they are yearly taught to depend less and less upon the assistance from the Government and more upon their own efforts.

In referring to the factors that are tending to elevate and advance the moral condition of this degraded people, I can not omit to mention the influence exerted by the constant, earnest, zealous labors of the field matron, Miss Calfee, upon the women and girls of the tribe. Her ceaseless labors for their temporal and spiritual welfare can not but continue to bear its fruits.

During the three or four months when the Indians are living near the towns, and their children are attending the day schools, is the time that the vigilance of the police is most required to keep the appetite of the red man and the fire water

of the white man apart. Little assistance is rendered by civil authorities in suppression of traffic in liquors to Indians, although the officers are willing to make arrests when called upon by me to do so; but punishments are slight for whisky sellers, and the sentiment of many citizens is openly expressed that an Indian should be allowed the privilege of having all the whisky he can pay for. Persons possessing such sentiments are not of any assistance to us in our labors, nor is their influence exerted in the direction of punishing those who violate this law. Officers of the county government have refused to permit the expenses of prosecuting or arresting Indians to be borne by the county unless the offense is against a white person; but to make up for this lack of assistance they have assured me of their willingness to make my authority as near absolute in matters pertaining exclusively to the Indians as possible. When an unfortunate has been proven to have partaken of the forbidden beverage, if he is required to build a few yards of fence or dig some irrigation ditches for the other Indians the lesson is not easily erased.

In these two things, then, this tribe has made advances toward civilization and moral improvement as great as I had hoped, but in some other respects they are as bad as ever. Gambling is unrestrained, and I almost feel that it is unrestrainable. If the Indians are idle they will gamble—horses, clothing, blankets, money, everything goes. If there is not over 10 cents between 20 Indians, they will gamble all day for that; all of them. Little or no effort has been made to suppress the practices of the medicine men, because I have nothing to offer in its stead. I can not offer them the services of a physician, nor even medicine of my own prescribing; therefore I do not feel justified in interfering now. This sorcerer has not, however, the control over them that he once had, but it is bad enough yet. Plural marriages have been stopped. A shower of protests from chiefs and others who desired to take another wife has resulted, but no exceptions have been made, and no violations so far have occurred, and none will be tolerated.

Industry.—Realizing that the surest way to keep my Indians out of the way of evil is to keep them at work, I have considered it a part of my duty to provide as far as possible employment for all who could work. If constant work could be provided our troubles would soon be at an end. But the country in which they live is semiarid, sparsely settled, and the Indians as yet know but little of entering upon enterprises of their own. They must depend upon the whites to furnish employment unless they are farming. A few cut and pack or haul wood into the camps of the miners or gather wild hay in the valleys and sell it. A few work at different work-around the mines, and there are a number who depend entirely upon the cattle-raising industry for employment.

The Hualapai takes naturally and kindly to horsemanship; he makes a good cowboy. He soon learns to ride the wildest broncho and throw a lariat with skill. Those who are efficient in this branch of industry are independent, usually sober, and are making more rapid strides toward civilization than any of the others. Some of the reasons for this are: First, that he has found an occupation that is adapted to his nature and his instincts; second, he can usually find employment more readily than many of the others, and his pay is good and sure; third, he learns to value the money he makes and what it buys, because he worked for it, and, fourth, he is thrown more intimately in contact with the whites in this work than in any other, so that he learns English and becomes more like his white associates. He imbibes the fearless, independent, manly spirit of the cowboy. And the stockmen, for whom he usually works, are among the best citizens of this section and men of families, owning their own herds, and not of the desperado, six-shooter brand with which many are familiar. The latter class are rapidly being supplanted by the Indians, who are more to the liking of the cattlemen who occupy the ranges of northwestern Arizona. An association of the Indians with this class of whites can not but result to the advantage of the former. The wealthiest, most substantial citizens, who are cattle raisers in this section, employ Indian cowboys almost exclusively, paying them, in some cases, the same wages as the whites receive.

In my opinion, it is not the part of wisdom to try to make a certain section of country adapt itself to a certain industry, but rather to adapt the industry to the capabilities of the country. For this reason the Hualapai can never become a great success as a farmer, the land at his disposal being arid, and water for irrigating is scarce, or is in some canyon, where only barren rocks in place of soil appear. It seems to me that if the Hualapai ever becomes independent and self-supporting he will have to become a cattle raiser. His reservation is adapted to this industry; thousands of head of cattle and horses—not his—are roaming over it, eating its nutritious grasses, drinking from its springs. His natural inclination

tends toward cattle raising, and the only thing he now lacks is to have his reservation surveyed and stocked with cattle, and he is from that moment independent and no longer a vagabond.

If the reservation is not surveyed it should be thrown open to settlement, as it is only a drawback to the development of the resources of the country in its present condition. The lines in many places are not established, and crimes committed upon it can not be punished in either the Territorial or United States courts, as has been proven. When the reservation is surveyed then it will be policy, economy, and humanity to give the Hualapais cattle and allow them to use their reservation. The only privileges they have on it now are to farm about 100 acres of land lying in two of the canyons on it.

YAVA SUPAIS.

Of the Yava Supais but little need here be said. Living as they do in a deep canyon, remote from the habitations of the whites, they have followed the even tenor of their ways as of yore. But little changes are wrought in this tribe from year to year. They have for centuries cultivated the same crops, in the same way, and in the same place, and by the same methods as they use to-day. Corn, pumpkins, melons, peaches, etc., grow in profusion and with little effort on the part of the cultivators. Efforts have been made within the past few years to induce them to adopt more civilized ways of farming, and they are not slow to fall in line. A few plows, hoes, shovels, and some barbed fence wire have been given them and the uses of these articles explained and exemplified to them by the additional farmer, a most competent and industrious employee, and the Indians now have better fences, raise more to the acre after plowing, and put in larger crops than formerly. Formerly they took a vacation of two months each year and went deer hunting on the great mesas north of the San Francisco Mountains, but now the game law forbids this and they get little venison.

Owing to the isolation of the Supai Indians they have not been corrupted and demoralized with the vices of civilization like the Hualapais, whose cousins they are. Their language is similar—only a slight difference in dialect—and they are evidently the same tribe of Indians. If no other tribes were more trouble to the Government than the Supais the administration of Indian affairs would not be the great burden that it now is.

EDUCATION.

The Kingman day school, at Kingman, Ariz., has maintained an average attendance during the year of 41. This was as good and as regular an attendance as the conditions would admit of. School is taught in a building rented for the purpose, with bath attached. Clothing was furnished toward the last of the winter, and was certainly of great benefit. The school has been under the tuition of a competent and energetic teacher, and the work done has been satisfactory, though not as marked as last year. The industrial training, consisting of sewing, cooking, laundry work, etc., has not been quite so fortunate, especially toward the latter part of the session. But few garments were made. The bathing of the pupils did not receive the attention that its importance deserved. Ill health of the employee having charge of this branch of the work may have been the cause.

The Hackberry day school is situated near the town of Hackberry, and is taught in a building furnished by the Massachusetts Indian Association. The average attendance was 47, but for several months it was near 60. During the last five months of school the teacher put forth an unusual effort to accomplish results in the schoolroom exercises, and the results were soon apparent. Prior to the date mentioned, February 10, little progress was made, and apparently little effort put forth to accomplish any results. This is the oldest Hualapai school. Its advantages as to location being good, it should keep up an attendance of at least 60, and industrial training of various sorts should be added. Lack of title to land at this school has retarded erection of buildings, or any improvements, which are greatly needed.

What industrial training was possible was taught in a creditable manner. Only sewing, cooking, washing, and a little gardening were possible. The housekeeper carried on the instructions in her branches with credit and satisfactory results. The clothing furnished was made up and frequently washed and mended under her supervision.

The Supai school has kept up very close to its capacity in attendance, 60 being the limit and over 57 the average. The new schoolhouse, built of red sandstone by the additional farmer and the teacher, was so far completed as to be occupied for recitations, but is still incomplete. The building is commodious, comfortable.

and a credit to the energy, skill, and interest of the employees who built it. Until April 1 the school was under the direction of R. C. Bauer, who has since been promoted to the position of supervisor of Indian schools. The ability, energy, and interest of this employee is a sufficient guaranty of the results accomplished in the school while he was there. Upon his retirement I placed the cook, Miss Ferry, in charge, who for some time then performed the duties of teacher, housekeeper, and cook. Only a woman of ability and unflinching courage could have performed the services rendered by her during that time with the credit that she has. In May the new teacher and housekeeper arrived and entered upon their duties with earnest zeal, and I have no doubt that their services will prove all that can be desired.

Supai school has been most fortunate in always having had exceptional employees to administer its affairs, and the results are easily apparent at a glance in the pupils, the school, and its general surroundings. I wish to speak particularly of the energy and ability of all the employees in Supai, both agency and school. In each and every case they have shown a particular desire to do their full duty, and everyone has done all and more than all that could have been expected or requested of him or her.

I have the honor to be, most respectfully, your obedient servant,

HENRY P. EWING,

Industrial Teacher in Charge of Hualapai and Yava Supai Indians.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF NAVAJO AGENCY.

NAVAJO AGENCY,

Fort Defiance, Ariz., August 27, 1898.

SIR: I respectfully submit the following report of this agency for the fiscal year 1898:

NAVAJO INDIANS.

The condition of these Indians continues to improve; their fields yielded good crops last fall, and the coming harvest promises to be better. The increase in the price paid for wool has also added to their prosperity.

The work on irrigation ditches has been very satisfactory during the year. The ditches on Wheatfield, Cottonwood, and Defiance creeks have been completed according to the plans and turned over to the agent. The appropriation, however, is now exhausted, and the sum—\$5,000—to be allowed out of the general appropriation for the coming year will not accomplish much. It is greatly to be regretted that the special appropriation asked for continuing this most important work failed of passage at the last session of Congress. I recommend that another effort be made at the next session. No money can be spent to more advantage for the Navajos than such as may be expended for completing the irrigating system so much needed on their arid reservation.

The mission hospital of the Woman's Auxiliary of the Episcopal Church is a benevolent institution of great value, in which its founders and supporters can justly take pride. A number of cases have been successfully treated there, and the superintendent, Miss Eliza W. Thackara, has acquired the confidence and esteem of the Navajos. I earnestly recommend this hospital as a worthy object to all who have means to contribute for its support.

Mrs. Eldridge, the field matron, continues her useful work among the Navajos with the same energy which has heretofore characterized her. She has recently opened up a new field in the vicinity of the Two Gray Hills, where she is doing good work.

The mission of the Methodist Church on the San Juan River, under the charge of Miss Trippe, is admirably conducted and does much good.

The attendance of children at school has been greater than at any time since I took charge of the agency, and the dormitories have been overcrowded. I have, therefore, been obliged to ask for more buildings.

The Indian judges and the Indian police have faithfully performed their duties during the year.

The general conduct of the Navajos has been very good, and I have had only two cases to turn over to the civil authorities during the year.

MOQUI INDIANS.

Last year the Moquis had very good crops, and, from present indications, they will have better ones this year.

The school plant at Keams Canyon is old and the buildings are in bad order. It would be a waste of money to attempt any repairs here, and I have recommended that a new plant be built about 2 miles below the present site.

There are two missions among the Moquis, one at the Middle Mesa, with Misses Watkins and Collins in charge, and the other at Oraibi, with Rev. H. R. Voth in charge.

As stated in my last report, the allotments of land to Indians on the Moen-kopi Wash were confirmed by the Department. This was in August, 1897, and all parties concerned, Indians and whites, were duly notified that the lands in dispute had been awarded to the Indians, and that the white claimants must refrain from molesting the Indians. The whites apparently acquiesced, and I thought we should have no more trouble; but when planting time came last spring one of the Mormon claimants reasserted his claims to part of the allotted lands and refused to permit the Indians to plant there. When this was reported to me, I directed the farmer in that district to take possession of the land and to use force, if necessary. In compliance with my orders, he took a force of Indians and planted this land. He was then arrested and tried before a justice of the peace and sentenced to pay a fine of \$300 and to be imprisoned for six months. The case has been appealed and will be disposed of next spring. In the meantime the Secretary of the Interior had been induced to suspend his order approving the allotments and to send out an inspector to investigate the whole matter. The result of this investigation has not yet been communicated to me.

I inclose the usual statistics and the report of the superintendent of the Navajo boarding school.

Very respectfully,

CONSTANT WILLIAMS,
Major, Seventeenth Infantry, Acting Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF NAVAJO SCHOOLS.

FORT DEFIANCE, ARIZ., June 30, 1898.

MADAM: I have the honor to submit the following report of the Navajo boarding school for fiscal year 1898:

Attendance.—During the year 54 girls and 131 boys were enrolled. At the close of the year 50 girls and 108 boys were present. However, as shown by quarterly reports, most pupils were enrolled after the 1st of October. At one time there were over 100 beginners attending school, many former pupils not returning. From this statement it will be easily seen that the work for employees has been unusually difficult. Few ran away; none during the latter part of the year. But few went home to visit parents, except within the week following Christmas and occasionally one on a Saturday or Sunday.

Nearly all girls attending school were small, only three being enrolled over 14 years of age. It seems to be against the principles of Navajoes to send large girls, partly because girls marry young and are sold by parents.

Schoolroom work.—Great stress has been placed upon the importance of English speaking. Teachers have had directions to make all lessons and recitations in some measure language lessons. Attention has been given to the fact that learning to read in English does not greatly help in learning to speak that language, only inasmuch as the eye is made to assist the ear, the theory followed being if one learns to talk he must do so by talking. Mechanical solutions, involving large numbers, have been discouraged, but making change, actual measurements, and problems within the reach of a little Indian's understanding have been advised. Songs have been committed to memory when the words were senseless things to many pupils, but ordinarily other factors of the intellect besides memory have been appealed to.

Great progress has undoubtedly been made. With a majority of the school beginners, not knowing how to stand, walk, eat, and to dress themselves well, the progress at first was slow and discouraging, but the last half of the year rapid advancement was made.

Industrial work.—The Navajo children are the best of workers. This fact has been attested to by a number of employees and others from other schools and agencies. Though we have a small garden, probably 4 acres, the boys have been kept busy repairing buildings, cutting and drawing wood, doing heavy laundry work, and assisting to keep their own building in proper order. The machines in the laundry were entirely too heavy to be operated by little girls. We have an engine which, I am credibly informed, needs little repairing. If apparatus for washing by steam could be supplied, much more profitable work could be found for boys outside of the laundry. A general utility shop is nearly ready for use, where each of the larger boys should spend part of his time, as they take great interest in any kind of mechanical work.

In the industrial work for both boys and girls the practical side has been kept in view. Employees have been asked to consider each day's work a language lesson as well as a practical lesson in useful handicraft. A decided improvement in language, manners, neatness, and ability to do work well has been evident. The girls deserve special mention in this respect, having become the best of little housekeepers, as well as being skillful in ironing, sewing, mending, and in doing kitchen and dining-room work.

The early part of the year the sewing room was more like a manufactory than an industrial schoolroom. This evil could not be avoided, as little was on hand wherewith to clothe children

as they came in. The following-named articles were made in the sewing room, besides a great part of the mending was done there:

| | |
|--|-----|
| Aprons: | |
| Apron check..... | 264 |
| Muslin..... | 48 |
| Denim..... | 40 |
| Capes..... | 12 |
| Combination suits: | |
| Small boys'..... | 98 |
| Girls'..... | 74 |
| Drawers..... | 175 |
| Dresses..... | 108 |
| Napkins..... | 350 |
| Pants, small boys', denim and jeans..... | 113 |
| Pillow slips..... | 179 |
| Sheets..... | 193 |
| Skirts..... | 75 |
| Towels..... | 505 |
| Waists..... | 61 |

In addition to the articles named above, the girls, under the supervision of the matron, made 22 curtains, 18 tablecloths, wove a number of small blankets, rugs, etc., besides assisting with the mending.

The draining of a tract joining the present garden will add about 10 acres more agricultural land. This should be done next year. As irrigating ditches are being made in localities within the reservation, boys should receive practical lessons in irrigating at school.

The ditch leading from the reservoir formed by the dam about a half mile above the school site now carries abundance of water, but the water was not available this year as early as needed. Should this dam, which was lately finished, withstand the tremendous freshets coming in July and August, there will be no lack of water.

Last year nothing worth mentioning was raised from the school garden. We have planted garden vegetables and corn, which look well now. At least the weeds have been destroyed and the utmost care has been given to the garden, though it must be confessed that gardening in this altitude is somewhat discouraging.

In concluding this subject, the statement at the beginning should be emphasized—these children are the best of workers. I doubt if their superiors in this respect can be found among Indians. Was not their reservation almost a barren waste of sand and rock, much more could be expected in the way of farming from boys trained to work intelligently.

Buildings.—The new boys' building promised for next year is badly needed. In the old building the boys had two sitting rooms about 18 feet square. Of course many of the 120 boys attending had to sit or play elsewhere. During the cold weather it was impossible to keep these rooms at the proper temperature and at the same time well ventilated.

The new tin roof being put on will make the girls' building in good condition, except replastering, which should be done within the next two months. As all buildings have been described for the Department this year, no further description is necessary, without it be to add that the woodwork of buildings was painted last autumn and all rooms were thoroughly whitewashed several weeks since.

Transfer of pupils.—Notwithstanding the united efforts of employees of the school and the cooperation of the agent, but few children have been transferred to nonreservation schools. By request of Supervisor F. M. Couser, a special effort was made to secure 12 children for the school at Phoenix, to go some time during June. The children readily consented, but their parents objected. A few children who died while away at nonreservation schools caused a widespread prejudice against sending children off the reservation.

Health.—Pupils throughout the year have been healthy. The girls especially, in large, airy dormitories and a large play room, have enjoyed remarkably good health. A few boys suffered from the effects of la grippe and colds, unavoidably aggravated by the condition of their building. There has been considerable sickness among employees.

Generally.—The year for the school has undoubtedly been a prosperous one. A large majority of the employees have been faithful and earnest. Indian employees, with but one exception, reached a high standard of excellence. Can the same pupils be secured next year and for several years to come, the school will pass far beyond the primary work done by the most advanced pupils this year. Discipline has been maintained with little effort. Both girls and boys have been almost invariably respectful and obedient.

A brass band was organized last November and was able to play remarkably well for the closing exercises, June 23.

To Maj. Constant Williams, the agent, sincere thanks are due for kindly interest and help. The superintendent has not been hampered or interfered with in his work, but help and advice have always been tendered when asked for. Lastly, to such employees of the school that have worked earnestly for the good of the children in our care grateful remembrance is assured.

Respectfully,

FRANCIS M. NEEL, *Superintendent.*

The SUPERINTENDENT OF INDIAN SCHOOLS.

REPORT OF PIMA AGENCY.

SACATON, ARIZ., August 13, 1898.

SIR: In compliance with office instructions, made necessary by the death of late Agent Henry J. Cleveland, I assumed temporary charge of this agency May 24, and it has fallen to me to write the annual report of its affairs, which I now have the honor to submit.

Accompanying this will be found separate reports on school buildings and school requirements, together with the report of the superintendent, Mr. W. H. Hailmann, and of agency needs in the way of repairs, etc., to which I respectfully invite consideration.

This report will be found unavoidably lacking in some details usual to such, and I purposely leave out "past history," of which the Department has doubtless already enough. It is well, however, to restate a few known facts.

The jurisdiction of this agency embraces four distinct reservations, besides a large area of mostly desert country extending 80 to 100 miles south to the Mexican boundary line, over which here and there, in mainly small settlements, are scattered the nomadic Papagoes, the number of whom is estimated at 2,000. Nothing better than their precarious desert existence seems to have been offered them, and nothing better is in store for them unless Department interest is aroused and through its efforts Congress is induced to pass some measure for providing them with land and water, on and with which by their labor a living more in keeping with their attempted civilization may be gained. Destitution has never yet proved a satisfactory civilizing influence.

The Gila River Reservation, the largest of the four, has 357,120 acres, of which it is judged two-thirds is good to fair irrigable land needing but one lacking essential—water—to make it astonishingly productive. The fine ranches and orchards about Phoenix, Mesa, Tempe, and Florence, and wherever sufficient water is obtainable, are all eloquent testimonies of what may be done with this seemingly desert waste with sufficient water at just the right time. And the small patches cultivated by the Indians in their rude way and with a very scant water supply, resulting often in 30 to 40 bushels of wheat to the acre, afford additional evidence of the value of the Gila Valley, provided water can be supplied.

Investigation, surveys, and estimates by experienced engineers have demonstrated the feasibility and practicability of an extensive reservoir at the Buttes, some 40 miles east of this reservation, which, at a cost of not more than \$2,500,000, can impound for use as needed billions of gallons of surplus water, precious as gold, but now in riotous freshets going to waste, doing no good and much harm. Here nature, seemingly penitent for her agency in making a desert of this valley, provides reparation, and only requires and invites man's means and intelligence to make effective her kind intentions.

This reservoir, with its network of canals and ditches, will, if constructed, not only make serviceable and productive 300,000 acres of reservation lands, but also reclaim from utter uselessness several hundred thousands of acres of outside desert, which, through its beneficent instrumentality and man's labor, can be made to "blossom like the rose," and make of this valley of the Gila the richest section of the great Southwest. What better paying and more useful business proposition, and what more philanthropic, can there be? It seems almost a crime to permit it longer to pass unheeded. It is un-American to take no advantage of such providential opportunities. If Government means can not be authorized for such an investment, private capital should be allowed and encouraged to undertake the work.

With this reservoir constructed and in operation, every man, woman, and child of the Indians (including the unsettled Papagoes) in charge of this agency can be given allotments of 40 acres each of good land, and in a few years time become prosperous. It is certainly a matter for the most earnest consideration and speedy action. All of these Indians, if water can be supplied them, will be quick to take allotments and make permanent homes and improvements. With this and a few more years of Government education the problem for them is solved. They will be fully able to paddle their own canoe, and be ready to become worthy citizens of a growing State. Without it, a century hence will find but little if any change from their present condition. Their education, unaccompanied by the means for material advancement, is likely to prove a curse instead of a blessing to them.

No census has been taken this year. It had not been undertaken when I took temporary charge of the agency, and lack of time and the necessary funds to properly perform this duty prevented its execution by me. I am informed, however, that there is no material change from last returns, deaths and births being about equal.

More wheat has been raised this season than usual—estimated by competent judges at 50,000 sacks or 7,000,000 pounds. All of the reservations have had very fair crops, and with the possible exception of a few Papagoes, always more or less unfortunate, no Government support will be necessary.

With a little more consideration by the Department, more generous and prompt allowances for necessary repairs and expenditures, this agency, under the administration of Mr. E. Hadley, the incoming agent, will doubtless next year present a more creditable report of condition and progress.

Thanking you, Mr. Commissioner, and the several heads of departments for courtesies extended,

I am, very respectfully,

S. L. TAGGART,

United States Special Indian Agent in Charge.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF PIMA SCHOOL.

PIMA BOARDING SCHOOL, August 13, 1898.

SIR: I have the honor to submit my first annual report of the Pima Boarding School for the year ending June 30, 1898.

The year just closed has been in the main successful; one of steady progress after annual organization had been effected.

Attendance and capacity.—Attendance has been regular and full, averaging 193, with an enrollment at the close of the year of 196. This is in excess of the estimated capacity (150) of the school, but by eliminating overgrown and overaged pupils, who properly belong to nonreservation schools, and accepting only children aged between 5 and 15 years, it was found a few more could be accommodated. Were facilities provided, double the number of children could be obtained. As it was, at least 50 were turned away during the first two or three weeks of September for lack of room. These Indians are so eager to acquire educational advantages for their children that I have strained every possibility to accommodate as many as could be.

Health.—The health throughout the year has been good, no serious ailments claiming attention. **Sanitation.**—The sewerage system of the school might be considerably bettered. At present all waste water finds exit not exceeding 300 feet from the main building, thence to the "river." When the river is dry, the waste water stagnates, breeding malaria and kindred ailments.

Literary.—A regrading of pupils in the class rooms, and the promulgation of a definite outline of work in conformity to the departmental outlines, have produced desirable results, and a uniformity of purpose is more noticeable in the teachers' corps. The kindergarten, not theretofore in operation, has proved to be of incalculable benefit to the smaller beginners; results which will be noticed perhaps more next year, when the primary class will claim some of the kindergarten pupils. The introduction of regular monthly entertainments served to free the children of bashfulness to a gratifying extent.

Literary and musical programmes were presented Christmas and Washington's Birthday, creditable to the pupils and the teachers, who devoted themselves to successful drill and presentation. The closing programme was presented June 16, largely attended by the parents and friends of the pupils.

Industries.—It gives me pleasure to report satisfactory progress in the various departments, industrial and domestic. There has been no exceptional training, but the pupils concerned have received valuable instruction of lasting benefit, calculated to serve rather as an apprenticeship to what may be offered by the higher, nonreservation institutions.

Discipline.—Discipline has been maintained throughout the year, with but few runaways. Military drill has been continued successfully with the usual benefits. The spirit of obedience and right-doing is an inherent quality with these children, requiring but proper guidance rather than attempts to create. Maintenance of organization and, on the whole, harmonious action, have characterized the services of the employees' corps. To efficient effort and the acceptance of suggestions much of the success of the year is indebted.

Improvements.—General repairs, considerable painting, and slight internal changes have characterized the work of the carpenter's force and industrial detail. Steps were taken to better the bathing and washing facilities for boys by installing shower baths and suitable wash trays with running water. That is yet unfinished, due to nonarrival of materials.

In the early spring a number of rees, rosebushes, and shrubs were set out, roadway outlined and graveled, and a lawn started and inclosed. The plants are doing nicely, the lawn and inclosure and the definite driveway insure more privacy, while the whole adds greatly to the appearance of the school plant.

The needs of the school are not so numerous as essential. Foremost among these is a school-house and assembly room capable of accommodating at least 300; the present schoolhouse to be remodeled for dormitory purposes. An adequate water supply for fire protection is a pressing need. In this connection an electric light plant seems urgent; power is here, in the mill.

The visits of inspecting officials at times during the year were exceedingly helpful. In conclusion, I beg to acknowledge appreciation of recommendations approved.

Very respectfully,

W. H. HAILMANN, *Superintendent.*

SAMUEL L. TAGGART,
Special Indian Agent.

REPORT OF PHYSICIAN, PIMA AGENCY.

PIMA INDIAN AGENCY,
Sacaton, Ariz., August 13, 1898.

SIR: The sanitary history of this agency for the year ending June 30, 1898, has little of special note. Taken as a whole, the health of the tribe has been fair. By far the greater part of the sickness occurs during the winter season, while the heated term is remarkably healthful, except for bowel troubles among children, caused by faulty diet, and which is often fatal.

An epidemic of whooping cough during the fall and winter caused a number of deaths among the younger children from pulmonary and bowel complications. Inflammatory troubles of the eye are prevalent, largely due to lack of cleanliness. Venereal diseases are not so prevalent as might be expected, but are by no means rare, and do not seem to be on the increase.

Tuberculosis continues to cause a large per cent of the deaths and seems to be increasing, largely due no doubt to overcrowding of poorly ventilated houses. The earthen floors absorb the sputa of tuberculous patients, which soon becomes dry and finds its way into the lungs of others through the medium of dust, thus communicating the disease. Under the circumstances such troubles must continue to increase. I have endeavored to impress this upon them, to teach them the contagiousness of consumption and how to guard against it in their homes. In this I have been fairly successful.

The "medicine man" is not active as would be expected among so primitive a people. His hold on the tribe is weakening, but he is occasionally heard from. A large proportion of those living nearby apply at the office for treatment, while many come long distances. As a rule, medicines are taken faithfully for a short time, but are apt to be set aside unless prompt improvement follows.

The health of the school has been fair, although sanitary conditions are not what they ought to be. Sewage from the dormitory, laundry, and kitchen empties into a creek only 50 yards

away, and the odor is often noticeable throughout the building. When the creek is dry, it forms a cesspool, making matters worse. The building has an additional odor from the corral, which joins the girls' playground in the rear of and 25 yards from the building.

Another objectionable feature is the overcrowding of dormitories. So many are crowded into small space that, in spite of careful attention to ventilation, the air becomes very foul, which can not fail to be detrimental to health.

Tuberculosis in the school has been guarded against and several doubtful cases sent home.

Diseases of the eye are very prevalent among the children when they first come from camp, but cleanliness generally effects a cure without much other treatment.

It is almost useless to employ Indian nurses in the school, as they are incapable of doing the work; nursing was done principally by the matron, while the nurse was assigned to other duties.

Lack of necessary drugs has greatly embarrassed me in my work. Twice during the year an additional estimate was made, but was not granted by the Department, leaving me to get through the year as best I could on the small annual supply.

Respectfully submitted.

A. P. MERIWETHER, *Agency Physician.*

S. L. TAGGART,

Special United States Indian Agent in Charge.

REPORT OF FARMER IN CHARGE OF PAPAGOS.

PIMA AGENCY, ARIZ.,

San Xavier Reservation, September 3, 1898.

SIR: In compliance with regulations, I have the honor respectfully to submit herewith my eighth annual report of the affairs at this reservation under my charge for the fiscal year ending June 30, 1898.

The last census taken shows the following population: Males, 262; females, 253; total, 515. Thereof are children of school age, from 6 to 18 years: Males, 73; females, 71; total, 144. The decrease of population under last year's census has entirely resulted from emigration of non-allottees who had resided here only temporarily.

With the exception of one Pima, all the Indians living on the reservation are Papagoes, and about three-fourths of them belong to the Catholic Church.

In 1890, 41,280 acres of this reservation were allotted to Papago Indians, who were then residing thereon, giving to each husband or head of a family 160 acres, and to children 80 and 40 acres, according to their age. The remainder of the reservation, about 29,700 acres, not allotted, is so-called mesa land of very little or no value. The allotted land consists of about 1,580 acres of farming land, 6,440 acres timber land, and about 32,260 acres mesa land.

The farming land, of which there is now about 1,000 acres under cultivation (against 400 in 1890), with a limited water supply for irrigation, is good and productive. All of the timber land, upon which is growing the largest mesquite timber in the Territory, would be in every respect splendid farming land, provided that the necessary steps were taken to bring it under irrigation, and this desirable measure could be effected with comparatively small expense when the great benefit resulting therefrom is taken into consideration. Mesquite, the only timber growing on this reservation, makes a splendid fuel, and it is used also largely for fence posts, but none is sawn or used as lumber.

The allotted mesa land (32,260 acres) is all of the same kind as the unallotted land, useful only for grazing after a plentiful season of rain. It is not under fence, and the Indians do not derive any benefit therefrom. At the time the allotment was made 2 acres of this land was given for each acre the Indians had been entitled to, which goes to show that the quality of the mesa land had always been considered to be poor. All the farming land and the timber land is inclosed by a good substantial wire fence.

This land is generally overflowed every year in the rainy season, and the floods are continually causing considerable damage to irrigating ditches and to roads and bridges, and in many locations also prevent the planting for the so-called second crop; but otherwise these floods do much good, as the considerable amount of sediment they bring is considered to be, and, as a matter of fact, is, a great fertilizer, and land so overflowed does not need any artificial fertilizing.

The southwestern part of the reservation has been often prospected for copper. There is copper ore in plenty, but until yet none of a paying quality has been found. A few miles south of the reservation there are several copper mines now being worked with more or less success.

In regard to farming, I have the pleasure to report a marked progress. The past year was one of the most prosperous we have ever had. Partially this was due to the better prices which farm products, principally hay and grain, brought; but the principal cause for the change for the better is certainly that the Department has, for the first time, furnished this reservation with a reasonable number of good plows and other necessary farming implements. This has given a great impetus toward more and principally better farming, notwithstanding the last season, taken in general, was not over an average one in regard to favorable condition of the weather, etc., for the farmer. The Indians have raised and harvested a few larger crops from their fields this year than any previous year, and it was the result of good plowing only. Our land is mostly of the so-called black adobe soil, very rich and productive, but it can be cultivated only with good implements. Cultivating prairie land is comparatively an easy task in comparison with the amount of work our land requires.

Cutting barley for hay has again proven more lucrative in this section of the country than anything else in farming, and notwithstanding the fact that the Indians had to pay the usual price of \$2 per ton for baling, which considerably reduced their profits, each of them who made barley hay was able to buy a new wagon, paying therefor from \$85 to \$125. Wagons, and in fact all heavy farming implements, are very high in price here, owing to the enormous freight charged by the railroad company. If the honorable Commissioner would kindly consider favorably my repeated request for a hay press, it would foster the hay industry to a great extent, and farming would be made more profitable for the Indians.

Prospects for our so-called second harvest are not good. The unusually large floods have destroyed what the grasshoppers, which made their appearance again this year, had not eaten up of the planted corn, beans, and squashes. The damages caused on roads, bridges, and fences the last few days are very considerable and heavier than for many years.

Agriculture is in a much more advanced state than formerly, and there is hardly an Indian who has not made some kind of improvement upon his allotted land during the past year.

About 900 rods of new fences have been erected, 8 new houses built, 4 wells dug, and all the necessary work on roads and ditches has been performed by the Indians in a manner that would be a credit to a white settlement. The Indians very willingly assisted in all such public work whenever called upon, which goes to show that they fully appreciate the great benefit they derived from good roads and from good ditches.

The educational facilities of this reservation consist of a "day school," conducted and supported by the Sisters of St. Joseph. The two schoolrooms are large enough for all the children of school age, and they are well equipped. During the past year school was held fully nine months, from September 1 to June 1, with an enrollment of 46 boys and 37 girls. The average daily attendance was boys 38 and girls 32. The attendance of the boys could frequently only be kept up with the aid of the policemen. The parents are generally willing enough to send their children to school, but, as a rule, they exercise very little control over them and allow them to do as they please; and, while the girls willingly go to school, some of the boys are causing trouble, and in such cases the police are needed.

In addition to the regular teaching of a day school, instruction is given in sewing and general housework to the larger girls. The two sisters who have had charge of this school continuously for many years are faithful and competent, and they possess certainly the necessary qualifications to teach Indian children successfully. I believe this school to be doing very good work and to be an effective factor in the early civilization of these Indians.

Most of the Indians are devoted Catholics and attend regularly the mass held by a Catholic priest every second Sunday in our old church building, and also the Sunday services conducted by Mrs. Berger on alternate Sundays when mass is not held. They have their children baptized and bring their dead, neatly prepared for burial in decent coffins, to the church, where some mortuary services are performed by a Catholic priest, when one can be procured, or by Mrs. Berger, when the services of a priest can not at the time be procured.

The Indians here generally respect the laws, seldom quarrel with each other, and the commitment of a theft is an extremely rare occurrence. As a rule they are upon good terms with their white neighbors. Only one arrest—for cruelty to animals—has been made during the past year. An Indian had beaten to death a cow which frequently entered into his wheat field. His punishment was to pay \$10 to the owner of the cow and to be imprisoned for fifteen days in the county jail.

No liquor has been brought to this reservation during the past year; but since the United States marshals are paid by salary, sales of liquor to Indians in the city of Tucson are considerably more frequent than in the time the marshal received fees. An arrest now is very seldom made, and the persons engaged in the business of selling liquor to Indians have no fear of being prosecuted or punished.

The Indians of this reservation live much better than they did formerly. They have better houses, wear better clothing, have more to eat and of a better quality, and they are more cleanly in their habits, consequently their sanitary condition has improved. Their health has been very good during the past year, except during last December and a part of January, when some kind of pneumonia raged among them. In these two months more deaths occurred than during the balance of the year. This epidemic, which existed also among the white people living in the vicinity of the reservation, was probably due to unusually sudden changes of the temperature.

Last March Indian Inspector Col. C. F. Nesler, on a tour of inspection, visited this reservation. He expressed himself pleased with the state of affairs, principally our improvements, which he said he found to be of a more substantial kind than he had seen on any other reservation. This was the first official visit made by any inspector in nine years.

The inspector was here again in May after some of the Papago Indians who had come over from Sonora (Mexico) in the beginning of 1897 on account of trouble they had with the Mexican authorities, and were living since with their families on the American side. Most of them had armed themselves and recrossed the border line for the purpose of recovering some cattle and ponies, which they claimed belonged to them and which they were compelled to leave behind the previous year. Inspector Nesler conducted this investigation from the San Xavier Reservation, and under his direction I arrested the 25 Papagoes who had taken part in this trip. The 4 leaders were brought before the United States court commissioner and held prisoners to appear before the next grand jury at Tucson; the other 21 were sent to the agency at Sacaton. On June 14 last, Col. S. L. Taggart, special Indian agent in charge of the Pima Indian Agency, requested me to arrange, if possible, for the release and transfer to the agency of the four leaders in jail at Tucson, they being very sick, and one of them being in a very serious condition. After explaining the matter the court very kindly reduced bail from \$500 to \$100 each, and going myself on their bond for this amount, they were released from prison and sent by me to the agency.

Since last harvest the Indians have bought several sewing machines, 5 new wagons, many new sets of harness, also 20 coils of fence wire, and it can be justly said that the large majority of them are in a prosperous condition.

In making a review of the year's work I can see much to encourage, for in many things that go to make up a prosperous people and good citizens, great progress has been made. In conclusion I thankfully acknowledge the uniform kindness and support given me by the agency during last year. This reservation had always been neglected by the agency, as shown in all my previous reports, but since the appointment of Mr. H. J. Palmer as clerk, matters have changed entirely for the better. My letters are now promptly and courteously answered, and as for the first time in nine years the Department has been just and generous to the Indians under my charge and has allowed mostly all my requisitions for supplies, it is only natural to believe that the honorable Commissioner had never before been informed of our wants and needs. I have no doubt that all communications from me in this matter had been thrown in the wastebasket by former agents and clerks.

For the past year the Pima Agency was under the charge of four different agents. In the beginning of the fiscal year under the former agent, Young; thence under Mr. Cleveland, who died May 17; thence for two months under Special Agent Colonel Taggart, and at present under Mr. E. Hadley. Under such circumstances the credit for our improved condition is most certainly due to Mr. Palmer, and as farmer in charge of this reservation I feel deeply indebted to him.

Very respectfully,

J. M. BERGER, *Farmer in Charge.*

E. HADLEY, *United States Indian Agent.*

REPORT OF SAN CARLOS AGENCY.

SAN CARLOS AGENCY, ARIZ., *August 24, 1898.*

SIR: I have the honor to submit herewith the annual report of the San Carlos Agency, for the fiscal year ending June 30, 1898.

According to the census taken, there are on the reservation:

| | |
|---------------------------|-------|
| Males above 18 | 784 |
| Females above 14 | 1,057 |
| School age, 6 to 16 | 915 |
| Males, total | 1,403 |
| Females, total | 1,520 |
| Total, all ages | 2,923 |

This includes children absent at school, Indian scouts in the service of the United States, and Indians who have permanent occupation in adjacent towns but does not include the Indians on the San Pedro River and the lower Gila River, at Mohawk, and in that vicinity, who originally belonged to this reservation, but were permitted to leave some years past, and have since lived by their own industry. They belong principally to the Yuma and Mohave tribes. There are no records here to show that a census has been taken of these Indians since their departure from this agency. Their number was estimated by my predecessor at 600. There has been but one complaint lodged against a member of these tribes, and that, upon investigation, was found to be groundless.

I assumed charge of the agency, November 7, 1897, relieving Capt. Albert L. Myer, Eleventh Infantry. I found the Indians in an excellent state of discipline and contentment, and the affairs of the agency generally in a very satisfactory condition.

The Indians have made very satisfactory progress during the year in agricultural pursuits, considering the very great disadvantages they are continually laboring under. The yield this year shows a very considerable increase over that of last year, it being 13,246 bushels of barley and 6,652 bushels of wheat. The grain, however, is of a very inferior quality, due to the fact that the seed has run out from continuous planting. It should be renewed before another planting, and I earnestly recommend that the agent be authorized to purchase, and make a gratuitous issue, of new seed. No seed has been issued to these Indians for a period of four years.

I am convinced that the greatest need of these Indians is a proper system of irrigation on this reservation. This would, of course, involve considerable expense, but until it is done, there will be a large number of Indians who will be compelled to remain practically without employment, and consequently dependent upon the Government for their subsistence.

There is sufficient land that is susceptible of irrigation to give each family a farm, from which it is thought they could furnish the greater part of their subsistence, and their willingness to help themselves in this way has been demonstrated beyond a question. All lands under cultivation are eagerly sought and bargained for, and cultivated to a very satisfactory extent. The system now in vogue consists of a number of small ditches, supplying a few families which are banded together in different places. These ditches have been crudely and faultily constructed by the Indians themselves, and are washed out and partially destroyed by each flood, which occurs at least once during the year. I am told that in the past it has occasionally happened that the Indians have lost their entire crops from these causes. The work of rebuilding involves the loss of a very considerable amount of labor, which is very discouraging.

The gristmill has done very satisfactory work in grinding wheat into flour during the last year, and with the addition of the new machinery now on hand the capacity will be materially increased. The amount of flour made from Indian wheat during the year amounted to 63,256 pounds.

The farmers have performed their work in an efficient and satisfactory manner.

Many of the Indians have secured employment in the adjacent towns, and a large number have found employment on the construction of the Gila Valley, Globe and Northern Railway. It is estimated that at least 50 per cent of the labor employed in the construction of this road has been furnished by the Indians, who have shown a disposition to earn money by hard labor, which is very encouraging.

Pursuant to instructions contained in your letter, Land, January 21, 1898, a council of the Indians was convened at this agency on February 8, 1898, to consider the question of granting the right of way to the Gila Valley, Globe and Northern

Railway Company through this reservation. The railway company was represented by its president, Mr. William Garland. After the matter had been fully explained to the Indians, a vote was taken which was practically unanimous in favor of granting the right of way. The proceedings of the council were promptly forwarded to the Department, and having been approved, work was begun on the construction March 12, 1898. The road is now completed to the agency. The grading is practically completed through the reservation, and trains will probably be running into the town of Globe by November 1. It is thought that the road will prove to be of considerable advantage to the Indians, by furnishing a market for their produce, giving employment to many of their number, and producing other good results in the matter of civilization, etc.

The wheelwright and blacksmith have been constantly employed and have rendered efficient service in the repair of wagons, farming implements, tools, etc.

A very severe epidemic of whooping cough occurred during the months of March, April, and May. Several hundred cases were reported and treated. The mortality among the children living in camp was very great. No deaths occurred among the school children, although a very large percentage of them were afflicted.

The mineral lands segregated by the act of February 25, 1896, have not yet been thrown open.

There have been no cases of murder on the reservation since my arrival, and but once during the year, the killing of an Apache Indian by a member of his band. The murderer was turned over to the Territorial authorities for trial and was acquitted.

The boarding school was in full operation during the year, with an average attendance of 108½. On my recommendation, based upon the excessive heat, the school was dismissed for vacation on June 10. The progress made by the pupils during the year has been very satisfactory. They seem well contented with the conditions, and there is no difficulty in keeping the school filled to its utmost capacity. The management of the affairs of the school has been given into the hands of the superintendent almost entirely, and I take pleasure in testifying to the efficient and successful manner in which she has performed her duties. The school employees generally have rendered excellent service and are highly satisfactory.

The addition of a new kitchen and dormitory, plans for which have been submitted, are very essential to the proper maintenance of the school.

The agency employees have performed their several duties in a cheerful and satisfactory manner.

The report of the superintendent of school is herewith submitted.

Very respectfully,

SEDGWICK RICE,

First Lieutenant, Seventh Cavalry, Acting Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SAN CARLOS SCHOOL.

SAN CARLOS, ARIZ., June 20, 1898.

SIR: My fourth annual report of the San Carlos Boarding School is hereby respectfully submitted. Owing to the fact that by some means my report of last year's work was omitted from the Report of the Commissioner of Indian Affairs, I will endeavor to embody an outline of the two years' work in this communication.

This school has a capacity of 100 pupils, but has been crowded beyond its proper limit, having had an average attendance of 110½ and 108½ for the two years.

We have a good stone school building and two small adobe buildings, which have been in use but four years. The remaining buildings are old dilapidated adobes, one of which, the boys' dormitory, is considered by all to be in an extremely dangerous condition. It is believed that a heavy rain or a slight earthquake shock would cause a collapse of the building, the walls of which are cracked, rotten, and bulging, and they alone serve to support the heavy roof.

Plans and estimates have been submitted for a new dormitory building, and also a kitchen building, with storerooms, root cellar, and bathrooms connected. These are urgently needed for the proper, safe, and hygienic conduct of the school. The boys still bathe in washtubs in their play room, and the girls have four zinc tubs in a rough board shed. As much labor has been expended in repairs to these old buildings as the material furnished would permit.

The garden consists of about 2 acres, and has furnished a fair supply of small vegetables. Potatoes cannot be raised here, and the irrigation from one well is not sufficient for crops of corn, which could otherwise be raised. Vegetables are much enjoyed and appreciated by the pupils, and the milk from the 5 to 10 cows kept is also relished.

The arrangement of work and school details so that pupils have two consecutive half days in the schoolrooms, but not both in one day, has been a decided improvement, giving, as it does, all pupils equal advantages, and affording opportunity for work to be completed without the interruption of another class coming between the two sessions.

The labor of the school has been, in most cases, well and conscientiously performed. Apaches excel in manual labor. We have seven Apache employees, all of whom give good satisfaction. A Pima Indian boy has served as cook during the present year, and has given good service,

During last year we had five different cooks, greatly to the detriment of the service of that department.

The laundry has been ably conducted and the character of the work excellent. The recent addition of a cold hand mangle has proven a valuable help.

For the first time in the past four years, the sewing room is now in competent hands. The work is expeditiously and properly performed and the girls well taught.

The matron's department continues to be managed thoroughly, systematically, and in a manner highly creditable to the school and service. Work in the industrial teacher's department has also been well managed and faithfully performed.

Work in the shoe and harness shops under the charge of two Apaches has been, as usual, satisfactory. All the repairs needed on the pupils' shoes are made, and Indians' and agency harness repaired and plow harness, etc., manufactured.

The Apache disciplinarian and assistant matron have been valuable in their line of work. The work of the primary schoolroom has been up to its usual standard of excellence. That of the higher grade, although having suffered seriously in the past, is now in competent hands.

I would present a vigorous protest against employing Indians as heads of departments. While they make valuable assistants, they lack in judgment, discipline, management, use of English, and ability to impart the knowledge of which they are possessed. The fault lies with those who recommend students and assistants who have given good service as helpers, without due consideration of the additional responsibilities and requirements of the higher position. An example of this is that of an Indian boy employed as half-day assistant baker at \$5 per month, who knew nothing about cooking, being sent to another school as head cook at a salary of \$45. As a baker at \$20 per month he would have been a success.

I trust that a kindergarten department will be added to the school next year.

A deplorable condition as regards educational facilities prevails here. For every child in school there are at least 10 growing up in ignorance, vice, and filth, for whom no school is provided. In most cases the parents would willingly send them to this school if they could be accommodated. The sentiment regarding education has very materially changed with the older Indians during my four years' acquaintance with them, and a kinder feeling prevails toward the school. The parents give us no trouble and do not encourage the children in running away nor other wrongdoing. Discipline is easily maintained, and the school is regarded by the pupils as a home in which all share alike.

The greatest obstacle in the way of progress in schoolroom work is the aversion of the pupils to the use of the English language. As they but rarely hear any English outside of the school, they can not be brought to see the need of it, and its use can be insured only by disciplinary measures. The English used among themselves is so broken that only a careful observer can distinguish it from the Indian tongue, which is very difficult and guttural. The Mohaves far excel the Apaches in the use of English and in mental ability, while the reverse is true of manual training.

During the present year 5 of the largest boys and 1 girl were voluntarily transferred to the Phoenix Training School, where they are satisfactory pupils. Another party will be transferred in September, and a party of 9 girls and boys to Carlisle at the end of this year.

The general health of the school has been good. The epidemic of measles which afflicted the whole school last year left its effects in the form of pulmonary diseases, which proved fatal in several cases. We have been afflicted with whooping cough during the latter part of this year, with no serious results, although the death rate in the camps was enormous. The parents do not fail to contrast these conditions, and this helps to keep the school in favor.

The usual holidays have been properly observed, and Sunday exercises, in which we have been assisted by the Rev. Plocher, who has a small mission on the reservation, have been maintained.

Supervisors Peairs and Conser and Inspectors McCormick and Nesler have visited the school during the past two years, giving helpful suggestions and encouragement.

School closed with a dinner to which parents and friends were invited—a custom established by me four years ago, and now eagerly looked forward to and expected by all. The guests are seated in the school dining room, the tables being three times filled. The greater part of the people are never seated at a table excepting at these annual dinners, and the children take pride and interest in teaching their parents proper behavior.

Permit me to express my appreciation of the support and encouragement received, and of the assistance in carrying on the work in this extremely difficult field.

Very respectfully,

LYDIA L. HUNT, *Superintendent.*

First Lieut. SEDGWICK RICE,

Seventh Cavalry, United States Army, Acting Indian Agent.

REPORTS OF AGENCIES IN CALIFORNIA.

REPORT OF HOOPA VALLEY AGENCY.

HOOPA VALLEY AGENCY, CAL., *June 30, 1898.*

SIR: I have the honor to submit the following report of service at this agency during the fiscal year ending to-day:

The census roll of the Hoopas exhibits the following statistics:

| | |
|--|-----|
| Males | 246 |
| Females | 258 |
| Total | 504 |
| Residing on Redwood Creek near the reservation | 24 |
| Absent at school | 6 |
| Number of males above 18 years | 152 |

| | |
|--|-----------|
| Number of females above 14 years | 180 |
| Number of children 6 to 16 years | 118 |
| Number of families, including Redwood people | 113 |
| Births during the year | 15 |
| Deaths during the year | 13 |
| Number of frame houses built during the year | 9 |
| Rods of fence made during the year (estimated) | 1,200 |
| Stock owned by Indians (estimated): | |
| Horses and mules | 300 |
| Cattle | 400 |
| Swine | 600 |
| Poultry | 1,200 |
| Area of land under cultivation: | |
| In grain (about) | acres 750 |
| In garden (about) | do 100 |
| Total | 850 |

The product must be estimated, and will be about as follows:

| | |
|-----------------------|---------------|
| Wheat | bushels 4,000 |
| Oats | do 3,600 |
| Barley | do 250 |
| Corn | do 500 |
| Hay | tons 550 |
| Pease and beans | bushels 300 |
| Vegetables | do 8,000 |

The people are industrious, prosperous, and contented, and quietude and good order prevail among them at all times. The agency establishment will be discontinued from to-day, the supervision of the affairs of the people having been deputed to the school superintendent, a very conscientious gentleman, who possesses their regard and confidence in large measure.

The boarding school was in session during the term required by the regulations, and closed on the 24th instant. The average attendance during the year was 146.8. The report of the superintendent is inclosed herewith.

Missionary work of a very practical kind is carried on among the people of the reservation and among the neighboring Indians by Mr. and Mrs. P. E. Goddard, who represent the Indian Association. They are eminently successful, as well as practical, and on this account are highly regarded by the people.

I am, sir, very respectfully, your obedient servant,

WM. E. DOUGHERTY,
Major, United States Army, Acting Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF HOOPA VALLEY SCHOOL.

HOOPA VALLEY BOARDING SCHOOL,
Hoopa, Cal., July 6, 1898.

SIR: I have the honor to submit the annual report of this school for the year 1898.

Number of pupils who have attended school during the year: Boys, 114; girls, 98; total, 212. Average attendance during term time, 146.8. Lowest monthly average, 58, for the month of September; highest, 167.8, for February. The growth of the school is shown by the following table:

| | |
|---------------------|-----|
| Average attendance— | |
| 1894 | 33 |
| 1895 | 69 |
| 1896 | 110 |
| 1897 | 138 |
| 1898 | 146 |

Although during a large part of the year the school has labored under unfavorable conditions, yet, taking all things into account, we believe distinct gains have been made.

Comparing our work of the last four months with that of previous years, we find for the school an increased popularity with the Indians and children, a more regular attendance, and a spirit of greater happiness and contentment among the pupils, and better results than ever before in the molding of character. The children have received at the hands of the care-takers better care and sympathy. There has been no death nor serious illness.

The industrial and class-room work has been carried on as heretofore with success.

Among new features of work are a recently organized girls' cooking class, which has proved successful and will materially assist us in influencing the homes of the people, and an embroidery class, kindly organized and conducted by a lady sojourning at the school.

Particular attention has been given to the social enjoyments of the children. The "game

room," the reading room, picnics, camp fires, bedtime readings, evening socials with refreshments, and a final lawn party have brought about the reflexive result of improving the pupils' industry and behavior.

By means of exceedingly generous contributions by the employees and friends of the school and the sale of embroidery the children enjoyed a gala Christmas week; they have been amply provided with outdoor games, and the sum of \$28 was saved toward the purchase of a suitable magic lantern, which, with appurtenances, is estimated to cost \$85. Unstinted praise is due to the employees, individually and as a corps, for their interest in and devotion to the work.

As a corps, we desire to express in this manner our great respect and esteem for the acting agent, soon to retire, and to assure him of our gratitude for the upbuilding of this school, which is a credit to the service, and for his great personal kindness and consideration toward all of us.

Very respectfully,

WILLIAM B. FREER, *Superintendent.*

Maj. W. E. DOUGHERTY, U. S. A., *Acting Agent.*

REPORT OF MISSION-TULE AGENCY.

MISSION-TULE RIVER CONSOLIDATED AGENCY,
San Jacinto, Cal., August —, 1898.

SIR: In compliance with your instructions I have the honor to submit a report of this agency for the fiscal year ending June 30, 1898, together with the report of the agency physician, which is made a part of this report, and the usual statistics. Scattered as this agency is and embracing so many reservations, a comprehensive report in detail would no doubt be burdensome and not desirable. There are, however, some principal features of the work to which I respectfully ask your attention.

This agency embraces the whole of southern California, extending from Tule River, in Tulare County, on the north, to the Mexican line on the south, and from the Colorado River on the east to the Pacific Ocean on the west. Within this territory are located some 32 reservations of various sizes and stages of improvement.

General conditions.—Among the Mission Indians we may find every condition of life, ranging from Indian affluence to abject poverty. As a rule these people are very poor. They have adopted the civilized modes of dressing and housekeeping. Some of them have fair houses, in which they take considerable pride. Left alone the Mission Indians are a phlegmatic, indolent, improvident, and fairly good-natured class of people. They are entirely ignorant of ordinary business methods, and put implicit trust in the Government and its agents in the management of their affairs.

Once they possessed the best of this land, in fact, owned it all. The advent of the white man has resulted in their discomfiture, and they have been driven back to inhospitable canyons, gravelly wastes, and mountain tops. In this position we find them to-day, humiliated, and in many cases legally robbed of their former possessions. The protection of their remaining rights from the rapacity of the whites, even to the pillaging of the little feed that grows within the confines of their reservation, is a task of no small magnitude.

While upon this subject it would be apropos to consider the self-support of these people. I desire to call your attention forcibly to this fact, that they are not in any sense of the term self-supporting. In a majority of instances they are geographically located so that self-support is impossible. Without soil or water, they are obliged to depend upon the acorn and mesquite bean crop and other forage for their subsistence. From this you can readily see that suitable subsistence should be furnished the sick to make their recovery a reasonable possibility. I anticipate great suffering among these Indians, especially among the aged, infirm, and indigent, this coming winter, which has the appearance of being long, cold, and wet, as they are ill provided with any store of provisions or necessities, and the usual fund for this purpose set apart in the appropriation bill for support of Mission Indians is entirely inadequate for the actual needs of the people in any year.

The outside boundary lines of many of the reservations are not marked by suitable monuments defining the limits of the lands set apart for Indian use, which causes confusion, doubt, and annoyance in the transaction of business connected with these particular reservations, and I shall recommend at an early date that provision be made for the performance of this very necessary work.

Indian land titles.—The fact that many Indians are living on lands alleged to be granted by the Government of Mexico to various missions and private parties renders the advancement of these particular Indians impossible. On account of the uncertainty of their possessions and the chaotic condition of such land titles, strenuous efforts should be made by the proper authorities to forever settle the legal status of the occupants. I shall, therefore, in the near future make recommendations which I hope will meet with the approbation of the Department.

The Santa Ynez land question, I am pleased to report, promises a satisfactory solution both to the Indians in interest and the Department.

Schools.—The pupils and their parents are taking a great deal of interest and pride in the day schools of their respective reservations, which is due to the painstaking care and effective work of the teachers in the service, as well as the effect of the well-used noonday lunches. The schools are a credit to the service; while the buildings are in good order, except in the instance of the Cahuilla, Martinez, and Mesa Grande buildings, which have been reported upon and request made for their repairs. The item of water is becoming a question of serious moment at several of the schools, which shall be made the subject of future correspondence; this is also true of the reservations.

Liquor traffic.—This very annoying and mortifying traffic is next to impossible to suppress, as the Indians will not testify against the dealers, nor will they aid me in the collection of sufficient proof to establish a conviction. These parasites are materially aided in their nefarious business by the remoteness of the reservations from the agency headquarters and the facility with which they can conceal themselves when suspecting apprehension. Of my own means, I keep a standing reward for the arrest and conviction of any offenders. I thoroughly believe, however, that this work should be done by the United States marshal, who has competent and skillful men at his command who are not known to the lawbreakers and who could easily incognito bring to justice this class of offenders with a round turn in a way that fear alone would suppress this most vicious of all vices. I shall make recommendations along this line in a future communication.

Allotments.—The following table shows the reservations allotted, the number of allotments, and by whom allotted:

| Reservation. | By whom allotted. | Number of allotments. |
|----------------------|-----------------------|-----------------------|
| Rincon | Miss Kate Foote | 51 |
| Potrero | Carare | 156 |
| Pala | do | 15 |
| Temecula | do | 85 |
| Syquan | Patton | 17 |
| Capitan Grande | do | 37 |
| Total | | 361 |

Patents have been delivered to the following reservations in severalty:

| Reservation. | Number of allotments. | Date of allotment. |
|----------------|-----------------------|--------------------|
| Pala | 15 | Mar. 5, 1896 |
| Syquan | 17 | Do. |
| Temecula | 85 | Nov. 3, 1897 |

I herewith submit a tabulated statement showing the names of the teachers, their compensation, the location of the schools, number of days attendance at each school, the average number of pupils enrolled during the year, and the average attendance:

| Name of teacher. | Compensation per month. | Location of school. | Number of days attendance. | Average number of pupils enrolled during year. | Average attendance. |
|------------------------|-------------------------|----------------------|----------------------------|--|-----------------------|
| W. H. Winship | \$72 | Tule River | 2,794 | 22 | <i>Percent.</i> 13.52 |
| Sarah E. Morris | 72 | Potrero | 3,616 | 23 | 16.89 |
| Chas. E. Burton | 72 | Soboba | 3,021 | 22 | 17.88 |
| Ella L. Burton | 72 | do | | | |
| M. A. Bingham | 72 | Martinez | 4,058 | 23-50 | 18.62 |
| N. J. Salsberry | 72 | Cahuilla | 3,650 | 20-50 | 16.69 |
| Bell Dean | 72 | Pechanga | 4,033 | 26-50 | 19.94 |
| J. H. Babbitt | 72 | Agua Caliente | 2,988 | 20 | 15.00 |
| M. C. B. Watkins | 72 | Mesa Grande | 3,632 | 30 | 16.19 |
| Flora Goish | 72 | La Jolla | 3,854 | 25 | 19.33 |
| Ora M. Salmons | 72 | Rincon | 5,284 | 31-50 | 25.25 |
| E. F. Thomas | 72 | Capitan Grande | 4,549 | 23 | 20.82 |

The following tabulated statement shows the names of the reservations (or villages), their population by sexes, the population under 18 years of age and their sexes, the population of school age and their sexes, the number speaking English, the number of dwellings of all classes used by the Indians, and their tribes:

| Reservations. | Population. | | | Population under 18. | | | Population of school age. | | | Number speaking English. | Number of dwellings. | Tribes. |
|--------------------------------------|-------------|---------|--------|----------------------|---------|--------|---------------------------|---------|--------|--------------------------|----------------------|---------|

NOTE.—Explanation to letters in the right-hand column: C., Cahuilla; D., Diegeno; S., Serrano; S. L., San Lucania; S. Y., Santa Ynez; C. P., Cupania; T. R., Tule River; Y., Yuma; P., Pinte.

I regret to state that I have not been able to get the census of the La Guna, La Posta, and Manzanita reservations.

Police.—I am more than pained to chronicle the death of Capt. John Morongo, captain of police of this agency, for many years an efficient officer, a true and trustworthy friend. In his death his family and his people have suffered an irreparable loss and this agency a valuable officer and friend impossible to replace; yet I must say for the men that they are trustworthy and diligent men, well qualified for their several trusts and charges.

Sanitary.—Dr. C. C. Wainwright reports as follows:

In the matter of the sanitary condition of the Mission Indians of your agency in and for the fiscal year last past, I have the honor to report the following synopsis of the diseases that prevail and other influences that have a bearing on the physical welfare of these people:

Consumption, vena, idiopathic anemia, organic heart disorders, and scrofula are the common inheritance of these people, and to this list of diseases alone is due the constant high rate of mortality.

To these must be added this year the cold, barren winter, the extremely dry spring and hot summer, causing an almost complete crop failure. The domestic water supply, which at best on Indian reservations of southern California is almost always inadequate, is this year actually contaminated by the dregs of a scanty flow.

This combination of afflictions upon the Mission Indians, who never were able to overcome obstacles, and who are not now nor ever were self-supporting, will make your task this fall and winter a very difficult one indeed.

The suffering in store for the sick, aged, and infirm, and consequent mortality on account of food necessities, will be very apparent this coming winter.

Near the close of the year many cases of typhoid and other fevers, on account of impure, dreggy water, have been reported from Morongo, Agua Caliente, Mesa Grande, Coahuilla, Pichanga, and Tule River reservations, and the greatest obstacle I have had to encounter in the treatment has been the dearth of proper nourishment.

For your further information as to data you are referred to the itemized summary.

All of which is respectfully submitted.

L. A. WRIGHT,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT IN CHARGE OF ROUND VALLEY INDIANS.

ROUND VALLEY AGENCY,
Covelo, Cal., July 7, 1898.

SIR: In obedience to official instructions, I have the honor to submit the following report of this agency for the fiscal year ending June 30, 1898:

Population of Indians by tribes—

| | |
|--------------------------------|-----|
| Concow..... | 164 |
| Little Lake and Redwood..... | 117 |
| Ukie and Wylackie..... | 276 |
| Pitt River and Nomelackie..... | 64 |

Total..... 621

This is a decrease of 23 from last year, due, first, to some Indians who were mere sojourners and are now absent; and, secondly, to an epidemic of influenza last February, which resulted in the death rate being abnormally large. The greatest per cent of death was found among the old Indians and those suffering from pulmonary troubles. In other respects the health of the Indians has been fairly good.

For crops raised, etc., see statistics furnished.

Allotments.—In obedience to instructions from your honorable office, I made 18 additional allotments during the year.

Religious.—The religious and missionary interests for the last year were conducted by the Rev. Colin Anderson and wife, reports from whom are herewith inclosed.

Prosecutions.—In October last Mr. R. J. W. Brewster, special agent of the Department of Justice, paid this agency a visit for the purpose of investigating violations of law relative to selling liquor to Indians. After a very determined effort five offenders were arrested and held to answer before the United States court. In April last four parties were arrested and bound over for stealing stock from Indians.

Progress.—I feel that there has been marked progress during the last year in almost all things concerning the reservation, and especially in the abating of drunkenness and lawlessness, both among the Indians and surrounding whites. I feel it my duty to add that with prompt and vigorous prosecution still further progress in this line could be reported.

Suggestions and recommendations.—I have to state that there are a number of valuable and fertile allotments which are covered with dense growths of shrubbery, without fence with which to protect them, or any drainage whatever. These allotments are owned in many instances by Indians who are unable physically and financially to improve them. They can not be leased for cash rent in accordance with departmental rule, for the reason that there is no market here for the excess of farm products owing to the great distance from market and the consequent excessive cost of transportation. The best white farmers do not attempt to market the excess of their produce for the reason stated, but feed the same to stock and drive the stock to market. Were I authorized to lease these allotments for a term of years for the purpose of having them cleared, drained, and fenced, it could be done with ease, and instead of having the allotments practically worthless and yielding their owners no income nor benefit whatever they could soon be transformed into beautiful and fertile fields and yield their owners a living.

I feel constrained to add before closing this report, that the further extensive issue to these Indians should be discontinued, for the reason that they are intelligent and able to make their own living, and for the further reason that experience teaches me that issuing clothing, subsistence, etc., only keeps them in idleness.

The issuing of any complicated and costly machinery should also be discontinued, for the reason that they take no care whatever of the same. The binders, mowers, sulky rakes, etc., have been allowed to go to ruin, in many instances not harvesting a single crop and in a very few instances extending beyond one or two seasons. I find also that such things as they can not get by issuing they buy and take care of. One instance I will note. I issued an Indian a wagon, but had no plow for him. He immediately purchased a plow, cared for and housed it against the inclement weather, while he took no interest in sheltering the wagon except such interest as I was enabled to enforce upon him. The constant petty issues of plow bolts, harness buckles, horseshoes, etc., are irritating, a nuisance, and consume the entire time of a clerk, and no real good to the Indians results therefrom. I urgently recommend their discontinuance.

The younger Indians, for the most part, are becoming quite progressive. Some of them have comfortable homes, plenty of good stock, ride in buggies, and some of the ladies even ride bicycles and sport, while so doing, costumes quite up to date.

ROUND VALLEY SCHOOL.

This school is located $1\frac{1}{4}$ miles north of Covelo, at the foot hills on the northern side of Round Valley. A more beautiful valley can scarcely be found.

The school plant consists of one large building, in which the school is taught, and cooking, sewing, etc., are carried on. There are some outbuildings in which the laundry, commissary, etc., are kept.

The farm consists of 180 acres, most of which is very fertile. The school stock consists of 10 head of horses, 17 head of cattle, 30 head of hogs, fowl, etc. There are 10 acres of garden and about 100 acres of grain and hay on the school farm this year, which bids fair to furnish vegetables for the pupils and subsistence for the stock.

The schoolroom work has been under the direction of Mr. William J. Nolan, principal teacher, and Frances D. Nolan, teacher, and has been very successful and given perfect satisfaction. The year's work of the school has been a year of uninterrupted progress until the transfers of Miss Coats, seamstress, who was promoted to kindergarten teacher, and Mr. Trubody, industrial teacher. Both were valuable employees, and I regretted to lose them. Their places were filled by

Miss Ida Curtiss and Mr. Albert G. Hunter, respectively, who seem to be competent and efficient employees.

The health of the school was excellent until an epidemic of influenza spread among the pupils and resulted, in connection with other diseases, in several deaths.

Twelve pupils were transferred during the year to the Phoenix school.

Suggestions and recommendations.—I respectfully recommend that a school building, a barn, and a hospital be erected. Also that the cottage, storeroom, and granary be removed to the school, which affords abundant room and facilities for the school.

A water supply is badly needed, with proper drainage, which has been estimated for. This, if allowed, will make the school more healthful and protect it against destruction by fire, as well as furnish water for domestic purposes.

The employees of the school have been faithful, loyal, efficient, and whatever progress has been made is largely due to their united, patient, and earnest efforts, for which I desire to return my sincere thanks.

Supervisor Conser and Mr. V. K. Chestnut, of Washington, paid us a visit during the year. Both were very kind and courteous, and we hope to have another visit from them again.

In conclusion, I desire to thank the honorable Commissioner for kindness, courtesy, and support given me during the year, and the promptness with which my numerous requests have been granted.

Very respectfully,

GEO. W. PATRICK,

Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF MISSIONARY, ROUND VALLEY RESERVATION.

ROUND VALLEY AGENCY, June 20, 1898.

DEAR SIR: I have the honor to present to you herewith a report of my work as missionary on the Round Valley Reservation during the past year.

There is a marked improvement in many respects resulting from the enforcement of the law in reference to the prohibition of introducing liquor on the reservation and the furnishing the same to Indians, and also an enforcement of other matters in reference to the marriage state.

The attendance at the public services is much improved, and the children are instructed religiously at the boarding school on the Sabbath afternoons by the teachers. The distance from the place of worship at headquarters to the schoolhouse prevents their regular attendance at the morning service.

We have baptized some 25 children during the year, married 4 couples, attended some 25 funerals, and having been laid up with la grippe for over six weeks were not able to visit or hold services; but the regular services were held by the agency clerk, C. F. Hathaway, who is a member of our church (Methodist Episcopal). He served with much acceptability.

We have had a bitter opposition in our work, and efforts to intimidate us have been put forth in consequence of the fact that it seemed for the good of the Indian people that we should accept the position of United States commissioner. Yet we have done our duty fearlessly, and punishment has been meted out to a few offenders, which has its result in convincing the lawless band of bad men who fear not God nor regard man that the United States laws can and will be enforced even in Round Valley.

Praying that the earnest efforts of George W. Patrick, superintendent, to do his duty and protect the Indians may be sustained, and the rights of this people maintained against the ungodly and vicious wretches who have held sway over them in bygone years and are so loath to give it up, I shall go on, and so long as I am continued in this not pleasant field, yet pleasant, for "labor is rest and pain is sweet if only God is there," I shall uphold the law and preach the blessed gospel of the Son of God and watch for the harvest.

I respectfully submit this report.

Sincerely,

COLIN ANDERSON,

Missionary, Methodist Episcopal Church.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF AGENCY IN COLORADO.

REPORT OF SOUTHERN UTE AGENCY.

SOUTHERN UTE AGENCY,
Ignacio, Colo., August 20, 1898.

SIR: I have the honor to submit herewith my annual report for the fiscal year 1898.

As a complete census was forwarded to your office at the beginning of the fiscal year. I omit any reference in this report.

Progress.—Considerable change is noticeable in the direction of advancement of the allotted Utes at the Ignacio subagency. Blankets and breech-clouts have been

discarded, and the great majority of Indians now appear in citizens' dress, and it may truthfully be said that among those who never showed a disposition to work a desire has sprung up to improve their lands and allotments and to have a home of their own.

Crops.—Considerable more land was put in cultivation last spring than in former years, and as wheat and oats are now ready for harvest and beyond danger of hailstorms and grasshoppers, the Indians are assured a good yield of grain to help them out through the coming winter. I have impressed upon them the absolute necessity of saving enough grain for seed for the coming spring, but I am afraid that a compliance with such order can not as yet be strictly enforced.

Irrigation.—The work of constructing the canals and ditches for irrigating the lands on Pine River and Spring Creek has been continued during the last fiscal year under the superintendency of a competent engineer. The east-side canal or Spring Creek ditch, the largest of all the projected canals on the reserve, is now completed and needs only the addition of a small lateral, about a mile in length, to cover some allotments at the head of Spring Creek, which could not be brought under irrigation by an extension of the main canal except by an unwarranted expenditure of money without obtaining any adequate results. The canal of the west side of Pine River has been completed as far as the top of the first plateau or mesa, there connecting with and supplying the old agency ditch. A further appropriation will be necessary to complete this canal.

Improvements.—Authority for improving the dilapidated condition of the buildings at this agency was granted during the year, and with the aid of new material, carpenters, and paint, the main buildings at least, together with the old residence for agent, have assumed a respectable appearance, and as we are now repairing the old issue house, implement house, blacksmith shop, wagon shed, and barn, these also will appear in a better light in their finished condition.

Depotment.—Since the killing of "Quinche" by Manuel or "Annee," on the 8th day of December last, a special report of which was forwarded to your Office at that time, no crime of any serious character, except an occasional drunk, has been committed on this end of the reserve. Theft or the crime of larceny is almost unknown among the Indians here, and in this respect they will compare favorably with their white brethren.

Educational.—No progress in the way of education has been made at this sub-agency. It is a difficult question to handle; but after ownership to land has been issued, and the reserve opened to new settlers, we will endeavor to enforce the State law as to attendance, and thus secure at least the bulk of the children for the Fort Lewis Indian school, which is conveniently located on the north line of the reservation about half way between the allotted and unallotted Utes.

Missionary work.—The Presbyterian Board of Missions has a missionary stationed at this agency by the name of A. J. Rodriguez, and commendable progress has been made during the year by this noble Christian, as evidenced by the now almost finished schoolhouse, the erection of which is entirely due to his untiring efforts in that direction, animated by a noble desire to better the condition of the red man.

Navajo Springs and Unallotted Utes.—Regarding the condition on the west end of the reservation and of the unallotted Utes, I can but repeat what I stated in my last annual report: That part of the reserve contains the most valuable lands in the State of Colorado, favored alike by climate and altitude, yet upon this vast tract of land no water has been provided to even cultivate an acre of land, and during the summer the Indians are compelled to take to the mountains with their stock, so as to find a sufficient supply of water to quench their thirst. I sincerely hope that the existing conditions will soon be changed, as the honorable Secretary of the Interior has been authorized by Congress to provide water for that now arid region. The condition and surroundings at the west end or unallotted part of the reserve have been alike discouraging to Indians and those intrusted with the task to better their condition.

Health.—The health of the tribe of Weeminuche or unallotted Indians has not been good during the last year. Pneumonia and consumption have claimed many victims, and this condition is liable to continue until homes and better comforts are provided for them. Smallpox has entirely disappeared among them, and I sincerely hope that the dreaded disease will not appear again.

Very respectfully submitted.

WILLIAM H. MEYER,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN IDAHO.

REPORT OF FORT HALL AGENCY.

FORT HALL INDIAN AGENCY,
Ross Fork, Idaho, August 30, 1898.

SIR: I have the honor to submit the following report of affairs at the Fort Hall Indian Agency during fiscal year ended June 30, 1898. Having assumed charge of this agency on June 7 last, my report may not cover all points essential, though I have lived at Pocatello, within the limits of this reservation, for years, and since my appointment have driven over the entire reservation, visiting the Indians individually, learning their wants and their requirements.

Reservation.—I learn from last year's report that my predecessor gave a description of this reservation, together with its resources, which I find correct, and therefore unnecessary to repeat or comment upon.

Census.—A careful census shows the following population:

| | |
|--|-------|
| Bannocks: | |
| Males | 221 |
| Females | 209 |
| Males above 18 years of age | 138 |
| Females above 14 years of age | 163 |
| School children 6 to 16 years of age | 67 |
| Shoshones: | |
| Males | 508 |
| Females | 508 |
| Males above 18 years of age | 294 |
| Females above 14 years of age | 364 |
| School children 6 to 16 years of age | 220 |
| <hr/> | |
| Bannocks | 430 |
| Shoshones | 1,016 |
| <hr/> | |
| Total | 1,446 |

The above represents the true and correct number of Indians belonging to this agency; and the difference between this and last year's census is due to the fact that during the past year about 30 Indians have been dropped from the rolls, they having confessed to being enrolled at other agencies. Also the band of Camas Jim, numbering about 35, and remaining permanently off the reservation near Bliss, Idaho, have been dropped from the rolls in compliance with orders from the Department.

Habits and disposition.—The two tribes are distinct. The Bannocks as a rule dislike to work, prefer to remember their warrior fathers, and think it disgraceful to work. However, a considerable number of them are farming and raising cattle. The Shoshones are quiet, and nearly all work at ranching, cutting hay, and raising stock. The Indians of both tribes are temperate and moral people. Very little trouble is given us by full bloods, but there are a number of half-breeds who drink and carouse, purchase whisky openly in Pocatello, and cause most of the trouble on the reservation. I have notified the United States district attorney and marshal and asked for a deputy, but they fail or refuse to send one.

Agr. culture and stock raising.—There is much good farming and grazing land on the reservation and the Indians are fast improving their opportunities to use it and make money. This year we have been bothered by a shortness of water. All lands require irrigation, and if water runs short they come and want the agent to furnish it. The agency is not supplied with sufficient machinery to properly care for the Indians' grain, and much grain is now ruining after it is ripe, for want of cutting and thrashing. One binder, which was allowed early last spring, is not yet here; we should have at least two more binders and a half dozen thrashers. I find only one on the reservation, and that is at the school and not for the use of the Indians.

The Indians seem to take a great interest in their cattle—raising, herding, providing hay and caring for them as well as the average white man. During the ensuing year the Indians will furnish the Government with 150,000 pounds of beef. The purchase of Indian cattle by whites without permission. I have almost entirely stopped. The Indians still own vast herds of ponies which are almost worthless, and which utilize a great portion of the grazing portion of the reservation. They think more of one pony than ten steers, and I do not know any way

to suggest to rid us of this evil except to inbreed with large stallions and thus increase size, value, and working qualities of these horses.

Irrigation.—The ditch which has been contracted for with the Idaho Canal Company still lies untouched, this company having failed, and no steps have been taken to enforce their contract, though this ditch is badly needed.

Court of Indian offenses.—The judges are progressive and intelligent Indians selected from both tribes, and men of good morals and conduct, whose example can be a model for the other Indians to follow. They are really of little use in this position except for the agent, if he desires, to shift the responsibility for the punishment for Indian offenses from his own shoulders to theirs. They are just and honest in their decisions, though a little inclined to be severe in punishment.

Police.—The police force consists of 1 captain, 1 lieutenant, and 13 privates. They are necessary, and will usually carry out the agent's orders without question.

Agency buildings.—One double building has been allowed and started for homes for the employees during the year; another is badly needed, also a new jail. The jail and buildings now used are very old and in the last stages of decay. The warehouse, office, agent's and physician's houses are all a credit to the service, and the buildings are in excellent condition, but when you come within the office it is so bare and unfurnished as to remind you of a barn, and compares very unfavorably with the outside appearance.

The water in use at the agency is ditch water. The Indians bathe, wash their hair, soak hides and utilize the ditch above us for all such purposes, until when the water gets here it is filthy and not fit for use, and the cause of much sickness. Also the creek out of which we water our stock is often dry in summer. The agency should have a good well, furnished with windmill and tank, and have the water piped into all buildings as well for fire protection as for other uses. The bath rooms in the agent's and physician's houses should be fitted up.

Hunting.—My Indians have not been in the Jackson Hole country this year, and do no hunting there.

Sanitary.—The general health of the Indians is good, though consumption is prevalent among them and keeps them from increasing much in number. The physician, Dr. G. M. Bridges, reports the following summary of the work for the year:

| | Males. | Females. |
|------------------------------|--------|----------|
| Taken sick or injured | 220 | 168 |
| Recovered | 201 | 143 |
| Died | 14 | 14 |
| Treatment discontinued | | 2 |
| Remaining on hand | 5 | 9 |

There were 34 deaths from the causes enumerated below, 28 on the reservation and 6 at the school. Ten seems rather a large number to die from unknown causes, but these were mostly old persons who rarely or never apply to the physician, and their deaths were only accidentally learned of through the farmers.

| | | | |
|------------------------|----|--------------------------------|----|
| Tuberculosis: | | Bronchitis, acute | 2 |
| Pulmonary | 11 | Pneumonia | 1 |
| Lymphatic | 2 | Measles | 1 |
| Enteric | 1 | Ascites | 1 |
| Meningeal | 3 | Unknown | 10 |
| Cholera infantum | 2 | | |

Six were under 5 years of age, 14 were between 6 and 18, and the remainder were adults, 10 of whom were married. There were 22 births, 10 male and 12 female.

At the beginning of this fiscal year I opened and have accurately kept a record of all births and deaths occurring within my knowledge. I am convinced there were more births than recorded above, but this is such an improvement over previous years that I am encouraged to think the hope of eventually collecting all may finally end in fruition. In this connection I may say there is in force at the Crow Creek (S. Dak.) agency a rule which greatly facilitates gathering information of this kind. By the agent's order all parents are required to register births with the agency physician, who gives them a ticket to the issue clerk stating the name of parents, date of birth, sex, etc. On presentation of this to the clerk the child is duly entered on the census roll and ration book.

I regret that I am still unable to report a satisfactory sanitary condition, either at the agency or on the reservation. There has been some improvement, but so infinitesimal in character as to scarcely be worthy of mention. Last summer after the return of the children to their homes from the school, I noted with pleasure a marked change for the better in many of their homes, those of the larger girls especially, due no doubt to their influence.

I do not think there has been more sickness this year than in the past, but I have seen more of it, due, I think, to the fact that these people have made a distinct and, I trust, permanent advance in reference to accepting the services of the physician. During the year just closed I received 132 calls to visit 109 individuals in their homes, at least four-fifths of which were without solicitation on my part. I traveled 2,611 miles in making these calls. In the third quarter I was unable to answer 23 calls, owing to the fact that all my time was taken up at the school,

I regret this very much indeed, but it was unavoidable without allowing the school to suffer from want of attention. As we now have a physician located at the school, I hope to respond to every call during the present fiscal year. In addition to the above mileage, I made 65 visits to the school, covering 2,684 miles, and making a total of 5,235 miles for the year just closed.

I think the influence of the "medicine men" has rapidly declined in the past year, a statement I have been quite unable to make in my former reports. I have encountered them in only a few instances, and with one exception they have always yielded to my suggestion that they discontinue their practices. From the present outlook they will not long be a factor affecting the progress of these people.

These people are not sufficiently advanced to avail themselves of the benefits of a hospital, but in this connection I wish to respectfully recommend that the dispensary be removed to a more central location and the rear room fitted up with a bed and stove, so that it can be used for emergency cases or those who will come, and whom I desire near me for the purpose of closer attention. This will cost but little, and it will be the initial step in teaching these people the value of systematic hospital treatment. During the year I had three persons who would have willingly availed themselves of something of this kind. There will be no expense for nursing, with the assistance of the family or friends I will attend to the nursing myself. I trust you will favorably consider this matter.

At the beginning of the session the school was filled to considerably more than its intended capacity, and it remained in this plethoric condition throughout the term, notwithstanding which we experienced little or no sickness traceable to this cause. The following table shows the work accomplished during the year:

| | Males. | Females. |
|-----------------------------|--------|----------|
| Taken sick or injured | 79 | 81 |
| Recovered | 73 | 76 |
| Died | 4 | 2 |
| Treatment discontinued..... | 2 | 3 |

All the deaths were from some form of tuberculosis. None of them took place at the school, all having been excused for from two weeks to three months previous to a fatal termination, but by order of the acting agent all sick were retained on the records after being sent home. Of the 160 under treatment during the year 73 were admitted to the hospital and given 887 days' treatment. When it is considered that 40 of the 160 were mild cases of chicken pox we can but call the percentage of sickness for a school of this size very light, and the superintendent and matrons are to be congratulated on the care which resulted in producing these excellent figures.

For the major portion of the year the food and clothing were adequate. Toward the end of the session the rations were a little short, and during a part of the time it was found rather difficult to provide suitable foot gear for the smaller children.

The sanitary condition was fairly good throughout the year; however, not up to the standard maintained last year, due not to want of care upon the part of all concerned, but rather to our crowded condition and the extremely poor buildings. A system of ventilation was put in some of the buildings where most urgently needed, and while by no means the best, it has in a measure answered the purpose and prevented most of the troubles incident to overcrowding and non-ventilation.

Educational.—The Fort Hall boarding school, having a capacity of 175 pupils, is located on this reservation. Its progress during the year and its present condition is shown in the accompanying report of Superintendent Locke. This school is a great benefit to this reservation; its work and the education of the children is beginning to be largely felt for good.

The school when established was given the buildings at the old fort. These buildings are old, patched beyond recognition, and are now located 10 miles off the railroad. It is very expensive to get supplies there. The old site and buildings should be abandoned and a new school built at the agency. The school now is 18 miles from the agency across the mountains, very inconvenient for the agent to look after, and often in the winter almost impossible to reach.

Missionary work.—There is but one small mission school on this agency, established in 1887 by the Woman's Connecticut Indian Association and well maintained by them ever since. Eight girls were cared for during the year. Miss Frost, in charge of the school, does a good work and has a good influence on the reservation.

Commission.—Your three commissioners appointed under act of Congress, June 10, 1896, to treat with these Indians for the cession and sale of a portion of this reservation, succeeded in making a treaty under date of February 5, 1898, but this treaty has not yet been ratified by Congress. The portion of the reservation proposed to be cut off is used very little by the Indians for either farming or grazing. It is an incumbrance upon the agent in looking after it; is not needed by the Indians—they will have ample left; and it will stop the trouble with trespassers from Pocatello, which is now surrounded by the reservation. In fact, it will benefit both Indian and white man, and Congress should ratify this treaty as it now stands. Indians are very suspicious; they have agreed once, and it would be almost useless to ask them to agree again to some different treaty.

Very respectfully,

C. A. WARNER,
United States Indian Agent,

The COMMISSIONER OF INDIAN AFFAIRS,

REPORT OF SUPERINTENDENT OF FORT HALL SCHOOL.

FORT HALL SCHOOL,

Fort Hall Agency, Idaho, August 15, 1898.

SIR: I have the honor to submit my fourth annual report of the Fort Hall boarding school for the year ending June 30, 1898.

Capacity, attendance, etc.—The school can properly accommodate 175 pupils. The total enrollment during the year was 207. The average attendance was the largest in the history of the school. Early in August 10 pupils were transferred to Carlisle and 3 to Haskell Institute. Owing to the fact that the school was not filled the preceding year we had a surplus of clothing and rations on hand, so that we could provide for 10 or 15 pupils more than the number estimated for, which was 150.

Lieut. F. G. Irwin, jr., put nearly every child on the reservation in some school. There was great opposition on the part of the parents, and it became necessary to ask for troops to settle matters. The presence of a troop of cavalry proved effectual. Forty children were put in school in one day. The opposition soon melted away, and some of the worst Indians seemed reconciled and in favor of the school.

Education.—The schoolroom work has been faithfully performed, and upon the whole good satisfaction has been given under the direction of Miss Mary C. Ramsey, the principal teacher.

Industrial pursuits.—Each pupil (except the small ones) works one-half day. All who are large enough are regularly detailed to the various departments and placed under the instruction of the various employees. They are changed and take a new position every month.

Farming.—We shall have about 350 tons of hay this year. The oat crop is fair. I am sorry to say that our potato crop will be a partial failure, owing to the cold and wet spring. All of the beef will come from the school herd, and of necessity will reduce it to about what it should be in a boarding school of this size.

Sanitary.—The general health of the pupils has been good. Dr. T. M. Bridges, the agency physician, has attended to the wants of the sick, and has looked after the sanitary condition of the school with ability and success.

Improvements needed.—We should have more dormitory room. Also a bathroom, furnished with suitable tubs, is greatly needed. The only mode of bathing at present is in washtubs at the laundry, which is very inconvenient and unsatisfactory.

Our closing exercises were attended by the agent and a large number of visitors from the adjacent towns, all of whom offered words of encouragement.

In conclusion, I would say that in nearly every case the employees have been faithful and have worked together in harmony. My thanks are due them for able assistance in placing the Fort Hall school upon a high plane of moral and intellectual culture, but more especially to Lieutenant Irwin, the outgoing agent, and Mr. C. A. Warner, the incoming one, for the great interest they have taken in the school and its success.

Very respectfully,

HOSEA LOCKE, *Superintendent.*

(Through C. A. Warner, United States Indian Agent, Fort Hall Agency, Idaho).

REPORT OF LEMHI AGENCY.

LEMHI AGENCY, IDAHO, *August 15, 1898.*

SIR: In compliance with your instructions, I have the honor to submit the following report relative to the condition and needs of the Indians under my charge and affairs at this agency for the fiscal year ending June 30, 1898, the same being based on the records of this office and my observations since assuming charge, December 21, 1897.

Census.—A careful review of the census shows the following results:

| | |
|---------------------------|-----|
| Shoshones | 215 |
| Shoepaters | 203 |
| Bannocks | 85 |
| Total | 503 |
| Males | 227 |
| Females | 276 |
| Males over 18 | 157 |
| Females over 14 | 167 |
| Children between 6 and 16 | 105 |

Of the 111 Indian children of school age, as shown by the statistics accompanying this report, perhaps not more than 65 are suitable for school, as a large number are married and others so afflicted with various diseases that they are undesirable and their attendance would be detrimental to the health and progress of the school.

Reservation.—The Lemhi Reservation is situated in Lemhi Valley, some 30 miles south of Salmon, on the Lemhi River, and is about 70 miles distant from Redrock, Mont., the nearest railroad point. It contains about 104,960 acres, composed largely of hills and mountains, there being not more than 2,700 acres suitable for farming purposes, and that only as water is conducted upon the land and under proper irrigation.

Agriculture.—This is not, in a true sense, an agricultural country, but is more adapted to stock growing. Owing to the altitude (5,400 feet above sea level) we

have frequent frosts, and the growing season is very short; frequently killing frosts occur in June and September, and occasionally during July and August, which retard vegetable growth. Notwithstanding these disadvantages, more or less vegetables and grain are produced and some few good farms are to be found on the reservation. Tame hay, such as timothy, clover, and alfalfa does exceedingly well and produces large crops for winter feed. The number of acres of land susceptible of cultivation, as stated above, is about 2,700, and is inadequate to the needs of these Indians. Hardly one-half of this land is at present in a state of cultivation, but could be reclaimed at a small cost.

In the way of farm products, I have to report the following from statistics at hand to date, viz: Three hundred and seventy-five bushels oats, 135 bushels potatoes, 75 bushels turnips, 25 bushels other vegetables, and 170 tons hay, all of which is produced under the supervision of one practical farmer, who directs and assists in the management of the Indian farms.

At least one more farmer is needed to help to encourage and instruct the Indians, who in themselves have not the courage and confidence to reach out. One farmer can not visit the farms, situated as they are, in various parts of the reservation, and do justice and obtain good results, for experience teaches that it is a difficult matter to make farmers of Indians under the most favorable conditions.

Indians.—These Indians as a tribe are honest and peaceable and kindly disposed, but about as degraded and ungrateful set as one finds. They have been humored, and, like spoiled children, want things their way, and their condition, mode of living, and barbaric practices would indicate that undue concessions have been made on the part of agents. While some will avail themselves of the opportunity of earning their living by civilized pursuits, others lead a lazy, vagabond life, begging and complaining constantly, nothing satisfying them but plenty to eat; this they want, too, with as little effort as possible.

They are addicted to the vices of gambling, horse racing, and dancing, and the influence of the so-called "medicine man" operates to the disadvantage of the tribe, and is a great hindrance to their civilization and advancement.

The reported progression made by these Indians from year to year has been grossly misrepresented, and leaves one with an erroneous idea. I can not refrain from stating, having known these Indians for twenty years, that their progression has been mostly on paper, their real advancement having been slow, not, perhaps, what it should or possibly could have been under the circumstances. In the agent's annual report for 1883 on the Lemhi Reservation I find that 29 Indian families were engaged in farming; fifteen years afterwards I can report but 41 following agricultural pursuits, an increase of 12, not quite one convert a year. What wonderful progression!

Morally these Indians are practically the same as twenty years ago; financially they are but little better off. Aside from a few small farms, wagons, and farming implements, held by some of the more energetic and industrious, they have comparatively nothing, except a great number of worthless ponies, which if they did not own they would not be any the worse off. No horned stock are owned by them at all.

It would be unjust not to state that a few of these Indians have farms and are thoroughly in earnest, and keep constantly at work trying to establish for themselves comfortable homes. A majority, however, seem to content themselves with their present condition and continue on in the old channel, leading a life of idleness and degradation.

These Indians need assistance from the Government as much or more than years ago, when game and fish were plentiful. Fostering care is needed not only to encourage but make them improve the opportunities they have. Thus assisted, in time they ought to make themselves comfortable and have profitable employment.

Cattle raising.—As an incentive to labor and for the building of new homes, with a view of civilization and improvement, I earnestly recommend that a number of young cows or heifers be given to the Indians that have proven themselves worthy and competent to care for cattle. Some of these Indians manifest considerable interest in cattle, and I believe would increase their herds when they learn that cattle, more than anything else, can be relied upon in this country. Money expended for cattle to be issued to deserving Indians would be well spent. As this reservation is better adapted to stock raising than farming for grain and vegetables, I am of the opinion that the attention of these Indians should be directed toward the cattle industry.

They have a very poor market for their grain and vegetables, as the supply usually exceeds the demand; hence low prices often prevail. The Indians sometimes haul their produce from 30 to 40 miles to market it at a price scarcely above

the cost of production. This is not the case with cattle, for we have a sure market for beef at all times at a good figure. Evidently there would be more revenue for the Indian in raising hay to feed cattle at home in the winter than producing grain at the prices in this country.

Irrigation.—Proper irrigation on this reservation is, I believe, of vital importance and absolutely essential to obtain good results. This land will produce no agricultural crop whatever without water, but is wonderfully fertile, and once brought under irrigation is capable of producing the finest crops of timothy, clover, alfalfa, oats, and barley without fear of drought. About 1,300 acres of good agricultural land still remains in an unproductive state, and until brought under irrigation it can not be farmed or put to any useful purpose.

The Department has granted authority to employ a civil engineer to survey and lay out ditches for the purpose of conducting water upon this land. The engineer is now in the field making the survey. When his report and plat are filed with the Department I hope to get an appropriation for the construction of the ditch, which can only be accomplished with the assistance of the Government, for these Indians have not the enterprise nor necessary means. The work can be done, however, mostly by Indians, and when completed will furnish farms for a large number of Indians, who, I firmly believe, could be made to locate and assume industrious habits.

Rations.—The Government issues these Indians weekly about two days' rations. The balance of their subsistence is obtained by civilized pursuits and hunting and fishing. Consequently, I am forced reluctantly to issue passes to them to go to the mountains and surrounding country in pursuit of game, which, under the most favorable circumstances, is hard to obtain, and against the protests of the citizens in various parts of the country.

Civilization.—These Indians are far from being civilized, and still adhere to their old-time customs. Two-thirds of the male population over 18 years of age dress in their native costume—moccasins, leggings, breechcloth, blanket, feathers, and paint. Step by step these Indians must be taught, by precept and example, to abandon their native garb and mode of living and adopt citizens' dress and civilized habits.

My opinion is that the most effectual plan to pursue in advancing these Indians to a higher and better state of civilization is to give them little farms, something on which their desires can be fixed, furnish farm implements, and put them to work tilling the soil under the direction of a good practical farmer. Then they having something to occupy their minds, and are more likely to abandon their roving mode of life for the more permanent and peaceful occupation of a farmer's life.

Deportment.—The deportment in general of these Indians has been very good. Occasionally little differences arise among them, which are easily adjusted. No crimes of a serious nature have been committed during the present year.

Earnings.—The following table shows the amount of money received by these Indians from various sources during the fiscal year:

| | |
|---|----------|
| For transporting 40,762 pounds freight for Government. | \$407.62 |
| Cutting and delivering 125 cords wood | 625.00 |
| Produce sold to United States Government | 125.13 |
| Sales of gloves and moccasins | 723.00 |
| Received of Government for services rendered | 1,188.00 |
| Total | 3,068.75 |

Employees.—The number of employees at this agency is not sufficient to conduct the affairs in a thoroughly progressive way, and some branches have necessarily suffered, more particularly the Indians in their efforts at farming, by not giving their operations a personal oversight.

Education.—The yearly session of the Lemhi Boarding School began the last week in September, 1897, and closed June 30, 1898. During this time the average attendance was 25+. The greatest attendance was secured in the month of April, during which the average was 41.

In reporting the improvement I can not make it as favorable as I would like, owing to the disadvantages under which we labored, there having been numerous changes of school employees during the year. As a matter of fact, all but the teacher have been changed in the last six months. Thus the efficiency of the school has suffered and its progress been retarded in consequence.

The attendance has been increased this year from 28 to 41, which is more than our scanty room will accommodate, and until more new buildings are erected (two having been erected this year) the attendance can not be what the interests

of the school would require. This plant is totally inadequate to accommodate the number of children that should properly be in school.

Under the supervision of the industrial teacher the boys have performed all the industrial work connected with the school. They have sawed and split wood, milked the cows, cared for the stock, and planted and cultivated a garden. The girls' work in the kitchen, laundry, and sewing room has been quite satisfactory. The literary work has been all that could be desired, the scholars having made rapid progress in their studies. Considering the circumstances under which we have labored, I can not complain.

Visitors.—During the year Indian Inspector McConnell and Supervisor Rakestraw have each paid us an official visit, from whom we have obtained much information, which has been highly beneficial in the performance of our duties.

Permit me, in conclusion, to express my grateful appreciation of the courtesy, forbearance, and liberal support given me by the Department during the past year; also the hearty support and cooperation given by the employees. All have endeavored to do their duty and render good, honest service.

I am, sir, very respectfully, your obedient servant,

E. M. YEARIAN,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF NEZ PERCÉS AGENCY.

NEZ PERCÉS AGENCY,
Spaulding, Idaho, August 1, 1898.

SIR: I have the honor to forward this annual report with statistics for the fiscal year ending June 30, 1898:

Census.—

| | |
|---|-------|
| Males over 18 years of age..... | 446 |
| Females over 14 years of age..... | 598 |
| Children under 6 years (males under 18, females under 14).... | 342 |
| Children under 6 years..... | 272 |
| Total..... | 1,658 |

These figures show a small increase in the tribe during the last year.

This, or what was formerly, the Nez Percés Reservation was wiped off the face of the maps nearly three years since, when trust patents were issued to these people for land previously allotted to them, since which time they have been full-fledged citizens of the State of Idaho, amenable to and having the benefits of State laws. It is true, however, that a great many of the Indians and not a few of the whites do not understand or realize the changed condition, still insisting that the old laws and regulations which governed while they were wards of the Government living on an Indian reservation are still in force.

Allotments.—There have been 1,997 trust patents sent to these people, over 100 of which have since been canceled and returned to the Department. 17 of the number being duplicates—two allotments made to the same person under different names; others were given allotments who for various reasons were not entitled to them; while quite a number were voluntarily relinquished by members of "Chief Joseph's Band" of the Colville Reservation in Washington, who preferred to retain their rights there.

Owing to the strong opposition of about one-third of the tribe to accept land in severalty, and their refusal to give the allotting agent the number and names of their families, much confusion and unavoidable mistakes were made during allotment which has since required hundreds of investigations and affidavits to adjust, quite a large number of which are yet unsettled. Some eighty-odd allotments have been made here since the allotting agent left the field, and there are a dozen or more applicants whose cases are still pending.

These allotments comprise 80 acres of agricultural, or double the amount of grazing land. All of the allotments, however, embrace more or less farming land which is of an excellent quality, yields bountifully in all cereals, fruits, and vegetables grown in the Northwest, and does not require irrigation except along the river and creek bars. The soil on the high benches and table-lands, being closely underlain with a hardpan or clay, holds water which accumulates during the winter and early spring. In most instances water can be obtained for culinary and stock purposes, by sinking from 10 to 15 feet even on the high table-lands.

A fine belt of pine, spruce, and fir timber crosses through the center of the reservation over 30,000 acres of which is reserved for the sole use and benefit of the allottees. Two good portable sawmills are kept in almost constant operation turning out lumber from this reserve timber, which enables the Indians so inclined to make permanent and needed improvements at a moderate expense.

Industry and agriculture.—Industry is not a characteristic of the Indian race in general, and this tribe in particular, as they have too much ready cash at their command to be compelled to resort to hard labor. Plenty to eat and fancy clothes for the time being is the height of their ambition. Of course there are many notable exceptions, but as a class they are not industrious. Many of the able-bodied men, who are not allowed to lease their allotments, are allowing their land to lie idle and grow up with weeds rather than to put their hands to the plow or even employ white men to do the work for them. Take it all in all, there has been but little, if any, improvement in the line of industry during the last twelve months.

Stock raising among the Indians is carried on to a considerable extent, and would be greatly increased were it not for the fact that cattle thieves, mostly white men, make the business unprofitable.

Roads.—Owing to the fast settling up of this section of country by homesteaders and Indians moving onto their allotments, many new roads have become necessary, in the locating of which the county commissioners and road supervisors have shown a disposition to be fair and impartial between the whites and natives; nevertheless, much wrangling, a few resorts to the courts, and an occasional arrest for fencing up county roads and cutting wire have occurred of late.

The Northern Pacific Railway Company has during the last few months completed the Spokane and Palouse extension through and past the agency to Lewiston, Idaho. This road will greatly facilitate the shipping of grain and other farm products and should materially enhance its value.

Payments.—Financially, this tribe is well provided for; each man, woman, and child having received from the Government during the last three years \$746.73 from the sale of surplus lands, and they still have some \$300 each due, which they will receive in semiannual payments during the next two years. Add to this about \$20,000 each season—money derived from leased lands—it can readily be seen that they are in very comfortable circumstances. I regret to say, however, that quite a large percentage are not improving their allotments “while the sun shines,” and in many instances are squandering their money as fast as received.

Liquor traffic.—The whisky business has not in the least abated; in fact, owing to the inability or indifference of the only United States deputy marshal in the northern half of the State, the traffic has materially increased of late. I have exhausted every effort in trying to get a “live” deputy stationed here. With such an officer the curse could be greatly reduced, if not entirely broken up, so far as its introduction on the reservation is concerned; but Indians with money, who desire, can get liquor in any town in the United States where liquor is sold, all laws to the contrary notwithstanding. As shown by the accompanying statistics, 10 whites and 23 Indians have been convicted by the United States court during the past year, receiving more or less severe punishment, for this unlawful traffic, still it seems that for every man convicted there are two left ready to take up the trade.

The court of Indian offenses was abolished at this agency soon after the Indians became citizens. A small police force was retained until the close of the last fiscal year, when they, too, with a single exception, resigned from the service. Their places have not been filled, as it is quite evident that they have no authority in law to make arrests under any circumstances; at least I have been unable to get a ruling from the Indian Office to the contrary. The necessity of retaining this one policeman is due to the fact that he alone can positively identify every allotted member of the tribe, consequently his services can not well be dispensed with during the making up of pay rolls, payments, establishing heirships, etc.

Health.—The general health of the Indians under my charge has been as good as could be expected of Indians. Consumption, the greatest foe of the human race, has not overlooked the Nez Percés, and while there have been many cases of la grippe and pneumonia, consumption has claimed far more than its share, according to the report of the physician. Indian doctoring by “medicine men” still continues to a limited extent, but as the State of Idaho has no medical laws there is no legal way of abridging this nuisance.

Education.—As the school has been managed by a bonded superintendent during the last fiscal year, and being situated some distance from the agency, I know but little regarding it, but presume the superintendent's report on the Fort Lapwai Indian School for the last fiscal year will not be “rose-colored” to any extent.

Sometwenty mixed-blood and Indian children have, during the last year, attended district schools within the confines of what was formerly the Nez Percés Reservation, with very satisfactory results.

Religion.—Very enthusiastic revival meetings were conducted here last winter by the native elders, which resulted in quite a number of new converts being made, and some old ones who had "strayed from the fold" were called back.

Employees.—The regular employees of this agency, without exception, have performed good and faithful work during the last year. * * *

Respectfully submitted,

S. G. FISHER,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN INDIAN TERRITORY.

REPORT OF QUAPAW AGENCY.

QUAPAW AGENCY, IND. T.,
Seneca, Mo., August 10, 1898.

SIR: I have the honor to submit herewith my first annual report of the affairs of this agency, together with the required statistics, suggestions, and such other information of interest as I have been able to gather.

Location.—The Quapaw Indian Agency is situated in the northeastern corner of the Indian Territory, and is bordered on the north by the State of Kansas and on the east by the State of Missouri. The agency headquarters are beautifully located $4\frac{1}{2}$ miles from Seneca, Mo., which is the railroad and telegraph station and post-office address. Although the surroundings are all that can be desired, the buildings have been neglected to such an extent as to make them at present almost uninhabitable. Not only are all conveniences lacking, but the sanitary condition of the houses is very bad, the most inconvenient feature being the quality and scarcity of water. However, requests have been made and approximate estimates forwarded by me for making necessary repairs on buildings and for the erection of a more wholesome and adequate water supply, which, if allowed, will be a source of gratification to the employees at this agency.

Tribes and population.—

| Name of tribe. | Total population. | Males. | Females. | Males over 18 years of age. | Females over 14 years of age. | School children between 6 and 18 years. | |
|-----------------------|-------------------|--------|----------|-----------------------------|-------------------------------|---|----------|
| | | | | | | Males. | Females. |
| Wyandotte | 325 | 156 | 169 | 88 | 124 | 34 | 33 |

| Modoc | 51 | 25 | 26 | 15 | 19 | 5 | 2 |
| Total | 1,469 | 693 | 776 | 339 | 474 | 216 | 213 |

This shows a gain of 21 persons since last report.

Although there are in this agency eight distinct tribes, there seems to be the most friendly feeling between them. They intermingling and intermarry to a great extent, and from appearances one would think there is but one tribe. In looking over the census reports, I find this singular fact—that among the Eastern Shawnees not one member is married to one of his tribe.

Among the Seneca Indians there has been for a number of years past an internal strife, the tribe being divided into two factions, each having its own chief and council. This has, to a great extent, retarded the progress of this tribe, besides being a source of annoyance to the Indian Office and former agents, on account of their many trivial complaints and grievances. I finally succeeded in having both factions agree to meet at this agency for the purpose of holding their election. On July 1 every adult male member, with the exception of three, was present, and they elected a splendid set of men for their chiefs and councilors for the ensuing

year. All seemed satisfied and pleased at the result and agreed that in the future factions and differences would be unknown in their tribe and that they would all work together for the advancement of their people. I am gratified at the result of my efforts and feel that some good will come from them.

Some of the ancient Indian customs are still observed among the Quapaw and Seneca tribes. In May last, from curiosity, I attended the "strawberry feast" observed by the Seneca Indians. This is a religious ceremony and has to the Indian the same significance as the taking of sacrament has to the Christian. I was invited into the "inner circle," and participated with them in the drinking of the juice made from the fresh strawberry. (I was informed that this privilege is seldom accorded by them to a white man.) After the ceremonies all resorted to pleasure, the men and boys playing an Indian game of ball and the women and children engaged in other amusements characteristic of their tribe. I was very much impressed with what I saw, and can not believe that harm can come from such practices.

During the month of August there will be held on the Seneca reserve what is known as the "green corn feast," and, while the arrangements are under the direction of the Seneca Indians, the ceremonies are usually participated in by other tribes from this and adjacent agencies. This feast is the Indian Thanksgiving, they taking the opportunity on this occasion to offer up their thanks to the Great Spirit for bountiful crops and other favors showered upon them during the year. I am informed that the only drawback to this feast is the intrusion of a number of disreputable white men whose vocation is the boot-legging of whisky to the Indian. Arrangements have already been made to have the police force of this agency attend the gathering to arrest, for the purpose of prosecuting to the full extent of the law, any person found engaged in this nefarious traffic.

Civilization.—I am unable to say just how much progress has been made in civilization among the different tribes of this agency the last year. This I can, however, say, that in their attire, behavior, and habits they compare favorably with white communities in which I have heretofore resided. The Indians of this agency are law-abiding people; marital laws are generally observed, and they are no more addicted to vices than are their white brethren. Since taking charge of this agency I have not learned of a single serious crime committed by an Indian on this reservation.

From personal observation I am satisfied that the percentage of those who habitually use intoxicants is no greater than among white men, although the procuring of it is as easy for the one as for the other, living as we do on the borders of the State of Missouri, in close proximity to several towns whose principal industry is the sale of intoxicants. Until a recent decision, given by one of the United States judges, no beverage having the semblance of an intoxicant was openly sold in this agency. Since the decision was rendered, however, the towns in this agency all have their metropolitan hop-ale joints, which "hop ale" is, in my opinion, nothing more nor less than common, ordinary beer, and a shield behind which they dispose of the vilest adulterated liquors.

Religion.—The missionary and religious work in this agency is conducted by the Methodist Episcopal, Catholic, Baptist, Episcopal, and Society of Friends denominations. They have in all 15 places of worship and 16 missionaries. The latter are all sincere in their work and are making every effort, with considerable success among the Indians, for the recognition of God and the adoption of the Christian doctrines.

Leases.—Very few leases have been forwarded by me for approval. This can be accounted for by an act of Congress approved on June 7, 1897, which gave the allottee in this agency the right to lease his land without departmental supervision or approval. I do not consider this act as beneficial to the Indian, but believe instead that it is a great detriment to his advancement, and unless some changes are made in existing laws very little progress in the way of agricultural pursuits will be made by the Indians for years to come. Notwithstanding the many statements heretofore made as to the thrift and industry of the red man, I find them to be, as a class, indolent and devoid of the above traits. Of course there are a great many exceptions to this rule. Some of the best and most successful farmers can be found among the members of the different tribes of this agency, but generally speaking they would sooner rent a piece of land and receive \$10 in cash for it than to work and earn \$100 from this same piece of land. When an Indian wants money he wants it very badly and very little persuasion is necessary to have him agree to any kind of a contract; this gives the unscrupulous white man too many chances to drive good bargains, as he soon learns how, when, and where to attack the weak point of his red neighbor.

While I do not think it absolutely necessary for the leases to have departmental

approval, I do believe that all contracts made with Indians who can not read or write, should be examined and witnessed by the agent and the provisions of the same explained to the Indian. A great many have come to me complaining that their white lessees make certain agreements and promises which they are not fulfilling. I examine their contract and invariably find the conditions different than stated to me or understood by the Indian. There is no doubt in my mind that in the majority of cases he is imposed upon; but I can not help him, as the contract is usually properly drawn, and in nearly every case witnessed by friends or relatives of the white man.

One change, which I think would be beneficial, is not to allow the allottee to lease all of his land, but compel him to retain at least one-third of all of his tillable land. This, I believe, would have a good effect, as he would soon make up his mind that in order to get returns from his land he must do some work on it.

Sale of Indian lands.—I have forwarded to the Department for approval, since taking charge of this agency, some 48 deeds, made by Indians for lands from which restrictions had been previously removed. Of this number 40 were returned approved, 3 disapproved, and the others not yet heard from. The consideration for these lands varied from \$3 to \$30 per acre. A number of deeds were executed prior to my taking charge, and in nearly every instance the laws and instructions of the Interior Department were violated. These cases were investigated by United States Indian Inspector C. R. Nesler, in December last, and it was clearly shown that flagrant violations had been practiced in these transactions. While no punishment has been meted out to the guilty parties up to this time, the investigation has been of vast benefit to those who have disposed of their lands since.

The late changes in the instructions made by the Department, in reference to the sale of these lands, is a benefit to the grantor as well as a protection to the grantee. I can not say that the grantee was altogether to blame for the wrongs committed in these former transactions. According to the instructions of the Secretary of the Interior the grantee was compelled to pay for the lands the value placed upon them by the agent, which in a number of cases was altogether too high, as the grantee had previously made a contract with the Indian for a less price, and as he had already paid part of the consideration money he was compelled to make some arrangement with the Indian in order to make himself whole on the deal. If dissatisfied with the appraisement and he allowed the deal to go by default, he would lose the amount advanced, as the Indian had already disposed of the money and the purchaser had no recourse to get it back.

In the majority of cases where the Indian sold land the consideration money was squandered in a reckless manner, and there is nothing now to show excepting that the allottee has only half of his allotment left. In two cases the grantors did not have one penny left one hour after turning the deed over to the bank and receiving the consideration money, and the only thing they had to show for their money was what is commonly known as a "jag." One case I wish to cite: An Indian woman sold 100 acres for \$600. I would not appraise this land at so low a figure and both grantor and grantee were indignant and threatened to report me to the Secretary of the Interior for refusing to forward the deeds. A few days later I found a purchaser for the same land and the deed was executed for \$900, an increase of 50 per cent. On the return of this deed approved I paid to the grantor the purchase money, and after liquidating obligations in my presence, which she assumed while the deed was under consideration in Washington, she had only \$67 remaining out of the \$900, and there was nothing to show for this expenditure; no improvements made on her land, no horses, vehicles, or farming implements purchased; the money was simply squandered, and to-day she has not a decent garment nor a dollar to her name.

I believe it would be of greater benefit if, instead of paying all of the consideration money to the grantor, upon the approval of the deed, the lands be sold on deferred payments—say one-fourth of the amount upon approval of the deed and the balance divided in three annual payments bearing interest, nontransferable notes to be given, payment of them to be made through the agent.

One satisfactory statement I can make in reference to this subject, that, in a majority of these conveyances, the purchasers are honest and industrious men who acquired these lands for homes and not for speculative purposes. Already a number of substantial improvements are being made by these home seekers, and their presence will certainly exert a good influence among the citizens of this agency.

Surplus lands.—One source of contention among the tribes of this agency is the surplus land. Very little benefit is derived from it by them in its present state; not being fenced, there is no protection to the timber or pasture. The individual members feel that they have a right to do as they please in regard to these lands,

which causes a continual strife among them. Some action should be taken by the Government in reference to this matter. The lands should either be divided among the individual members or the restrictions removed therefrom and sold for their benefit. The only tribe in this agency exempt from this agitation is the Quapaw tribe, which has no surplus lands.

Annuities.—The tribes in this agency who receive annuities are the Senecas and Eastern Shawnees, the former receiving some \$9 and the latter less than \$5 per capita, semiannually. I can not help but feel from what I have already experienced that this is not the best thing for these Indians, and believe that the sooner they receive all that is due them in one or two payments the sooner will they become honest and independent. At present many of them scheme in every conceivable way to get hold of this money before the payments are made in order to beat the merchants, some of them having contracted with as many as four merchants for the full amount the Indian is to receive. I have had several come to me and offer to take half of the amount due them if I would give them the money. It would be an easy matter for the agent to make several hundred dollars a year in this way if he would encourage their dishonesty. I would recommend that some attention be given this subject at an early day.

Agriculture.—The splendid prospect early last spring for a good wheat and oat crop was blighted by excessive rains, which caused rust and prevented the maturing of the grain. Not more than half a crop was harvested. The best and largest corn crop ever raised in this agency is now assured. I am sorry to say that the greater portion of these products were raised by the white men, when they should have been raised by the Indian, for no better place could be found than in this agency for him to follow agricultural pursuits, on account of the many small fertile valleys, which would give him an opportunity to farm on a small scale. I am compelled to say that the existing laws relating to the leasing of Indian lands are responsible for this condition.

Reservation roads.—I am unable to give a satisfactory report relating to road work performed during my administration. The roads in this agency, generally speaking, are in very bad condition, and a great amount of hard work will be required to make a number of them even passable. Heretofore all of the road work was performed in the spring of the year. This I think a mistake, and in the future during my stay at this agency the improving of roads will be done in the fall. My reasons for this change are, in the spring all of their time is required, by persons called upon to assist in this work, in the preparing of their lands and the planting of crops; besides, the spring being usually the wet season, the new road work is nearly always ruined by excessive rains.

It is a hard matter to get the Indian to do road work. He is shrewd enough to know that there is no law to compel him to do it; and the white man is not much better, since, as he can make a direct contract with the lessee for the leasing of lands, the clause relating to the requirement of road work is usually eliminated from such contracts. If every lessee or renter living in this agency were compelled to pay a nominal sum annually for road purposes, quite a fund could be created for the purchasing of the necessary tools for doing bridge work and for generally improving the public roads, and a vast amount of good accomplished in this line without working a hardship on anyone.

Schools.—The Quapaw school is located some 15 miles from the agency, which distance does not allow of as many visits as I would like to make to this school. Supt. C. H. Lamar, formerly normal teacher at the Santa Fe school, New Mexico, took charge of this school early in April last, and I can not help but feel that he will be successful in his new position, and if he will follow in the footsteps of his predecessor he will experience little trouble in keeping the school up to its present standard. The capacity of the school is 90 and the average attendance for the year just ended 89. It would require very little effort to increase the attendance fully 25 per cent were the capacity sufficient to accommodate the increase. A new school building is badly needed, and if it is the intention of the Government to continue this school for any length of time this want should be supplied at an early date. Other improvements, such as an adequate water supply, sewerage and lighting systems, and general repairs, are very much required. They have all been asked for, and we trust we will not be overlooked when the proper time comes.

The Seneca, etc., school is located on an ideal spot some 5 miles from the agency. It is beautifully situated, and if the proper assistance is given it by the Government it will soon become a model school. From my own observation, I am satisfied that in past years this school has not experienced the success it was entitled to. Many improvements are badly needed. A number of them have been estimated for, and, if allowed, will greatly add in improving and beautifying this

plant. Supt. R. A. Cochran, with his estimable and energetic wife as matron, was transferred to this school last April. Under his splendid business management a marked improvement is already noticeable. Although this school has a capacity of 140, the average attendance for the year just ended was only 84. With the changes already made and those to be made in the personnel of the employees at this school, I feel certain that the next annual report will show an increase of at least 25 per cent in the average attendance.

Having in the past had considerable experience in school work, I feel a deep interest in the success of the schools under my charge, and no effort on my part will be spared to make them the equals of any reservation schools in the Indian service. I had the pleasure of attending the closing exercises at both the Quapaw and Seneca schools, and felt very much gratified with what I saw. I can truthfully state that in efficiency, discipline, and attire the pupils of these schools compare favorably with any school of white children I have ever visited.

While there is no doubt that these schools can be filled to their utmost capacity by children from the different tribes of this agency, a great saving can be made by the Government in consolidating them. From a careful estimate made, I find that with an expenditure of less than \$8,000 the capacity of the Seneca school could be increased to 250. This consolidation would save in employees' salaries at least \$5,000 per annum, which amount could be augmented in other ways to \$7,000. I make this suggestion for the reason that if the Quapaw school is continued any length of time it will require almost an entire new school plant.

Separate reports of the superintendents of these schools are herewith submitted.

Thanking you and your representatives for favors already accorded me, I am, sir, very respectfully,

EDWARD GOLDBERG,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF QUAPAW SCHOOL.

QUAPAW BOARDING SCHOOL, *July 1, 1898.*

SIR: I have the honor to submit the following annual report of the Quapaw Boarding School for the year ending June 30, 1898:

Upon my arrival here, April 12 last, I found the school plant in very good condition of repair, considering the age and structural nature of the buildings. The attendance was about up to the limit, and has been kept up to or above the limit till the close of the school year. There would be no difficulty in filling this school if its capacity were increased considerably; in fact, pupils have been turned away on account of lack of capacity to accommodate them.

The schoolroom work has been very satisfactory, and the pupils have made very good progress indeed in this line. The industrial work has been quite seriously interfered with on account of sickness.

The prospects for crops of all kinds on the school farm, except the oats, which were seriously damaged by bugs and climatic conditions, are very flattering.

Some minor improvements and repairs on buildings should be made during vacation.

Having been here but a few weeks, I will not attempt an exhaustive report at this time. In conclusion, I desire to say my thanks are due to your office, to the agent, Mr. Goldberg, and to the employees here for hearty cooperation in bringing the school year to a successful termination.

Very respectfully,

C. H. LAMAR, *Superintendent.*

The SUPERINTENDENT OF INDIAN SCHOOLS.

(Through Edw. Goldberg, United States Indian Agent.)

REPORT OF SUPERINTENDENT OF SENECA, SHAWNEE, AND WYANDOTTE SCHOOL.

WYANDOTTE, IND. T., *June 30, 1898.*

SIR: In compliance with instructions from your office, I have the honor to submit herewith my first annual report of the Seneca, Wyandotte, and Shawnee Boarding School for the fiscal year ending June 30, 1898, as follows:

I assumed charge April 5, 1898. It will be seen, therefore, that a little less than three months of the year have been under my supervision, I having previous to this time been at the Quapaw school. The first few weeks of my work here were devoted to the grounds and buildings, which I found in a badly neglected condition, the storerooms especially. It was impossible to tell just what subsistence and supplies were on hand until they were put in order. Both the storehouses have been remodeled and put in first-class condition.

The discipline of the school was not good; moreover, the manner and method of disciplining did not suit me, and were contrary to the rules and regulations of the Indian Office. A good part of my time has been devoted to this defect. Kindness having been adopted and put into effect, it bore fruit even more speedily than was anticipated. The better nature of the pupils was thereby drawn out, their confidence and good will secured, and, in consequence of this, a change for the better was almost immediate.

The buildings are now all in fair condition, with the exception of paint, which is needed both inside and outside of most of them. New roofs for the girls' home and boys' home are also needed. The water and sewerage system is inadequate, the water being pumped into the tank

by means of the windmill, which is not satisfactory. During this month we have been compelled to haul water in barrels for bath and laundry purposes almost every day. There is no sewerage system, all the pipes leading to the ground beneath the floor and emptying there. This matter has been reported to the Indian Office, and recommendations for improvements in this line have been made by the agent, which will, I hope, have the desired effect.

As there is no mechanic of any sort employed here, I have recommended the employment of one capable of performing the duties of a carpenter and of giving instructions in this branch. Such a person is much needed to keep up the necessary repairs of the school, saving thereby a considerable sum, which would be paid otherwise to irregular employees.

The school work did not commence until the latter part of September, and then with but a limited number of pupils. I do not know the reasons for this delay, but am of the opinion that, as a consequence, it will be very difficult to get the pupils to return on time next September.

Sunday school has been conducted by the teachers and other employees, and all have attended. We have been visited by ministers of various denominations and have had preaching in the school building. The national holidays have all been observed, with appropriate exercises. The school closed June 24, with an entertainment creditable alike to teachers and pupils.

In concluding this report, I desire to express to Agent Goldberg my thanks for the support and assistance he has given me.

Thanking your Office for uniform acts of kindness and courtesy, I am, very respectfully,

R. A. COCHRAN, *Superintendent.*

(Through Edward Goldberg, United States Indian agent, Quapaw Agency, Ind. T.)

REPORT OF UNION AGENCY.

UNION AGENCY, MUSCOGEE, IND. T., *September 17, 1898.*

SIR: I have the honor to submit this my annual report for the fiscal year ending June 30, 1898, grouped under appropriate headings for convenient reference.

Education for noncitizens.—I have in annual reports heretofore presented the importance of making some arrangement, either by Congressional action direct or by agreements made with the several tribes, whereby the blessings of an education could be secured to the children of noncitizens, or citizens of the United States resident in said tribes. The Seminoles have made such arrangement or provision in the following terms:

One acre in each township shall be excepted from allotment, and the same may be purchased by the United States upon which to establish schools for the education of children of noncitizens when deemed expedient.

I respectfully recommend that a similar clause be incorporated into any further legislation on allotments affecting the Five Civilized Tribes. An uneducated non-citizen element thrown into the bosom of an Indian community is not a desirable one, and is likely to be a source of much trouble. It will swell the criminal record and retard the development of the country on all the lines of progress. It is not a blunder, it is a crime, to fail to make some provision for the education of the poor white children whose lines of life have been cast in the Indian country.

Insane noncitizens.—I have also heretofore presented to the Department the fact that there are many insane persons, who are noncitizens, residing in the agency. They need the fostering care of the Government, and their sad condition should elicit the profound consideration of every philanthropist and humanitarian. There is but one insane asylum in the Territory. It was founded and is supported by the Cherokees and its inmates are Cherokees. Its doors are closed to insane white people, and hence no relief can be expected from that quarter. The indifference shown by the Indians in making provision for their own insane, if any, may be accounted for by a remark made by a Creek official who, when approached by a prominent officer of the Government upon this point, replied that the Creeks had no insane people within its boundaries except such as came from Arkansas. The officer to whom the reply was made was a native of Arkansas, and doubtless appreciated the force of the remark; at least he twirled his cigar, smiled a ghastly smile, and said nothing.

Since my last report I have endeavored to ascertain the number of insane white people in this agency, and have issued an order that names and residences of insane white people be furnished me. I regret that not much reliable data has been received, but I have received enough to satisfy me that the Government should take some action in their behalf. So far ten or twelve bad cases of incurable insane noncitizens have been reported to this office, and this number would be greatly augmented if there were any provision in sight for taking care of such unfortunates in this agency—probably to fifty, or even more. All that I have been able to do in the matter has been to recommend further patience on the part of the immediate family of the unfortunates, and to recommend them to the kind offices of charitable and religious organizations and to the munificence of private individuals. Were I to incorporate in this report the various letters written to me in reference to the condition of the insane above mentioned, it would present a harrowing picture of sorrow that would make the very stones cry out for pity.

Licensed traders.—The number of licensed traders in this agency now approximates 400. This is an increase numerically, but not a very notable one. A country passing through its transition period, when the old order of things is succeeded by the new, is not alluring to capital and not promotive of investment. Besides, I am constrained to say that the taxes imposed by the Indian governments are rather too high on merchants or traders. The tax fixed on merchants in the Creek Nation is 1 per cent on the amount of goods introduced and exposed for sale. Where rapid sales are made and new goods introduced from time to time this tax becomes onerous and is a restraint upon capital. It is too high a specific tax, and I think, in justice to a most progressive and enlightened element of our citizenship, it ought to be reduced, and I recommend such reduction by the tribal authorities, if such species of taxation is to be continued.

There is another view of the situation that presents itself. All of our towns which contain the adequate population will be or have been incorporated. Town sites are exempt from allotment and thereby segregated from the public domain. Each town levies a tax on merchants doing business within its limits. The merchants therefore pay a double tax, or will do so in the near future. This double tax must, in the end, be paid by the consumer, and there is a relative rise in the price of goods. Light taxation is a badge of good government: I might say, in stronger terms, it is a proof of it. Again, it is contended, with some show of reason, that the segregation of town sites from the general plan of allotment takes them out of the jurisdiction of the tribal laws and beyond the control of the tribal authorities, and therefore traders in towns can not be taxed, as has been the custom in the past. Meanwhile, acting under my provisional instructions, I have issued the following instructions to licensed traders and am enforcing the same, receiving revenues and having them placed to the credit of the tribes to whom they belong:

Notice to licensed traders of Union Agency.—All noncitizen merchants carrying on business of any character within this agency are hereby notified that all taxes levied upon their respective businesses by the laws of the tribe in which they are located must now be paid into the United States Treasury, through this agency, at the same rate as is levied by said tribal laws. This tax must be remitted to this agency quarterly, so as to reach this office not later than the 15th of the month next following the close of the quarter, and should be in St. Louis exchange, express money order, or postal order, payable to me as United States Indian agent, and each remittance must be accompanied by a sworn statement showing the total amount of invoices of goods purchased during the quarter (where the tax is levied on the amount of goods introduced), or a sworn statement showing the nature of the business carried on (in cases where the tribal law levies a tax on the business as an occupation, such as livery stables, barber shops, restaurants, lemonade stands, etc.); also all taxes which accrued prior to June 28, 1898, and are yet unpaid, must be paid through this office in the same manner as above shown. Tribal officers and collectors are forbidden from collecting any revenues whatever since June 28, 1898, regardless of when they accrued.

All merchants will govern themselves accordingly.

Outlawry.—There has been another outbreak of outlawry in this agency during the past year. Mose Miller, a full-blood Cherokee, who has been in hiding for about two years for the murder of Thomas R. Madden, a merchant and intermarried citizen of Braggs, Ind. T., has been guilty of several smaller offenses against the property of citizens. His headquarters are, and have been, in the Greenleaf Mountains, a remote and almost impenetrable country in the Cherokee Nation, east of Braggs Station, on the Kansas and Arkansas Valley Railroad. The mountains are rough and covered with timber, and he has been able to escape the vigilance of officers and every effort made to capture him and his confederates, five or six in number.

A short time since—during the month of July—Miller and gang projected a raid against the bank at Checotah, Ind. T., and gathered near that place to attack and loot it. Fortunately, one of his "pals" gave the plan away. A band composed of officers and citizens went out and attacked them. A pitched battle ensued and two of the robbers were captured and wounded. Miller escaped. Later on a squad of deputy United States marshals succeeded in locating one William Nail, of the gang, and, as he was approaching a house in the Greenleaf Mountain country, the marshals fired on him, putting three balls into his body and killing him instantly. Nail, with characteristic devilry, returned the fire, but his shots failed of any effect. Nail was said to be a more desperate and reckless outlaw than Miller himself. Miller will no doubt be disposed of in due time according to the accepted mode in this Territory.

One of our home papers describes this outlaw business as follows:

Indian Territory desperadoes still continue playing in the hardest kind of luck. Of the late Mose Miller gang, who recently planned the Checotah Bank robbery, one was killed by officers last Saturday, two are in the Muscogee jail, both shot more or less dangerously, and the leader alone remains on the scout, with only a possible chance of escape. The prompt manner in which the officers dispatched these desperadoes is certainly a wholesome lesson to other embryonic bad men, and it is no longer either fashionable, safe, or profitable to be a wild and woolly outlaw. A good many of the bold, bad fellows, who are not inclined to be good by nature, feel a

sort of goneness in the crow when they see companions of like ilk hauled in on a shutter. Missionaries have done much toward taming down the criminally inclined in this section, but, as an ultimatum, the Winchester in the hands of a fearless officer has been most effective.

Statehood.—Persistent advocates of statehood endeavor to keep this question to the fore, and Indian citizens are more or less disturbed by its premature agitation, and at this time discussion would seem to be useless. It is undeniable that the Five Tribes do not want statehood with Oklahoma at this time, and there are pertinent reasons why such a union should not be forced or consummated while the tribes are struggling to settle their land tenure and to meet the new and vital issues that confront them. Any question that is peculiarly political and advanced merely to promote political ends and to gratify ambitious journalists and self-advanced statesmen of our sister Territory should be held in abeyance. The Muscogee Phoenix of August 11, 1898, presents the matter clearly, and we indorse its views:

If statehood was a question of the present, which it is not, and if the people of the Five Tribes had the decisive vote as to whether they did or did not want union with Oklahoma, the "did nots" would undoubtedly carry the day. In the dim and distant future, when the time is ripe, and when the legislative jugglers at Washington see fit to put us through the goal, conditions and ideas may be changed and a union for statehood purposes with Oklahoma may not be so distasteful to the average citizen as now. Then, again, in modern State making there are many forces from the outside that play a much more important part than the mere desire of the home people, and the boundaries are by no means adjusted to fit the clamor of the actual residents. The admission of a State into the Union carries with it the admission into the United States Senate of two additional members as well as Members of the lower House of Congress. In these days when the balance of power may sometimes be changed by a single vote, the staid old lawmakers of the East and North will look with suspicion on the problem of augmenting their number by new recruits from a different section, especially these days, when you can not always tell with certainty just what the political status of a new Commonwealth will be.

From our point of view, we see little prospect for immediate statehood for either Oklahoma or the Indian Territory. The recent treaties made with the different tribes, as well as the recent legislation enacted, while it may be regarded as a step in that direction, certainly does not warrant the belief that the additional steps that must intervene are to be sure and swift. The Indian people who tenaciously oppose even these first steps will continue strong in opposition for many years, perhaps, and especially if a condition of statehood must depend on conjunction with Oklahoma.

There are more important questions confronting us just now than the statehood problem. The new Curtis bill, in conjunction with the treaties made or to be made for the better government of the Territory, offers a system of government that, when applied and in working order, may prove a vast deal better than the old, and keep us in good condition during the interim between the passing of the old tribal forms and the advent of ultimate statehood, be that interim one or many years.

Influx of negroes.—I have received reliable information that there is liable to be an influx of negroes into this Territory which may assume alarming proportions and provoke a racial issue to be deprecated by every lover of law and order. In Texas an organization composed of white men exclusively has driven the negroes from small towns into the larger ones of that State. The cities revolt at this phase of the matter, and are organizing committees of safety for their own protection. The following item, copied from the Kansas City (Mo.) Star of September 9, 1898, shows what is being done at Texarkana:

Men here are organizing vigilance committees for protection against the large number of idle negroes in town. The unusual influx of negroes recently is due to the operation of bands of whitecaps in Titus, Cass, Red River, Hopkins, and other counties in the cotton district of north Texas, whence thousands of negroes have fled on account of the posting of notices ordering them out, and, in some cases, because of violence. These people have sought refuge in the towns, and Texarkana has been the refuge of a large number.

A trustworthy negro from Titus County says that while a number of his race were at work in a field a mob of whitecaps, concealed in a fence corner, opened fire on them. The negroes fled, leaving three of their number behind wounded, and perhaps killed. They had been warned to leave the county, and had paid no attention to the warning. Other similar incidents are reported by incoming negroes. In some localities in Titus County, which were formerly densely populated by negroes, not a negro woman or child remains, according to the stories told by those who have reached this place.

As a result of the race conflict in Texas, the refugee negroes are selling out their property in that State, and are getting on foot a hegira to invade the Five Tribes, believing that they can buy land here and find more hospitable surroundings among the Indians.

If it be true that such a hope has been excited, it is a false one, and if such an impression prevails it should be disabused or removed. The Indian is not as friendly to the negro as is the white man. This remark especially applies to the full-bloods, among whom a negro rarely resides in the Territory. They would not rent land to him and they can not sell it to him, and it is hoped the unfortunate black man will not come among them. "'Tis better to bear the ills they have," etc., and their leading men should be informed that an immigration to this Territory in large numbers by negroes would not only be unwise in policy, but would not receive the sanction of the Indian Department, having jurisdiction over the Five Tribes; and, as illustrative of the Indian sentiment toward negroes, it is a historical fact that the Chickasaws have never admitted them to citizenship, and

they are not allowed to vote in said nation, thus depriving them of the highest franchise known to an American citizen.

Schools.—Statistics heretofore furnished by me to the Department show that each of the Five Tribes has in successful operation a school system that will compare favorably with like systems in the surrounding States. These systems are the growth of years and the result of a heavy expenditure of money. It is admitted that they are neither free from fault or corruption. It has been charged that in some instances teachers, in order to secure employment or obtain positions, have been compelled to pay and have paid superintendents of schools fees in money, that went into the pockets of the said officers before their positions were secured. I do not know positively that this charge is true, but I believe it to be true; and to prevent such farming out of places a more direct supervision by the Government over Indian schools may become necessary in the near future.

Just at this time, when matters educational and otherwise are in a provisional state, this agency has seen proper to permit schools to be run under tribal laws in the same manner in which they were conducted before the passage of the Curtis bill, with the understanding, however, that the teachers were to be paid by a disbursing officer of the United States, unless rulings of the Department or the ratification of agreements made with the tribes necessitate the adoption of other methods.

In the Cherokee Nation, under their school law, each pupil at their national schools or seminaries (and this does not include their primary schools) is required to pay \$7 per month in advance for board, and pay the same to the treasurer of said nation either in cash or in national warrants or scrip. National warrants are at a heavy discount. It was found that when said schools opened the first of this month the patrons came prepared to pay the tuition of their children with said warrants. They are poor people and had no other money, and their children had come from all parts of said nation to enter said schools. It was a question whether the schools should be closed, the children denied the blessings of an education and be returned to their homes, or whether said warrants should be received by the treasurer according to their law and custom. The board of education made a personal appeal to me to revoke an order that only cash would be received by me in payment of revenues, at least so far as Cherokee schools are concerned. The matter was considered by United States Indian Inspector J. George Wright and myself, and we concurred in the opinion that the emergency justified the issuance of the following order to the treasurer of the Cherokee Nation:

You are hereby authorized and directed to receive and receipt for all money paid to you as treasurer for the board of pupils in the male and female seminaries and the Colored High School, at Tahlequah, Ind. T., as provided for by the Cherokee law, and when such board is paid all pupils shall be received and admitted as boarders at either of the said seminaries or the Colored High School by the stewards thereof.

You are further authorized to receive in payment of such board either cash or national warrants, and you will hold warrants when so received subject to such rules and regulations as may be made and prescribed by the honorable Secretary of the Interior hereafter.

You are further directed to deposit whatever cash you may receive on account of the boarders with the Bank of Tahlequah, Tahlequah, Ind. T., to my credit and subject to my order. You will deposit any national warrants that you may receive on this account with the Bank of Tahlequah subject to my orders.

You are further advised that this order applies to teachers who pay board at the high schools and orphan asylums in the Cherokee Nation.

You will understand that it is the intention of the Department not to cripple, but to encourage and sustain, the Cherokee national schools as far as possible under existing circumstances. (Signed) D. M. Wisdom, United States Indian Agent, and approved by J. George Wright, United States Indian Inspector.

The above order has given entire satisfaction, the schools are in good condition, and the number of pupils about that of preceding years, and the Cherokees now know that the Indian Department does not intend to hamper the working of their schools, but to foster and encourage them, and I believe at their next council they will revise and modify their school system so as practically to put it under Government control. I have recommended such plan to the principal chief of said nation. I trust that my action will meet your favorable consideration.

I do not deem it necessary to array in this report elaborate statistics of the various schools now in operation in this agency. These statistics have been furnished in special reports of late date, and their reproduction here would encumber this report without subserving any practical purpose. I am satisfied, too, that Inspector J. George Wright, during his late visit to this agency, accumulated full and sufficient data to enlighten the Department upon our school systems, their practical operation in the several tribes, and can intelligently present their merits and defects, and can suggest such rules and regulations as may be needed to put them on a better footing and harmonize them with existing conditions.

Dawes Commission.—This important commission is now enrolling the citizens of the Chickasaw Nation, and at present is at work at Pauls Valley, Ind. T. The Chickasaw Indians appreciate the situation and are cheerfully coming forward

and handing in their names for enrollment. When the commission has enrolled the Chickasaws it will enter the Choctaw Nation, and the enrollment of these two tribes will probably engross the time of the commission until the first of the year 1899. The enrollment of the Seminoles has been completed, and that of the Creeks has also been practically finished. The enrollment of the Cherokees will be last entered upon, and, owing to its large population and certain vexed and unsettled questions of citizenship, considerable time will be required to wind up the rolls and make an accurate report of its citizenship.

This agency has endeavored to work in harmony with the commission and to facilitate its labors, realizing that allotment must be more or less retarded until the problem of citizenship has been definitely settled.

At the outset of enrollment there was an aversion among some members of certain tribes, notably the Creeks, to attend the place of enrollment and give in their names and those of their families, but happily this aversion has passed away, and the enrollment is apparently proceeding with but little friction as fast as should be done consistent with an accurate census.

The Curtis Bill.—The passage by Congress of an act entitled "An act for the protection of the people of the Indian Territory, and for other purposes," approved June 28, 1898 (commonly known as the "Curtis bill"), has provoked among the people of this agency its full measure of commendation and adverse criticism. It is not my intention here, as perhaps it is not my duty, to discuss its merits or to expose its defects, if there be any. As an executive officer of the Government, I have endeavored to interpret and enforce it, except so far as I have been restrained by the ratification of agreements made between certain tribes and the Dawes commission, which agreements contain certain clauses in conflict or inconsistent therewith. Where such conflicts occur the agreements prevail. Whatever may be the imperfection of the Curtis bill, its primary object is clear, and it need not be read between the lines to enable one to see that allotment of Indian lands in severalty has come, and has come to stay. By its strict enforcement tribal autonomy will disappear, and monopolies will be overthrown, and the homeless Indian—driven about from pillar to post—will be guaranteed a homestead in his own right and will be protected in the enjoyment of his liberty and allowed to worship God according to the dictates of his conscience under his own vine and fig tree.

I herewith append an extract from an article recently published in the Vinita Chieftain anent the Curtis bill, and invite attention to its concluding paragraph, in which it states that the bill "with proper modifications will be accepted by the Indians," meaning, as I understand it, the Cherokee Indians:

To the observer of all the different steps which have been taken to reach the present very unsatisfactory state of affairs, the primary object of the United States Government has been easily seen. To protect the Indians against the greed and monopolistic tendencies of themselves was plainly its duty. Then, again, to protect the Indian citizen against intrusion and imposition by outsiders was manifestly its duty again. The charge that has been made in some quarters that the Indian was ultimately to be plundered of his lands for the benefit of white settlers has never been any part of the plan of Congress; indeed, the opposite has been the fact; the idea has been to secure the Indian in the continued ownership of his property.

That the Curtis bill was a great blunder is about to be conceded everywhere; but the object sought in framing that remarkable measure was that the Indian might not only have his own, but that he should have and hold it as an individual citizen. The Curtis law, with all its imperfections and absurdities, has already borne fruit, and with proper modifications will be accepted by the Indians.

It is well known that the Cherokees have persistently refused to treat with the Dawes Commission, and their council, dominated by full-bloods, has steadily fought every scheme of allotment. Reliable information convinces me that a "change has come over the dreams" of the Ke too wahs, and that they are considering at this writing the propriety of treating with the Dawes Commission on terms more liberal than the friends of allotment had expected. It has been found that the full-bloods, or Ke too wahs, are not so much opposed to the Curtis bill in itself, but that they discredit their own brethren of mixed blood and are not willing to intrust their fortunes and destinies into their hands for a final settlement of the Indian problem. It seems now that at an early day the Cherokees will make an agreement along satisfactory lines and under just concessions, or they will accept the Curtis bill as it stands, subject to modifications and alterations by Congress, which the practical enforcement of the bill will both suggest and secure.

Allotment is a stupendous undertaking, and no doubt the author of the Curtis bill would be pleased to see his own bantling revamped and reissued bearing the inscription "The deformed transformed."

Statistics as to area, population, and amount of land individual Indians would be entitled to allot in the nations named if divided per capita under the Curtis bill.—Under the above heading I present a tabular statement showing the amount of land in acres, number of members, and the apportionment of land each member of the Choctaw and Chickasaw, Creek, and Cherokee nations, respectively, will receive under allot-

ment, or rather the amount each would receive per capita if the lands were divided equally among them. This statement was prepared with care by William F. Wells, assistant clerk at this agency, and while it is only an estimate, yet I believe it to be substantially correct, and therefore submit it for the information of the Department for what it is worth:

Choctaws and Chickasaws:

| | |
|---------------------------------|--------|
| Choctaw citizens by blood | 14,256 |
| Intermarried whites | 950 |
| Freedmen | 4,200 |

| | |
|----------------------|--------|
| Total Choctaws | 19,406 |
|----------------------|--------|

| | |
|-----------------------------------|-------|
| Chickasaw citizens by blood | 4,230 |
| Intermarried whites | 318 |
| Freedmen | 4,500 |

| | |
|------------------------|-------|
| Total Chickasaws | 9,048 |
|------------------------|-------|

| | |
|-------------------------------------|--------|
| Total Choctaws and Chickasaws | 28,454 |
|-------------------------------------|--------|

| | |
|-------------------------------------|-----------|
| Total acres in Choctaw Nation | 6,688,000 |
|-------------------------------------|-----------|

| | |
|---------------------------------------|-----------|
| Total acres in Chickasaw Nation | 4,650,935 |
|---------------------------------------|-----------|

| | |
|-----------------------------------|------------|
| Total acres in both nations | 11,338,935 |
|-----------------------------------|------------|

| | |
|---------------------------------------|---------|
| 8,700 freedmen at 40 acres each | 348,000 |
|---------------------------------------|---------|

| | |
|---|---------|
| Reservations for town sites, railroad rights of way, schools, churches, court-houses, cemetery grounds, etc | 100,000 |
|---|---------|

| | |
|--|---------|
| | 448,000 |
|--|---------|

| | |
|---|------------|
| Net acreage to be allotted to citizens, except freedmen | 10,890,935 |
|---|------------|

| | |
|--|-----|
| This number of acres divided equally among the 19,754 citizens of the two nations, exclusive of freedmen, would make a per capita allotment of | 551 |
|--|-----|

Creeks:

| | |
|------------------------------|--------|
| Creek Indians by blood | 10,014 |
| Freedmen | 4,757 |

| | |
|--------------------|--------|
| Total Creeks | 14,771 |
|--------------------|--------|

| | |
|-----------------------------------|-----------|
| Total acres in Creek Nation | 3,040,000 |
|-----------------------------------|-----------|

| | |
|--|--------|
| Less estimated reservations for town sites, railroad rights of way, schools, churches, court-houses, cemetery grounds, etc | 30,000 |
|--|--------|

| | |
|--------------------------------|-----------|
| Net acres to be allotted | 3,010,000 |
|--------------------------------|-----------|

| | |
|--|-----|
| Which, if divided per capita, would give each citizen, inclusive of freedmen | 203 |
|--|-----|

Cherokees:

| | |
|---------------------------|--------|
| Cherokees by blood | 26,500 |
| Intermarried whites | 2,300 |
| Freedmen | 4,000 |
| Delawares | 871 |
| Shawnees | 790 |

| | |
|-----------------------|--------|
| Total Cherokees | 34,461 |
|-----------------------|--------|

| | |
|-----------------------------------|-----------|
| Total acres Cherokee Nation | 5,031,351 |
|-----------------------------------|-----------|

| | |
|---|--------|
| Less estimated amount of land to be reserved for town sites, railroad rights of way, schools, churches, cemetery grounds, etc | 60,000 |
|---|--------|

| | |
|---|-----------|
| Net amount in acres, to be allotted | 4,971,351 |
|---|-----------|

| | |
|---|-----|
| Which, if divided per capita, would give each | 144 |
|---|-----|

Creek agreement.—I am satisfied that, after a somewhat careful review of the situation, the Creek agreement made between the Dawes Commission and a like

commission representing the Creek or Muscogee Indians will be ratified by a popular vote of the members of said tribe. All indications of public sentiment point to such result as highly probable.

Chief Isparhecher has consented to call said election, but his call will not be announced and the day of election fixed until after the meeting of the Creek National Council, which convenes at Okmulgee on the first Monday of October, proximo. Chief Isparhecher, in explanation of his delay in calling said election, says that he desires that it shall be held under such rules and regulations as the national council may prescribe, and he also desires that the questions involved shall be fully understood and discussed by his people before the final vote is taken; and, in order that the Curtis bill and agreement may be fully understood, he is having them translated into the Creek language, so that the voters may read them and act intelligently thereon.

United States jail.—A United States jail is located here, but it is wholly inadequate to hold in confinement, comfortably, the prisoners of various grades of offense committed to its charge. Upon this point we submit extracts from a report made by a special grand jury to Judge John R. Thomas for the May term of the United States court (1898):

We find the jail entirely too small to accommodate this great number of prisoners, which compels the indiscriminate mingling of all classes, the vicious and hard-hearted being mixed with those who have not yet been proven guilty of any crime. * * *

In conclusion, we desire to again call the attention of your honor to the urgent need of more room in the jail and hospital, and that your honor use your influence with the proper authorities at Washington for the betterment of the condition which now exists in this particular. (Signed) John Adams, foreman.

Congress at its last session appropriated \$60,000 to establish sites and erect jails thereon, one each in the northern, central, and southern districts of the Indian Territory—sites to be selected and money expended under direction of the Attorney-General. Thus far, so far as I am advised, no substantial progress has been made in this matter under said appropriation. At this time there are over 200 inmates in said prison, which is small, cheaply built, and is a poor makeshift for a Federal jail. It is below the dignity of our Government and is a living rebuke to its usual generous treatment of prisoners, some of whom, though fallen in the ways of sin, are not unregenerate, and may be born again into a higher life. I would respectfully recommend that the necessity for the enlarging and otherwise improving of the jail for this district be presented to the judicial department for appropriate and speedy action.

Remarks.—This report has been delayed by the onerous duties imposed upon this agency by the passage of the Curtis bill. Its correspondence swelled in volume, and the collection of revenues required time and close attention.

I send herewith catalogues of the male and female seminaries of the Cherokee Nation located at Tahlequah, Ind. T., and also a list of Cherokee general-fund warrants unpaid on August 20, 1898, as appropriate statistics to accompany this report.

Conclusion.—In conclusion, permit me—in no perfunctory sense—to express my thanks to the Indian Office for courtesies shown me and for valuable advice given me in the discharge of my duties. I also recognize here the valuable assistance given me at all times by the clerks of this agency, Messrs. J. F. Wisdom and W. F. Wells, and recommend them and their services to the favorable consideration of the Department.

Awaiting your orders in the future, which I shall obey at all times, I am, very respectfully, your obedient servant,

DEW M. WISDOM,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF AGENCY IN IOWA.

REPORT OF SAC AND FOX AGENCY.

SAC AND FOX AGENCY,
Toledo, Iowa, September 15, 1898.

SIR: I have the honor to submit herewith my fourth annual report of one of the most primitive tribes of Indians within the borders of the United States. As introductory to this report I will submit some matter concerning the history of this people and their present comparative relation to other tribes, which can be secured only by extended research and actual experience among them. A more typical

example of the primitive Indian is probably nowhere to be found in the country, strange to say, than is here found in the very center of one of the greatest and most advanced States of the Union.

Historical.—Four hundred members of a prehistoric race, residing on an average of a little more than 8 acres of land among the hills, groves, and meadows which skirt the banks of the beautiful Iowa River in Tama county, enjoying the rude, wild life and cherishing the customs of their ancestors of a century ago, relishing the dog feast and growing zealous in the medicine dance, marrying and divorcing as their fathers did before the light of a Christian civilization spread beyond the banks of the Mississippi River, without a church house or a school, or a single communicant of Protestant or Catholic faith, although for fifteen years devoted missionaries have faithfully ministered to their physical wants and zealously tried to make the story of Christ music to their barbaric ears and comfort to their disquieted souls, clinging firmly and steadfastly in life and in the hour of death to the superstitions of their ancestral warriors of a hundred years ago, has been such an anomaly in the history of the North American Indian as the Indian Bureau was until recent years disposed to disbelieve. Yet such is no overdrawn picture of the life of the Muskewaki Indians as they have resided in Iowa for over forty years. This band of Indians is a remnant of the once powerful Sauks and Foxes, who were a terror to the white settler in the region of the Great Lakes and the Mississippi Valley, and every other band of Indians whose path they crossed.

Their original abiding place is hidden among the mysteries of the unwritten history of the continent. Caleb Atwater, who visited them along the Mississippi River in 1829, wrote at that time:

The farthest back I am able to trace their traditions was up to the time when our European ancestors first settled on this continent. That story every Indian can tell; and the Sauks have some tradition of their living, as I suppose, in Rhode Island, and of King Phillip's war.

This story by Mr. Atwater and known facts concerning the history of these people in the north correspond very closely to the traditions that are related by the old men of the tribe, who cherish them as the most sacred legacies of their fathers. In the warm summer days it is not uncommon to see an old man, with his blanket spread upon the ground and himself disrobed of all garments except the breechcloth, basking in the sunshine and teaching his grandchildren and the young men of the tribe the religion and traditions of his ancestors. They relate that the first white man their people saw was an Englishman. The next nationality they came in contact with was the French; that the French were hostile to them and allied other Indian tribes against them, and finally drove them westward across the lakes.

The Sac and Fox Indians of Iowa are the Foxes of the tribe known in treaties with the Government as the "Sac and Fox of the Mississippi." Just when or where the union of the Foxes and Sauk took place I am unable to state, but at the siege of Detroit they were two distinct tribes, for it is related that the French were enabled to withstand the fierce and disastrous assaults of the Foxes only by an alliance with the Sauks and other tribes in that locality; and as late as 1815 the United States made a "treaty of peace and friendship with the Fox Nation." This treaty is now in the possession of the chief of our tribe, and is preserved in a little buckskin sack, which he guards as jealously as he guards his life.

The tribe attaches as much importance to the treaty of 1815 as we do to the Declaration of Independence or the Constitution of the United States. To it they invariably refer when pressing any claim against the Government. They boast with much pride that they have never violated any of the stipulations of this treaty and from its date to the present time none of their band have taken up arms against the Government. They disclaim any part or responsibility in the Black Hawk war, and point to the fact that Black Hawk was a Sauk and that the war known in history by his name was an uprising of the Sauks and not of the Foxes.

This band is otherwise known as the Muskewaki. The spelling here given is that adopted by the Smithsonian Institute. The name as locally used during their residence in Iowa has been spelled Musquakie, and in a certificate of good character given to their chief by John C. Calhoun, Secretary of War, in 1824, they were referred to as the "Musquaky Nation." There have been many erroneous explanations in vogue as to the meaning of this name and the date of its origin. For many years the story was current that the name originated at the time of the outbreak of the Black Hawk war when the Foxes refused to take part in the hostilities, and that it signifies "coward." Nothing could be farther from the truth, for I have already indicated that the name was common in 1824, and however spelled, it is always pronounced the same way by the Indians, and, literally translated, signifies "red earth." The Indians claim that it was the word by which their tribe was originally designated and distinguished from other tribes, and

boast that as it signifies "red earth," they are the original Indians—the first created by the Great Spirit—and that when they were created he gave to them the name Muskewaki, signifying that they had been made from red earth.

By a treaty, in 1842, the joint tribes sold their lands in Iowa to the United States, and in partial consideration therefor were assigned a reservation in Kansas. The Sauk branch promptly removed to Kansas, but the Foxes hesitated to leave Iowa. However, under the influence of their leaders and the Government agents, the most of them removed to Kansas between 1842 and 1845, but scarcely had they settled in their new home when they became dissatisfied and began to return to Iowa in small groups, and between 1845 and 1866 about 264 members of the tribe returned, and settled in small villages along the Iowa River in Tama, Iowa, and Johnson counties, and it is related that a few of their band never left the State.

In 1856 the general assembly of Iowa passed an act legalizing the residence of these Indians in the State and requesting the Secretary of War to pay the Indians their annuity in their new home. In the summer of 1857, while the Indians were residing along the Iowa River in Johnson County, five of the principal men of the tribe were sent out to select a location for their permanent abiding place, and on July 13 purchased their first tract of 80 acres of land from a white settler in Tama Township, Tama County. In 1866 the first agent was appointed over them in the person of Maj. Leander Clark, who is still a resident of Toledo. That year the first census was taken since their return to Iowa. There were then enrolled 264 persons—125 males and 139 females—and their first annuity payment was made in January, 1867.

After this payment had been made the Secretary of the Interior ordered them to remove to the joint tribal reservation in Kansas, and informed them that no further payment of annuity would be made to them except upon said reservation. Fortunately Congress reversed this unfair ruling by a special act on March 2, 1867, providing that the Indians should receive their annuity at their Iowa homes so long as they remained peaceful and as they had the assent of the government of Iowa to reside in the State. Since that date this band has annually received an approximate proportion of the annuity due it under the treaties of 1837 and 1842, but during the years from 1853 to 1867 the band was wholly unrecognized by the Government and received no annuity, and to the present time the Fox branch of the Sacs and Foxes of the Mississippi has not been permitted to share in the benefits which should accrue to them under the stipulations of the treaties above referred to, wherein they provided for schools, physician, and tribal government, including \$500 annually to be paid to their chief, and I here submit that the responsibility for the immovability of this tribe and its opposition to civilization rests, all things considered, far more with the Government than the Indians themselves.

When these Indians determined to return to Iowa and take the unequal chance of casting their lot among white men, purchasing land on their own account, and relying on their resources, it took a special act of Congress to save them their annuity which had been guaranteed to them by solemn treaty stipulations, and it has taken two or three special acts of Congress since that time to give them something like a fair apportionment of the funds due them under said treaties.

For the past forty years this tribe has cost the Government of the United States less per capita for administrative purposes than any other tribe in the United States. Their peaceful career has been their greatest curse. They have not enforced the pledges of the Government by force of arms or by threat of uprising since the treaty of peace in 1815, and apparently for this reason they have been left alone to suffer while other tribes, including the Sauk branch of their own tribe, have been given the lion's share as a natural consequence of their hostility. To-day the chief of the Sauk branch in Oklahoma is enjoying the treaty stipulation of \$500 annually, and has received this amount for all the years since the treaty was made, while the chief of the Fox branch, to whom an equal amount was as solemnly pledged in the same treaty, has not received a single dollar since the return of the Fox band to Iowa. Has not the chief of the Muskewaki paid too dear a price for the honor of a good conscience? In reflecting upon these events one is led to believe that had he taken a war club and led forth his band upon the early settlers along the Iowa River in 1857, instead of transacting a simple piece of legitimate business in buying a small patch of land upon which his people could settle, he would have enforced recognition and reward where deeds of peace and years of quietude have been unable to make appeal.

To the 80 acres originally purchased in 1857 there have been added from time to time other tracts of land, until to-day this tribe owns nearly 3,000 acres, held in trust for them, some by the governor of Iowa, some by the United States Indian agent, all of which is soon to be transferred in trust to the Secretary of the Interior, as provided by act of Congress in 1896. During their residence in Iowa prior

to 1896 the question of the legal status of these Indians was very much complicated. In order to clear the matter up to some extent and to open the way for the establishment of an agency boarding school, I organized in the summer of 1895 what is known as the Indian Rights Association of Iowa. The purpose of this association was to take such steps as were necessary to determine and fix, as far as possible, the legal status of the Indians and to promote education and civilization among them. The work of this organization was left in the hands of an executive committee composed of Rev. S. N. Fellows, D. D., of Fayette, Iowa; Hon. E. C. Ebersole, Judge John R. Caldwell, of Toledo; Hon. A. E. Jackson and Hon. E. G. Penrose, of Tama, and the Indian agent, and it spent much time for several months in investigation and advisement. The committee finally formulated a bill ceding jurisdiction over the Indians and over their lands to the Federal Government, making certain advisable reservations in criminal matters and fixing the power of the State to tax the Indians for State, county, road, and bridge purposes, and relieving the Indians from taxation for educational and charitable purposes. Heretofore the Indians had been paying taxes to support the white schools in the townships and were receiving no benefits therefrom; they were being taxed to help maintain the State University, and not a member of the tribe was provided with a common-school education.

The act granting jurisdiction was passed in January, 1896, by the legislature of Iowa and shortly afterwards Congress passed an act accepting the jurisdiction tendered. This has no doubt been the most important legislation affecting these Indians since their residence in Iowa. It will probably not settle all disputed points, but it clearly points the way for the exercise of Federal authority by the agent in charge, and every day proves the wisdom of these acts. Prior to this legislation the agent could exercise little or no authority and the Indians were well aware of the fact and often took advantage of it. Hostile members of the tribe who did not approve of the course of the agent at times would order him from the grounds and even attempt to enforce their demand. I do not know that they ever succeeded, but this simply shows how far these Indians had gotten from under the control of Federal authority, and that to get them back after forty years of undisturbed self-will is no easy task.

The cession of jurisdiction to the Federal Government opened the way for a school. In introducing this subject it is only fair to history to state that the Government maintained a day school on the Indian land for about eighteen years and that the school amounted to little less during the last than during the first year of its existence. Without the authority to enforce school regulations it was impossible to maintain a school of respectable standing, and while a few of the boys of the tribe availed themselves to a limited extent of some of the advantages offered, it can be truthfully said that the school was almost a farce during the entire eighteen years of its operation.

The matter of establishing a boarding school for the tribe was taken up in January, 1895, with the Indian Department, and during the ensuing months received much consideration. Commissioner Browning indicated his approval and willingness to cooperate with us to that end as soon as the matter of jurisdiction should be settled, so that the Government would be warranted in establishing a school over which it could operate without liability of interference by reason of the jurisdiction of the State of Iowa.

After adopting a plan by which to settle the question of jurisdiction, the executive committee of the Indian Rights Association determined to make an effort to secure an appropriation from Congress for the establishment of a boarding school. A delegation consisting of Dr. Fellows, of Fayette, Judge Caldwell, of Toledo, and the writer was detailed to wait upon Senator Allison at his home in Dubuque in the fall of 1895, prior to the opening of Congress. The plan presented met with the hearty approval of Senator Allison, and early in February, 1896, acting on similar recommendations from both Commissioner Browning and Senator Allison, a delegation representing the Indian Rights Association visited Washington for the purpose of presenting the matter to the Committee on Indian Affairs and to the Iowa delegation in Congress. The committee detailed for this work consisted of Dr. S. N. Fellows, of Fayette; Rev. T. S. Bailey, of Cedar Rapids, and the agent. When we reached Washington the Indian bill had already passed the House. An agreement was promptly reached between the Indian Department and the Iowa Senators to attach an amendment in the Senate, asking an appropriation of \$35,000, to the bill as it passed the House. This was done, and was concurred in by the House, and thus the first appropriation for the first school for these Indians was secured.

In passing this subject and submitting it to record, I desire to most cordially, on my own behalf and on behalf of the people of Iowa, among whom the Indians

reside, acknowledge the valuable services of the other members of the executive committee of the Indian Rights Association of Iowa, the many friends who contributed, financially and morally, to its support, and for all these to make acknowledgment of the generous, patriotic, and substantial assistance rendered us by former Commissioner Browning and his Department, and by the United States Senators and Members of the House from Iowa.

Last fall the first policemen were appointed, three in number, and members of the tribe. The old men of the tribe and the council used every means in their power to intimidate these appointees and to drive them from their conclusion; but fortunately they were resolute and courageous fellows, and after they had given me their pledge and taken the oath of office, they could not be induced to retract, and while they have had some shortcomings, I can truthfully say that I never saw any men, red, white, or black, who have borne responsibility more seriously and progressed more rapidly than these men have in their new relation. I was authorized to appoint a fourth policeman, but the hubbub of the tribe was so great over the appointment of the three that I have not to this day been able to find a fourth man who had the courage to assume the responsibility. I have now several good men who are considering the matter, but they are slow in reaching a conclusion.

These historical facts are here sketched for the benefit of my successor, who otherwise would be compelled to do as I have done, gather them in fragments from here and there as best he could, and for others who may read this report and who are interested in the history and welfare of the Foxes. What follows relates solely to present conditions.

Location.—The agent's office, post-office, and telegraphic address are located at Toledo, the county seat of Tama County. The agency boarding school is situated on a beautiful elevation overlooking the city of Toledo, 1 mile west of the courthouse. The farmer's residence and headquarters, which are the only Government buildings located on the Indian land, are situated at a point 3 miles southwest of the corporate limits of Toledo and $2\frac{1}{2}$ miles west of the corporate limits of Tama, and 4 miles from the agent's office by the usually traveled highway. These buildings consist of a two-story frame dwelling formerly occupied as a day school, abutting which is a one-story building 20 by 20 feet, used for a council room and shop, a good frame barn, chicken house, hog house, and storehouse. The location is central, and very desirable for the work of the farmer. Some further minor improvements are needed, which will be made the matter of special communications.

Principal events.—The principal events to be recorded in connection with the history of this agency during the past year are: (a) The murder of a young girl 16 years of age; (b) the death of Ma tau e qua, the last war chief of the tribe; (c) the division of the annuity into semiannual payments; (d) the refusal of one-fourth of the tribe to draw their annuity; (e) the prosecution of Black Hawk for fraudulently obtaining annuity from the tribe; (f) the appointment of the first policeman in the history of the tribe; (g) the arbitration of certain damage cases against the Chicago and Northwestern Railway Company; (h) the claims of Muck que push e to the chieftainship of the tribe and the disturbances of his followers; (i) the continued opposition of this band to the established highway through the Indian country and the claims of Muck que push e to a certain 80-acre tract of land; (j) the improvement in agriculture; (k) the completion of the boarding school and the manifest opposition of the Indians to education.

(a) On the night of July 25, 1897, Se ten e qua, a girl 16 years of age, was murdered on the open prairie about 500 feet from her home, the nearest Indian house. That night some of the Indians had been engaged in a dance which had been introduced by visiting Winnebagoes. The girl had attended the dance in company with other girls and had remained until after midnight. An examination of the body indicated that the murder had been committed about 1 or 2 o'clock in the night, and showed five contused and lacerated wounds on the face and forehead and one deep, sharp wound in the right ear and scratches and finger prints on the neck. The bridge of the nose had been crushed and the frontal bone fractured. Two clubs were found close to the body—one about 12 inches in length and $1\frac{1}{2}$ inches in diameter, the other a stick of cord wood with sharp angles. The wound in the forehead was about 4 inches in length and evidently had been made by one blow with the stick of cord wood. The body was discovered the next morning by some small Indian boys who had gone to open the gate leading through the camps for some soldiers en route overland from the West. Immediately on notice of the crime I summoned the county coroner, who made an investigation, held an inquest, and returned a verdict in accordance with the facts here stated.

The Indians authorized me to offer a reward of \$100 for the detection of the criminal, and for several weeks I devoted almost my entire time to ferret out the

crime, and was assisted by the county attorney, Mr. S. C. Huber, mayor of Tama, and former Indian agent, W. R. Lesser, but all without success. Some of the older men among the Indians were of the opinion that the murder had been committed by a squaw, and the ferocious and lacerated wounds inflicted on the face and head of the victim would seem to warrant the conclusion, but I was at a loss to discover any one who had a motive for the affair, except a slight suspicion against a visiting Winnebago squaw who had a week previous had some difficulty with this girl, but of so slight importance that her provocation seemed wholly inadequate to the crime, and I could discover no circumstantial evidence supporting the suspicion. It is, however, a curious coincidence that this woman shortly afterwards returned to her home in Nebraska and, although apparently enjoying the best of health, suddenly died, and our Indians say that she suicided on account of fear of detection. This has been the second murder committed in these camps since the location of the Indians here, in 1857.

(b) Ma tau e qua, the last war chief of the Sac and Fox Indians of Iowa, who knew what it meant to meet the enemy in open battle or to take him from ambush in the pioneer days of the State, died in camp along the Iowa River, about 4 miles west of Tama, at sunrise on the morning of October 4, at the advanced age of 87 years. The old chief had been in failing health for several years, but the serious illness which led to his death was two months in duration, and in the end he was the victim of consumption, one of the diseases that is responsible for a very high death rate among these Indians. On account of the important part he played in the history of this tribe during its residence in Iowa, and the interest that is attached to his life and death, I herewith submit at some length a biographical account, giving also a description of the interesting ceremonies which attended his burial.

Ma tau e qua was born at Dubuque, Iowa, in 1810, and had the place and date tattooed on his right arm. In physique, habits, customs, and mental endowments he was a typical Indian of the warrior days. While he was always reticent in speaking of his personal activities in the early events which filled the pioneer days with stories of war, adventure, and romance, the men of his tribe hold as sacred legacies the traditions of the part Ma tau e qua played in some of the early struggles along the Mississippi River and in Iowa. He was not of royal blood. He never laid hereditary claims to leadership, yet even in his young manhood he was recognized as one of the strongest characters of his tribe, and was the last one of the five sent out on the tribe's return from Kansas to find a suitable abiding place in Iowa, and on July 13, 1857, he, in company with his four associates, purchased 80 acres of land from one of the early settlers in Tama County for \$1,000. When these scouts were sent out by the tribe, the Indians were residing temporarily at various points between Iowa City and Ottumwa, but soon after the selection of a location in Tama County the members of the tribe came to this place, and to their original tract of 80 acres there has been added from time to time adjoining farms of white settlers, until to-day they are in possession of nearly 3,000 acres.

During the most of the period of their residence in Tama County, Ma tau e qua was the strong man of the tribe, especially in more recent years. He was no king, but he was a king-maker. He was the Warwick of the Muskwa'ies. When the old chief who brought the Indians back to Iowa died, and his son was young and timid, it was Ma tau e qua who called about him the headmen of the tribe and had Pushe to neke qua, the present ruling chief, proclaimed the chief of the tribe, and through all these years Ma tau e qua has been the mainstay of the ruling chief. Within the knowledge of the writer these two men never failed to stand together on any important matter, and while the king is more progressive in his methods than the king-maker, he never advanced beyond where his Warwick would follow, and it must be said to the credit of this barbarian warrior that he had a happy faculty of cheerfully acquiescing in the inevitable. He was a strong opponent of education, and the last time the agent discussed the question with him he ended his reply by saying, "Maybe, after I am dead."

Ma tau e qua's burial on Tuesday afternoon, October 5, at 1 o'clock, was attended with considerable interest, and many of the business men from Montour, Tama, and Toledo paid their respects to his memory by calling at his late wigwam, and quite a number attended his burial. Judge Burnham adjourned the district court at Toledo to accompany the agent to the funeral, in company with Inspector A. J. Duncan, of Washington, D. C., and the Hon. S. M. Endicott, of Traer. The burying ground where Ma tau e qua's body rests is situated on the south slope of a high bluff along the north bank of the Iowa River, about an eighth of a mile east of the "Narrows," where the Chicago and Northwestern Railway passes between the bluff and the dam. The body had been carefully prepared and preserved according to Indian methods and customs, and was dressed

in the regalia of a war chief. It was wrapped in a blanket and laid on a framework of poles, over which was spread a new piece of matting woven by Indian women from rushes in beautiful designs of various colors. Before his death the old chief had selected Pa to ka to have charge of his burial and had given minute directions as to all the appointments, and all his directions were closely followed. He was buried in a rough coffin, in a sitting posture, the painted feather in his hair coming just to the edge of the ground, his face to the west, and his face and breast laid bare. Otherwise he was clad in moccasins, leggings, and blanket, and adorned with beads and paint, much as he had appeared on many important occasions. In the coffin were placed a bottle of water, a small vessel containing food, an Indian hand bag containing many little articles that would be useful on the journey to the happy hunting ground, and his two walking sticks. Then a lid was placed over the lower part of the coffin, covering the limbs of the body, leaving the chest exposed, and over the lid of the coffin were spread several blankets. All the blankets and clothing used by the deceased during his sickness were placed in the grave.

After the body had been arranged in the coffin, Wa pellu ka, an old man who had fought in more than one historic battle side by side with Ma tau e qua, delivered an address in the Indian language at the grave, and, according to the Indian custom, was the first to sprinkle tobacco into the grave. In this ceremony he was followed by all the other Indians present, who passed around the grave as they sprinkled holy tobacco into the coffin, and one of their number sat by the open grave for several minutes and in a low monotone performed the last rites. The tobacco used in their burial exercises is raised by a few of the priests of the tribe on a small patch of ground set apart for that purpose, and is used only in connection with their religious ceremonies. No ground is permitted to touch the body, and after the body had been properly arranged in the coffin a gable roof constructed of boards was placed over the open grave; over the boards a canvas was spread and the grave was inclosed with a crib work of oak poles, and the angular space between the roof and the poles was filled with earth.

After the grave had been finished, Wa pellu ka closed the ceremonies with brief remarks in the Indian language. A heavy pole was then erected at the west end of the grave, about 4 feet out of the ground, and on it was painted by George Morgan, the secretary of the tribe, a few emblems to characterize events in the life of Ma tau e qua. At the left was painted the picture of a bear, representing the Band of the Bear to which Ma tau e qua belonged, and opposite was painted the picture of an eagle. Under the eagle was the bust of a man, and under this the name of Wa pellu ka, written in Indian, and a gun. Wa pellu ka belongs to the Band of the Eagle. Lower down are five horizontal marks, which are used to represent an event in the life of Ma tau e qua and Wa pellu ka, wherein they had an encounter with four Pawnee Indians in Kansas and fought side by side for several hours, leaving the field with the scalps of their four enemies dangling at their belts. The stake contained beside these characters the picture of a Sioux buck and a Sioux squaw, and one mark under each, indicating that Ma tau e qua had killed one of each.

At this point, Pa to ka, who was in charge of the burial, took all the effects left by the old warrior and divided them among the six other men who had assisted in the burial. In the distribution of gifts one representative of the white race was remembered. The exercises lasted about two hours. In this connection it may be remarked that the greatest stoicism is manifested by these Indians on occasions of this character, and that neither in the presence of the dying nor at the funeral do they ever show any sign of emotion or shed a tear. Death with them is simply a solemn fast, neither to be praised nor lamented.

(c, d) By request of the Indians their annuity was last year divided into semi-annual instead of annual payments. This is one of the first requests which the Indians made after my appointment as agent, and was frequently repeated, but for a number of reasons was not deemed practicable until last fall. When the change was made many of the Indians objected, and about one-fourth of the tribe, headed by Old Bear, who aspires to leadership and who has never drawn his annuity, refused to accept the payment, and continue to hold out to this time. The division of the annuity was only the occasion for this concerted manifestation of hostility. This band represents the most unprogressive members of the tribe, who do not farm and who bitterly oppose all such innovations as the opening up of their country by a highway, the establishment of a school, the appointment of policemen, and every act on the part of the Government which forecasts the breaking down of ancient Indian customs and habits. They denied to the Government the right to change the manner of their payment from annual to semi-annual periods. The benefits of this change, however, are so apparent that I

would not recommend going back to the old method under any considerations. This band will probably find easy excuse to accept the annuity when a new agent is appointed.

(e) Black Cloud, one of the worst characters of the tribe, had for two years fraudulently obtained annuity for a child enrolled with the mother among the Sacs and Foxes in Oklahoma. When he presented the child for enrollment in 1895, he enforced his demand in the strongest terms upon the council, and deliberately, after having been warned of the nature of the offense should his statements prove false, signed a declaration affirming that the child was not enrolled in Oklahoma. Last summer I secured undoubted evidence that the application of Black Cloud was fraudulent, and at the same time discovered that a sister to the mother of this child also had a child enrolled in our tribe, she too being a member of the tribe in Oklahoma. This second enrollment had been made without formal declaration and just who was responsible for it was not easy to determine. But Black Cloud's fraudulent declaration had been made knowingly, willingly, and for the purpose of defrauding the tribe, and, as aside from this he was a bad character, I determined that prosecution should be made. He was tried in the November term of the Federal district court and sentenced to two years hard labor in the State penitentiary at Anamosa. The example is worth much. Over twenty years ago an unprovoked murder occurred in camp, and although all the facts in the case were fully known the murderer has gone unpunished and is to-day one of the band which is refusing to yield to Federal authority.

(f) In November the first policemen in the history of the tribe were appointed. The authority was at first for the appointment of two, but the opposition of the Indians was so strong that it was deemed advisable to increase the number to four, and authority was accordingly granted, but only three men have yet been appointed. The opposition of the old men of the tribe has been so great that I have been unable to find a fourth Indian suitable for the position who will accept it. When the policemen were appointed frequent councils were held, at which every means within the power of the old men was used to induce the men who had accepted positions on the force to abandon them. On more than one occasion the policemen have said to me that their lives had been threatened and they had not a friend in camp (of course, referring to the principal men), but they have stood by their duty bravely and at times under the most trying circumstances. Their names, as the first men of the tribe who have had the courage to withstand the threats, the taunts, and jeers of their elders and superiors and wear their responsibilities with dignity and fidelity, deserve a place in the record—James Poweshiek, Samuel Lincoln, and John Canoe. Their presence in police uniform and clothed with police power has enforced respect for law and order to a degree highly encouraging.

(g) In July, 1894, the Chicago and Northwestern Railway Company set out fires from engines passing over the road, which destroyed the timber on 40 acres of land and the warehouse containing nearly all the agricultural implements of the tribe. On assuming the duties of the office, October 1, 1894, I was advised that the matter was in process of adjustment and would be promptly settled; but the company did not adjust it, and when I called upon it to do so, the claim agent denied all responsibility for the damage. The matter was submitted to the Indian Department, but as the land was held in trust by the governor of Iowa, it was found that suit would have to be brought in the State court by the trustee. The affair was then presented to Governor Jackson, who assured us that he would prosecute the case, but he retired from office without doing so. We then laid the matter before Governor Drake, who ordered the attorney-general of the State to bring suit for damages to the amount of \$2,000, but delay followed delay until another governor was inaugurated. In the meantime the Indians became suspicious of agent, governors, and attorneys. They wanted a settlement without suit, as the chief told Governor Shaw, "White man's lawyers tricky; don't like his court." To the end of an equitable settlement without litigation, Governor Shaw and Attorney-General Remley tendered their good offices, and in May secured an agreement from the attorneys of the road to settle the case for \$750. This was not enough—would not pay for the warehouse and tools—but the Indians liked it better than "lawyers and white man's court." The disappointing part of this account is that the railroad company has not yet paid the amount agreed upon by its attorneys, and refuses to say that it will or will not pay, and it may yet be necessary for the Indians to take their case into court to get a shadow of justice. I have done everything, personally and officially, which I could do in the matter, and by reason of the legal status of the case can only cooperate with the governor of Iowa, who is the legal representative of the Indians in the case.

(h, i) Muck que push e to, otherwise known as Old Bear, now 34 years old and the youngest son of Ma min wau ne ka, a former chief of the tribe, has for more than a year past aspired to the chieftainship of the tribe and is creating considerable division and contention in the tribe. He finds the present an advantageous occasion for pushing his claim. He is uncompromisingly opposed to the advancement of the tribe and the many innovations that have occurred in recent years. They are used by him in rallying to his support many of the old men and women who are as much opposed to advancement as he. They realize that the present chief, Push e to neke qua, is personally on the best of terms with the influential whites of the locality, and that he looks approvingly on the progress made by the members of the tribe and has no personal inclination to oppose the school.

The first purchase of land for the tribe in Tama County was made when Old Bear's father was chief and the deed was erroneously made to five members of the council and their heirs. Old Bear has been laboring under the impression that this deed ran to his father and several of the council men and that he and one other young man are the only living heirs. When the transfer of jurisdiction over these lands from the governor of Iowa and the Indian agent to the Secretary of the Interior, as provided by an act of Congress in 1896, came up, the rightful title to this 80-acre tract was involved, and, after a thorough investigation of the matter, the Department ordered suit to be brought in equity in the district court in this county, asking to have the deed re-formed and the title vested in the tribe instead of in the individual members who were sent out to make the purchase, and their heirs. The case is now pending and will be tried about the 15th of October. Old Bear and his band are making preparations to contest it, but I am of the opinion that the court will order the deed re-formed.

The points of contention raised by Old Bear and his followers, which are at this time creating considerable disturbance and unrest in the tribe, are: (1) The claim of Old Bear to the chieftainship; (2) the individual title to the 80 acres of land referred to; (3) the denial of the right of the State to establish a highway through the Indian land; (4) the denial of the right of the Government to divide their annuity into semiannual payments; (5) opposition to the school and refusal to send their children; (6) objection to policemen; (7) objection to any Indians owning cattle on the Indian land, and general opposition to industry and frugality.

From this brief outline it will be seen that the band of Old Bear stands for the most pronounced opposition to all progress, and that it would be disastrous to the interests of civilization and order in the tribe for his claims to chieftainship to be recognized. Aside from this, however, he has, according to the Indian customs and traditions, no legal or just claim to leadership. When his father died, the eldest son succeeded to the chieftainship, but lived only a few weeks, and the present aspirant at that time was a mere boy. This left the tribe without a hereditary chief of lawful age. The council men and head men of the tribe were then summoned by Ma tau e qua, the old war chief who died last fall, and Push e to neke qua, the present chief, was proclaimed chief and head of the council, and until a little over a year ago his right was undisputed. According to the traditions of the tribe, which are in this matter as binding upon them as our statutes are upon us, there are two methods by which chieftainship can be obtained, namely, heredity and election, and an investigation of the matter shows that one is regarded as legitimate as the other, especially if an election is made at a time like that at which Push e to neke qua attained his chieftainship, when there was no hereditary chief in the tribe of eligible age. Old Bear and the head men of his band called upon Governor Shaw in June and laid before him their complaints on the chieftainship, the highway, and the land. After investigating the matter Governor Shaw informed Old Bear that he had no legal or just cause for complaint in either case, and that hereafter he would be compelled to recognize and negotiate all matters of this kind with Push e to neke qua, the legal and present ruling chief of the tribe. However, I understand that Old Bear and his band are again taking this matter up through an attorney in an adjoining town.

(j) The improvement that has been made in agriculture during the past year deserves special mention, and the efficiency and success with which Mr. D. S. Hinegardner, additional farmer at the agency, has advanced this important line of industry among the Indians is the subject of the most complimentary remarks in the locality. The grade of horses has been improved, and I believe it is not overstating the truth to say that the productiveness of Indian labor has been during the past year double what it was in any year preceding 1897. This will not appear from a comparison of the present report with some of the reports in former years, but we can not be held responsible for flights of imagination which have pictured glorious sunrise while yet the midnight of ignorance and indolence lingered.

Last year I reported 352 bushels of wheat, the first raised by our Indians; this year they thrashed 1,400 bushels of wheat. Last year I reported 750 bushels of oats; this year we thrashed 2,600 bushels. Last year our estimated corn crop on 500 acres was 12,500 bushels; this year the estimated corn crop on 400 acres is 15,000 bushels. Last year I reported 300 bushels of potatoes; this year we report 850 bushels. This progress is no fiction. It is a substantial, reliable fact that challenges investigation. The progress here indicated has extended to many lines. Last year was the first year in which the Indians sold any considerable amount of surplus produce, and their sales during the year amounted to \$2,300, as near as we were able to keep a record of the sales made. The future success and usefulness of this tribe of Indians lie in the line of their agricultural progress and the education of their children. To these two phases of the work I have almost wholly devoted my attention during my administration of this office, and through these two avenues to civilization I hope to see this band of Indians yet made useful and intelligent citizens of Iowa.

(k) The new boarding school, including laundry, shop and warehouse, and barn is practically completed, furnished, and ready for occupation. An account of the school will be found in the report of Supt. George W. Nellis, which accompanies this report. Mr. Nellis has been with us since August, 1897, and thoroughly understands our Indians and the peculiar and difficult situation with which he has to deal, and I am of the opinion that the Department can at all times rely on him for sound judgment and intelligent methods in the conduct of the school. We were ready for the reception of pupils on September 1, but fifteen days have passed and none have been enrolled. With Superintendent Nellis I have worked almost incessantly during the day, and a good part of the night, for several weeks to accomplish a successful opening of the school, but the Indians are maintaining the strongest opposition, and at this writing I am unable to say whether pupils will be obtained voluntarily or not. The mere fact that these Indians live in Iowa is no evidence that they are longing for civilization. The problem is no different nor easier than it has been in other years with Indians on the frontier, and it may be necessary for the Government to resort here to the same methods as were used in other tribes to enforce education. I am yet hopeful that the school can be made a success by voluntary attendance, but I do not feel assured that such will prove to be the case.

Land.—The land upon which the Indians reside comprises about 2,800 acres, and is situated in Toledo, Tama, Columbia, and Indian Village townships, Tama County, Iowa. The land is owned by the Indians and is held in trust for them, some by the governor of Iowa and some by the United States Indian agent, although a transfer of this trusteeship from the governor of Iowa and the United States Indian agent to the Secretary of the Interior is now in process, under special acts of jurisdiction between the State of Iowa and the United States in 1896. Of their land 707 acres are rented to white men. The land rented is classified as follows:

| | Acre. |
|--------------------------------|------------|
| Plow land, good | 375 |
| Pasture and meadow | 130 |
| Timber and rough grazing | 187 |
| Waste | 15 |
| Total | 707 |

The land occupied and farmed by the Indians may be classified as follows:

| | Acre. |
|------------------------------------|--------------|
| Plow land, good | 635 |
| Pasture and meadow | 544 |
| Timber and rough grazing | 585 |
| Bluff, timber and underbrush | 167 |
| River waste | 162 |
| Total | 2,093 |

Taxes.—Our Indians pay taxes on all their lands for State, county, county road and bridge purposes, amounting to less than \$300 per year. This is about one-half the amount of taxes paid by white residents on the same valuation.

Agriculture.—The most important industry followed by our people is farming. This has been an item of importance for only about seven years, and the two years just passed have been by far the most productive. At first the Indians were assisted to a considerable extent by white labor. For the past three years no white man has been permitted to do a day's labor of any kind on the Indian land.

This year they have raised 1,400 bushels of wheat, 2,600 bushels of oats, 15,000 bushels of corn, 125 tons of hay and millet, 850 bushels of potatoes, and a large quantity of beans and pumpkins, together with some turnips, onions, and melons. They have 70 teams of good work horses, about 300 ponies, 3 mules, 10 head of cattle, 25 hogs, 740 chickens, 66 farm and spring wagons, 8 of which were purchased during the past summer; 70 plows and cultivators, 12 of which were purchased during the spring season; 2 self-binders, purchased in June; 4 hay rakes and 4 mowers. All of this property belongs to individual Indians except the self-binders and one of the hay rakes, which are owned by small companies, and 3 hay rakes and the mowers, which are owned by the tribe.

Each Indian is permitted to farm on his own account, and receives the rewards of his own labor. Tribal ownership in farm implements has been tested to our entire satisfaction, and has proven a signal failure, while anything like a community of labor has not been considered worth trying. A great many of our people are now taking a commendable interest in farming. Their crops looked as well this year as those of their white neighbors, and I believe that by competent and vigorous supervision they can be induced to take hold of farm work to an extent that will finally make them an independent people. Their land is very productive, and when properly tilled yields encouraging results. Probably no other tribe of Indians in the United States is so fortunately situated in this respect. The principal drawback to be encountered in accomplishing this end will be the small acreage per capita which they own, and for this reason I have made the recommendation for the enlargement of their domain, which will be found in the closing paragraph in this report.

One of the most difficult tasks I have had to perform during the year was to induce the Indians to care for their horses during the winter months. In the early days of December heavy snows fell, completely covering the rough forage. In former winters nearly all of the Indians have left their horses and ponies in the timber and pastures to care for themselves, and each spring we have had from 40 to 60 carcasses to bury. When the heavy snows fell in December I felt that it meant certain death to probably 100 of the horses, if the Indians were left to abandon them as they had done in former winters. I tried to persuade them to care for the stock, but they stubbornly refused to do so and they even got their theology badly mixed up with this practical proposition. Now, just what relation the Great Spirit sustains to a proposition of this kind no one but an Indian can tell, but when he does not want to accede to a demand, I find that he has little difficulty in getting the Great Spirit on his side of the case.

When I found that argument would not win, I notified them that unless they took up their horses and ponies and properly provided them with food, water, and a reasonable degree of shelter, I would take them up as abandoned animals under the State law, feed and care for them for sixty days, and at the end of that time sell some of them to meet the expense. Such a protest as followed would have caused anyone unaccustomed to dealing with them to feel a little "shaky in his boots." When the Indians did not act on my demand I had a corral made, a well dug, and some hay hauled. It was not until the second load of hay was brought to the corral that the Indians indicated any disposition to yield, but when I got that far along a number of them scampered out through the timber and meadows and took up their horses. It was not necessary for me to take up a single animal, and the horses were quite well cared for by their owners. When spring came we found that but 6 out of about 500 horses and ponies had died and that the Indians had sold about 75 of their surplus ponies.

Population.—The population of the tribe on the 30th day of June, 1898, was 388, a loss of 6 over the enrollment of a year ago. This loss was sustained not by reason of an increase in the death rate, which has always been high, but by reason of a decrease in the number of births. Nevertheless there were 17 deaths in the tribe during the year. There was almost a scourge of malarial and intermittent fevers during the fall months, and during the winter and spring months there was an epidemic of whooping cough and measles, and had we not supplied the Indians with medical attendance, I am of the opinion that there would have been nearly double the number of deaths.

In my annual report in former years and in special reports submitted from time to time on the sanitary conditions existing in the tribe I have fully covered this subject, and I feel that there is here little to be said except that there are the same demands existing to-day for medical attendance and hospital service which have existed in other years, and that the United States will not have done their duty toward this people—not even have carried out the intent of some of the treaty stipulations with the tribe—until they shall have furnished relief along this line. Medical attendance is secured for the children in the school, but denied to Indians

in camp, and I here desire to record my recommendation that steps be taken by the Department to furnish this people with (1) a competent physician; (2) a field matron, who shall act in the capacity of a nurse, and (3) a small hospital and in connection therewith laundry rooms and bathrooms for the use of the tribe.

Classification of population.—

| | |
|--------------------------------|------------|
| Males..... | 196 |
| Females..... | 192 |
| Total population..... | 388 |
| Children between 5 and 18..... | 134 |

Besides this enrollment there are about 25 Winnebagoes from Nebraska and Wisconsin and a few Sacs and Foxes from Kansas and Oklahoma residing here.

Dwellings.—Nearly all of our Indians live in wigwams and wick-i-ups. The wick-i-up is used for winter quarters, is oval in form, from 10 to 20 feet in length and from 8 to 10 feet high in the center, and is covered with a matting woven by squaws from rushes gathered along the rivers. The wigwam is a frame structure, about 40 feet long and 20 feet wide, covered with poles, bark, and boards, and is used as summer quarters. Two frame houses were built during the year, one by Samuel Lincoln, a policeman, and the other by William Davenport, a returned student from Hampton Institute. Every time there is a house of this kind built there is a great powwow over the affair and the old men of the tribe vigorously dissent from the judgment of the builder, but nevertheless a little progress is each year made along this line.

Dress.—While the Muskwaki Indian must still be reported as a blanket Indian and many of the older members of the tribe cling tenaciously to the moccasin, legging, breechcloth, loose flowing shirt, and blanket, there has been in recent years considerable improvement in their dress, and the younger element, both men and women, are adopting articles of clothing used by the white people.

Cooking and eating.—The Indians have adopted to some extent the cooking utensils of the whites, but there are only five cook stoves in the tribe and the cooking is done over the open fire in the center of the wick-i-up, and they eat on the ground. Nearly everything that they eat is cooked in lard, and they are content if they have hot fried cakes, pork, and coffee. They scarcely ever taste of beef and are very fond of pork, chicken, turkey, skunk, and dog. They relish skunk as much as a negro does opossum, and dogs are raised in large numbers for feasts and special occasions. They are excellent judges of good flour, and nothing but the first patent of Northern wheat satisfies them.

Religion.—These Indians practice the religion of their fathers with a strictness of their own. Although there has been a mission in their midst for fifteen years, there is not in the tribe a single convert to the Christian faith, and no member of the tribe has ever been given a Christian burial, and only one civil marriage has ever occurred in the tribe. The sincerity with which they practice their religion can not but profoundly impress anyone who comes in contact with them and commands respect for the fidelity with which they cling to the faith of their fathers.

Retrospective.—In closing my fourth annual report permit me to briefly review the past quadrennium. During this period, through the help and encouragement of faithful friends here and the uniform courtesy and assistance of the Commissioner of Indian Affairs, the cooperation of the Senators and Representatives from Iowa, and through other friends of the Indians, I feel that I have been fortunate in occupying the position during a period when some decisive steps have been taken for the elevation and advancement of these people, and that some definite progress has been made. I would summarize the chief events of the past four years as follows.

Awakening of State interest in the Indians.

Securing a thorough investigation by the Indian Department.

The organization of the Indian Rights Association of Iowa.

The extension of the term of service of the farmer from six to twelve months.

Prohibiting of white labor on Indian land.

Improvement of agency premises.

Opening of Indian country by highway and bridging of the Iowa River by Tama County.

Establishment of boarding school.

Appointment of police.

Enforcing care of stock and crops.

Division of annuity into semiannual payments.

Discouragement of credit system and reduction of indebtedness.

Reduction of liquor selling to a minimum.

Cession by the State of Iowa of jurisdiction over the Indians and their lands to the Federal Government and acceptance of the same by Congress in 1896.

Transfer of trusteeship from governor of Iowa and Indian agent to Secretary of the Interior. (This transfer has not yet taken place, but has been provided for and is in process at this time.)

The future.—When I assumed the duties of this office I determined upon four salient points which I believed should be accomplished: (1) The cession of jurisdiction; (2) the founding of a boarding school; (3) establishment of a highway, and (4) improvement in agriculture. These things have been accomplished with more or less success, and with them many other things of minor importance. With four years' experience and labor among these people I would not feel warranted in closing this report without pointing to some of the things that, in my opinion, should be accomplished at the earliest possible date in the future. These things are:

Improvement of sanitary condition by means of a physician and field matron and hospital quarters. This thing must be.

Sawing of lumber from timber on Indian lands for houses and barns. It was my intention to saw 100,000 feet of lumber this summer, but the Indians have been disappointed in receiving the money due them at this time from the Chicago and Northwestern Railway Company for damages, and this work will have to be deferred. It should be taken up as soon as means are available.

Introduction of hogs and cattle. This will require persistent effort, but can be accomplished as soon as there is an intelligent apportionment of land as herein recommended.

Regulation of the marriage relation according to the civil law of Iowa. There has never been any recognition of the State laws on marriage and divorce.

The ditching and breaking of about 200 acres of bottom land which has never been reclaimed from the native sod. This important matter the farmer is now planning for.

The apportionment of their lands per capita in family groups for a period of ten years. By this I mean that all their lands should be apportioned (not allotted) per capita, throwing the lands of the different members of a family together, so as to give them an opportunity to live together, for a period of ten years, and at the end of that time a reapportionment could be made if the equity of the first apportionment should be disturbed by births and deaths during the period. In this manner individual effort in farming and stock raising, building houses and barns, and setting out orchards will be encouraged and the responsibility of individual ownership will be acquired. I would not recommend that these lands be allotted. I doubt if it will prove good policy to allot them in twenty-five years from this time, and I hope the mistakes that have been made in some other tribes along this line will be avoided here. We do not want allotment nor citizenship for these people. We want intelligent and progressive administration of their affairs until they have become competent to wear the responsibility of citizenship without injuring their personal and financial welfare. A system of apportionment as here indicated could be followed during any length of time and perfectly preserve equity to the individual members of the tribe. This apportionment could be made at any time that it is authorized by a committee consisting of three—the agent, a representative of the Indian Rights Association of Iowa, and a practical farmer from this locality who is acquainted with the nature and value of the different kinds of land, acting together with the Indian council.

The enlargement of their possessions. At present our Indians have less than 8 acres of land per capita. My predecessor, Mr. W. R. Lesser, pursued a wise policy when, during his administration, he increased their possessions by nearly 1,500 acres of land, or just about double their previous possessions. Their land possessions are yet too limited for their permanent establishment upon a self-relying and self-supporting basis. They now draw an annuity of interest on a principal of more than \$360,000. I would recommend that negotiations be opened looking toward the appropriation of \$100,000 of this principal to be invested in Iowa lands near their present location, and \$60,000 for the erection of houses and barns. This would still leave them an annual annuity of over \$20 per capita. I do not believe that the perpetuity of this annuity is a blessing. Within ten years after this \$160,000 of the principal has been judiciously invested in Iowa lands and improvements, the balance of the principal on which they draw annuity should be likewise expended, and the annuity should then forever cease. By the investment of the first \$100,000 in land, 2,500 acres of rich Iowa soil could be added to their possessions. After this investment and the original investment of \$60,000 in houses and barns no further demand would be necessary upon the principal to their credit for the purpose of houses and other improvements, for they would then be able to make such improvements as would be desirable by their own industry and frugality. With the last \$200,000 of their principal invested in land

5,000 acres could be added to their possessions, giving them a total of about 10,500 acres. This would give them a per capita acreage of nearly 26 acres, or 130 acres to a family of five. This would give to our Indians about an equal chance in the struggle of life with the average progressive white farmers in the community. By the time these results could be accomplished I believe nearly all, if not quite all, of the members of the tribe will have acquired the ability to successfully handle that amount of land. In this plan I do not contemplate that even then allotment will be necessary or desirable. That is a question which time and conditions alone can rightly answer. What I recommend, and what the people of Iowa desire to see, is a policy pursued by the Federal Government which will put this little band of Indians within their borders on a respectable, self-sustaining basis that will make them prosperous and happy, and a credit to the State.

Very respectfully,

HORACE M. REBOK,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SAC AND FOX SCHOOL.

SAC AND FOX AGENCY,
Toledo, Iowa, July 15, 1898.

MADAM: I have the honor to submit the following report of the Sac and Fox (Iowa) Boarding School for the fiscal year ending June 30, 1898:

Location.—This school is located on a tract of land comprising 70 acres, lying immediately west of and adjoining the corporation of the city of Toledo, in Tama County, Iowa. The land was purchased at a cost of \$75 per acre, and is in every way suitable. In point of good drainage, general character of land, railroad and postal facilities, as well as the good moral influences of the surrounding community, the location can not well be excelled.

Buildings.—The only building so far completed is the main dormitory building. It is a T-shaped brick structure, having basement and two stories. Its greatest length is 159 feet 1 inch, and its greatest depth 80 feet 7 inches. The basement contains, besides boiler room, coal room, and cellar, two play rooms, each 28 by 37 feet, with clothes rooms adjoining, each 28 by 37 feet. On the first floor are boys' and girls' sitting rooms, 2 schoolrooms, boys' and girls' bathrooms, 6 employees' rooms, kitchen, and dining room. On the second floor are 3 employees' rooms, boys' and girls' lavatories, boys' and girls' dormitories, each about 28 by 55 feet. The back porches, upon which the dormitories open, are provided with fire escapes. There are water-closets in the basement and on the second floor. The building is roofed with metal shingles and is well protected against fire. There are on each floor 100 feet of 2-inch hose upon which water can be turned at a moment's notice. We also have two hose carts with 40 feet of 2½-inch hose, which can be attached to the two fire hydrants outside. These hydrants are so located that all parts of the grounds reserved for building purposes can be conveniently reached.

The sewerage system, which discharges into Deer Creek at a point 2,000 feet from the buildings, is perfect. We have an abundance of water, being connected with the city waterworks of Toledo. The water rent for all purposes amounts to \$85 per year, the contract covering a period of ten years.

Authority has been granted for the erection of three additional buildings—the barn, the laundry, and the shop and warehouse building. The barn is a two-story frame building with 8-foot stone basement. It is 35 by 55 feet. Attached to one end of the barn is a stone machinery shed 16 by 51 feet. The laundry is a two-story brick, the first floor to contain washing and ironing room and the second floor, sewing and dry rooms. The building is 20 feet 4 inches by 38 feet 8 inches. The shop and warehouse building is also a two-story brick building, the first floor to contain carpenter and shoe shops, the second to be used as a ware room. This building will be built into the side hill so that the second floor can be entered in the rear from the ground. The contractors are getting their material on the ground and the contract calls for the completion of the buildings by the 15th of September.

Estimates have been prepared and authority requested for the erection of hog, poultry, and ice houses and root cellar, the labor to be performed by school employees.

Much work has been done on the grounds in the way of grading. When completed we will have a lawn 400 feet long by 200 feet deep. It is our intention to seed it during the coming autumn. About 3 acres have been planted in small fruits—grapes, strawberries, raspberries, blackberries, etc. We have also set out about 250 apple, plum, and cherry trees, together with quite a number of forest trees for ornamental purposes. About 17 acres of ground were cultivated by the school farmer. Ten acres of oats have just been harvested, the estimated yield of which is 300 bushels. The balance of the ground was put into millet, sweet corn, and small vegetables. Our hay crop will be about 10 tons.

It was the intention to have opened this school on April 1, but because of the lack of lighting facilities and the late arrival of necessary supplies, this could not be done. The date now set for opening is September 1. What the attendance will be it is impossible to estimate intelligently. A number of the younger people of the tribe are favorable to the school, but the older element opposes it bitterly. It is to be hoped that the Department will find some way to compel attendance at school among the people if it can not be secured otherwise. I am, however, not without hope that a considerable number of children can be secured. The agent undoubtedly has the confidence of the better element of the tribe, is heart and soul with the school, and is bending every energy toward making it a success.

I wish to thank Agent Rebok for his uniform kindness and courtesy toward myself and employees, and to express my appreciation of the generous treatment of estimates and requests by the Indian Office.

Very respectfully,

GEO. W. NELLIS,
Superintendent.

The SUPERINTENDENT OF INDIAN SCHOOLS.

(Through Horace M. Rebok, United States Indian agent.)

REPORT OF AGENCY IN KANSAS.

REPORT OF POTTAWATOMIE AND GREAT NEMAHA AGENCY.

POTTAWATOMIE AND GREAT NEMAHA AGENCY,
Nadeau, Kans., August 24, 1898.

SIR: As directed in your circular letter, dated June 1 last, I respectfully submit the following report of the five different tribes of Indians embraced in this agency and the affairs thereof for the fiscal year ending June 30, 1898:

Population.—The names of these tribes, their separate and total population, and other information required in reference thereto is submitted in the following tabulated statement, viz:

| Tribe. | Total number on reservation. | Males above 18 years of age. | Females above 14 years of age. | School children between 6 and 16. |
|------------------------------------|------------------------------|------------------------------|--------------------------------|-----------------------------------|
| Prairie Band of Pottawatomies..... | 560 | 168 | 138 | 144 |
| Kickapoo..... | 237 | 62 | 57 | 63 |
| Iowa..... | 200 | 36 | 58 | 54 |
| Sac and Fox of the Missouri..... | 77 | 22 | 26 | 14 |
| Chippewa and Christian..... | 86 | 23 | 23 | 27 |
| Total..... | 1,160 | 311 | 302 | 302 |

Reservations.—The location of reservations and the number of acres contained in them occupied by the above-named tribes are shown by the following table, viz:

| Tribe. | Number of acres in reservations. | Location of reservations. |
|-----------------------------------|----------------------------------|---|
| Prairie Band of Pottawatomie..... | 77,357 | Jackson County, Kans. |
| Kickapoo..... | 19,137 | Brown County, Kans. |
| Iowa..... | 11,600 | Doniphan County, Kans. |
| Sac and Fox of the Missouri..... | 8,013 | Brown County, Kans., and Richardson County, Nebr. |
| Chippewa and Christian..... | 4,395 | Franklin County, Kans. |
| Total..... | 120,502 | |

Trust funds.—To correct the very prevalent opinion that all funds received by Indians from the United States are gratuities, appropriated by Congress, I will state that the Indians of this agency have placed to their credit on the books of the Department of the Interior sums aggregating \$1,177,035.36, of which the Prairie Band of Pottawatomies alone own \$597,037.57. The annual interest accruing on the total sum named is disbursed to the different tribes, under treaty stipulations, for the payment of annuities, support of shops, and the payment of all agency employees, with the exception of agency clerk; also, in large proportion for the payment of school employees, purchase of school supplies, and erection and repair of school buildings, as well as the purchase of furniture therefor.

Schools and education.—Of the three boarding schools conducted in the agency, that attended by the children of the Prairie Band of Pottawatomies, known as the Pottawatomie Boarding School, is the most important as to buildings and attendance, and at least fully equals other schools in the advancement of its pupils, in discipline, deportment, schoolroom studies, and a knowledge of agricultural pursuits gained through actual labor on the school farm. Male pupils that last year were classed as incorrigibles and could not be kept at the school here, during the present year, under different treatment, developed into excellent pupils in every respect. One of this class last April, being placed in charge of four other boys, lined and erected one-fourth of a mile of fence, without other assistance, and the work was excellently accomplished. All of the male pupils of suitable age aided very materially last spring in erecting fencing around the entire school farm, in inclosing new land, and in effecting other much-needed improvements, and were especially faithful and useful in cleaning the school farm of cockleburrs. In this last work they hoed all that part of the farm planted in corn nearly three times, and the crop is the second best in this section of country. The efforts of

the female pupils to excel in the work assigned to them in the various departments of the school were commendable and appreciated by those in charge of them.

I stated in my last report that "attendance at this school could not be maintained by withholding annuity payments, seizing the children by the police force, or by any resort to arbitrary measures, but that if the employees would visit the Indians in their homes and promote a friendly feeling toward them and the school, and that if milder methods generally were practiced, a better feeling would soon be established and the school better supported." In accordance with these views, I informed the Indians that every one of them should receive their annuities, and that the police would not be used to obtain children, but that I should expect them to properly support the school. The experience of the year has proven that, in this matter at least, my judgment was correct, as the enrollment was increased 27 pupils, and the attendance proportionally more than the enrollment. When the school session closed 105 children were in attendance, which in itself was gratifying, and this feeling was intensified by the fact that there had been no "run-aways" for months, and that a majority of the children had commenced to comprehend the real purposes of the school and desired to profit by them.

The school buildings are located at the agency, in the Prairie Band Reservation, upon a conspicuous elevation, and can be seen from every direction for a greater distance than any other public building that I know of in Kansas. Although they are commodious, the extent of their accommodation has been reached, and additional sleeping rooms, enlarged dining-room facilities, and a new kitchen and laundry are required, and have been estimated for.

Thirteen persons were employed for the fiscal year at a total cost of \$5,880.

A herd of 22 head of cattle is maintained, and sufficient horses are kept to operate the school farm. Sixty acres of corn, 5 acres of potatoes, and 2 acres of garden were cultivated, and will produce a good yield. Fifteen acres of new land was inclosed; 500 rods of new fencing was built, and 400 rods more was reset and repaired.

The Great Nemaha boarding school is beautifully located on the Iowa Reservation, in northeastern Kansas, about 75 miles from the agency. The schoolhouse is a comparatively new building. The dormitory needs repairing badly, which has been estimated for, as well as a laundry and barn, all of which are absolutely indispensable to the proper conduct of the school in the future.

Seventy acres of land are embraced in the school farm, which is conducted under the direct supervision of the superintendent, and by the labor of one male employee, with such assistance as can be rendered him by the male pupils. Good crops of corn, oats, potatoes, and garden vegetables are growing or have been realized. During the year I sold, under authority, considerable hay and a number of hogs, more than was required for the stock or for subsistence of school, and the farm is really established on a satisfactory and paying basis, and conducted, in my opinion, very commendably.

The children attending the school are drawn from the Iowa and Sac and Fox of Missouri tribes of Indians, who live on adjoining reservations. They are bright and handsome children generally, and are affectionate and obedient in disposition when freed from home associations and influence, which, unfortunately in small reservation schools, is difficult of accomplishment. The children, however, made good progress during the year, both in their school studies and industrial education in different departments, appropriate to their sex.

A slight increase in attendance was accomplished and all that could be expected, considering the number of children of school age that are attending Haskell and other schools. For various reasons, some of which will be stated elsewhere in this report, I consider it of vital importance to the welfare of the children of the Iowa and Sac and Fox of Missouri Indians that this school should be fostered and supported in every way necessary to its complete success. Seven persons were employed at the school during the year at the very reasonable total cost of \$3,120.

The Kickapoo boarding school is located at an excellent site on the Kickapoo Reservation, 35 miles north of the agency. The site, however, and the naturally fine advantages for sewerage, water, and timber are all that can be urged in behalf of the school in this respect, as the buildings, and especially the dormitory, are wretched, both in appearance and accommodations, for the pupils and employees. This difficulty will be remedied in a reasonable length of time, I suppose, by the erection of a new building, containing all modern improvements, and calculated to accommodate 65 pupils and necessary employees, for which an appropriation was made during the last session of Congress. The language of the appropriation, however, involves the removal of the school to another site in a different part of the reservation.

On assuming charge of the agency, July 1, 1897, I observed that the attendance at this school was less than it should be, and took measures to have it increased, with the result that the average for the year is 50, as against 42 last year, and it may not be inappropriate to state in this connection that the total cost of maintaining the school with the increased attendance is \$1,169.21 less than it was last year.

Both employees and pupils seem to be affected by demoralizing conditions, existing at the school heretofore, which are not accounted for solely on the ground of bad buildings. They are, however, a grave cause for both discouragement and criticism, and I dread the experience of keeping up the school until the new building is erected.

An excellent farm is attached to the school, from which there is likely to be sufficient corn and more than sufficient hay realized to feed the stock belonging thereto, which is of good quality and sufficiently numerous to admit of some sales being made from it to aid in supporting the school.

Seven persons were employed at this school during the year at a total cost of \$3,320. While the attendance was larger at each of the schools than last year, reference to the statistical information accompanying this report will show that the total cost of maintaining them was less.

Having been associated with the Prairie Band of Pottawatomies in various capacities since the establishment of their first school in 1873, no one is better qualified than myself, perhaps, to acknowledge and assert the advantages that have been conferred upon the Indians by its beneficent influence. In this statement the education of the schoolroom alone is not referred to; indeed this has been but one of the many factors brought into active agency through school conditions, by which the moral, material, domestic, and social conditions of the tribe have been changed, improved, and elevated. At the date referred to, but a very few children could be obtained after entreaty, persuasion, and in some cases, the promise of reward for the privilege of teaching and caring for them, and the parents of such as were obtained were frequently threatened with being "dropped from the rolls" by the large and influential party of school opponents if they were not taken therefrom. The present school conditions are certainly very gratifying to those acquainted with its history in 1873, and for many subsequent years during which those in charge of it were confronted with the most distressing difficulties in securing attendance.

Agriculture and leases.—While the agricultural interests of the Indians throughout the agency continue to be greatly enlarged and made profitable in a strictly pecuniary sense, such results have not been attained to any considerable extent by their own effort or labor, but are very largely due to the allotment and leasing of lands. While leasing the lands undoubtedly contributes to the general prosperity of the Indians and utilizes them for the benefit of the whites as well, I think it would have been far better for the Indian if agricultural development on their reservations had been of slower growth and accomplished to a greater extent by their own labor and management. The existing conditions at least do not lessen the contempt which the average Indian entertains for labor, and really does away with the necessity for it in most of the tribes. I have observed in this agency that the Indians of the tribes receiving the smallest annuities made more advancement in agricultural pursuits, and more intelligent effort generally to surround themselves with conveniences and comforts, than those more greatly favored in the matter of income and benefactions. It is also true, however, that the Indian who has made himself comfortable through the result of his own labor will discontinue it in most cases when his income is increased by unexpected resources, but he retains his appreciation of such advantages and the experience through which they were realized, and is likely to apply a portion of his increased income in the same direction.

The introduction of numbers of white lessees with their families on the reservations increases and complicates the duties of an agent, and entails upon him a vast amount of additional work, for which no provision has been made in law, clerical labor, or considerations for his protection and safety in dealing with violent and otherwise criminally inclined persons of the class named; and it is unavoidable, but unfortunate, that the class seeking lodgment on reservations are not of the best class of whites. There are a fair proportion of them, however, that are industrious and reputable, the families of whom are a positive advantage to Indian women and children. All of the lessees throughout the agency have been controlled reasonably well, I think, without resort to the Federal or State courts, and possibly the difficulties and disadvantages growing out of their presence is compensated for by influences and results that will aid materially in advancing the Indians to a standard conforming to the policy of the Government toward them, and which can not now be abandoned or easily modified.

The Prairie Band, Kickapoos, Iowas, and Sac and Fox of the Missouri Indians are all well supplied with horses, wagons, farming implements, and in short, all facilities necessary to successful farming operations. Their lands are adapted to the production of corn, wheat, oats, potatoes, and all kinds of vegetables, but especially to corn, being located in the best part of the "corn belt" of the United States, and failures in this crop, or indeed in any crop, are as little or less frequent than in any other section of the western part of the country, although, owing to excessive rainfall in the early part of the season and the want of it for the past six weeks, the corn crop will be considerably shortened; but that growing on the reservations is quite as good as elsewhere. Potatoes and vegetables of all kinds have yielded largely, and the grasses, particularly that of the prairie variety, are yielding a full crop.

This grass, the seed of which was probably brought here attached to icebergs during the glacial period, if considered in all respects, is perhaps the most useful that grows, and, as I stated in my report last year, should be preserved as far as possible where it remains on the reservations in the agency. It is indestructible from natural causes, and continually enriches the earth upon which it stands. During the months of July and August, when other grasses frequently become unfit for pasture, it is in its prime for fattening purposes, and when made into hay it is superior to any other kind, except timothy, perhaps, for horses. In the last few years a very large demand has been developed for this hay, and I estimate that the grass standing on 24,000 acres of the Prairie Band Reservation will be sold for hay during the present season, consisting of both allotted and surplus lands, in nearly equal parts. The allotted lands, being selected, are naturally the best and have brought from 40 cents to \$1 per acre, with the ruling price at about 50 cents; the surplus lands, consisting to considerable extent of high and rocky points, has brought from 30 to 60 cents per acre, with the ruling price at about 40 cents.

One of the greatest difficulties I have had to contend with in controlling the business consequent upon the sale of grass arises from the constant effort of unscrupulous and speculative members of the tribe to act as intermediaries for the purpose of deceiving and wronging their fellow-Indians for their own advantage; and in fact this difficulty has to be met in all the tribes in business transactions that afford opportunity for combinations for profit. There are methods by which white men in such cases can usually be controlled—unless they have strong political support, which is frequently the fact—but the Indian schemer who wishes to defraud his brethren is not only irrepressible but ever present.

Upon assuming charge of the agency I found that this class, on one of the reservations particularly, had in the interests of their white clients succeeded in establishing the rental of lands much below their real value, and when I attempted to raise the prices to a proper standard they became very indignant and in some cases went through the form of making leases in towns adjacent to the reservations, and in fact denied the authority of the United States in the matter of leases. The prices, however, have been increased for pasture 25 cents per acre and for cultivated lands nearly \$1 per acre.

Allotments and surplus lands.—Allotment of lands were made to all the Indians of the different tribes in the agency up to the date of the completion of the work. This work was undertaken and accomplished with the full consent of the Iowa and Sac and Fox of the Missouri Indians, but was resisted by factions of the Prairie Band and Kickapoos. The members of these factions still contend that no allotments have been made; that they hold the reservations in common, and that in a short time all the fencing on the reservations will be torn down and affairs will be conducted in the "old way." I think about seven unauthorized delegations of this class from the Prairie Band alone have visited Washington during the past six years in the prosecution of their intention to "break allotments," and, strange as it may seem, they receive from that source encouragement and assistance that is very perplexing to an agent as well as discouraging to the law-abiding and progressive Indians of the Prairie Band. This faction, consisting of but a small minority of the Prairie Band, while opposing allotments, have commenced to grasp very greedily all pecuniary advantages arising from them, and are becoming as much interested in the location of their lands as the large majority of the Indians who made their own selection of lands and voluntarily asked that they be allotted. Their fight on allotments is becoming strictly technical.

The Chippewa and Christian Indians hold their allotments under provisions of a treaty made in 1859. Their affairs are now being adjusted preliminary to a pro rata distribution of their trust funds and accomplishment of full citizenship through legislation accepted by them last year.

The Prairie Band have 16,010 acres of surplus lands, nearly all of which will be

required for members of the tribe who were absent when allotments were made, and for children born since.

The Kickapoos have about 6,000 acres, much of which will be required for members of the tribe as yet unprovided with land.

The Iowas had an insufficient area of land for allotments to all of their people, many of them being landless.

The Sac and Fox of the Missouri have but a few acres of surplus, but all of their people are provided with allotments.

Civilization.—The civilization of the Indians is the result of education and industry, and its degree is clearly defined by the advancement and development of these two important principles in the elements of human progress among the Indians.

Previous reference has been made to the great improvement in the educational conditions of the Prairie Band of Pottawatomies, and another striking proof of their advancement along the lines of genuine civilization is the steady increase in the number of houses built and occupied by them. In 1873 they numbered less than 10; now there are 194, many of them commodious and well furnished.

Altogether there are 360 houses occupied by the Indians of the agency, consisting of a total population of 1,160 souls. Many of the houses are fully equal to those of white farmers living adjacent to the reservations, and are quite as well kept. The erection and occupation of houses has not only involved the abandonment of the barbarous system of lodge shelter, but has brought about radically improved changes in methods of cooking, sleeping, dressing, and in the very important particular of treatment of women, who, under the old system or practice, were required to retire into solitary occupation of small and badly built lodges upon occasions when they should have been provided with the best accommodations and care.

While the acceptance and practice of these improved methods and habits are somewhat imitative and the result of changed conditions, there are evidences of advancement in thought and ideas that are encouraging, particularly to those well acquainted with them and who do not think it necessary that their civilization should be accomplished through the total loss of their land and money, as I have known to be suggested by alleged friends. They can not be civilized and invested with moral perception by a system of isolation, but must be brought into contact with civilized individuals and communities, and if with the advantages reaped therefrom there are some disadvantages they must suffer the consequences, as have all other barbarous races or wild people since the era of civilization opened.

Religion and missionary work.—Good work has been done for many years on the Chippewa and Christian Indian Reservation by a missionary of the Moravian Church, and the church has been largely instrumental in educating, at Bethlehem, Pa., several bright men, among whom is John H. Kilbuck, now and for many years a missionary in Alaska. From all I know and have heard of him I believe him to be one of the most unselfish and advanced Indians of this generation in America.

The Holiness Sect has performed some successful religious work on the Iowa Reservation for some years, but do not seem to be holding the attention of the Indians as well as formerly.

A majority of the Kickapoo Indians continue to worship at a church established by a member of the tribe forty years ago. The principles taught are the primary ones of Christianity, and were evidently selected from the creeds of several different churches because of their adaptation to the minds and religious wants of the Indians. During my acquaintance with this tribe, extending through a period of twenty-two years, there has always been some prominent member of the tribe who gave his whole time and influence to the support and strengthening of the church, and, in my opinion, with excellent results to his people.

The Prairie Band principally practice the Indian religion, but a number of them are Catholics, and attend churches located adjacent to the reservation; in fact, churches of nearly all denominations are located within a few miles of the different reservations, and are attended to a considerable extent by the residents thereof.

What is classed as "Indian religion" has many of the elements of the Christian belief, and I have observed that each year the barriers between them grow less distinct, and that the transition from his own practice to that of an acceptance of all the truths of revealed religion becomes less difficult. During the year a speaker of the Prairie Band, and a leader in their religious rites of much prominence, with several of his friends, were baptized in the Christian religion, and he has since expressed himself as having gained thereby the religious contentment he had sought for all the mature years of his life. The intensity and sincerity of the religious convictions of the Indian give promise that when he has become acquainted

with and accustomed to the creeds of the Christian religion and those who practice it, he will accept it as the true one.

Industries.—The industries incident to farming and stock raising only are followed in the agency. There are no towns located within the reservations where the Indians can learn or pursue other avocations or trades, and, indeed, their experience and interests fit them for, and incline them more to, agricultural and pastoral pursuits than any other.

Shops.—Blacksmith and wheelwright shops, separately, are conducted at the agency for the Prairie Band of Pottawatomies; also a blacksmith shop for the Kickapoo Indians, on their reservation, wholly at tribal expense for all of them. Every class of work required in farming communities is performed in these shops promptly and in the most workmanlike manner.

Physicians.—Physicians are employed regularly for the Prairie Band and Kickapoo tribes of Indians and schools, with great advantage to all of them. I think it a serious mistake that provision has not been made for the employment of a physician for Iowa and Sac and Fox of the Missouri Indians, and the Great Nemaha school, which the children of those Indians attend, especially as one would be sufficient and could be employed at a very reasonable salary.

Intemperance.—Owing to the location of the reservations of the agency in the midst of thickly settled white communities, and within a few hours' ride of a number of small as well as large towns, in all of which intoxicants are sold to Indians as freely as to others, it is impossible to prevent the evil of intemperance among them, but it can be and has been reduced. I notified all the Indians of the agency at the commencement of the year that annuity payments would not be made to any tribe when drunkenness was known to exist at the date of payment, or immediately previous thereto, and in the thirteen made since there was no drunkenness or gambling in sight, except in the case of one tribe, and the prompt arrest and imprisonment of the guilty parties cleared the field of further indulgence of the kind.

The statistical information, agency and school, asked for in your circular letter is herewith respectfully submitted.

Very respectfully,

GEORGE W. JAMES,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF POTTAWATOMIE SCHOOL.

NADEAU, KANS., —, 1898.

SIR: Assured that whatever may be written will be of most interest to employees contemplating a change, or those newly elected to this place, I will so conform my report which I have the honor of submitting through you.

The school is 25 miles from Topeka, 18 from Holton, and 10 from Hoyt, the nearest station on the Chicago, Rock Island and Pacific. The buildings are within one-half mile of the agency and trading store. The place is beautiful for situation, enabling the buildings to be plainly visible for many miles in all directions. The main building covers an area of 5,000 square feet, and when the attic is completed will make a flooring of 15,000 square feet available for dormitory purposes. This building is heated with steam, and is supplied throughout with water pipes. Two heaters supply the children's bath tanks with hot water. The three schoolrooms and assembly hall are in a separate building, capable of accommodating 150 pupils, and are first-class as to design, light, and ventilation.

I was put in charge of the school shortly after the 1st of September. The average attendance for each month closing the quarters is as follows: September, 67.03; December, 91.2; March, 95.29; June, 98.79. Average monthly attendance was 89.15. The enrollment reached 105. These figures show a gradual increase and faithful attendance to the end. This is said to be the best attendance the school has ever had.

As to the discipline and management of the school, the comparatively few runaways—none toward the last—the growing good will of the parents toward the school, the decrease in the necessity of petty punishments, and the *reductio ad absurdum* of the prejudice existing against some of the best employees, because of different tribe, etc., are some of the fruits as evidence.

It took severe punishment to break up running away. One of the rooms in the main building was made into a quasi jail. After confining the worst cases in there for a week or two on limited rations, they generally preferred staying with us. You may "tell it in Gath and publish it in the streets of Askelon" that one of the parents said, "Why don't you whip him," referring to his boy then in jail.

Much of whatever success we had in preventing friction, I believe, is due to the liberty that was given the children. The boys had the run of the prairies, woods, and streams. In the winter, they chased the rabbit. In the summer, they were allowed to fish and swim. All will testify to their appreciation of this treatment, and how seldom they abused it being late for school or work.

The work accomplished on the farm referred to in the agent's report, together with all freight for school and agency delivered by the school force, and the return of nearly all pupils by one or more of the employees, I do not wish to pass over without commending the industrial teacher and the farmer for their interest in this work and their cooperation. The farm has certainly had the curse of Adam upon it in the form of cockleburrs, and we shall be disappointed if 1,500 bushels of corn and cockleburrs are not raised.

The literary work of the school has been much broken into by the frequent changing of the head teacher, by transfer, and promotion. The upper room has had three teachers during the year. The primary teacher has been allowed to remain at her post, and though, with the care of nearly 50 most of the year, has worked with more than ordinary patience. A third teacher has been added for the coming year, which will certainly be a great advantage.

The improvements asked for are much needed, namely, a reserve water tank, a kitchen, a larger laundry, and the completion of the attic. These would be adequate for 125 or 150 pupils.

A few families are still opposed to school, and these are not on this account the most wicked Indians in the world. Some of them belong to the conservative class. Some of them are possessed of commendable traits—freedom from gambling, swearing, etc., that would be well for their better educated white brethren to imitate. By a continuation of the past year's policy it is to be hoped that even these Indians can be brought into school. These will probably make the best ones. I visited nearly every home during the past year. Some of the other employees also visited the Indians. We wish to make a record of our welcome reception, and also the good effect of such visits.

Whatever of kindness and encouragement, especially from the Indian parents, are appreciated and belong equally to my associates in the work. The matron has been "my better half," in a different sense, however, to most superintendents' matrons. We are singularly fortunate in having for assistant matron one who is proficient in both languages, and can find out the little ones' wants. The agent, being possessed of what may be called Scotch "dourness," has made us rest assured that when once a pupil was in school he had to stay in. This has been of much help to us in securing such regular attendance.

Yours, respectfully,

JAMES J. DUNCAN.

The COMMISSIONER OF INDIAN AFFAIRS.

(Through George W. James, United States Indian agent.)

REPORT OF SUPERINTENDENT OF GREAT NEMAHA SCHOOL.

POTTAWATOMIE AND GREAT NEMAHA AGENCY,
GREAT NEMAHA BOARDING SCHOOL,
August 23, 1898.

I have the honor to submit the annual report of the Great Nemaha Boarding School for fiscal year 1898.

The year has been marked for its steady progress in all departments of school work. At the opening of school all pupils were ready and willing to be in school promptly, clean and well dressed. The 1st day of September found a larger per cent of pupils in school than other years. Each home had been visited by employees before the opening of school and the children urged to be prompt, and parents were encouraged to take more interest.

The practice of pupils visiting their homes at stated periods has been kept up during the past year with no apparent injury to the success of the school, the pupils carrying home with them new ideas of home life, which the parents have adapted to the conditions and circumstances of the home, and many improvements have been made. A closer relation has grown up between school and home. Each pupil going to the home has in a measure effected a work similar to that of a well-equipped field matron. The mothers have visited the school to learn how we make apple butter, catsup, vinegar, hominy, yeast, soap, etc., and ask, or have interrogated for them, many questions further about cooking, cutting, sewing, etc. Parents have visited the schoolroom work and were well pleased with the recitations of pupils and progress of the individual pupil. At times when pupils have had a specially arranged programme, parents have visited and have taken great interest in every detail of the programme. Parents have visited the Sunday school and chapel exercises with profit to the school.

The work in each department has been performed promptly, cheerfully, and very carefully, no loose ends left undone for some one, but each department has closely connected, bringing all work up to its proper place.

The schoolroom work has been in the hands of a teacher well qualified for the position. She has been interested in the individual success of the pupil as well as the school as a whole. Primary work has been given excellent attention, together with the more advanced grades. As a result the pupils read and recite promptly, speak English accurately and unhesitatingly. Very little of the Indian language is heard at the school, and when parents visit the school the children speak English in conversation with them.

The untiring efforts of the matron have added greatly to the success of the school, guiding and directing the children in their housework, giving careful attention at play, and during sickness ever watchful and patient.

The work of the seamstress has been careful and painstaking. The quality of the work with quantity has been the standard. Great care has been given to the neatness of repairing garments, together with the cutting and fitting. This, carried on in the same line with care in school work, correlates industrial work and class work.

The laundry work, although under the care of two different employees during the year, was made a helpful source of instruction in that line of work.

The work performed in the kitchen and dining room under the direct supervision of the cook has been the most practical of all the year's work. The girls have taken unusual interest in the work in all of its details. The making and baking of bread, preparing fruits and vegetables for the meals and cooking of same, together with the cooking of meats, were such lessons to them as the girls could take home and apply.

The industrial work performed on the farm by the boys has been well done. They have been busy feeding and caring for the stock, and in the spring they were very enthusiastic in the planting of the crops and during the time of cultivating worked diligently. They combined their school work with the industrial work in making a study of how plants and animals grow and are nourished.

The school enjoyed the visits of Inspector Duncan, Supervisors Peairs, Bauer, and Smith. We wish to thank these gentlemen for these visits.

I am very grateful to the honorable Commissioner of Indian Affairs for all the benefits derived through the Office of Indian Affairs in the support of the school, and to George W. James, United States Indian agent, who has continually endeavored to promote the best efforts of the school and make it successful.

Very respectfully,

THAMAR RICHEY.

The COMMISSIONER INDIAN AFFAIRS.

(Through George W. James, United States Indian agent.)

REPORT OF AGENCY IN MINNESOTA.

REPORT OF WHITE EARTH AGENCY.

WHITE EARTH AGENCY, MINN., *August 26, 1898.*

SIR: I have the honor to submit herewith my first annual report of the affairs at this agency for the year ending June 30, 1898, I having taken charge of the agency January 1, 1898:

Census.—The census of the Indians shows the number to be 7,883, divided into different bands, as follows:

| | |
|---|-------|
| White Earth Mississippi Chippewas | 1,493 |
| Otter Tail Pillagers | 715 |
| Gull Lake, Mississippi | 346 |
| White Oak Point, Mississippi | 714 |
| Mille Lac, Mississippi | 1,209 |
| Leech Lake Pillagers | 1,162 |
| Cass and Winnebagoishish | 480 |
| Red Lake | 1,357 |
| Pembinas | 325 |
| Fond du Lac | 82 |
| Total | 7,883 |

The above shows an increase of 232 since last census.

Schools.—Eight schools are located at this agency, 7 being boarding schools and 1 a day school, the average attendance being 442. If better school buildings are erected, more pupils can be accommodated. As it is now, many have been refused admittance on account of the buildings, which are small and badly in need of repairs.

Contract has been let for the erection of fine school buildings at White Earth. The work is now going on, and it is thought that they will be completed and ready for use by June 30, 1899. Congress has also appropriated funds for the erection of school buildings at Red Lake and Leech Lake. Both places are badly in need of new buildings, although the superintendents of the schools at the points named above have kept up the attendance to the capacity of the present buildings.

When these new school buildings are completed and ready for use, many Indian children can be taken in and educated that never have been to a school, owing to the small capacity of the present buildings.

Agriculture.—There is no question as to the advance in civilization among the Indians at this agency. Their desire to live in good houses, their attendance at church, and their desire to educate their children go to show their advance toward civilization. I believe that there is less crime among them than in the States among the same number of people. There are very few cases of polygamy among them, and, in my opinion, it will only be a short time when such practice will be entirely done away with.

Court of Indian offenses.—There are three competent, progressive, and just men who compose this tribunal. Court convenes twice a month to try any case that may be brought before them. They are dignified in their bearing, and their decisions are just and generally received without complaint by the Indians.

Reservation roads.—The work on the roads is still progressing, and under favorable auspices. Most all the Indians seem to understand the necessity of good roads, and are willing to put in their time on the same. Many a mile of road has been repaired, and quite a number of miles of new roads have been made.

Sanitary.—No epidemic has visited this agency during the past year. Quite a number of deaths have occurred, but mostly among the old. The Indians avail themselves of the agency physician, Dr. John H. Heidelberg, by calling at the dispensary and by having him call upon them at their homes.

Indian police.—The police have all done their duty acceptably and satisfactorily, and they are indispensable to an Indian agent. There has been no serious trouble among the Indians during the time since I have been in charge.

Lumber.—Three million feet of lumber and about 2,000,000 shingles have been manufactured and issued to the Indians for the improvement of their allotments, which in most cases has been done by erecting houses, barns, and other necessary buildings.

Logging.—Authority was granted to cut the dead and down timber on the diminished reservations and on the ceded lands, and about 70,000,000 feet of pine logs were banked and sold by Indian loggers, they having received on an average \$5

per thousand feet for the same. By this system of logging much work is given the Indians, who are always in need of help throughout the long winters, this kind of work being almost the only labor performed by them during the winter months.

In conclusion, I desire to thank the Department for their prompt attention and cordial support rendered me in the performance of official duties, and also the employees for their hearty cooperation, efficiency, and loyalty in all matters pertaining to the conduct of the affairs at this agency.

Very respectfully,

JOHN H. SUTHERLAND,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN MONTANA.

REPORT OF BLACKFEET AGENCY.

BLACKFEET INDIAN AGENCY,
Browning, Mont., August 20, 1898.

SIR: I have the honor to submit the following report of the affairs of the Blackfeet Agency for a portion of the fiscal year ended June 30, 1898:

I arrived at this agency on the 4th of January, and proceeded to familiarize myself as quickly as possible with the duties of the position and the general situation of affairs on this reservation. I receipted for the public property on the morning of January 20 and assumed the duties and responsibilities as United States Indian agent in charge.

Reservation and its location.—The Blackfeet Indian Reservation lies between the one hundred and twelfth and one hundred and fourteenth meridians of longitude west from Greenwich and the forty-eighth and forty-ninth parallels of latitude north, and contains approximately 1,500,000 acres. The area has been greatly reduced by purchase by the Government of the mountainous strip to the west, consisting of about 896,000 acres, thought to have been valuable for its mineral deposit.

Population.—(Census statistics.)

| | |
|--------------------------------------|-------|
| Males above 18 years | 501 |
| Females above 14 years | 644 |
| Males between 6 and 16 years | 236 |
| Females between 6 and 16 years | 185 |
| <hr/> | |
| Males, all ages | 970 |
| Females, all ages | 1,052 |
| <hr/> | |
| Total, all ages | 2,022 |

The census that was taken last year was inaccurate and incomplete. Particular attention has been paid this year to the enumeration and collection of statistics. The increase of this year over last is due to the particular care and attention that has been given to this subject.

The above figures do not include about 140 white men with Indian families who reside upon the reservation.

The Piegan Blackfeet are disposed to be a tractable and a peaceable tribe of Indians. There have been no crimes committed of a serious character. Disputes and misdemeanors frequently occur about the rights to lands and boundary lines, stealing and unlawfully branding of cattle and horses, marital infidelity, family and neighborhood quarrels, the settling of which daily requires much of the agent's time and makes heavy drafts upon his stock of patience.

The opening of the ceded portion.—The opening on the 15th day of April last of the ceded portion of the reservation, under the mineral-land laws, was effected with many, but not serious, difficulties or accidents. Since that time over 500 men have been engaged in prospecting the mountain ranges and valleys in search of mineral, but have been unable to find the color of gold and but small deposits of copper or other mineral. I predict the abandonment of the so-called mineral strip before November 1 proximo.

The agency.—The location of this agency could not have been more unsuited to the business and as a place of abode unless it had been located upon the mountain tops; being exposed to every wind that blows through the mountain passes, with

no trees nor shelter of any kind, situated on marshy ground that becomes a lake in the springtime and early summer, which Indians avoided before the agency was built, fearing they would mire their saddle blankets. I am at a loss to understand why the many beautiful and sheltered locations on the Cut Bank Creek or Two Medicine River should have been ignored and this forsaken spot selected.

Buildings.—All of the agency and school buildings need painting outside, an estimated cost of which will be submitted during the coming spring.

Farming and stock raising.—Agriculture in this high, arid climate, wherein the growing season is very short, has proven to be an unsuccessful pursuit. The chief industry of these Indians, and the only one that is calculated to make them self-supporting, is that of stock raising. During the fiscal year 1898 these Indians furnished 800,000 pounds of gross beef to the Government and shipped to eastern markets several train loads of prime steers. They will furnish 500,000 pounds or more the present fiscal year. The Indians are now realizing the benefits to be derived from stock raising, and are making greater efforts to save their cattle and be in readiness to take advantage of the best markets. They suffered a heavy loss during the late winter and early spring from lack of hay and insufficient shelter for their stock.

The heavy rainfall early this summer, with frequent showers throughout the entire season, has caused an abundant growth of grasses, and the Indians are now providing themselves with a sufficient amount for feeding purposes the ensuing winter.

Irrigation.—As the chief industry among these Indians is stock raising, the success of which is dependent upon the amount of hay put up each year, it is very essential that the different systems of irrigation constructed heretofore, and now under progress, be kept in good condition, that plenty of hay may be obtained should a shortage occur from drought or heavy pasturage. During the past year a canal 7 miles in length was completed, the success of which is very promising. Other systems will be constructed so soon as the haying season is over.

I would respectfully invite your attention to the accompanying report of N. E. Jenkins, civil engineer.

Education.—There are conducted on this reservation two schools—the Government boarding school, on Willow Creek, with an attendance of 103, and the Holy Family Mission, on the Two Medicine River, with an attendance of 45. The number of children of school age between 6 and 16 is 421.

The report of Mr. W. H. Matson, superintendent of the Government school, is herewith submitted, to which I would respectfully invite prompt and earnest attention. In December last the boys' building was destroyed by fire. Plans and specifications of a new building have been submitted and the attention of the Department since called to the urgent need of replacing this building, to which communication no reply has as yet been received.

At the Holy Family Mission School the building occupied by the sisters and girls was destroyed by fire last February. A new building is under process of construction, which, when completed, will render the school thoroughly complete, where undoubtedly the past excellent work of the Holy Family Mission among these Indians will be continued.

Situated near the agency is the Piegan Indian Mission, presided over by the Rev. E. S. Dutcher and his estimable wife, who have been in charge since its establishment, and whose abilities and opportunities for doing good among the tribe increase with their increased familiarity with the existing conditions.

Sanitation.—The health and sanitary condition of these people does not differ materially from that of all Indian tribes in the Northwest. During the year a widespread epidemic of the contagious disease commonly called measles has prevailed over the entire reservation. For particular information on this subject, attention is invited to the following extracts from reports of the agency and school physicians. The Blackfeet are as a rule disposed to avail themselves of the services of the physicians when sick.

EXTRACT FROM REPORT OF DR. GEORGE S. MARTIN, AGENCY PHYSICIAN.

A recapitulation of the year's sanitary reports shows 790 cases treated, of which 34 have died, 22 being males and 12 females. Of these 34 deaths 14 were over 5 years old and 20 under 5 years old. These are only the more serious cases coming under my observation, and do not include the cases treated at my office and in which recovery only extended over a period of a few days. There have been 50 births of which I have a record, 32 being full bloods and 18 part bloods, and equally divided as to sex.

These figures would indicate an increase in population, but they are not conclusive, as there likely have occurred both births and deaths of which I have not been informed. The census just completed shows an increase as follows, bearing out the idea that at the present this tribe is increasing—2,022 as against 1,892 for 1897. Two cases of accidental death have occurred during the year, one in a runaway accident and one from exposure, both being men in the prime of life.

During last winter and spring an epidemic of measles spread slowly over the reservation. Owing to the difficulty in persuading the Indians to properly care for their children during and after attacks of measles, there has resulted many cases of pulmonary disease, pneumonitis being most common, and under the circumstances, very fatal. The general sanitary condition of these Indians is slowly becoming better.

The practices of the native medicine men continue to a certain extent, and will as long as the present generation lives. The sanitary condition of the agency is as good as is possible in its present location. The buildings, while not of the proper kind for the rigid winters we have here, are new, clean, and wholesome. Cases of serious sickness among employees are extremely rare.

The water supply at agency is very poor, being largely from a small stream fed by springs, and is likely to become much worse as the country becomes more thickly settled. Wells dug at agency so far have proven very unsatisfactory, the water being too hard for most ordinary uses.

EXTRACTS FROM REPORT OF DR. Z. T. DANIEL, IN CHARGE OF THE HOSPITAL AND WILLOW CREEK SCHOOL.

The health of the school has been good, i. e., for an Indian school. The principal acute diseases at the school and hospital have been pneumonia and conjunctivitis. Tuberculosis, in one form or another, affects nearly all Indian children. It attacks the eye, causing corneal ulcers and opacities, staphylococci, trachoma, pterygium, iritis, irido choroiditis, panophthalmia, etc.; the optic nerves, tract and retina, are very rarely affected primarily. They also uniformly suffer from nasopharyngeal catarrh, and their personal habits are no assistance to the physician in relieving it. Their tuberculosis also invades the lymphatic glands, particularly those of the neck, face, axillæ, and pectoral region; the joints also, especially those of the fingers, wrist, elbow, knee, ankle, and sometimes the hip. The shoulder joint, vertebral column, and scapula are less often attacked, and the cranium very rarely.

No death has occurred in the school nor hospital the past year. I have performed, with the assistance of the agency physician, twenty-five operations in the hospital under anesthesia, for the relief of glandular and cutaneous and osseous tuberculosis. I have not been as successful in results as I hoped, but the progress made encourages one to continue. I have relieved all operated upon; some I have gotten out of hospital and sent to school entirely healed, these have been in hospital three years, and without operation would have remained indefinitely.

Tuberculosis is a systemic disease, with a frequent local manifestation, popularly called scrofula. I operate on the local lesion by removing it with instruments under anesthesia, and dress, with pure carbolic acid, hydrozone, bichloride, iodoform, glycozone, and boric acid, according to the size and location of the resulting wound, and adhesive strapping. Stitches are never used, as all wounds in all Indians as a rule heal only by granulation. By proceeding thus, I get fairly good results, but not what one would expect, and here is the explanation: Suppose a solitary gland in the submaxillary region becomes enlarged, and caseified from tubercular degeneration, while under the skin it feels like a marble; if let alone it will go on to supuration, and become an ugly ulcer, which is the usual condition when first seen by the surgeon; only one gland seems to be implicated; you etherize the patient and with scalpel scissors and curette you remove the entire gland; you now swab with pure carbolic acid and dress with iodoform, borated or bichloride gauze, strap, and your operation is done; the result will be that the wound will heal by granulation, if the proper after-treatment is done. And what will follow? In a few months, as a rule, not always, a deeper neighboring gland will take on the same condition, and you will have to reoperate in the same manner. The original gland unoperated on would have served a sort of volcanic purpose, and the contiguous glands would have emptied themselves through it; but in all cases I believe it is best to take away the diseased glands and not relegate the patient to the slow, tedious, disgusting process of natural ulceration. I also give internal medicines, as creosote, hypophosphites, cod-liver oil, iron, arsenic, iodine, quinine, etc.

I have cured a girl (Julia Running Rabbit) with fourteen ulcers about the face, head, and neck; but the disease is liable at any time to recur in the same locations, or result in pulmonary tuberculosis, which usually ends in death. My theory of this disease is that the glands and ulcers are foci of infection to the system, a sort of hothouse or hatchery, where the bacilli are multiplied and disseminated throughout the circulation; and as improvement usually follows extirpation, this fact seems to sustain the belief. In the case of a boy, 14 years of age, who had extensive superficial ulcers, and which were all healed by operation in hospital, after a stay of a few months at school was returned with large abscesses in the deeper lymphatics, and apparently worse than ever, I reoperated, and now he is on the mend again.

This disease is the worst foe I have to deal with, and all I have been able to do as yet is to relieve, unless some of the cases operated on will result in a permanent cure. That remains to be seen, as a permanent record is kept of each case, and it will require a lapse of years before we can say for a certainty that the cure is complete, and even then the diathesis of tuberculosis will be theirs; at all events, the operations keep most of them in school instead of in hospital, which is a great deal.

The other cases treated in hospital have been pterygium by operation, inguinal abscess, chronic ulcer, leg, gunshot wound through right ankle, measles, erysipelas, epistaxis, contusions, varicella, roseola, incised wounds, fractures clavicle and radius, rheumatism, punctured wounds, removal fibroid tumor from wrist by operation, etc.; have had no capital operations, such as amputations, craniotomy, laparotomy, etc.

The service rendered by the hospital is largely for the boarding school, and for that reason it is unfortunate that the building was erected some 3 miles distant from it. In winter often-times the school might as well be in Alaska, for it is impossible to get there.

While there are two physicians here, one for the school and one for the reservation, it is my conviction that the hospital should be closed to all except school children. None of these people are willing to place their sick in the hospital and turn them over to the physician and attendants. Without exception, several or quite all of the family insist on staying with the patient, giving Indian medicines, fruits, candy, etc., in conjunction with the medication of the attending physicians.

The hospital building is a fraud. It is a pity that so much money has been devoted to a thing that is wholly inadequate for the purpose intended. There is not one feature of it that is acceptable. It has two dormitories. The space of the dormitories should have been cut up into rooms for the accommodation of one patient each. It has 14 stoves for wood; a hot-water plant should have been put in. It is a frame; stone should have been the material. The ceilings are from 1 to 2 feet too high. An expensive ventilating plant was put in; it should not have been. In this intensely cold and marvelously windy country such a building as this will ventilate itself plenty. I have dispensed with the system with most excellent and comfortable results. It

has no dead room. If a patient has to die, he or she does so in full view of the remaining patients in the ward; and in night work, with a patient requiring it, the others are needlessly disturbed by the nurses and very sick patient. It should have two portable bath tubs; it has none. It has no bathrooms worthy the name and the patients bathe in washtubs. It has no reception room, no operating room, no operating table, no equipment for medical and surgical dressing. The central part of the structure is two story, and in high winds it don't rock like a cradle in the deep; no part of the edifice should have been two story. There are no comfortable apartments for the employees. There is no water system; no drainage. Our slops are dumped on the ground, 50 or 70 yards from the building. There is no suitable privy or water closet, and none whatever for the employees. No cow barn, woodshed, hencoop, nor suitable garden spot. Vegetables would not succeed here if we had. The building shivers so in the wind, which blows nearly all the time, that the plastering throughout the house is a complete wreck. The walls should have been wainscoted throughout. Only two little 8 by 10 bathrooms are thus finished. If any of the apartments hereafter are repaired they should be celled and not replastered.

The reservation physician has his office and dispensary in it. Both these should be in another building, which has been asked for, and which I trust will be allowed. The premises should be inclosed. They are not. I believe the wisest and best thing to do now is to build a hospital at the school, that is, a hospital planned and specified by the agency physician and myself, who are fully conversant with the demands and requirements of this community, and by reason of our positions and calling better qualified than any others to do so. When this building was projected, the agency physician opposed it, and the sequel confirms the accuracy of his judgment. This building could be utilized for habitation or farm machinery purposes to advantage at its present site, and, if I am correctly informed, obviate the necessity of erecting additional quarters for employees.

The location of the Willow Creek School is probably the most desolate, dreary, unfruitful, rocky, barren, cold, windy, and inhospitable spot on this reserve. There is a cellar at the school that floods every spring, and the demand for its drainage is important, if the school is to remain where it is. But I think the conflagration of the boys' dormitory there last year ought to be taken advantage of and a new site for the school selected, and the new dormitory for boys built on it, preferably near the agency or north on Cut Bank, and, eventually, the entire school could be rebuilt on it near the agency and hospital, if a new hospital is not contemplated at the school. This dormitory should be built of stone and fireproof; and if the frame policy is adhered to, it is only a question of time when all of Willow Creek School will go up in smoke. The remaining girls' dormitory at Willow Creek is, in my humble judgment, about worn out and not worth the necessary repairs.

The location of this new agency, also, was another fatal fall down. It is about $2\frac{1}{2}$ miles east of the school, on Willow Creek, in a quagmire and alkali bed, where a tree won't grow and a vegetable can't be raised, except from the plate; where the wind howls in terrific blasts the year round, driving snow, dust, pebbles, and everything movable before it, rocking the hospital and dwellings like aspens, and making life one continual dread and discomfort.

If, when we were in quest of a site for the new agency, we had gone 5 miles farther north and nestled ourselves on the flowery banks of the limpid, rippling Cut Bank, surrounded by its noble forest trees, which cool in summer and shelter in winter, we would not have been far wrong.

Among all the agency buildings, I believe there is only one cellar; it is under the hospital. Nearly all the other buildings can have none, because the water is too near the surface, and this is flooded and has to be bailed out with buckets every spring, same as the cellar at the school.

Our water supply heretofore has been from surface springs and streams for all purposes, which is all right in a new country, but as the land above us becomes more settled, camped upon, and otherwise polluted, its use for drinking purposes must be discontinued for apparent reasons. The wells which are to be sunk this summer here I trust will correct this defect.

The opening of the mineral strip on the west side of the reservation will increase alcoholism and venerealism among the Indians and mixed bloods, and I don't see how these diseases can be entirely averted. We will have to meet them as best we can and try to prevent them as much as possible.

The hospital employees, with one exception, being those of Indian blood, have, as usual, proven unsatisfactory; they soon tire of steady labor and become worthless; they have to be changed frequently. The past year the position of janitor has been changed five times; cook four times; assistant nurse and laundress twice each; thirteen changes in a force of six in one year—a fearful official mortality. The nurse, who is a white woman, is steady, reliable, and faithful. We hope, with a white cook, to make a better showing the coming year, and to get better service from the other help. It is an impossibility to get a satisfactory Indian cook, and it is to be hoped that our anticipated civil-service cook will soon appear on the scene.

When I came I instituted a Sunday school in the hospital, and every Sabbath during the school months we had Sunday school, with myself as superintendent. It is a little strain on my general reputation, but it is I or none. So I essay the function with many misgivings of my fitness, but believe with a modicum of success, and with some personal comfort and satisfaction of performing a ministerial duty in conjunction with my professional. The Sunday school is greatly indebted to Mrs. A. T. Wheelock, of No. 75 Park avenue, New York City, for Bible lesson pictures, cards, and a little newspaper, the Sunbeam, one of which each pupil and inmate receives each Sabbath. The Sunday school helps to prevent the hospital children from idling about the agency on the Sabbath day.

This spring I have employed the boys and girls in grubbing and removing bowlders and stones from the hospital grounds, making walks over low places, raking the grass, and cleaning up generally around the building, filling holes, leveling elevations, etc., and as I write our lawn looks green, clean, and fresh. With the aid of the boys I have in part cleared the road leading from the hospital to the school of bowlders; this seemed almost a necessity, for a drive with a sick child over a rocky road is anything but agreeable.

For some weeks measles has been rife on the reservation; have had fourteen cases in hospital, and on May 16 it appeared in Willow Creek school and, of course, went through it.

In conclusion, I feel that I have done a good work the past year in relieving the sick and injured, by operations for the cure and relief of tuberculosis principally, as I have little faith in combating the disease by medication. The knife and local and general antiseptics are the best treatment that I can command, and even with them the results are far from satisfactory. If the Indian could be freed from this disease he would increase like ourselves, but it seems that the day is rapidly approaching when there will not be a pure or full-blooded Indian on the face of the earth, and the cause of his extinction will be tuberculosis.

Court of Indian offenses.—The Indian court authorized and established here consists of three judges, all full blood, men of intelligence and good repute, who are

prompt and reliable in the attention to their respective duties, who render their decisions fairly well and punish offenders without delay.

Indian police.—The police force consists of 1 captain, 1 first lieutenant, 1 second lieutenant, and 15 privates, selected from different portions of the reservation. Two are kept on duty each week about the agency, 2 at the subagency on the southern portion of the reservation, and 1 near St. Marys Lake on the road leading to the ceded portion. When relieved, others take their places in turn. They are faithful, obedient, and prompt in the discharge of their duties, in preserving the peace, guarding Government property, removing intruders, carrying messages, etc. They willingly perform any duty that they may be called upon to perform.

Inclosed herewith please find the following reports: Statistics accompanying annual report; report of superintendent of Indian schools; report of agency and school physicians; report of civil engineer and meteorological report, which are respectfully submitted.

Very respectfully,

THOMAS P. FULLER,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF BLACKFEET SCHOOL.

BLACKFEET AGENCY BOARDING SCHOOL,
July 27, 1898.

SIR: I have the honor to hand you this my sixth annual report of the Blackfeet Agency boarding school.

During the vacation period from July 1 to August 31, 46 children were taken from the list of pupils at this school and sent principally to Fort Shaw. School opened September 1 with 25 pupils present; 9 more came in during the day. Notwithstanding names were added to the roll every month from September 1 to May 31, the school's average attendance did not at any time reach its capacity. The wisdom of transferring upward of 30 pupils from 7 to 13 years of age from the lower classes of a thoroughly equipped and efficient reservation school to a nonreservation school, leaving the school thus reduced to run with an average attendance of 25 below its capacity, is not apparent to this writer, while the bad effects of such a course are numerous and present throughout the year.

December 20 the boys' building was destroyed by fire, after which a room in the classroom building was used for the boys' assembly room, and the loft of the same building for their sleeping apartments. This arrangement, to which we appear to be doomed for another year, while not the most convenient imaginable, was the only plan available, and, the quarters being fairly comfortable, it was vastly better than turning the boys adrift.

To add to other discomforts, the measles, prevalent on the reservation, reached the school in May, prostrating for a time 65 children. Other ailments sending different children at different times to the infirmary were incipient consumption, pneumonia, scrofula, and sore eyes. While there were no deaths at the school, three children, two of whom had been withdrawn and one excused temporarily because of illness, died at their homes before the end of the school year.

Despite interruptions and inconveniences, the classroom work (in which the printed suggestions of the superintendent of Indian schools were faithfully followed, unity in the efforts of the several teachers sustained, and the environments and needs of the children observed), was quite satisfactory, eliciting congratulations from such officials of the Indian Office as honored the school with an expression of their views. While the children generally maintained a good degree of interest from first to last, there were individual cases of marked improvement in both enthusiasm and proficiency.

Among the industries the care of stock has ever been first in importance and most exacting, requiring a large expenditure of labor winter and summer. The school herd of a hundred cattle is the finest in quality on the reservation, and the care it receives can not fail to be of immense practical worth to the boys who go out from the school to engage in the stock industry, which is their destiny. Were it not for this invaluable object lesson, the school might dispense with the cattle feature, save a few cows for dairy purposes, and thus avoid the necessity of much hard and disagreeable work, particularly in the winter season. But to my mind this industry is essential to an ample furnishing of these boys for their life work, as, without exception, all Piegan children who for any reason leave the reservation ultimately return to it, and the cattle interest is practically the only business here to which they can turn their hand for a living.

To keep the herd within the limitations of the school, several head of cattle are turned out to the department every fall for beef, the proceeds of which would be of great advantage to the school in making improvements if it could avail itself of them.

Farming and gardening received the usual attention and were reasonably remunerative for this locality. The soil here is very productive, but the seasons are for the most part so cold and backward that garden vegetables are uniformly light. Last fall nothing was gathered but potatoes, and present indications are that this will be the main root crop the coming fall, though some of the turnips are doing well. The oats were good and made excellent rough feed for the horses. Grass was abundant, and 100 tons of choice hay were put into stack. The school farm is essentially a stock farm. As such it is pronounced by experts the most suitable and best arranged in all this region. No mistake was made in the site if it was located with this end in view, as I am informed it was.

In connection with all industries, indoor and out, all the children had their regularly assigned duties, and, though quick to resent what they felt to be an imposition, worked cheerfully and well on the whole when directed by a skillful and kindly hand. There were employed at the school six Indians, all of whom, with one exception, and that a mere boy, were dutiful, constant, and efficient.

The improvements for the year consisted of a drying room connected with the laundry and a well, windmill, and tank so located and constructed as to furnish water for the use of the laundry within doors, thus doing away with a part of the labor and exposure to which the "water boys"

were subjected. There were purchased for the school two draft and two driving horses—teams very much needed, as the old horses which were taken off our hands had become largely unserviceable.

Barring several yards of plastering loosened by leakage from defective gutters, recently repaired, and a few feet of badly worn flooring, the buildings at the school are in a good state of preservation. A statement of repairs needed was sent to the agency for transmittal to the Department several months since.

The immediate and pressing need of the school is a new building to replace the one burned last winter. At the request of the Department a rough sketch of what is required, and an estimate of the probable cost were sent to Washington early last spring. Nothing having been received since concerning the matter, and as school opens September 1, when we hope to have our full former complement of children, we are planning the best we can in the dark for that event.

In closing, I wish to thank you, sir, and your predecessor, for many kind courtesies, and the Indian Office for the valuable suggestions and helpful words of its able and impartial representative, Dr. Hailmann, late superintendent of Indian schools.

Very respectfully,

W. H. MATSON, *Superintendent.*

THOS. P. FULLER, *United States Indian agent.*

REPORT OF IRRIGATION ENGINEER, BLACKFEET RESERVATION.

BLACKFEET AGENCY, MONT., *July 10, 1898.*

SIR: I have the honor herewith to submit my report of the irrigation work performed on this reservation under my direction from the 26th day of May, 1898, to the 24th day of June, 1898.

As the Indians are dependent upon the wild grasses for forage for their teams, it was necessary to wait till the grass had attained sufficient growth to support them before we could begin the work of construction. We began work on the Birch Creek Ditch May 26, and finished 7 miles thereof and turned the water in on the 24th day of June, 1898. The head of the ditch is on the left bank of the creek, about 6 miles above the crossing of the old stage road from Dupuyer to subagency, and extends in a northerly direction at nearly a right angle with the creek for a distance of 7 miles, where the water is thrown into "Long Coulee." This coulee extends nearly east, where the water therefrom enters Birch Creek about 5½ miles below the head of the ditch.

The water thus diverted from the creek will cover about 9,000 acres of excellent agricultural and grazing land. The ditch is 10 feet wide on the bottom for the first 3 miles and has a bottom width of 8 feet for the remaining 4 miles, and has a gradient of 5 feet per mile, with a safe capacity of 1,200 cubic feet per minute. The ditch is so constructed that it may be enlarged as the necessity for an increase of the water supply demands.

It was necessary to construct the first 1,500 feet of the ditch through a high gravel bar, where the ditch has an average depth of 7 feet and a top width of 35 feet. As this formation is cement gravel, it cost more to excavate the first quarter of a mile than the remaining 6¼ miles, where the excavation was in light sandy loam. The total number of cubic yards of earth excavated from the entire ditch was 19,145.

The teams were small and were very weak, for lack of food, to begin with. They could not improve as the work advanced, owing to the heavy work at the head of the ditch. Therefore the Indians were very much discouraged, and it was with much persuasion that they were induced to remain till the completion of the work. There were not a sufficient number of horses belonging to the agency to do the plowing and it became necessary to employ two, and a part of the time three, Indian teams to assist with the plowing.

Much snow and rain fell during the month of June, which interfered to a great extent with the work.

It will be necessary to construct a head gate near the intake, also three spillways at points along the ditch where the same intersects water courses that at times carry quite a volume of water. Plans and specifications of the head gate and spillways have been submitted.

Before the water in this ditch can become properly available for irrigation it will be necessary to survey the lateral ditches from the main ditch over the lands now occupied and under fence by the following-named persons:

| | Acres. |
|--------------------------------|--------|
| Joseph Cayton and mother | 300 |
| Mrs. William Teasdale | 400 |
| Joseph Tatsey | 640 |
| Frank Pias | 200 |
| John Hall | 120 |
| Total | 1,660 |

The above-named parties are willing to construct the necessary lateral ditches on their lands, provided the agency will have them surveyed and furnish the boxes by which the water may be diverted from the main ditch.

During the month of June I surveyed ditches for the following-named parties: Joseph McKnight, 2 miles of ditch; L. H. White, 2 miles of ditch; James Fisher, lateral ditches on 100 acres; David La. Brusch, main and lateral ditches. Since the date of survey the ditches have been constructed by the parties themselves without assistance from the agency.

On my return to the agency, June 30, I went to the head of the Willow Creek Canal. At a point about one-half mile below the head gate I found the side of the ditch washed out, and the water flowing back into the creek. This Willow Creek Canal, which cost about \$4,000, is practically useless for the present season unless this washout is immediately repaired.

A thorough system of irrigation is very much needed on this reservation. The wild grasses are becoming shorter each year on the at one time natural hay meadows, and it is only a question of time till no hay can be harvested without irrigation.

The lack of hay and shelter were the causes that led to the 40 per cent loss of cattle during the winter from January 1 to April 15, 1898. The value of cattle that thus perished for lack of food in one year would be sufficient to place 100,000 acres of land under irrigation. That quantity of land under irrigation will produce sufficient hay to feed 50,000 head of cattle through the winter. Irrigation alone is the method by which the Indians on the Blackfeet Reservation can be made self-supporting.

They need the services of a civil engineer each year from the 1st day of April till the 1st day of November to survey lateral ditches and to teach them to properly irrigate their lands. Under the present method they have no one to teach them during the month of July, the month in which their meadows should be irrigated. The irregularly employed engineer has to quit work till the return of the appropriation.

After the completion of the Cut Bank Ditch, as contemplated under the estimate of February, 1898, a large ditch or canal should be taken out of the Two Medicine River at a point near the mouth of Little Badger Creek and extend to Flat Coulee; thence to the "Carlow Bench," thus covering about 30,000 acres of excellent agricultural land. This ditch can be constructed with Indian labor. The cost per acre to reclaim the land will not exceed \$1, and would furnish farms for the entire population of the reservation. With irrigation the hay crop is a certainty, and with sufficient hay the loss of cattle will be a thing of the past.

Respectfully submitted.

Capt. T. P. FULLER,
United States Indian Agent.

N. E. JENKINS,
Irregularly Employed Civil Engineer.

REPORT OF CROW AGENCY.

CROW AGENCY, MONT., August 24, 1898.

SIR: Pursuant to the regulations of the Department, I have the honor to transmit herewith the annual report of the affairs of this agency. This is somewhat of an arduous task, owing to the fact that the agent in charge has at this writing had barely sufficient time to warm the official chair, and his knowledge concerning affairs of the reservation must necessarily be based upon the fact of a residence of some eighteen years in the country contiguous to the reservation and from such information as he can obtain from among the older employees of the agency.

Population.—I find, from a careful census of the Indians, the following:

| | |
|--|-------|
| Males | 963 |
| Females | 1,040 |
| Total population | 2,003 |
| Males above 18 | 666 |
| Females above 14 | 802 |
| School children between 6 and 16 | 295 |

Education.—The highest number in school attendance during the year was 238 pupils. Of these 158 attended the Government school at the agency and 80 the Catholic mission schools at the Big Horn subagency and the Pryor Creek subagency.

The school at the latter place has been discontinued upon the alleged ground of gradual discontinuance of Government aid. This leaves the Indians on Pryor Creek—some 500—without a school, and the nearest point where the children from this band can attend school is the Catholic Mission School at the Big Horn subagency, some 50 miles distant. Much complaint has been entered at this office by the parents of the Pryor Creek children on account of the closing of the school at that point. The reestablishment of a school at Pryor Creek, or an increase in the capacity of the Crow boarding school (outlined in the report of the superintendent), is most heartily recommended, and unless this is done there will be more or less trouble from time to time in order to secure the attendance at school from that part of the reservation.

Support.—While these Indians have in the past year been able to support themselves, with what aid they have secured from the Government, this was largely due from the fact that they have almost wholly furnished the hay and oats supply at Fort Custer called for by the military branch of the Government. At this army post the Indians last year supplied about 1,000,000 pounds of oats and about 1,200 tons of hay at good prices. This post has since been abandoned, and the revenue derived therefrom by the sale of their principal products has in consequence been cut off. I recommend that the Crow tribe have their Government allowances increased until such time that conditions more fully warrant a return to the present amount of rations issued.

Agriculture.—The tribe as a whole are advancing somewhat in the line of agriculture. During the year they have approximately raised 25,000 bushels of wheat and 30,000 bushels of oats, besides other field and garden products, as is more fully set forth in another paper submitted in tabular form. The Indians pursue farming principally upon the large-tract system, under the supervision of white farmers. The large-farm system should be broken up as soon as practicable and each family located upon lands in severalty. This, however, can not be done successfully until the large irrigation ditch now in course of construction in the

valley of the Big Horn River is completed. The Department will readily see the necessity of having this work finished.

Farming implements.—I can not transmit this report without calling the Department's attention to the class of farming implements which, as a rule, find their way to an Indian agency. It would seem that almost every known make of farming machinery finds its way to the Indian farm. Some of this machinery, about the first year after it reaches the agency, goes out of date, and in consequence when breakage occurs (which is frequent where Indians are operating machines) it is almost impossible to obtain repairs. At best, when up-to-date machinery is supplied, it is often hard to get repairs in a country like this, situated remote as it is from the base of supplies.

Cattle.—The Indians would have been fairly successful in the raising of cattle upon the open-range system were it not for the fact that the herd has been subjected to the ravages of what is known as the gray wolf. A force of experienced "wolfers" should constantly be employed to hunt and kill these animals; and unless this is done, then, in my opinion, this tribe should go out of the business of raising cattle upon the open range, summer and winter. I would recommend that just as soon as the Crow tribe is more fully located upon land in severalty, that each family be given the cattle pro rata, and the agent see to it that they be kept nearer the home allotment.

Horses.—There are upward of 40,000 Indian horses within the reservation, of all ages and sizes. They are mostly inbred, and in my opinion almost worthless. These horses are constantly eating up the grass on the range, and in consequence are getting that which should properly go the support of a better class of stock. A scheme has been devised to ship a portion of them out of the country, and the first shipment of 1,000 head has gone forward, but with what results I am not able to state at this writing.

This, with the tabulated statements of the condition of this agency, is respectfully submitted.

E. H. BECKER,

United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF CROW SCHOOL.

CROW BOARDING SCHOOL, August 24, 1898.

SIR: I have the honor to submit my second annual report of Crow Boarding School:

Situation.—The school is situated on the Burlington and Missouri Railroad, 71 miles southeast of Billings, Mont. By a system of fine irrigating ditches the grounds have been made beautiful by planting of trees and the sowing of grass seeds, which have become a great success.

Buildings.—A full description of all the buildings at the school was given last year and will not be repeated in this report, but several new ones have been erected during the year, of which the following description is given: A storeroom 20 by 50 feet was erected in January, and all goods intended for the school have been moved into it and placed in charge of the superintendent; a good substantial coal house with a capacity of 20 tons was erected by the boys of the school under the supervision of the superintendent; also a carpenter shop, 14 by 20 feet, in which all the tools needed by the school are stored and repaired.

A henhouse, 12 by 30 feet, furnishes the necessary room for 150 chickens, which have been purchased by the school fund and furnish the school with eggs, and has proven a very successful investment for the school. An incubator and brooder has been purchased in the same manner and has proven a great success in hatching and raising chickens, and has been a great factor in the civilization of these Indian children.

Enrollment.—The total enrollment for the year is 158 pupils, an increase over last year of 50 for the year. The average attendance for the year is 147. There is one thing remarkable about the children attending school, viz, none were compelled to come; all of them came voluntarily, 146 pupils being present the first day school was in session.

Health.—The health of the school has been remarkably good during the year, with the exception of the appearance of the measles. School was closed for a period of three weeks, commencing about the 20th of October last. Teachers were detailed as nurses during the time. One hundred and six pupils were confined to their beds at one time, but fortunately no serious sickness occurred. This was due to the great care and skill of Dr. Portus Baxter, the very efficient agency physician, along with the patient, untiring efforts of those in charge. During the year 11 of our brightest pupils were transferred to Carlisle, Pa. They appear to be well pleased with the school there and are contented and happy.

Schoolroom work.—There has not been as good results as were expected, owing to the change of teachers and the lack of a proper course of study. It is hoped that this will be greatly improved the coming year, as it is the intention to provide a full and complete course of study for each grade, and have written tests for each pupil in the promotions from one grade to another. Employees have given reasonable satisfaction during the year. It is true that some have not, and I desire to thank the Department for ridding the service of unworthy persons, whose sole ambition is selfishness and the opportunity to draw salaries.

This school has been crowded beyond its capacity the present year, and all the children have been happy and contented, as is shown by the fact that there have been no runaway pupils or any acts of insubordination upon their part.

Holidays have been observed by appropriate exercises, prepared and rendered by the pupils in such a manner as would do credit to any of the public schools of the country.

The school farm has furnished an abundance of vegetables for the school, and presents a very favorable appearance for a full crop of all the usual products grown upon the farm. Twenty-one acres of ground has been seeded to alfalfa, timothy, and clover, and at this writing it is in fine shape, and in time will furnish plenty of hay for what stock is kept at the school.

Recommendations.—I would urge the erection of the same buildings as were recommended in my last report, viz. a new school building with a capacity for at least 200 pupils (this number can be easily obtained if the buildings are furnished); an addition to the girls' building, increasing its capacity from 50 to at least 100 pupils. This can be done by building an addition to the west side 40 by 70 feet, which will furnish dining room, dormitory, and bathroom facilities, and will have to be done before more pupils can be admitted to the school. With these necessary improvements and the able corps of employees and the very hearty cooperation of our agent there is every reason to believe that the ensuing year will be a very progressive one for the Crow boarding school.

Thanking the Department for past favors, and all others who have shown an interest in the education of the boys and girls of the school, I have the honor to be your obedient servant,

HENRY HANKS, *Superintendent.*

The SUPERINTENDENT OF INDIAN SCHOOLS.

Through E. H. Becker, United States Indian Agent.

REPORT OF FLATHEAD AGENCY.

JOCKO, FLATHEAD AGENCY, MONT.,

September 15, 1898.

SIR: In accordance with your instructions, contained in your letter of June 1, 1898, I have the honor to submit this, my first annual report of the affairs of this agency for the fiscal year ending June 30, 1898.

The tribes occupying this reservation are the Flatheads, Kootenai's, Pend d'Oreilles, Spokanes, and Lower Kalispels, their total population being estimated at 1,998.

The civilization of the people of this reservation is much diversified. We have here the extremes, from the well educated to the densely ignorant; from the wealthy to the extremest poverty, between which there are all the varying grades. The great majority, however, are extremely poor, and their advancement is slow, but I think they are making some progress.

Nearly all have homes with some land inclosed; houses to live in during winter, and tepees for the summer. Many of them annually raise a small crop of grain and a good garden. Many with ranches of considerable size also put up hay for the use of their stock during the winter. Fruit is raised here with the minimum amount of care, and some few Indians have a small number of bearing trees. As they are fond of fruit, I trust the Department will furnish them a limited number of trees the coming year.

On entering upon my duties here I found that the older Indians were disposed to prevent the younger and more industrious from taking up and fencing ranches, claiming that if this was done, soon their herds of horses would have no grass on which to graze. This, however, has been stopped. Those who would not take ranches of their own were plainly informed that they should in no wise interfere with those who desired or who could be induced to take ranches. Am pleased to note the stand taken has had a beneficial effect, for many of the young men desire and are taking up ranches for themselves.

I extend to these young people just starting in life every help to which I believe them entitled, for it is with the young Indians that the most substantial progress must be expected. The old do not seem to be able to entirely abandon the pursuits and costumes of their forefathers, and it will never be possible, with, of course, some exceptions, to cause them to adopt the ways of the white man.

Many of the educated and well-to-do half-breeds live in comfortable homes, which are well furnished and kept. From this we find all conditions of home life, even to the extremes of want and misery, and in many cases the manner of living is deplorable.

Allotments.—No allotments have been made. The reservation should, however, be surveyed, with a view of making allotments in the future. The half-breeds are generally anxious to have their farms surveyed, that they may know where the permanent lines will be located. With an Indian, as with his white neighbor, it is but natural that he should desire to know that the improvements that he is making will be upon his own property when same is eventually allotted, and there can be no certainty about this until surveyed.

Irrigation.—Irrigation, without which little can be expected from the soil, is a vital necessity. The lands of this magnificent reservation are rich and fertile, and with the artificial aid of irrigation are exceptionally productive and yield the choicest of grains, vegetables, and fruits. The lands easily accessible to the life-giving streams have been taken, and it is becoming a greater problem year by year

for the Indian to find suitable land to which his limited means will permit him to carry a ditch from the streams. Therefore more attention must be given in the future to irrigation, for without it it is useless to attempt farming. We have this year enlarged two ditches aggregating about 10 miles in length, so that their carrying capacity is now increased to nearly four times their original capacity. The good results from this are at present very noticeable, and another year will result in a large amount of new land being located upon and cultivated.

Cattle.—Perhaps of equal or greater value than agriculture are the cattle interests. While it is true the majority of the cattle here are owned by a comparatively few persons, still many of the Indians own a few head, and some are increasing their numbers to quite a herd.

Ranges.—I am glad to say that with the unusually copious rains of the spring our ranges here have revived and are in better condition now than for several years past, and consequently cattle are in prime condition, and the abundance of grass augurs well for the coming winter. It is indeed a blessing, for had it not been for the large amount of rain this spring our ranges would have been in a serious condition, brought about by the large and steadily-increasing number of worthless horses ranging here. The most stringent measures should and must be taken at once to stop their increase, else the otherwise splendid ranges will be utterly destroyed.

Commission.—In this connection I wish to recommend that if the commission now here for the purpose of treating with these Indians for a cession of a part of their lands shall be able to make an agreement, that it provide liberally as a part of the consideration for the future reclamation of the arid lands of this reservation. A provision should also be made for the purchase of cattle as a part of the proceeds of the sale. Two or three head of cattle to each Indian would, with the proper care, in a few years increase to a very good-sized herd and also bring them in a revenue that should make themselves largely self-supporting. Our Indians understand stock, and with the very favorable natural conditions prevailing here, I can not see any more judicious investment for these people.

I desire to mention the matter of increased school facilities that to me seem very necessary. For many years past the education of the children here has been under contract with the Jesuit Fathers, but Congress, having of late years deemed it wise to eventually discontinue all aid to sectarian schools, has been cutting down their appropriation. The past year the contract provided for 215 children; this year, for 161. When it is borne in mind that there are 450 children on the reservation of school age, the necessity for additional school facilities is apparent. It would seem very desirable that the above referred to commission should make a reasonable provision for a boarding-school plant at the agency, and possibly one day school on Camas Prairie, in the western part of the reservation.

The commission has made a proposition to the Indians for about one-fourth of their lands. The Indians are, however, loth to sell. It would seem to me wise for these Indians to cede this part of their reservation, for it is of little value to them, being largely occupied, with the exception of Chief Eneas's band of Kootenais, by white men with Indian or half-breed wives. As they are so much in need of some material assistance in the way of educational facilities, irrigating ditches, and cattle, it would seem that these benefits would more than offset the loss of their lands.

Education.—The only school upon the reservation is at St. Ignatius Mission, and is maintained by contract with the Jesuit fathers. The larger boys are taught by the fathers, while the larger girls are under the direction of the Sisters of Providence, the kindergarten being taught by the Ursuline nuns. The boys, in addition to their school work, have the benefit of practical work in the shoe, saddlery, tin, carpenter, and blacksmith shops, together with farming and gardening. The girls are taught all kinds of housework, sewing, and dairying.

Police and judges.—The police force consists of 12 privates and 1 officer. Their pay is \$10 per month for privates and \$15 for the officer. For these wages it is extremely difficult to get reliable and efficient men who will devote the time required of them to fill these positions. It would be preferable to have a smaller force, if necessary, and raise the wages of the balance to at least \$20 per month, believing that better results would be obtained with a smaller but well-paid force.

The Indian court is composed of four judges and is quite satisfactory. Parties charged with crime are brought before them and regularly tried under the supervision of the agent. If found guilty, they are fined or imprisoned, otherwise promptly discharged.

Buildings.—The present jail is in very bad condition, and it is almost impossible to detain fractious prisoners in it. A new one should be provided. The agency barn is almost worthless and should be replaced by a new one within the course of another year. Several sheds and small buildings, now used as warehouses, are

old and in bad condition, it being impossible to keep the supplies stored in them from being injured by the elements. One large warehouse should be built to replace all of the small ones.

Roads.—A large amount of road work has been done this summer and more is planned for the fall. As a rule the roads are in good condition. Some small bridges which were carried away by the floods will have to be rebuilt.

Omaha Exposition.—Pursuant to instructions, I sent 15 Indians to the Trans-Mississippi Exposition at Omaha. From reports received from there I am led to believe that they are considered as fine as any delegation at the exposition. They are profiting by their trip there, and the information they obtain there, and in turn communicate to their friends when they return, is bound to result in much good to them.

Employees.—I regret to state that the conditions confronting an agent in obtaining good and efficient employees is very unsatisfactory. Instead of being permitted to select only persons qualified for the various positions, he has no voice in the matter at all, and employees are frequently furnished who have no conception of the duties required of them, and instead of rendering the desired assistance to the success of the agency, become a burden on the other employees, and contribute a great part of an agent's annoyances. True, he has a limited authority to discharge, but he has no assurance that the next one sent will be any improvement over the last.

Under these circumstances many incompetent men hold positions who take no interest in their work and look forward only to pay day, to draw the salary they have not honestly earned. The agent, who is responsible for the successful handling of his reservation, should be given wide latitude in the selection of all agency employees.

I have the honor to remain, very respectfully,

W. H. SMEAD,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF FORT BELKNAP AGENCY.

FORT BELKNAP AGENCY,
Harlem, Choteau County, Mont., August 13, 1898.

SIR: Pursuant to instructions contained in your circular dated June 1, 1898, I have the honor to report upon the affairs of this agency for the fiscal year 1898 as follows:

The agency headquarters are located 4 miles from Harlem station on the Great Northern Railway, in the extreme northern part of the reservation. The post-office and telegraphic address of the agency is Harlem, Mont.

Population.—The census taken June 30 last shows a total of 1,290 Indians, of which 574 are Gros Ventres and 716 Assiniboiné. There are 332 children between the ages of 6 and 18 years—males, 169; females, 153.

Farming.—This section of the country has been greatly blessed this year by copious rains well distributed throughout the season, and vegetation of every character is in a flourishing condition. There is a luxuriant growth of grass on the range and a large crop of hay will be harvested, all of which is relished by the roving bovines and makes glad the hearts of their owners. The Indians have been recipients of these improved conditions and have gone forward with the year's work with much enthusiasm.

The farming operations among the Indians of the reservation have been more successfully carried on than for several years past. Owing to the favorable planting season and the large rainfall during the spring and summer, the yield of grain, vegetables, and hay will be greater than for some seasons past. The Indians started in with much zeal and energy. They have worked faithfully in the cultivation of their crops. The present irrigation systems have also contributed largely to the present fine condition of their ranches.

Under a conservative estimate the Indians will raise on the reservation the present year 18,800 bushels of oats, 1,300 bushels of wheat, 3,700 bushels of potatoes, 600 bushels of corn, 1,000 bushels of vegetables of various kinds. They made 600 pounds of butter and cut 1,200 tons of hay.

I am pleased to note that much advancement has been made by the Indians in the care of and attention to their cattle. They are firmly convinced that this industry is the one best adapted to the reservation and the most profitable one they can follow. They displayed great energy in harvesting their hay and placing it at their

ranches to be used in feeding their cattle during last winter. They looked after their cattle constantly and kept them close to their homes by holding them in neighborhood herds, and the good results following is apparent, as their loss last winter was small and confined principally to calves born in the early spring. Notwithstanding all their efforts, quite a number are bound to drift away during the severe storms and blizzards and wander over the ranges adjoining the reservation, and in order to recover these strays attention is paid to the various round-ups, and this part of the work was looked after by a white herder employed for the purpose, assisted by the young men of the tribe, with fairly good results, there being between 300 and 400 head of cattle found and brought in to their owners.

The young stock cattle issued to them one year ago got through the winter in good condition and but few were lost either by strays or death; and from this source a large percentage of increase was had, the calf crop being quite encouraging. Their cattle are now in a splendid condition and they have a considerable number of beef cattle ready for the market, and I will have no difficulty in securing the 300,000 pounds of gross beef authorized to be purchased from the Indians for the ensuing fiscal year. According to our figures, the Indians of the reservation own about 4,750 head of cattle, which amount includes 500 calves branded the past spring.

The horse proposition is a serious one among these people. They have a great number of very good horses—more than they have any use for. Besides these they own several hundred head of worthless ponies, which run at large over the reservation eating the grass that should be consumed by their cattle. I have labored diligently and incessantly to impress upon the minds of the Indians the utter worthlessness of these ponies and the great folly of allowing them to occupy their land; that they are rapidly destroying the good ranges of the reservation, and that if they are allowed to run in such numbers much longer they will have but little grass for either horses or cattle. I have urged them to get rid of their ponies; if they can not sell, to give them away. I am pleased to note that my efforts in this direction have been attended with some success, as they have gotten rid of a great many, and I notice they are herding the remainder out on the borders of the reservation with a view toward saving the ranges near their homes for their cattle.

Orders were issued to the farmers last spring to round up and castrate every stallion found on the reserve. The police were enlisted in this matter with instructions to let none escape. The results are very satisfactory, the number of stallions removed in this way being 464. I believe that the Indians are beginning to look at this matter in its true light and that there will be a large decrease in the number of their horses from now on. It is my intention to persist on this line of action, and shall do all in my power to assist them in reducing the number of their horses.

The Indians are very much interested in the subject of irrigation. The present small systems now in operation on the reservation have been an object lesson, setting forth the great benefits derived from the same and the value of such improvements. They are greatly pleased that authority has recently been granted by your office for the establishment of an irrigating system known as No. 1, on Milk River, and they are anxiously waiting authority for the construction of system No. 2, which provides for a large reservoir on Warm Springs Creek at the Little Rockies. The two systems will put about 8,000 acres of good land under irrigation, and when in successful operation will afford the Indians an ample supply of grain, vegetables, and large quantities of hay for their stock.

When these systems have been established and the Indians taught to handle the water properly, and with those already in operation, there is no reason why they should not be able to make their own living and become independent citizens. Irrigation is the only salvation in this arid section. It is no experiment, as the great benefits are apparent to every careful observer. I have advocated the establishment of these systems on this reservation, believing it to be the only means by which these people can attain a condition of self-support and independence in pursuing the avocation of farming and stock raising, and I trust my estimate for the construction of these systems will be allowed in full.

Education.—The educational branch of the service on the reservation has been conducted by the industrial boarding school at the agency and the contract school, a Roman Catholic institution, at the Little Rockies.

The attendance at the agency boarding school has been up to its full capacity. The literary part of the work has been conducted by a corps of good teachers and fairly good results have been obtained in this department, as indicated by the general bearing and conduct of the children participating in the closing entertainment at the school.

The industrial branch has been well looked after by an efficient industrial teacher. The farm and garden are well cared for and many small vegetables have already been gathered and used by the children, and the yield for the season will be sufficient to provide the school with vegetables for the ensuing year. The irrigating pump has done good work and has been the sole means of the result of this fine crop.

The school cattle are in good condition, and this herd has been increased by a few calves. Some of the cows are getting old and should be disposed of by sale. Hay is now being gathered to carry the herd through the winter.

A system of waterworks has been added to the school during the year, which is a great improvement and will facilitate the work and afford a much needed protection against fires.

A new building should be constructed to be used for recitation rooms and an assembly hall.

The bathing facilities of this school are very poor and should be remedied without further delay, in accordance with my estimates submitted last spring. The new building asked for would provide means for rectifying the present defective systems at the school in the matter of light, ventilation, bathing facilities, and general sanitary conditions.

The contract school conducted by the Roman Catholic Church, under the supervision of the Rev. Charles Mackin, at the Little Rocky Mountains, has had a successful year, and did much good work in elevating and training the Indian children in that locality. Several improvements have been made at this institution during the year, and the general appearance of the plant is attractive and prosperous.

Missions.—The missionary work of the reservation is carried on by the Society of Jesuits of the Roman Catholic Church. These people are faithful and diligent workers, and are doing much good among the Indians. A new church building is being constructed by this society at their mission, which will be of great assistance to them in their work.

Sanitary.—The sanitary condition of the reservation is steadily improving. As in the past, the death rate has exceeded the birth rate—by fifteen this year. It is accounted for by a number of old people dying. No epidemics were experienced, and the "medicine man" is a thing of the past here. They rely altogether upon the agency physician. They are instructed in the principles of hygiene and taught the importance of good ventilation in their houses and cleanliness in their habits.

Police.—The police have been faithful and efficient in the discharge of their duties. There has been no trouble or disorders among the Indians during the year. The only annoyance that has been given me in this connection is the habit of the Indians in getting and drinking liquor. The opportunity is afforded them in securing whisky by two or three doggeries located at different points near the reservation line. I brought to bear all our good influences on these "joints," and during the year succeeded in procuring five indictments against one of these vagabonds, who plead guilty to two counts and was fined \$400 and imprisoned for a few days. This had a good effect upon others in the business and has checked the traffic to a great extent.

The Indians are supplying themselves with mowing machines by purchase from local dealers. I have noticed that the men who buy their own machines take good care of them; much better than with those, the property of the Government, simply loaned to them for temporary use. I think this a good move on the part of the Indians, and have encouraged them to invest their money in important agricultural machinery.

The Indians have earned in the past year:

| | |
|--|-------------|
| Sale of beef cattle..... | \$11,901.82 |
| Sale of wood..... | 600.00 |
| Sale of lumber..... | 758.12 |
| Sale of oats..... | 1,000.00 |
| Hauling freight..... | 994.31 |
| Labor, aside from regular employees..... | 180.00 |

As an evidence of the progressive spirit and widening views of these people, I have concluded to incorporate in this report a petition recently received by me signed by over one hundred of the leading men of the two tribes. It is as follows:

FORT BELKNAP AGENCY, MONT., April 30, 1898.

LUKE C. HAYS, *United States Indian Agent.*

DEAR SIR: We, the people of this reservation, respectfully do this day seek your counsel and ask your aid upon the following: That there be no more money used from appropriations made to us by Congress for the purchase of grain for seed or annuities. In the latter we want to have discontinued all clothing, bedding, dry goods, hardware, and such other articles as you may

deem fit to discontinue. In regard to old men who are not able to work, we think it would be better that they should have annuity goods issued to them and their families.

Instead of these annuities, we want you, if it is possible, to make arrangements to deposit whatever amount of money we may have in the Treasury, so as to yield us a profit of 5 per cent interest for one year. Then, at the end of one year, if our reservation is not in condition for more cattle (which is by far the most profitable way our money could be invested, providing we could take care of more cattle, which we can not do at the present time on account of the scarcity of feed), you may put our money at interest for another year.

During the summer season of each year we want all our cattle herded out on the prairies and along the borders of the reservation, so that the grass may have the proper chance to grow around close to our home and be ready to do some good during the fall and winter season. Cattle are of no account to us unless we have hay for them. So we want our grain fields turned into hay meadows. We ask you to put in every effort to extend the irrigation system on this reservation.

Furthermore, we ask you for right to sell timber, lumber, not including firewood. We ask you to sell timber only when it may bring the proper price. All timber and lumber to be measured by the sawyer, after which he shall inform us as to how much we shall sell it for. No man shall sell timber or lumber under whatever the market price of such may be at any time any Indian may wish to sell.

For the enforcement of the above, we would leave to your judgment. Hoping you will consider our petition with sincerity, we are,

Your obedient servants.

This document will be forwarded to your office in due time, with recommendations for such action as will serve the best interests of these people.

I desire to state that the employees of the agency have been faithful and efficient, and to them much credit is due for any advancement of these Indians. Also, to thank your office for courtesies and assistance extended to me during the past year.

Statistics and report of the school superintendent are herewith respectfully submitted.

Very respectfully,

LUKE C. HAYS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF FORT BELKNAP SCHOOL.

FORT BELKNAP, HARLEM, MONT., June 30, 1898.

MADAM: Submitting my annual report of the Fort Belknap Industrial Boarding School, I have the honor to call attention to the following:

During the year ending our attendance has been very uniform. The vacation months were busy ones, with caring for the cattle, the garden, and house work, with the repairs which could be made during that time. The large girls remained at the school, while the large boys had one month away, which was ample time to produce a thoroughly demoralizing effect. However, it is a pleasure to note that with the coming of September all the pupils were promptly returned, due doubtless to the effectual influence of the United States Indian agent at this place rather than to their thirst for knowledge of the white man's road. Unfortunately many whites here on and near the reservation are very nearly on the old Indian trail themselves.

The attendance throughout the year has had very little to interrupt it, except an epidemic of whooping cough with, perhaps, a combination of la grippe, which in some cases worked an early fatal result, in others a wrecking of the health and developing pulmonary trouble. With the opening of spring, and consequent improvement of hygienic conditions, the normal status of good health was soon reached.

While the year has been fruitful of improvement in accommodations made there is much more, some in prospect, which is essential to a proper realization on the investment already made. The additional dormitory space given by the frame building moved from the agency is ample for present needs. The schoolrooms are too small and crowded. One of them should be converted into a boys' sitting room, and a new building provided with school and assembly room should be erected. The need of an assembly hall seems imperative. The dining room is now used for that purpose.

The waterworks, now nearing completion, supply a want existing since the origin of the school. A small additional outlay invested in the erection of one and the furnishings of two bathrooms would make our bathing facilities good. With the improvements made and those desired I see no reason why the work of another year, both in the educational and industrial departments, should not be of necessity very much higher in standard than that already attained.

The shoe and harness work has been largely repairing. In this work the Indian apprentices have done well.

The school herd is improving in number and quality. Some of the schoolgirls are becoming expert butter makers. The boys are good herders.

As our irrigation facilities are perfected, the garden is proving less of an experiment, and the children's bill of fare receives many additions therefrom, so that we can better cultivate a taste for other than strictly meat diet. The year's supply of potatoes and other vegetables, except tomatoes, was supplied in this way.

Allow me to recapitulate as to the needs of the school:

First. Much general repair work, now in prospect.

Second. A new building for schoolroom and assembly hall

Third. A putting in of furnace or steam heat.

Cordially remembering past kindness of superior officers, very respectfully,

HENRY W. SPRAY, *Superintendent*

ESTELLE REEL, *Superintendent Indian Schools.*

(Through the office of Luke C. Hayes, United States Indian Agent.)

REPORT OF FORT PECK AGENCY.

FORT PECK AGENCY, POPLAR, MONT., *August 31, 1898.*

SIR: I have the honor to make the following report for the fiscal year ending June 30, 1898:

I assumed charge of this agency April 22, 1898, relieving Capt. H. W. Sprole. I was agent at this place from 1889 to 1893, and was relieved by Captain Sprole.

* * * * * *

The reservation.—The reservation is in the extreme northeastern portion of Montana. It has an east and west frontage on the Missouri River of 100 miles. It is 40 miles in breadth, north and south. It is nearly in the form of a parallelogram. There is some very desirable land along the water courses, and with irrigation it would be extremely valuable. It is fairly well watered and has a reasonable supply of timber.

Population.—

| | |
|-----------------------|-------|
| Assinniboin | 660 |
| Sioux | 1,239 |
| Total | 1,899 |
| School children | 375 |

A decrease from last year's census of 114.

Character.—The disposition of these Indians is good. They are willing to work and to work hard when sufficient inducements are offered. They have improved greatly since I first knew them, fifteen years ago. They are rapidly becoming an English-speaking people.

Employment.—Stock raising is the only employment outside of work done for the agency. They own about 3,000 head of cattle, of which they take excellent care and which are rapidly increasing. More cattle should be issued to them. But little farming proper is done; the dry arid soil of eastern Montana is not adapted to it without irrigation.

Education.—A full report of the Poplar River Industrial Boarding School, by Supt. F. C. Campbell, accompanies this report. Comment by me is unnecessary. The school buildings are the old abandoned ones of Camp Poplar River, erected by the military in 1879 and abandoned by them in 1893 as uninhabitable. They have already cost more in repairs, extra fuel, extra help, etc., than would have built a first-class modern school plant for 200 pupils. When the military abandons a post but one thing should be done with what is left—apply the torch.

There are no day schools.

Religion.—The Presbyterian and Roman Catholic churches maintain missionaries. Both are doing a good work among the Indians. Considerable progress has been made in the past few years. It is not so patent to one living here continuously, but to me, after an absence of five years, it is very evident.

Indian traders.—There are five licensed trading stores on the reservation.

Crime.—One murder was committed, which was the only crime of any magnitude during the year.

Irrigation has not been a success this year. Crops were put in too late, and the water has been scarce. The only ditch is one taken out of Poplar River. It is about 7 miles long, and will, in a fairly wet season, irrigate about 200 acres of crops and considerable hay land besides. When finished (it has never been properly completed) it would make a good ditch for two or three prosperous ranchmen or a good one for the use of the school, or a few Indians might be located on it. As an enterprise to bring these Indians to a condition of self-support it is a failure. In a strictly dry season it amounts to nothing, for the creek goes dry at the head of the ditch. Yet on the same question of irrigation depends the future welfare of these Indians. All this has been reported upon and pointed out so much that I will forbear remark.

Police and judges.—The police are fairly efficient, but might be improved. The judges of the court of Indian offenses have done good work. The powers and duties of each should be more closely defined by law.

New treaty.—Preparatory to allotment an inspector should be sent here to extinguish the Indian title to about three-fourths of the reservation. There would be plenty of land left for allotment, and I believe these people would take kindly to it. Fortunately they have already inured themselves to the best portion of the reservation.

Conclusion.—I ask the indulgence of the Department for this brief report. My time is very much occupied. Most of the principal employees, including chief

clerk, superintendent, and every white farmer, have left this agency by transfer since my arrival. This has increased greatly the duties to which I have been compelled to give personal attention. I feel that I have had responsibilities thrust upon me for which I never bargained. I presume that I could have the privilege of relieving myself of this load of official responsibility by quitting the service. However, the Department need not consider this my resignation.

Very respectfully,

C. R. A. SCOBEY,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF POPLAR RIVER SCHOOL.

POPLAR RIVER INDUSTRIAL BOARDING SCHOOL,
Fort Peck Agency, Poplar, Mont., July 12, 1898.

MADAM: I have the honor to submit my annual report for the fiscal year ending June 30, 1898. The average attendance for the year as shown by quarterly reports is as follows:

| | |
|---------------------|-----|
| First quarter..... | 153 |
| Second quarter..... | 178 |
| Third quarter..... | 186 |
| Fourth quarter..... | 183 |

The total enrollment for the year is 235. Of these 14 were transferred to nonreservation schools; 15 were withdrawn on account of sickness; 21 were withdrawn on account of having no privileges on this reservation, their parents belonging elsewhere.

While 15 may seem a large number to have been withdrawn on account of sickness, they were pupils who were not really sick, but on account of running down somewhat this spring, it was deemed advisable to allow them to return home; and so far as we have been able to learn, all of them have recuperated and will be on hand at the opening of school this fall. We find this the most satisfactory way to treat these cases, as the pupil seems to recover much more readily in the freedom of the home, and it is much more satisfactory to the parents. We have had very little serious sickness in the school. Two cases of diphtheria developed, neither of which proved fatal.

The condition and needs of this school plant were reported upon in my annual report of last year. The Department's attention has also this year been called to them in special reports from this school and agency, also by Inspectors McConnel and Wright and Supervisor Smith, consequently it will not be necessary to mention them in this report.

While the condition of these buildings will not justify the expenditure of a very great amount of material and labor, we found it necessary to make some improvements. With very little expense we extended the water system so as to place water in the kitchen, laundry, boys', girls', and mess quarters. By so doing we have been enabled to do away with the former very unsatisfactory and expensive mode of delivering water daily to these quarters by means of a water wagon. By using some discarded fence posts, cottonwood logs, and other cottonwood lumber, and dirt for a roof, we provided the laundry with an addition 28 by 36 feet. This, with the water system extended to this building and a sewer to carry away the sewage has been very much of an improvement in this department. The same may be said of the kitchen, so far as the water system is concerned.

We have added to the girls' quarters an unceiled log building, with dirt roof, 38 by 90 feet, which provides for the girls a room for recreation, also lavatories. While this building is not constructed according to modern ideas, it is substantial, and will answer the purpose for which it was designed.

The farm and garden are proving quite satisfactory, and, considering the cost of produce from them, should it be necessary to purchase the same, quite remunerative. The prospects for a good crop this year are quite flattering. The agent has set apart 320 acres of land exclusively for school purposes, which in due course of time will be of very great value, and will be a means of helping to make the school self-supporting. If our increase of cattle is what can reasonably be expected, we will have 60 head belonging to the school. We are in hope eventually to have a large part of the beef as well as milk and butter for the subsistence of pupils from our own herd.

The school work as a whole has been conducted on similar lines to those of last year, making improvements wherever possible. The reading course prescribed by the superintendent of Indian schools was taken up by most of the employees, also by others not connected with the school. Everyone seemed to realize moral, social, and intellectual benefits from the course. We have been successful in creating more of an interest in school affairs among the parents than heretofore. As a consequence, the influences of the school have reached more homes on the reservation, thereby accomplishing a very important feature of the work of the agency boarding school.

I am pleased to express the thanks of the school to ex-Acting Agent Capt. H. W. Sprole, Agent C. R. A. Scobey, and visiting officials for courtesies extended.

Very respectfully,

F. C. CAMPBELL, *Superintendent.*

The SUPERINTENDENT OF INDIAN SCHOOLS.

(Through C. R. A. Scobey, United States Indian agent.)

REPORT OF TONGUE RIVER AGENCY.

TONGUE RIVER AGENCY, MONT., *July 19, 1898.*

SIR: I have the honor to transmit the following as my report of affairs at this agency for the fiscal year ending June 30, 1898:

The agency is located in Custer County, Mont., on Lame Deer Creek, 65 miles

from Rosebud Station, on the Northern Pacific Railway, on that part of the reservation set apart for the use of the Northern Cheyenne Indians under the Executive order of November 26, 1884. There is but limited area that can be used for agricultural purposes, as there is about 1,500 acres held by white men, who claim to have title for the land from the Government that they occupy. On that part of the reservation which was withdrawn later by order of the honorable Secretary of the Interior there is a larger area of land which might be cultivated to advantage by use of a proper irrigating system. The rest of the reservation is, in my opinion, only fit for grazing purposes, as it is a rough and hilly country, in which abound innumerable springs of good water for stock.

The past season has been a very bad one for agricultural pursuits, as there was scarcely any rainfall during the entire summer of 1897, the long drought and the hot winds having dried up everything that was planted. Where there was no water for irrigation a limited amount of hay was cut. The Indians were compelled to cut in small patches upon the divide and in the coulees, as many of their hay meadows were dried up by reason of long-continued dry weather.

These Indians have no stock to speak of. They have about 4,000 ponies and, probably, 50 horses, which is a good estimate, the ponies being small, worthless beasts. I would suggest that the Indians be induced to sell or trade them for cattle, if such a trade could be effected, as they are of no use and only keep the grass eaten off the reservation. As I am firmly convinced that the only means by which these people can become self-supporting upon this reservation is by stock-raising, I believe a way should be opened for them to this end. They could raise sufficient vegetables, corn, potatoes, etc., to enable them to live until they could get started in the proper manner, which could be done by placing competent persons in charge of this industry until the Indians learn how to manage and care for range cattle. I believe these people to be intelligent enough to be able to learn to manage and to care for stock in a few years. They all seem anxious to do something for themselves, but they realize that they have not the means to start with.

I sincerely trust that some steps may be taken in the near future in relation to more adequate school facilities for these people. There should be a boarding school upon this reservation large enough to accommodate at least 250 pupils. At present we have 384 children of school age. St. Labre's Mission, a contract school on Tongue River, can accommodate 65 pupils, the day school at the agency can accommodate comfortably about 30 pupils, which leaves 289 children without any school facilities whatsoever. The Rosebud Indians have no means of educating their children at all, as the day school is filled with children whose parents live on Lame Deer in the vicinity of the agency.

There have been one or two complaints from white settlers who have claimed water rights under State laws to water running in streams above their holdings. In those cases I have permitted the Indians to use water sufficient to irrigate their small gardens, then instructed them to shut the water gates and allow the water to run in its natural bed without wastage. I hold that the water rights of the settlers do not extend beyond the limits of the legal holdings of each person having rights on this reservation.

There are a great many whites upon this reservation, the town of Hutton, on Upper Rosebud, being about $2\frac{1}{2}$ miles north of the south line of this reservation. It has a population of about 50 people, has 2 stores, blacksmith shop, livery stable, restaurant, town hall, and post-office, and probably 15 or 20 log houses. The other whites are scattered over the reservation. They should all be removed from the reservation; those having bona fide claims should be bought out, and those who came upon the reservation knowing they were encroaching upon the rights of these people should be summarily ejected. With the whites removed there would be no cause for any friction or complaints from either Indians or whites. The reservation should be fenced upon the proper lines; this being done, a policeman could be stationed near each gate in a comfortable house and who would prevent the entrance of all improper persons upon this reservation and thereby preserve the peace and safety of the Indians.

The general sanitary condition and health of these people is very fair, there being no diseases of an epidemic character among them. Almost all the deaths that have occurred were due to tuberculosis or consumption. A few more of them come to the agency physician for treatment of their ills than used to come years ago, which fact shows that they are slowly drifting away from the medicine man, although the medicine man tries hard to retain his place and to ply his trade.

They have transported with their own teams about 533,300 pounds of freight, for which they received about \$4,000. They realized from the products of their own labor sold to the Government the sum of \$2,050, making a total of \$6,050 paid them during the past year.

There have been no cattle killed by these Indians since January 1 last, with one exception; the police caught two men in the act, they having killed an unbranded calf. They were promptly arrested and were punished by being locked up in the agency jail, and were made to work about the agency for the period of twenty-one days. This punishment had a very salutary effect upon them and other young men inclined to get into mischief.

We have three returned pupils from Carlisle; one of them will be put in the blacksmith shop and given employment; the others will be given places when vacancies occur, if they can fill them. In connection with the above it seems to me that when young men return from school after having finished the course some provision should be made for giving them employment to prevent them being compelled to drift back to camp life. At this agency there are no places at present for such persons.

The agency buildings are log, with exception of the agent's dwelling, warehouse, and granary. A great many are in need of new roofs; the present roofs are of dirt and leak very badly in rainy weather; some are also in a dangerous condition, especially that of the blacksmith and wheelwright shops, and a board roof is needed very badly.

The police force consists of captain, lieutenant, and 18 privates. It is a very intelligent body of men. To them is due the credit of keeping the people of this reservation under such good discipline. Their duties are varied and often arduous. Those who are not on duty at the agency are generally among the people giving them advice, the result of which is beginning to be felt among the younger men, as many of them now go to the captain of the police or the police for information instead of going, as of old, to the chiefs when they wished to do anything.

The last census shows an increase of 19 in the population, viz:

| | |
|--------------------------------|-------|
| Males | 626 |
| Females | 723 |
| Total | 1,349 |
| Births | 49 |
| Deaths | 28 |
| Males above 18 years | 326 |
| Males between 6 and 16 | 193 |
| Females above 14 years | 447 |
| Females between 6 and 16 | 191 |
| Males of school age | 193 |
| Females of school age | 191 |
| Total of school age | 384 |

In conclusion, I desire to thank the employees for their courteous conduct and their intelligent manner in performing their many and varied duties.

I also express my sense of obligation to the honorable Commissioner for his prompt action and assistance rendered this office.

I have the honor to be, very respectfully,

J. C. CLIFFORD,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN NEBRASKA.

[Not received in time to be inserted in proper place.]

REPORTS OF AGENCIES IN NEVADA.

REPORT OF NEVADA AGENCY.

NEVADA AGENCY, *Wadsworth, Nev., August 9, 1898.*

SIR: Pursuant to instructions of June 1, 1898, I have the honor to submit herewith my first annual report of the Nevada Agency.

Agency.—I assumed charge of this agency on November 26, 1897, relieving I. J. Wootten, who turned the affairs of the agency over to me in good condition.

This agency at present consists of Pyramid Lake only, with an acreage of 322,000 acres, including a large body of water 40 miles in length by an average of 12 miles in width, known as Pyramid Lake, from which the reservation takes its name. This lake abounds in a bountiful supply of "salmon trout," which affords the Indians a profitable source of revenue as well as a good supply of food during the winter months. The agency headquarters are located near the lake, eighteen miles north of Wadsworth, Nev., a town of 600 inhabitants on the main line of the Central Pacific Railroad. Wadsworth is both the post-office and telegraphic address of the agency, as well as the point where all supplies for the agency and school are delivered and received.

Population.—The following is a recapitulation of the census of the Pah Ute tribe of Indians, the only tribe under the jurisdiction of this agency, as taken on June 30, 1898:

| | |
|--|------------|
| Males over 18 years of age | 163 |
| Females over 14 years of age | 180 |
| Children between 6 and 16 years of age | 157 |
| Children under 6 years of age | 62 |
| Total | 562 |

Indians.—The Pah Ute Indians have little in their history or tradition to excite the curiosity of their more enlightened brothers. They are a contented, industrious, peaceable and kind race of people, obedient to all regulations and rules promulgated by the Department, and are easily managed. These Indians have no treaty stipulations with the Government and rely solely upon the gratuity of Congress for what little assistance they receive toward their civilization and support. They have always been faithful in their allegiance to the Government.

Agriculture.—Only a very small portion of this reservation is adapted to farming. Most of the land is a dry, alkali, and mountainous country. What little land they till depends entirely upon irrigation for the cultivation of crops. Last year they cultivated about 200 acres, divided into small holdings from 4 to 12 acres each. In addition to this they irrigated and cut hay from about 800 acres of bottom land. This year their crops (except hay, of which they will cut only about two-thirds of the usual amount) will be a total failure on account of the scarcity of water.

These Indians have been without proper instruction in farming for the past two years, the position of farmer having been abolished. This was a mistake. They should have by all means the constant advice and help of a practical farmer who thoroughly understands irrigation.

Irrigation.—The irrigating plant at this agency is, in its present condition, unreliable and totally inadequate for supplying the amount of water necessary to irrigate the lands under cultivation. The main ditch is a fair one, and, with the usual annual cleaning, carries an abundance of water for all purposes. But the dam at the head of the ditch has ever been a source of much trouble, and has been kept together at a heavy annual expense. A new, permanent, substantial dam is absolutely necessary if these Indians are to continue their farming industry, and if the school and agency plants are to rely upon the ditch, as they do now, for their supply of water for all purposes. In July I forwarded to your office a special report on this subject, and sincerely trust it will receive favorable consideration. If a new dam is constructed, at least 500 more acres of land can be put under cultivation. But it is useless for the Indians to break any more land until they are guaranteed a permanent and reliable supply of water.

Stock raising.—Stock raising could be made a profitable industry for these Indians, if properly started and supervised for a few years. The nature of the lands included within their reservation makes them far better adapted for this purpose than any other. The mountainous portion of the reservation is well watered and provides abundance of feed for cattle or sheep. This is a natural stock country and the Indians take kindly to this character of work, and they would always have an active and ready market for all the stock they could raise.

Roads.—The roads on the reservation are kept in good condition by the Indians without cost to the Government. They seem to realize the benefits to be derived from good roads, and do this work cheerfully when directed.

Freighting.—The hauling of Government supplies from Wadsworth to the Nevada Agency, a distance of 18 miles, is done by Indians at the rate of 50 cents per hundredweight. Last year they freighted 166,064 pounds, for which they received \$830.27. They make safe and reliable freighters and are always willing and anxious to do the work.

Purchases from Indians.—The hay, barley, and wood used at school and agency are purchased from the Indians at the usual market prices. There is no spirit of

competition among them and the prices paid are regulated by the agent according to the prices prevailing in the vicinity of the agency. Last year they sold to the Government the following:

| | |
|--------------|------------|
| Wood | \$1,047.50 |
| Hay | 718.95 |
| Barley | 58.94 |
| Total | 1,825.39 |

Court of Indian offenses.—Three judges comprise the court of Indian offenses and dispense justice in a very satisfactory manner. All minor disputes and transgressions of the regulations are submitted to the court for adjustment. Their decisions are rendered after full consultation with the agent in a spirit of fairness and impartiality.

Indian police.—The force at this agency consists of one officer and seven privates, one of whom resides in Wadsworth and cooperates with the local officers in the suppression of the liquor traffic. The members of the force have been faithful in the discharge of their duties, and have cheerfully responded to all calls made upon them. No serious crimes have been committed on this reservation during the past year.

Agency buildings.—The agency buildings are in good condition and provide ample accommodations for employees' quarters, warehouses, offices, etc.

Agency employees.—The agency force consists of 1 clerk at \$1,000, 1 physician at \$1,000, and 1 general mechanic at \$720. A practical farmer should be allowed this agency. The position was abolished a few years ago to the detriment of the Indians.

Agency stock.—The agency stock is in good condition. We have 2 driving teams, 1 saddle animal, and a mule for general work, a sufficient number for agency purposes.

School stock.—The school owns 13 cows, 1 bull, 4 heifers, 3 steers, and 13 calves, all of which are in good condition and furnish the school with an abundant supply of milk. The school also owns a good work team. The stock is properly cared for by the pupils under the supervision of the industrial teacher.

School buildings.—The school buildings are in good condition, but do not provide proper accommodations for the children of school age on the reservation or even the number annually in attendance. The buildings in use do not properly provide room for dormitories, recitation rooms, and employees' sleeping quarters. We have no assembly rooms for either employees or pupils, no lavatory or dressing rooms, no suitable clothes rooms for boys or girls, and the dining room and kitchen are entirely too small and ill-arranged for their purpose. The buildings should be materially improved and enlarged.

Education.—Pyramid Lake Boarding School is the only school in operation at this agency. It has been well conducted during the past year and a marked improvement in all its departments is the gratifying result of the year's work. The attendance was excellent; with an enrollment of 108, an average attendance of 94 was easily maintained. At all times during the year the school was crowded far beyond its capacity. The total cost of maintaining the school was \$12,276.63, or a per capita cost of \$131.11. The school was in session only ten months.

The industries taught in the school are those common to most reservation schools. The girls are taught to cook, sew, wash and iron, and to do general household work. The boys are instructed in farming, caring for stock, and general repairs to buildings. The school garden contains 15 acres, 8 of which are devoted to the growing of vegetables for the school, and the remainder to hay and pasture for school stock. In addition to the repairing of the pupils' clothing, the following articles were manufactured in the sewing department:

| | | | |
|------------------------------|-----|----------------------------|-------|
| Aprons | 151 | Pillowcases | 73 |
| Chemise | 16 | Sheets | 41 |
| Drawers, pairs | 321 | Skirts, manufactured | 107 |
| Dresses | 207 | Suspenders, pairs | 28 |
| Dresses, night | 36 | Towels | 139 |
| Garters, pairs | 135 | Waists | 30 |
| Laundry bag | 1 | Window curtains | 40 |
| Overalls, boys', pairs | 6 | | |
| Pants, boys', pairs | 21 | Total garments | 1,352 |

The literary department of the school is under the management of a principal teacher and two assistant teachers. The work of this department has been satisfactory and the improvement in the pupils is quite noticeable.

The white employees have faithfully and zealously performed the duties assigned to them. They have worked together in perfect harmony and taken special interest in the general welfare of the school. The Indian employees were not what they should be, lacking in general efficiency and competency, and I have recommended a decided change in these positions for the coming year.

The health of both employees and pupils has been excellent.

The parents of the children have begun to realize and appreciate the benefits of an education for their children, and from this on little trouble is to be apprehended from poor attendance. With the moral support of the parents this school has a bright future.

Inspection.—School Supervisor Conser was the only inspecting official to visit this agency during the past year. He thoroughly inspected the school, and the kind advice and valuable information given to the employees relative to the management of their various departments was duly appreciated.

Missionary and church work.—This work is conducted by the Protestant Episcopal Church. The pupils attend the church every Sunday for religious instruction. The resident missionary takes great interest in the moral welfare of these people, and has induced many of them to be baptized. Her untiring devotion to the cause is indeed gratifying and doing much good in improving the moral status.

Thanking your office for past favors and hoping for a merited continuation of the same,

I have the honor to remain, your obedient servant,

FRED B. SPRIGGS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF WESTERN SHOSHONE AGENCY.

WESTERN SHOSHONE AGENCY, NEV.,

August 19, 1898.

SIR: In compliance with instructions and in conformity with the custom of your office, I have the honor to transmit herewith for your examination my first annual report of the general condition of the affairs of the Western Shoshone Agency and Boarding School.

Inasmuch as I have been agent only about four months, having entered upon the discharge of my duties May 1, 1898, and having had only a period of four months' active management of its affairs, I shall not be able to make a full and complete report of all of the details, only giving your office a summarized statement as they have come under my observation as to the progress and improvement made during the past year.

This agency contains 400 square miles, or 256,000 acres, situated at an altitude of 6,000 feet, as taken by Lieutenants Bailey and Oyster, two Government surveyors and engineers, in 1883, while surveying and establishing the boundary lines of this reservation. Of the 256,000 acres there are about 229,500 acres excellent pasture land. The timber land when grouped together will not exceed 2,000 acres. It is scattered in bunches on the hillsides and along the waterways of the hills and canyons. Timber for fuel and building purposes, also fencing, is from 8 to 10 miles distant from the agency. There is about 5,000 acres that may be classed as hay land, in good seasons producing fine hay. There are about 10,000 acres well adapted to raising timothy, particularly alfalfa, which has done well on this reservation. What is known as grain land could be all planted with alfalfa; also all of that portion known as the "Island."

The raising of wheat and barley are not always attended with good success, owing to the climatic conditions. We are liable to experience a drought once in every four or five years. Sometimes two dry seasons follow successively. There are other drawbacks to the grain crop. The squirrels often devour the crop in the early part of the season and during the ripening period the standing grain is vested with swarms of blackbirds. These conditions have much disheartened the Indians, and they of late years have not farmed as much as formerly. During the past spring, in consequence of these conditions, I do not think there was more than 75 or 80 acres sown in grain. Another reason for the small amount of grain sown this year was they had no seed. They are now about gathering the present year's crop,

which I do not think will exceed 150 sacks, if that much. The hay crop is also meager, possibly less than half a crop, aggregating between 350 and 400 tons. It may, however, reach a higher figure, as the second alfalfa crop has not been harvested. The school garden and farm will not yield the present season more than two-thirds of a crop.

The general health of the Indians has been good the past year, notwithstanding there have been 13 deaths, the majority of which were old and decrepit Indians. The births for a corresponding period were 10.

In view of the fact that large pasture areas of this reservation, particularly along the line of small streams and springs that abound, afford sufficient water the driest of seasons for stock purposes, I would recommend that several heads of families, or groups of families, be furnished with cows for the purpose of starting them gradually in the stock business, say each family from two to five cows, according to the size of family. They would in this way gradually accumulate stock. The Shoshones and Piutes of this agency are noted for being fine stockmen, and fully able to look after and take care of cattle. It is the general desire of all the Indians that they be started in the stock business. I feel confident that they would put up sufficient hay to carry their stock through the hard winters.

Yet it is questioned by those well posted if stock raising would be best for the Indians and the Government, as the donation of from two to five cows to each family would involve a large outlay of funds, and it would be many years before the Indian cattlemen would be in a self-sustaining condition.

Inspector McConnell, who recently visited this reservation and examined it all over, was of the opinion that it would be for the best interest of the Indians that sheep be donated instead of cattle, as it took less capital to furnish this character of stock and that in the course of three or four years the increase of sheep would be so great, together with the annual output of wool, the Indians would be self-sustaining. As a matter of course one or two sheep herders would be required for two or three years. These should be white men, as the Indians are not yet experts in the business, except as to the shearing of sheep. They have acquired but little practical experience touching the lambing season, but, as above remarked, they are good sheep shearers, and go out to shear sheep every spring. Sheep do well on alfalfa, which does well here. Those Indians who are not favorable to sheep raising could have the southwest side of the river and reservation devoted to cattle raising and other interests, while sheep raising could be carried on on the northeast side of the river, which is the most mountainous and best adapted for the purpose. I would recommend that only a few hundred be given to a few well-informed Indians, the result of which, I believe, would be the most satisfactory to all concerned.

The Owyhee River, which courses its way through the reservation in a westerly direction, supplies the water for our present system of irrigating ditches. This stream is unreliable, as the amount of water supplied depends almost wholly upon the amount of snow that is annually deposited during each winter season upon the neighboring mountains. After an unusually hard winter the volume of water that makes down and is discharged through the canyon is simply immense during the spring, sometimes undulating the valley for two or three miles wide, then after a mild winter there will not be sufficient water for irrigating after the 1st of June, and by the middle of August will be dried up, as it is this season. After a careful examination for a dam site along the river with Inspector McConnell, it was our opinion that it would be impracticable to build a storage dam, as at no point in the canyon could abutments be found on both sides to answer the purpose, as on one side or the other there would be an open low space. The earth in the immediate vicinity for dam-building purposes at every point along the line of the river is a light loamy soil, particularly in the canyon, which is easily carried away. As a matter of fact a substantial dam can be built of large heavy timbers that are well fortified with heavy rock, but such a dam would cost at least \$250,000 or more, and would seem to be out of our reach for the present financial reasons, if no other.

The Indians have 47 houses already built and occupied, of which number 11 are lumber, and 7 new ones are now under construction, making a total of 54, besides a number of outbuildings, such as stables, sheds, and storehouses for farming implements and tools, also hay and cattle corrals. I estimate they have at present not less than 60 miles of wire fence now in fair condition, with three strands of wire nailed to posts set on an average of 8 feet apart in the ground.

The ditch system for irrigating consists of four main ditches, aggregating 14 miles in length. From these ditches a number of small distributing ditches have been excavated and bridged.

The earnings of these Indians during the fiscal year 1898 are as follows:

| | |
|--|------------|
| Transportation of Indian supplies..... | \$3,539.89 |
| Wood..... | 1,480.00 |
| Barley..... | 831.87 |
| Hay..... | 73.50 |
| Labor..... | 500.00 |
| Hides..... | 4.50 |
| Transporting supplies for private parties..... | 725.00 |
| Sale of gloves..... | 235.00 |
| Total..... | 7,389.76 |

All of the school buildings are in reasonably good condition. The general health of the pupils is excellent. The abundant supply of clear, cold, pure water has been a great factor in preserving their health. The sewerage system is not as good as it might be, but when some new sewerage pipes are laid, carrying off the water to a greater distance than at present, this defect will be cured. We will finish in a few days the repainting of the interior of the school building.

The school garden, except the potato crop, is a partial failure on account of the dry season. The second crop of alfalfa will not exceed one-third of the former cutting. The school cows offered a good supply of fresh milk for the pupils. The recreation grounds look neat, and the general surroundings of all the school buildings are well kept.

For the brief period that the school has been in session under my charge it has made only fair progress. The manners of the children can not be excelled. No Indian boy or girl of this school uses a knife when custom and good manners substitute a fork. The credit of all this work is due to the able management of Mr. Charles J. Mayers, the industrial teacher.

The aggregate cost of maintaining this school the past fiscal year is \$11,850.35, or a little over \$227 for each pupil. This amount at first glance looks extravagant, but when all the circumstances are taken into consideration, the sum does not seem unreasonable. The transportation of material, goods, and supplies, not only on the railroad, but the wagon transportation, from \$1.90 to \$2.25 per 100 pounds, with other attendant expenses that are necessary to carry the school successfully, is quite a factor in the total expense incurred.

Whisky and drunkenness continue to be an evil. Upon investigation I find that the selling of whisky to Indians off the reservation is confined to White Rock, by a white man. It seems impossible to induce an Indian to reveal the name of the vendor of this vile truck. I have charged my police to keep a sharp lookout, and hope to be able to discover and capture the party who is supposed to be in this calling of selling liquor to Indians. If I do I shall do my utmost to send them to the penitentiary.

The stock belonging to the sheep and cattle men bother and annoy us greatly. Messrs. Hake and Ryan are the owners of a ranch adjoining the northwest corner of this reservation, which contains 160 acres of first-class hay land, and for the purpose of removing further annoyance about the trespass of stock of either party, I recommend that your office cause this property to be valued, and, if satisfactory, cause the same to be purchased and be annexed to and become a part of this reservation.

The census of these Indians taken June 30 last is as follows:

| | |
|-----------------------------------|-------|
| Shoshones: | |
| Males..... | 171 |
| Females..... | 158 |
| | — 329 |
| Piutes: | |
| Males..... | 121 |
| Females..... | 106 |
| | — 227 |
| Total..... | 566 |
| Children of school age: | |
| Males..... | 69 |
| Females..... | 55 |
| | — 124 |
| Total..... | 124 |
| Males over 18 years of age..... | 190 |
| Females over 14 years of age..... | 172 |

Respectfully submitted.

JOHN S. MAYHUGH,
United States Indian Agent.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF WESTERN SHOSHONE SCHOOL.

WESTERN SHOSHONE AGENCY, NEV., *August 30, 1898.*

SIR: Pursuant to instructions I herewith submit my annual report of the Western Shoshone Boarding School for the fiscal year ending June 30, 1898.

The number of pupils enrolled during the year was 58, and the average attendance was 51.6. The greatest number enrolled in any one month was 52. The capacity of this school is 50, but had we the buildings to accommodate them properly we could easily obtain 75 or 80 pupils. These people are anxious to have their children attend the agency school, in witness whereof at the opening of the school year just closed we were compelled to turn many away for want of room. In view of the fact that these people manifest such a desire to have their children in school it is certainly to be deplored that there is not room to accommodate them, as it is a trait seldom seen among the Indians and should certainly be encouraged.

In the literary department the pupils generally evinced a great interest in their studies, and in looking back over the year I can not but feel gratified with the progress that has been made.

The industrial work, taken as a whole, has been fairly satisfactory. Owing to the fact that the outdoor work was under the management of four different industrial teachers during the year it could hardly be expected that there would be as much accomplished in the training of the boys had they been under the supervision of one man throughout the year who would take an interest in them and their work, as has been shown in the two months that they were instructed by Mr. Charles J. Mayers, the present industrial teacher.

At the first part of the season the garden promised a bountiful yield of potatoes, turnips, cabbage, rutabagas, etc.; but as it is impossible to raise any kind of a crop here without irrigation, and as the river from which we obtain our water supply went dry in July, at the time when water was most needed, we will have very few vegetables to show for our labor. The first cutting of alfalfa produced a very fair yield; but, there being no water, the second crop will prove an entire failure. Both crops will probably yield about 15 or 20 tons.

The health of the pupils has been exceedingly good during the entire school year. Not a death nor a case of serious sickness, and only a few slight complaints to be reported. I attribute this remarkable and healthy condition of the school largely to the watchfulness and care given by the agency physician, Dr. Oliver M. Chapman.

The employees generally have aided me in advancing these pupils in good morals and manners, and the good results obtained have been exceedingly gratifying. Many persons, prominent in educational matters both in county and State, and also some in the Indian service, who have visited the school, have expressed themselves as very much surprised and pleased with the good manners and training of the pupils.

In conclusion, I wish to thank you for your hearty support and interest you have manifested in the school.

Very respectfully,

G. W. MYERS,
Superintendent.

JOHN S. MAYHUGH,
United States Indian Agent.

REPORTS OF AGENCIES IN NEW MEXICO.

REPORT OF MESCALERO AGENCY.

MESCALERO, N. MEX., *June 30, 1898.*

SIR: I have the honor to submit herewith my annual report for the fiscal year ending June 30, 1898.

This will be the last report I shall submit as acting Indian agent, as I have been relieved from further duty as such by orders from the War Department on my own application. On this date I complete three years six months and twenty days of duty at this agency. I leave well satisfied that, with the material to work on and the condition of the Indians and of the section of country, I could not have accomplished more. My aim has been in some small degree to cut off these Indians from their dependency on the whites and to get them on the road to self-support. The lack of agricultural land, the inherited laziness of the Mescalero, and his aversion to any change looking to hard labor on his part, were strong factors militating against any aggressive policy. While much remains to be done with the tribe, yet a decided and distinct advance has been made, and if a firm hand be kept on them, they should soon be off the gratuity roll and the reservation be thrown open.

I strongly recommend the allotment of their land, on which subject a special report will be made later.

The Mescalero has adopted white man's attire, including short hair, and has his house to live in and lives in it. There is plenty of agricultural land for their self-support, but none to spare. All the children, 5 years and upward, are in school, and the school roll shows 118 children in school, out of a total population of 444.

The census shows a decrease of three from preceding years. The tribe is slowly on the decrease. The health of the tribe has been good. I inclose the report of the agency physician.

Very respectfully, your obedient servant,

V. E. STOTTLER,
Captain, United States Army, Retired, Acting Indian Agent.

REPORT OF PUEBLO AGENCY.

PUEBLO AND JICARILLA AGENCY,
Santa Fe, N. Mex., August 11, 1898.

SIR: In compliance with instructions from the Office of Indian Affairs, dated June 1, 1898, I have the honor to submit the following report of the Pueblo and Jicarilla Agency for the fiscal year ending June 30, 1898:

Having taken charge of this agency July 1, 1898, I can do no more than make a résumé of affairs as they appear from the records of this office. During the year three different persons have acted as agent, and accordingly affairs are decidedly mixed.

The agency office is situated at Santa Fe, with the subagency over the Jicarilla Apache Indians at Dulce, N. Mex., 216 miles distant.

PUEBLOS.

Population.—A census was taken a few days before the close of the year as accurately as the exigencies permitted. From this it appears that in the 18 pueblos there are 9,494 Indians. Of these, 2,475 are males above 18 years of age, 2,648 are females above 14 years of age, and 1,897 are school children between the ages of 6 and 16 years, of which number 641 are attending or have attended some school, while 1,256 are not attending any school. These figures can only be considered as approximate. In only 5 pueblos was it found possible to take a complete census, in 7 others a tolerably reliable estimate was obtained, while in 6 of the smaller pueblos no data whatever could be obtained, as there is no employee of this office in the vicinity. Heretofore there have been 19 pueblos, but during the past few years the Pojuaque Indians have gradually deserted their pueblo and joined their people, about 20 in number, with the pueblo of Nambe, until now the Pojuaque pueblo has become extinct. This was a wise movement, in my opinion, as the people were not strong enough to accomplish much good or to sustain a pueblo government.

Industries.—The Pueblos are a practically self-supporting people, farming many thousand acres of land, raising large herds of horses, burros, sheep, and goats. Many of the people live in comfortable, well-built, and attractive adobe houses, surrounded by well-kept orchards. All the lands have to be irrigated, and much time and labor is spent caring for the ditches. One of these canals, built by the San Felipe Indians, is 10 miles long and in many places 20 feet deep and 15 feet wide. This canal was constructed by the Indians with no other implements than shovels, spades, and picks. Some of the Pueblos—Taos, for example—not only raise sufficient wheat and oats for themselves, but also supply the whites of the surrounding towns. If these people could be furnished a few practical farmers to instruct them they would soon become well-to-do citizens and a help to the Government under which they live, instead of a burden.

Thrashing.—The method of thrashing among the Pueblos especially calls for aid and assistance. The wheat and other grain is placed on the ground, and the cows, horses, goats, burros, etc., are driven around over it until the grain is tramped out. Of course it is mixed with the excrement of all these animals, and untold labor is required in cleaning the grain, which is accomplished by picking foreign substances out with the fingers, throwing it up from baskets that the breeze may blow away the chaff, and washing it repeatedly in the water of a near-by ditch. To aid them in advancing beyond these primitive plans, I recommend that a fanning mill be furnished each Pueblo. These mills, I am sure, will help them to clean their grain quickly and in such a manner as to render it salable in the surrounding markets. With the present method these people get only about half price for their grain, which is much damaged by tramping, washing, and being improperly cleaned. These fanning mills will encourage them to raise larger crops, and as they will get double prices, the farming instinct will be greatly fostered.

Schools.—There are 14 day schools under this agency and 1 contract boarding school, situated at Bernalillo. The latter is in good condition and well kept. The day schools are, as a rule, in a most lamentable condition, owing to the fact that they have been, in my opinion, much neglected, and because they are conducted in buildings rented from the Indians themselves, some of them without floors and with absolutely no ventilation, without sufficient water, and dependent upon the school children for fuel. Very few of these schools have anything but wooden benches placed around the walls.

In two cases, San Felipe and Santo Domingo, the Indians refuse to send any girls to either the day schools or the nonreservation boarding schools at Albuquerque and Santa Fe. The inhabitants of San Felipe have agreed to send all

their girls to the day school provided a noonday lunch and housekeeper are furnished, but as yet I have been unable to obtain authority for the same.

It is a lamentable fact that these Pueblos do not wish to send their children to school. In only one village, that of Zia, do all the children attend. At Acoma the average attendance of the scholastic population is but a little over 3 per cent. If this is not a deplorable condition for a people and one which calls for redress and reform, I do not know what bad conditions are. At Zuni there is a scholastic population of nearly 300 and an average attendance of only 40. This pueblo alone could support a school as large as Chilocco, and if the children of all the pueblos could be in schools, 4 Chiloccas or 2 Carlisles could be supported. These statements lead up to the question of—

Compulsory education.—The poor attendance of the children of this agency illustrates in the strongest possible manner the great need of a compulsory school law. Taking the entire agency, the attendance compared with the scholastic population is the alarming figure of less than 16 per cent. These people are said to be citizens. If they are, they should be subject to the compulsory laws of New Mexico. If they are not citizens, a law of Congress or an order from the Interior Department should place every child of proper age in school. Why should this grand and glorious nation become a laughing stock by establishing a school for these people and having a few ignorant Indians defeat its plans and policies through superstition and a kind of Chinese unprogressiveness to such an extent that only 3 per cent of the scholastic population attends the school? A compulsory law would be very easy to enforce, for one of the Pueblo characteristics is to be obedient, and such a law has only to be passed and explained to them to be obeyed. I earnestly urge this matter to the early consideration of the Indian Office.

The condition of the various schools may be summed up as follows:

Acoma.—The school building is of stone and a substantial one. It is rented from the Catholic church, though the Indians say the building belongs to them and the rent should be paid to them. This building should be purchased. There is no water except such as is obtained from ditch, and no outhouses for the comfort and privacy of either teacher or pupils. Present enrollment, 17; average attendance, 6.7; expected increase, 400 per cent; scholastic population, 200.

Cochiti.—This school is conducted in a rented building which is inadequate in every respect. No wood is furnished except by the children, who bring one stick each, and consequently half the time there is no fire. A new schoolhouse should be built immediately. Present enrollment, 32; average attendance, 12.25; probable increase, 40 per cent; scholastic population, 93.

Isleta.—The school here is in a rented building and there are no seats, excepting some old benches of antediluvian pattern, which are ready to fall down. The building is adjoining the graveyard where smallpox victims and others have been buried on top of each other for hundreds of years, bones and decayed animal matter being thrown up with each new grave. This place is in the center of the smallpox region and there are few months when the disease is not prevalent. I beg that I may be allowed to relieve this unsanitary condition. Present enrollment, 29; average attendance, 16.30; probable increase, 35 per cent; scholastic population, 122.

Jemez.—School is conducted in a building rented from the Presbyterian Board of Home Missions. This building is in good condition and should be purchased by the Government. Present enrollment, 61; average attendance, 26.5; probable increase, 20 per cent; scholastic population, 131.

Laguna.—Building was built by the Presbyterian Board of Home Missions and turned over to the Indians. The Government pays no rent. Twenty acres of land is reserved by the Government for school purposes, and a new and adequate building should be erected at once. The water for school and pueblo is carried from railroad station by agreement with the company, and piping should be laid to convey water to school and village. Present enrollment, 34; average attendance, 15.7; probable increase, 50 per cent; scholastic population, 84.

Pahuate.—This school is located at one of the outlying villages of the Laguna Pueblo, and the building, rented from the governor of Laguna, is in fair repair, but too small. A new building should be erected with a capacity of 50. Present enrollment, 33; average attendance, 12.8; probable increase, 25 per cent; scholastic population, 125.

Santa Clara.—School conducted in a totally inadequate building rented from an Indian. It is very small, low ceiling, without any equipment except desks. A new building should be erected here. Present enrollment, 33; average attendance, 14.36; probable increase, 25 per cent; scholastic population, 74.

San Felipe.—School in rented building belonging to Indians. It has no floor, poor ventilation, and ditch water. New building needed here. Present enrollment, 42; average attendance, 17.6; probable increase, 50 per cent; scholastic population, 96.

San Juan.—School building part of church and rented from the vicar-general. Poor equipment; new building needed. Present enrollment, 30; average attendance, 18.9; probable increase, 30 per cent; scholastic population, 85.

Santo Domingo.—Schoolhouse is rented from the vicar-general, but the ownership is disputed. Present enrollment, 51; average attendance, 14.28; probable increase, 75 per cent; scholastic population, 228.

San Ildefonso.—School conducted in building rented from Indian governor. It is in poor condition, one room being without floor. A new building is indispensable to the good conduct of the school. Present enrollment, 28; average attendance, 17½; probable increase, 20 per cent; scholastic population, 44.

Taos.—School building is rented from the priest at Taos. There are no desks, but rickety benches. The roof leaks and the doors and windows are not well fitted, which renders the building cold in winter. School has depended on the children bringing one stick of wood apiece each morning for fuel. Part of the time there is no fire. A new school building is indispensable. Present enrollment, 57; average attendance, 25.25; probable increase, 25 per cent; scholastic population, 78.

Zia.—School is conducted in a building rented from an Indian. It is in a most lamentable condition, without any ventilation whatever; narrow, dirt floor, poor light, and altogether it is absolutely not fit for a stable. A new building should be built at once. The water is taken from the river and is so alkaline as to be actually poisonous. The attendance, however, is the best of any of the schools, every child except one being in school. The Department should see that better quarters are provided at once.

Zuni semiboarding school.—This is the only school plant in the agency owned by the Home Missions. The buildings were purchased from the Presbyterian Board of Home Missions, and are sadly in need of repairs and improvements. The sewerage is very poor, endangering the health of pupils and employees. Estimates of repairs and contemplated improvements have been sent to the Office of Indian Affairs, under date of March 17 and July 23, 1898. Present enrollment, 72; average attendance, 40.1; probable increase, 100 per cent; scholastic population, 295.

Following is a list of the day schools, with their respective teachers, who receive a salary of \$72 per month each:

Acoma—Miss Cora A. Taylor.
Cochiti—Mrs. J. B. Grozier.
Isleta—Mr. James Hovey.
Jemez—Miss Emma Dawson.
Laguna—Mrs. Annie M. Sayre.
Pahuate—Miss Annie M. Nichols.
Santa Clara—Mr. William P. Taber.
San Felipe—Mr. W. C. B. Biddle.
San Juan—Mr. Felipe Valdes.

Santo Domingo—Mr. W. S. Holsinger.
San Ildefonso—Mr. Thomas Dozier.
Taos—Mrs. Alice G. Dwire.
Zia—Miss Caroline E. Hosmer.
Zuni—Miss Elmira R. Greason, principal teacher; Miss Ethel E. Gregg, assistant teacher; Miss Fannie J. Dennis, matron; Miss Ella P. Dennis, assistant matron.

In April a supervising teacher was authorized by the Department, and Mr. Charles E. Burton, of California, was appointed at a salary of \$840 per annum.

New schools.—A new school has been authorized for the pueblo of Nambe. I shall recommend new schools at the pueblos of Sandia, Santa Ana, Picuris, and Tesuque to be started about October 1, 1898. Also the subagency for the Jicarilla Apache Indians should have a boarding school with a capacity of 300 pupils, but the details will come more properly under the report on said subagency.

I have recommended that the Government procure or build proper schoolhouses, because rented buildings are unsatisfactory and hard to keep in proper repair. A Government building and grounds can be beautified and rendered homelike, which is impracticable in a rented one. The schoolhouse and teacher's residence should be a pattern for implanting higher ideals in the minds of the Indians, which is not the case where it is a building which was originally intended for an Indian's dwelling and is exactly like the houses in which the pupils live.

Housekeepers and noonday lunches.—I am sure that the experiment of furnishing a noonday lunch for the children, which has been an experiment at the San Ildefonso school, has proven a success. It is a significant fact that at this school there was a steady increase in average attendance during the months of April, May, and June, the largest average attendance of the year being in the latter month, while at all of the schools where no lunch was furnished there was a steady decrease in the average attendance during these months. This decrease is easily explained, as the children were needed at home to help in the culture of the ground and other duties, it being the busy season.

With a housekeeper in the schools, the girls may be taught the simpler methods of good cooking, the care of the dining room, and good housekeeping in general. At all these schools or pueblos the teacher should devote a portion of each day or week to instructing the adult Indians in industrial pursuits. While these Indians

have made great progress and are self-supporting and civilized in a fashion, yet they are not self-supporting in an enlightened way, but, like Topsy, "just grow," or exist without the aid of the Government. In order that they may be taught to discard the blanket and the moccasins and the leggings and other paraphernalia of savagery, I think a housekeeper at least should be furnished each school, so that the girls and women may be helped and the older or adult Indians taught to farm, raise stock, and build comfortable houses, etc., by giving the teacher time to get out among them and teach them the language and civilized pursuits.

Arts, trades, etc.—The only arts that I know anything of among these Indians are blanket weaving, basket making, and pottery making. The Zunis are especially apt in weaving, and some blankets are woven so skillfully that they are waterproof and are so beautiful and of such excellent texture that they are sold for as much as \$150 for a single blanket. The pottery ware of the Lagunas and the Santa Claras is of excellent workmanship. Some of the Indians are skillful mechanics and are sought after as laborers on the railroads to the exclusion of the Mexicans.

The greatest industries, however, and the one that will civilize them quickest, are farming, stock raising, and horticulture. When any savage people can be made to love their homes and to be interested in improving and beautifying them, there is some hope. If these Pueblos could have encouragement and assistance along these lines they would soon be an intelligent and progressive people.

Returned students.—This is one of the most perplexing subjects of all. While a great percentage of the returned Carlisle and Santa Fe and Albuquerque students turn out well and make fairly good citizens, yet if we admit that all make good citizens, even then the whole number of such students, compared with the whole number of Indians steeped in superstition and ignorance and unprogressiveness is so small, that the good is swallowed up in the bad like a barrel of fresh water tipped over into the Atlantic. While Carlisle and Haskell and Chilocco and Phoenix are educating a thousand children, five thousand new ones are born in the Indian villages. The lesson is surely a plain one. The Government must educate a great many of the Indians, so that the educated influence will overbalance the uneducated, or give up in despair. As long as there are Indian villages of uneducated and unprogressive people, just that long will there be myriads of Indian children to take off and educate and turn back into the slough of despond. Put farmers and housekeepers and matrons and compulsory education in the Indian homes and such conditions can not possibly exist many years. Then, when the returned students do try to make men and women of themselves, the home influence will help them on their way, instead of tending to drag them down, as it undeniably does at the present time.

Missionaries.—Missionaries are supported at Zuni, Mr. and Mrs. Vanderwagen; a medical missionary at Laguna, Dr. C. E. Lukens, and two teachers at Seama, who conduct a very successful school. These missionaries, who are supported by religious societies, are doing a very good work along religious and industrial lines and deserve the consideration of the Indian Office. The question of missionaries naturally leads up to the question of

Physicians for the Indians.—These Pueblos may be said to be suffering from some form of epidemic almost constantly, any disease which is once introduced among them seeming to run through the entire tribe before subsiding. From the amount of medicine furnished by this agency to the teachers of the various day schools I am led to believe that the Indians are gradually being brought to appreciate the fact that "white man's medicine" is superior to the "witch's cauldron" of their own "medicine man," which in serious cases of course oftener kills than cures; and it seems to me that this tendency should be encouraged by establishing among them a certain number of physicians supplied with the necessary medicines to intelligently treat the ills which they are heir to.

The last expression is used advisedly, it being an undoubted fact that every pueblo contains cases of syphilis in some of its numerous forms, the death rate among them being due, probably, in a greater percentage to syphilitic consumption than to any other two, perhaps three, causes combined. In parenthesis, it may be remarked that were it not for the deaths due to consumption and the great number of cases of incipient life strangled before birth the Indians as a race would increase much more rapidly than they are now decreasing.

Aside from these considerations for their welfare, which every human breast must entertain, it is indubitably a fact that when a physician has been established in an Indian tribe his success in treating the people thereof has tended in a great measure to lessen the influence of the "medicine man" and just in proportion as this feeling of reliance on these quacks subsides does the advance toward civilization make strides.

Every consideration, therefore, pointing not only to the necessity but the expediency of their employment, I have the honor to recommend that five physicians be appointed for these various pueblos, which should be divided into five districts, as follows: The pueblo of Zuni, containing 1,796 inhabitants, to be the first district, and to have a resident physician; the pueblos of Acoma, Isleta, and Laguna, containing about 3,000 inhabitants, to compose the second district, with a physician resident at Laguna; the pueblos of Cochiti, Jemez, Santa Ana, Santo Domingo, Sandia, San Felipe, and Zia, containing 2,852 inhabitants, the third district, the physician to reside at Bernalillo; the pueblos of Taos and Picuris, containing 570 inhabitants, the fourth district, the physician to reside at Taos City, 3 miles from Taos pueblo; the pueblos of Santa Clara, San Ildefonso, San Juan, Nambe, and Tesuque, containing 1,194 inhabitants, to be the fifth district, the physician to reside at Santa Fe or Espanola. These pueblos have been grouped with reference to their proximity to one another rather than to their number of inhabitants.

JICARILLAS.

This subagency is at Dulce, N. Mex., 216 miles distant from agent's office at Santa Fe. The Indians here receive rations at stated periods. While they do some agricultural work, it is not to much advantage. They raise considerable corn, hay, wheat, oats, barley, rye, potatoes, onions, and beans. Six hundred tons of hay were harvested last year, and I recommend that this industry be encouraged. In order that they may be able to sell it at remunerative prices, hay presses should be provided them, and the Government should purchase hay from them to feed the Government stock.

Allotments.—The lands of this subagency have been allotted to 845 Indians, but when the allotment papers were returned only about 120 could be delivered, owing to the confusion of names or the neglect of the allotting officers. Therefore the anomalous condition prevails of an entire tribe receiving allotments and only 14 per cent of the homes delivered, the other 86 per cent being filed away in the office of the clerk in charge.

Condition of Indians and reservation.—These Indians are furnished rations to about one-third the amount necessary for their support. Their reservation is a mountainous region, wholly unfit for agriculture unless some means of irrigation is provided. Under present conditions they can never become self-supporting, as they have no resources from which to live. Unless some means can be devised by which they will be enabled to help themselves their rations should be increased. There is a lake 22 miles distant which might be utilized for irrigating purposes, which would enable them to pursue agriculture profitably and in time become self-supporting.

Missionaries.—Two estimable ladies of the Methodist church and supported thereby are doing a good work here, holding weekly religious services and encouraging morality in every way possible.

Roads and bridges.—Ten days' work by each able-bodied Indian have put the roads in good condition. Fourteen miles of new roads have been constructed and 12 miles of old road repaired. Fifteen bridges have been built.

Arts and trades.—Basket making, bow and arrow making, and beadwork are the special features of these people, and their work is of excellent quality.

Indian courts.—An Indian court is maintained, composed of 3 judges. During the year 72 Indians have been jailed for drunkenness and 13 have been punished for various crimes and misdemeanors. Two have been punished by the Territorial courts for housebreaking and cattle stealing. Some plan should be used to break up the whisky selling, which is carried on to an alarming extent. These Indians are allowed to go to neighboring towns to trade, and while there they get all the whisky they can pay for. In my opinion a trader should be placed on the reservation to supply them with everything they need, and the Indians should not be allowed to go off the reservation without the consent of the clerk in charge.

Education.—These poor people have no educational advantages whatever. They have petitioned this office time and again for a boarding school, and it is only justice that they be given school facilities. This boarding school at the Jicarilla subagency I consider the most pressing need of this agency. There are 242 children of school age, and the Indians are very anxious for the school. They have promised to send every child to the school and support it faithfully, and I believe they will do so. A school with a capacity of 300 can be supported there, and I most earnestly recommend its establishment at the earliest date possible. I consider \$30,000 a conservative estimate for the entire plant. About two years ago 160 acres of land was purchased for the establishment of a school, but the matter was allowed

to drop. A large two-story adobe building of eight or ten rooms is situated on the land, and this can be utilized for one of the buildings. This land is within one-half mile of the railroad station of Dulce, N. Mex., where the agency is located.

As these Indians are anxious for school facilities and have been peaceable and contented, I think steps should be taken at once to establish the school. The greatest drawback to the schools of this agency is that the Indians refuse to send their children. Now that they are in the right frame of mind they should be assisted. The Indians of this subagency are furnished regular rations and annuity issues, so that the Government will have a very potent means of persuading them to keep their promises in case they show a disposition to evade them. Another advantage here is that the children all live close, and no expense for transportation would be required.

Conclusion.—In conclusion I desire to say that while the affairs of this agency, and especially the schools, seem to be in a chaotic condition, no efforts will be spared by this office to remedy them as far as it is possible, with the support of the Office of Indian Affairs, to do so. The supervising teacher, Mr. Charles E. Burton, is giving his entire time and attention to the work of improving the condition of the schools, and if he has the proper support of the Indian Office, which I do not in the least doubt, I am sure he will succeed.

In making this report I have not covered up matters in the least, but, on the contrary, I have reported them exactly as I have found them. I ask the careful and considerate attention of your office that my efforts may be seconded in remedying affairs to such an extent that this agency may be a credit to the service instead of otherwise.

Respectfully submitted.

N. S. WALPOLE,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF FIELD MATRON IN ZUÑI PUEBLO.

ZUÑI PUEBLO, VIA FORT WINGATE, N. MEX., *August 12, 1898.*

SIR: I have the honor to submit my first annual report of work as field matron among the Zuñi Indians.

The Zuñis, being Pueblo Indians, are congregated during the winter months at their principal village, Zuñi Pueblo; during the summer they go out to the farming villages which are situated 25, 20, and 15 miles from the central village. The Zuñis are kind, peaceable, and industrious; they raise crops of corn, wheat, melons, pumpkins, and some hay.

The women have fine gardens, although limited to a few vegetables. These women do no outdoor work aside from the gardening, but attend to the housework, cooking, and grinding the family flour and meal, which is done in the primitive fashion of the Mexicans. They have quite a variety of food, which is wholesome and well cooked but not cleanly. The wealth of the Zuñis is their sheep. The houses are well built of stone or adobe and for the most part neatly kept, but devoid of furniture except perhaps a cupboard, a few boxes for chairs or a chair or two, and in a few cases stoves, which are more ornamental than useful, as the women prefer cooking on the fire in the open fireplace. With a few exceptions the families still eat from one large dish on the floor.

In my work I have met the utmost cordiality and an evident desire to comply with my wishes. In over five hundred and fifty visits, besides numerous calls, I have never been treated rudely but once. A number of the women have learned to sew on my sewing machine, and both men and women come for assistance and advice very often.

During the winter my work was much embarrassed from lack of supplies and constant meddling from outside parties with the evident desire to make me trouble and raise questions as to my authority. With many difficulties to overcome from within and without, I find I am able to see improvement which, although slight, indicates a steady growth upward.

The water supply in the central valley is a serious question. There is an excellent site for a dam at the head of the valley. If a storage reservoir were made at that point this valley could all be irrigated, which would be a factor in the problem of civilization.

Very respectfully, your obedient servant,

MAY FAURETE,
Field Matron, Zuñi Reservation.

The COMMISSIONER OF INDIAN AFFAIRS.
(Through the United States Indian Agent.)

REPORT OF AGENCY IN NEW YORK.

REPORT OF NEW YORK AGENCY.

NEW YORK AGENCY,
Olean, N. Y., August 9, 1898.

SIR: In compliance with instructions, I herewith submit my fourth annual report of the New York Agency, N. Y.

Number of Indians.—The Indians under the jurisdiction of the New York Agency are divided by tribal organizations as follows:

| | |
|------------------|-------|
| Cayugas | 166 |
| Onondagas | 549 |
| Oneidas | 270 |
| Senecas | 2,767 |
| St. Regis | 1,183 |
| Tuscaroras | 388 |
| Total | 5,323 |

The Senecas and their reservations.—The Senecas occupy the Allegany, Cattaraugus, and Tonawanda reservations. The Allegheny Reservation is located in Cattaraugus County and lies along the Allegheny River for a distance of 35 miles, the eastern terminus being near Vandalia and the western at the boundary line between New York and Pennsylvania. The reservation is from 1 to 2½ miles in width, the lines having been run so as to take in the bottom lands along the river. There are 30,469 acres in this reservation, of which about 11,000 acres are tillable, but of this not one-half is cultivated or in pasturage. Nearly all of the valuable timber has been cut off and sold.

The Indians on the Allegany Reservation as a rule pay but little attention to farming. There are a few good farmers among them, but the majority farm just enough to get a scanty subsistence, and the most of that is obtained from labor among their white neighbors. There are residing on this reservation 1,009 Senecas and 78 Onondagas.

On the Allegany Reservation are located six villages, laid out under an act of Congress passed February 19, 1875, which authorized leases to be made by the council of the Seneca Nation of Indians to white lessees for periods not exceeding twelve years. In 1890 this act was amended, authorizing leases to be made for periods not exceeding ninety-nine years. The twelve-year leases within these villages expired in 1892, and were then renewed for ninety-nine years. The rentals from these lands are paid to the treasurer of the Seneca Nation. Prior to the granting of the ninety-nine-year leases the rentals from these leases amounted to about \$12,000, but since that time the officers of the nation account for only about \$6,000 a year. Prior to the granting of the ninety-nine-year leases the average rental paid for each lease was about \$10 and since that time about \$6, the number of leases having increased and the reported income having decreased.

According to the report of Hon. Gilbert B. Pray, special agent, filed during this fiscal year, it will be found that there are about 1,400 live leases in these villages which should render an income to the Seneca Nation of Indians of at least \$14,000 or \$15,000 a year, but that from the year 1893 to the present time the income from these leases, as shown by the report of the officers of the Seneca Nation of Indians, has decreased, and also that the officers of the Seneca Nation of Indians corruptly vote to and appropriate to themselves the small portion of the income which they do report, and that the Seneca Nation of Indians as a body receive but very little benefit from these rentals.

I have reason to believe, from well-directed inquiries made by me and from the preliminary examination made by said Special Agent Pray, that the funds of the nation are improvidently expended. I am also satisfied, after diligent inquiry and investigation and from the published reports of the officers of the Seneca Nation of Indians and the report of said Special Agent Pray, that the funds of this nation are almost wholly absorbed by the officers of the nation and that they collude with white men for the purpose of absorbing said funds. The funds which come into the treasury of the nation from these rentals and other sources are disbursed upon orders issued by the president and clerk of the Seneca Nation authorized by a vote of the council. One method of absorbing these funds is to vote certain sums for orders reissued. Another is to vote certain sums to the officers and councilors for fictitious services. A large sum is expended each year to the councilors by calling frequent and unnecessary meetings with no business

to transact, and voting to the councilors and officers large sums of money for services never performed and for banquets and entertainments for the councilors and officers.

The Senecas on the Allegany and Cattaraugus reservations are a corporate body under the name of the Seneca Nation of Indians and have a common interest in the lands of both reservations. They are incorporated under an act of the legislature of the State of New York and have a constitution for their government. The president is the executive officer of the nation, and 16 councilors, chosen in equal numbers from each reservation, compose the legislative branch of the government. There is a clerk and a treasurer of the nation and on each reservation a surrogate, 3 peacemakers, a marshal, and an overseer of the poor. All the officers are elected for one year, except the surrogate and peacemakers. The surrogate holds for two years and the peacemakers are elected for a term of three years, expiring in alternate years.

The councilors and officers have been substantially the same for many years. From among the few of the corrupt dynasty of officers a president is elected upon the Cattaraugus Reservation one year and a treasurer on the Allegany Reservation; and the next year a president from the Allegany Reservation and usually the preceding treasurer is elected president and the former president is elected treasurer. This method has been pursued for many years, and although the Indians have endeavored to defeat the dynasty that has ruled them for so long, they are unable to do so. The officers notoriously use the funds of the nation to purchase the votes of the ignorant and illiterate Indians, who on election day are always anxious for a small sum of money. The better class of Indians are not numerous enough to overcome the power of these corrupt Indians, who have the funds of the nation with which to corrupt the masses and perpetuate their corrupt dynasty.

I have been called upon to attend the elections upon several occasions, and while the Indians are fully aware that the governing officers are misappropriating their money, they are powerless to help themselves. I am satisfied that the present dynasty is no more corrupt than any other government by the Indians themselves. In fact, the present dynasty is composed of the most progressive of the Indians; but their progress seems to be directed toward absorbing for themselves and misappropriating all the funds of the nation. Each year before election this dynasty votes large sums of money to an "executive committee" to carry the election for themselves. At the last election in May, 1898, which I was ordered to attend, this executive committee, to which had been voted a large sum of money, was openly using it to purchase votes.

Oil and oil leases on the Allegany Reservation.—On or about the 3d day of December 1896, the council of the Seneca Nation of Indians granted to a concern known as the Seneca Oil Company, composed of white men residing principally in the village of Salamanca, a grant, contract, or lease for oil purposes of a portion of the Allegany Reservation. Said contract or lease embraced all the lands of said reservation east of Salamanca to the eastern boundary of the reservation, and is estimated to contain about 4,000 acres, exclusive of the lands embraced within the village limits of Carrollton and Vandalia. The terms of said contract or lease are substantially that the Seneca Oil Company shall pay to the Seneca Nation of Indians the sum of \$1,000 bonus, and render and deliver to said Seneca Nation of Indians one-eighth part of all the oil produced from said property as royalty. Fraud was charged, and justly so, in the procuring of said lease on the part of the lessees. The councilors and officers who were interested with the white men procuring said lease promptly distributed among the Indians per capita a part of the \$4,000 bonus paid for said lease, and afterwards, and by a close vote in Congress, the said lease was ratified or confirmed.

In or about the month of January, 1897, the Seneca Oil Company commenced to bore and drill for oil under said lease upon said reservation. I have made diligent inquiry as to the number of wells sunk on the reservation and the product of the same. The usual and ordinary course among oil producers is to run the oil from the wells into the National Transit Company's line, which is a pipe-line corporation. The oil is gauged and measured by the transit company and the working interest run to the credit of the lessees and the royalty to the lessors. In making such inquiries I learn that from the month of January, 1897, to October 4, 1897, there was run to the credit of the Seneca Nation of Indians about 1,917 barrels of oil, being one-eighth of the product from said reservation and worth about \$1 per barrel. From the best information that I can get, the said Seneca Oil Company have drilled now about thirty oil wells which are producing upon said reservation; that many of said wells have started off at 800 and 900 barrels of oil per day, but usually settle down in a short time to from 30 to 150 barrels per day; that the product of oil from said reservation is now about 6,000 barrels monthly; that

the Seneca Oil Company are rapidly drilling said territory, and that about three sets of tools are in constant operation, each string of tools completing a well in about seven days. Since October, 1897, all of this oil has been shipped in tank cars to the purchasers of the same and not run into the pipe-line company's tanks, as is the universal custom among other producers.

It will be seen that a vast amount of oil has been produced since October, 1897, which belongs to the Seneca Nation of Indians. The oil has been at about an average value of \$1 per barrel. No account of this oil has ever been rendered by the councilors and officers of the Seneca Nation, and no part of the proceeds has ever been disbursed and distributed among the Indians, the proper owners thereof. In my opinion the object in selling this product of oil and shipping it in tank cars to different vendees and outside the usual course of business is to prevent the Indians not of the officers or councilors from knowing the amount of the production and the amount of royalty to which they are entitled. Some of the officers of the Seneca Nation of Indians are interested with the Seneca Oil Company.

In my third annual report I suggested that the funds belonging to the Seneca Nation of Indians, which accumulate from the rentals in the six villages on the Allegany Reservation, should be collected by and paid to the Indian agent, and disbursed by him upon proper vouchers, so far as the payment of the current expenses of the nation is concerned, and the balance be distributed to the Indians per capita at the time of the payment of the annuities. This would insure an economic expenditure of the funds of the nation, and prevent the dishonest and corrupt Indians from using the same as a corruption fund to perpetuate themselves in office. As it is now it is difficult to see where any considerable amount of the moneys received by the Seneca Nation of Indians for rentals is expended for the benefit of the Indians as a body, and most surely none of the funds to which they are entitled from this vast amount of oil which has accumulated to their credit has ever been accounted for or distributed, and probably never will be if these Indian officers and councilors are permitted to take charge of the same.

There is no way of compelling an accounting for these funds, except that legislation is had in that behalf. In this view Senate bill 2888 was introduced and passed at the last session of Congress, providing for the payment of these rentals and the product of these oil wells to the Indian agent to be distributed by him, and said bill is now pending in the House of Representatives. I particularly urge attention to this bill now pending in Congress, in view of the fact that such a large sum of money for oil is due to these Indians, and the sum will be constantly increasing. The production is growing rapidly and the Indians as a body, who are the owners of the same, will practically receive no benefit from it and be defrauded of their rights through the manipulations of the councilors and officers interested with the white men who compose the Seneca Oil Company. The only moneys ever distributed among these Indians as the product of this oil lease was a part of the bonus money agreed to be paid by the terms of the lease, and that was done only to secure a ratification, and with no other view, the argument being to secure the ratification that the Indians had already accepted the bonus.

Indian courts and their jurisdiction.—The peacemakers are judicial officers, and the peacemakers' court is a court of general jurisdiction as to all controversies between Indians, including the title to real estate and all controversies pertaining to real estate, although the practice prescribed by the legislature of the State of New York is the same as that followed in courts of justices of the peace. This jurisdiction of the peacemakers is exclusive, and an appeal lies from the decision of the peacemakers to the council, and the decision of the council is conclusive. This gives the peacemakers' court jurisdiction over all actions at law and in equity without any prescribed practice except such as is had in courts of justices of the peace, which are not courts of record and are courts of limited jurisdiction and are only organized to determine petty matters; and there is no practice in justices' courts in actions involving the title to real property. It will be seen therefore that all controversies between Indians as to real estate and all property rights must be determined finally and conclusively by this peacemakers' court and the council, and without any practice suitable or proper for the determination of such controversies. The peacemakers, from whose decision the only appeal can be taken, are the principal members of the council.

In all controversies between Indians the Indian is practically without remedy at law. The peacemakers are men unlearned in the law, and are entirely without knowledge of the rules of practice in any court. They have not the least notion of equity and no knowledge of the rules of evidence. In fact, they do not know what is and what is not legal evidence of a fact. They are capacious, arbitrary, and frequently mercenary, and many times arbitrarily refuse to issue process or entertain an application for process, and in cases where important rights are

involved. There is no power to compel them to issue process or entertain a cause, however just it may be, and if the applicant chances to be inimical to any member of the court he is likely to have his application arbitrarily refused. If a cause is entertained by the peacemakers' court and an appeal taken to the council, the same incompetency is found there, as the members of the council are without any learning in law and without any knowledge of evidence, and are notoriously mercenary and corrupt.

Under direction of the honorable Commissioner of Indian Affairs, a petition was prepared by me memorializing the legislature of the State of New York, praying for appropriate legislation to limit the jurisdiction of the peacemakers' court to petty matters, such as justices of the peace have jurisdiction over, and giving jurisdiction to the State courts in all other matters, or giving a right of appeal to the State courts, that the Indians might obtain justice. I have sent several judgment rolls of the peacemakers' court to the Department which showed upon their face the most outrageous injustice. Indians were deprived of the possession of their lands and crops arbitrarily and without having a chance to be heard in these Indian courts. In one instance the Indian court refused to enforce its own judgment and place the proper party in possession of the land, and for purely political reasons.

I attempted to have this petition signed as extensively as possible, but the Indian officers and councilors prevented the same being signed to any large extent, as they do not wish to be divested of their power. It is a notorious fact that under the present constitution of the Seneca Nation of Indians there is a denial of justice to the poor Indian who owns any property and does not happen to be in favor with the dynasty and who has not a few dollars to purchase the court, and there seems to be no remedy whatever except by legislation, and legislation is prevented by the use of money in inducing the Indians not to sign a petition, and the money used for that purpose is the money belonging to the Indians and misappropriated by their officers.

The law of descent among the Indians has in many instances worked great hardship and injustice. The common or unwritten law of descent among the Indians is, among the Senecas, that no Indian except a Seneca can own lands or inherit lands upon a Seneca reservation. It has been held by the Department, as I am advised, that Cayuga Indians and Onondaga Indians have a right to a home among the Senecas and to inherit property. Several instances have occurred where a Cayuga woman has married a Seneca Indian, borne children, and the peacemakers' court and the council have deprived the children of the Cayuga woman of their inheritance. The peacemaker's court have exclusive jurisdiction, and the decision of the Indian courts being conclusive, there has been and is now no remedy for this evil. The legislature of this State was also memorialized upon this subject, and, as I am advised, appropriate legislation was recommended by the Department, but the trouble in securing the legislation was a lack of sufficient number of Indians to sign the petition; and while a large majority of the Indians are actually in favor of it, they are induced to withhold their signatures by the payment of money to them by this corrupt dynasty, and the moneys paid to them for that purpose are the funds of the nation misappropriated by the officers and councilors.

The names respectively of the villages on the Allegany Reservation and the approximate number of acres of land in each are as follows:

| Name of village. | Number of acres. | Name of village. | Number of acres. |
|--------------------|------------------|----------------------|------------------|
| Vandalia | 240 | Salamanca | 2,000 |
| Carrollton | 2,200 | West Salamanca | 750 |
| Great Valley | 260 | Red House | 40 |

The approximate value of the improvements in each village is as follows:

| Name of village. | Value. | Name of village. | Value. |
|---|---------|--|-------------|
| Vandalia | \$8,000 | Salamanca (exclusive of railroad property) | \$1,200,000 |
| Carrollton (exclusive of railroad property) | 30,000 | West Salamanca | 50,000 |
| Great Valley | 20,000 | Red House | 50,000 |

The Cattaraugus Reservation is located in the counties of Erie, Cattaraugus, and Chautauqua. It lies on both sides of the Cattaraugus Creek, beginning at a

point near Gowanda and running to Lake Erie. It embraces 21,680 acres of land. The total number of Indians residing there is 1,421, of which 1,216 are Senecas, 39 are Onondagas, and 166 are Cayugas. Many of the Cattaraugus Indians are good farmers and have good, well-tilled farms, good stock, and comfortable buildings. The majority, however, cultivate only small patches of land. A large portion of the lands upon the Cattaraugus Reservation are valuable, and lie within the grape belt and fruit-growing section of western New York, but a large portion of these lands has been allowed to grow up to brush, second-growth timber and such other vegetable growths as are indigenous to the locality. If these lands were properly cultivated and improved every Indian on the reservation would be independent and have all the comforts of a civilized life. This is also true of the other reservations.

The Tonawanda Reservation is located in the counties of Genesee, Erie, and Niagara. It lies along the Tonawanda Creek, on each side of the stream, and contains 6,549 acres. It is occupied by about 500 Senecas belonging to the Tonawanda Band of that tribe, a few Oneidas, and a few members of other tribes. This reservation is a fertile tract of land, and there are a few good farmers among the Tonawandas. A large part of the 2,000 acres under cultivation is tilled by whites under leases authorized by a State law. The government of the Tonawanda Band is by chiefs, who are elected for life, according to the Indian customs. There are elected by popular vote each year a president, clerk, treasurer, a marshal, and three peacemakers.

The Tuscaroras.—This tribe is located on a beautiful reservation in the county of Niagara, a few miles northeast of Suspension Bridge. The Tuscaroras are good farmers. Their farms, fences, and buildings will compare favorably with those of the white farmers in that locality. There are 6,299 acres in this reservation. The Indian population aggregates 435, of which 47 are Onondagas.

The Onondagas.—This reservation is located in the county of that name, about 5 miles south of the city of Syracuse. It is about 2½ miles wide and 4 miles long, and contains 6,100 acres. The topography of the reservation is quite broken, and the steeper hillsides are worthless except for woodland and pasturage. The arable land is largely cultivated by whites under leases authorized by a State law. Some revenue is derived each year from stone quarries on the reservation operated by whites. There are several Onondagas who are good, thrifty farmers, and have homes as comfortable as the average white man.

The government of the Onondagas is by chiefs chosen for life, according to Indian customs. Nearly all of the chiefs are pagans, who are antagonistic to any innovations upon their ancient Indian customs and religious observances, and are also antagonistic to any progression which interferes with their Indian customs. The Onondagas on this reservation number 385, and residing with them are 108 Oneidas.

The St. Regis.—This reservation is located on the St. Lawrence River, in the county of Franklin and on the northern boundary of New York. The Canadian St. Regis Reservation is just over the boundary line. There are 1,183 American St. Regis and about the same number on the other side of the line, in Canada. The reservation in New York embraces 14,640 acres. A considerable portion is good farming land, but a large part is very stony and a part low and swampy. The reservation is 7.3 miles long and about 3 miles wide. The government of the St. Regis is in the hands of chiefs chosen according to Indian customs. The St. Regis have of late years neglected farming to engage in basket making. They are adepts at the work, and the product aggregates a considerable sum each year.

The Oneidas.—This tribe has no reservation. Most of the Oneidas removed to Wisconsin in 1846. Those who remained retained 350 acres of land near the village of Oneida, in the county of Madison. This land was divided in severalty, and the Indians are citizens. About 100 Oneidas reside in the vicinity of Windfall, near Oneida, and most of the remainder reside upon the Onondaga Reservation. But few of the Oneidas are now landholders. Their total real estate will not exceed 100 acres. Although the Oneidas are citizens and entitled to the elective franchise, a large majority of them refuse to exercise it.

The Cayugas.—This tribe has no reservation. They number only 166, and reside principally on the Cattaraugus Reservation. They receive annuities from the State of New York and merchandise annuities from the United States.

Schools.—The schools on the several reservations are supported by the State. The State builds and maintains the schoolhouses, pays the salaries of the teachers, and in some instances buys the fuel. The Indians do not seem to properly appreciate the school advantages furnished by the State, and do not require such regularity of attendance on the part of their children as is needed to produce good results. Within the last two years, however, the better class of Indians have manifested a

desire to have those Indian children who have already received a common-school education given opportunities for a higher education. I am glad to state that this has been responded to by the Department, and recently many Indian children from the reservations in this State have been furnished opportunities for a higher education in the Government schools.

I have been unable to procure from the superintendent of public instruction in the State of New York his report, so as to give the official tabulated statement rendered by him each year as to the Indian schools in the State, but the schools are in about the same condition and the attendance and all the other details as they were last year. I append a tabulated statement of the condition of the Indian schools as they were last year and as they are substantially this year. The statement is as follows:

| Reservation. | Number of districts. | Number of pupils of school age. | Number attending some portion of the year. | Average daily attendance. | Number of teachers. | Expense. |
|-------------------|----------------------|---------------------------------|--|---------------------------|---------------------|------------|
| Allegany | 6 | 200 | 143 | 79 | 6 | \$2,003.30 |
| Cattaraugus | 10 | 325 | 254 | 136 | 10 | 3,772.85 |
| Onondaga | 1 | 130 | 104 | 42 | 2 | 1,510.78 |
| St. Regis | 5 | 325 | 145 | 60 | 5 | 1,763.55 |
| Shinnecock | 1 | 55 | 51 | 24 | 1 | 457.76 |
| Poospatuck | 1 | 19 | 13 | 10 | 1 | 380.57 |
| Tonawanda | 3 | 137 | 117 | 53 | 3 | 1,302.35 |
| Tuscarora | 2 | 105 | 87 | 32 | 2 | 700.00 |
| Total | 29 | 1,296 | 914 | 436 | 30 | 11,891.16 |

An industrial school for Indian children is supported near Tunesassa, on the Allegany Reservation, by the Yearly Meeting of Friends, in Philadelphia. The school is a most excellent one and gives instruction in all the substantial branches of education. The annual cost of maintenance is about \$3,200 in addition to the income of the farm of 464 acres, upon which the school is located. The attendance of pupils is limited to 45.

The Thomas Asylum for Orphan and Indigent Indian Children is supported by the State. This institution is beautifully situated on a farm of 100 acres, in the valley of the Cattaraugus Creek, on the Cattaraugus Reservation. The State originally paid \$100 per capita annually for the support and education of 100 Indian children, in addition to the income of the farm. Extensive improvements have recently been made and more are contemplated in and about the asylum, for which special appropriations have been made by the State of New York. The superintendent, Mr. George I. Lincoln, has proved to be an efficient manager of the asylum and farm, and his wife a very competent matron. This asylum is under the management and supervision of the State board of charities.

Mission work.—The whites prosecute mission work upon the several reservations with a fair degree of success. On the Allegany Reservation there are two Presbyterian churches, with a reported membership of about 124. There is also a Baptist Church, with a membership of about 40.

On the Cattaraugus Reservation the Presbyterians support a resident missionary. Rev. George Runciman has had charge of the work for several years. He reports a membership of over 100. Services are regularly maintained at the commodious church and at several outside stations. There is upon this reservation a Baptist Church, in charge of a native preacher, which has a membership of over 125.

On the Tuscarora Reservation there is a Baptist and a Presbyterian Church. The Baptist Church work is directed by Rev. Frank Mount Pleasant, a native Tuscarora preacher, and the Presbyterian Church work is directed by Rev. John Gansworth, a native Tuscarora. The membership of the Baptist Church is about 200.

On the Tonawanda Reservation there is a Baptist, a Methodist Episcopal, and a Presbyterian Church. A native preacher has charge of the Baptist Church, which has a membership of about 60. The Methodist Episcopal Church has only a small membership, and is under the charge of Rev. W. B. Cliff. The Presbyterian Church has a membership of about 60, and the services are conducted by the Presbyterian pastor at Akron.

On the Onondaga Reservation there is an Episcopal and a Methodist Episcopal Church. Rev. John Scott has had charge of the former for a number of years. Rev. Abram Fancher is in charge of the Methodist Episcopal Church, and the

Rev. Thomas La Forte—a brother of the noted chief and president of the Six Nations, Daniel La Forte—is the leader of a Wesleyan Methodist class.

The religious interests of the St. Regis Reservation are looked after principally by the Catholic and Methodist Episcopal churches. There are about 750 American St. Regis who are communicants in the Catholic Mission, which is in charge of Father M. Manville. Rev. A. Wells is pastor of the Methodist Episcopal Church.

Annuities.—The United States holds in trust \$238,050 for the Senecas and \$86,950 for the Tonawanda band of Senecas. The interest on these funds, amounting to \$11,902.50 and \$4,349.50, respectively, is disbursed per capita by the United States agent. The per capita amount from the first fund last year was \$4.25. Each of the Tonawandas received from their fund \$8.40 in addition to the general Seneca annuity, making a total to the Tonawandas of \$12.65 per capita. In addition the Federal agent disperses each year \$4,500 worth of sheeting and gingham among the Cayugas, Oneidas, Onondagas, Senecas, and Tuscaroras, in pursuance of a treaty made with the Six Nations of New York November 17, 1794.

The State of New York pays annuities as follows: To the Onondagas, \$2,340; Cayugas, \$2,300; St. Regis, \$2,130; Senecas, \$500.

Respectfully submitted.

J. R. JEWELL,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF AGENCY IN NORTH CAROLINA.

REPORT OF EASTERN CHEROKEE AGENCY.

CHEROKEE TRAINING SCHOOL AND AGENCY,
Cherokee, N. C., July 14, 1898.

SIR: I have the honor to submit herewith my second annual report for the Eastern Cherokee School and Agency.

The agency and training school are at Cherokee, Swain County, the railroad and telegraph station being at Whittier, 6 miles distant, on the Southern Railway. The main body of land owned by the band is called the Qualla Boundary, and contains about 85,000 acres, in Swain and Jackson counties. The band also owns several tracts of land in Swain, Graham, and Cherokee counties, containing altogether about 15,000 acres.

The total population, as shown by the census taken in June, is 1,351, divided as follows:

| | Males. | | Females. | | School age. |
|-----------------------|--------|----------|----------|----------|-------------|
| | Total. | Over 18. | Total. | Over 14. | |
| Graham..... | 55 | 29 | 70 | 47 | 29 |
| Cherokee..... | 18 | 8 | 26 | 9 | 11 |
| Birdtown..... | 141 | 69 | 135 | 70 | 93 |
| Nantahala..... | 44 | 20 | 37 | 21 | 27 |
| Soco..... | 183 | 104 | 182 | 105 | 96 |
| Big Cove..... | 135 | 57 | 108 | 50 | 86 |
| Yellow Hill..... | 94 | 52 | 74 | 38 | 54 |
| At other schools..... | 22 | 12 | 27 | 26 | 13 |
| Total..... | 692 | 351 | 659 | 366 | 409 |

The total number of acres reported under cultivation is 3,150; total number of families, 304; an average for each family of about 11 acres. There is but little level ground, the larger part of the cultivated fields being on the steep mountain sides, from which the soil is easily washed away by the heavy rains. Principal crops are corn, beans, and potatoes, with some wheat on the bottom lands. Few horses or mules are owned. For the steep hill sides oxen are preferred and are more easily kept. The larger number of horses and mules are found in the Soco district, where the mills sawing timber from the Cathcart tract have furnished employment for a considerable number of men and teams. These mills were closed by order of the United States court in November, 1897. The contract for the sale of this timber having since been approved, it is expected that work will be resumed in September.

While they are industrious, these people are not progressive farmers and have learned nothing of modern methods. The same crops are raised continuously until the soil will yield no more or is washed away, when new ground is cleared and broken. The value of rotation and fertilizing has not yet been discovered or taught. It is expected that something can be done in this direction the coming year by instruction to pupils of the school, by visits of qualified employees to the homes, and especially by lectures or talks by the superintendent or others especially qualified for this work to meetings of progressive Indians to be held at the training school or other convenient place, as suggested from the Indian Office last winter.

That these people can live at all upon the products of their small farms is due to the extreme simplicity of their food, dress, and manner of living. The typical house is of logs, is about 14 by 16 feet, of one room, just high enough for the occupants to stand erect, with perhaps a small loft for the storage of extras. The roof is of split shingles or shakes. There is no window, the open door furnishing what light is required. At one end of the house is the fireplace, with outside chimney of stones or sticks chinked with clay. The furniture is simple and cheap. An iron pot, a bake kettle, coffee pot and mill, small table, and a few cups, knives, and spoons are all that is needed. These, with one or two bedsteads, homemade, a few pillows and quilts, with feather mattresses for winter covering, as well as for the usual purpose, constitute the principal house possessions. For outdoor work there is an ax, hoe, and shovel plow. A wagon or cart may be owned, but is not essential. The outfit is inexpensive and answers every purpose. The usual food is bean bread, with coffee. In the fall chestnut bread is also used. Beef is seldom eaten, but pork is highly esteemed, and a considerable number of hogs are kept, running wild and untended in summer.

As a whole, the year has been one of progress. The most serious problem has been the sale of liquor to Indians, which has been unrestricted. If a conviction in the Federal court can be obtained in one case the matter will be practically settled.

There is still a large acreage of land that can be brought under cultivation, and with the introduction of better methods all who have the will to do so can obtain a comfortable living.

No serious outbreak of disease has visited the boundary this year, and only 43 deaths are reported, as against 51 births. The medicine man or conjurer is here, as elsewhere, a bar to progress, and the school physician should be authorized to visit all parts of the boundary, giving medicines and advice to those wishing it, and reporting those who should have assistance but refuse it.

The home surroundings of many have been improved with money earned at the training school, and the return of a considerable number of young men and women from Carlisle and Hampton, whether they have graduated or not, has had a good effect in raising the standard of living and dress.

Schools were maintained, from public-school funds, at the Birdtown school-house for one month, with an average attendance of 13½, and in the Soco school-house for five months, with an average attendance of 8.3. I do not see that the result justifies the reopening of either school by the Government while the boarding school can accommodate all who wish to attend.

Attendance at the training school for the ten months was 155.

Within the year 24 pupils were transferred to Carlisle, 4 to Hampton, and 1 to Haskell. It has been my aim, in these transfers, to send only those who would undoubtedly appreciate the greater advantages offered them. While the attendance at the training school has been larger than usual, there were many children who did not attend any school and could not be induced to do so. For such a compulsory law is desired.

The new school building will be completed in August, in time for the September opening, and the old building, formerly occupied for school rooms, can be profitably used for other purposes. All other buildings are in good repair, and in most respects the school is now well equipped for the kind of work than can be undertaken here. The supply of excellent water is now sufficient and can be easily and cheaply increased when required. As usual, much work has been done on roads and fences, more than a mile of substantial rail fence having been built by the school force with rails of their own splitting.

Domestic industries have been taught and practiced, carefully and thoroughly, through all the branches of sewing, mending, washing and ironing, care of rooms and clothing. The hope is to better the home life, and something has already been done in this way, though there are still too many children who return to school from their homes far from clean and not always free from vermin. It would be well for us if our circumstances warranted the employment of a field matron to advise and instruct the women in their homes.

Work for the boys has been largely on the farm, fences, and roads, which have been kept in excellent order. A few boys have done quite creditable work in building, painting, and glazing.

Schoolroom work has been skillfully conducted, though under adverse circumstances as to rooms, none of those in use last year being at all suited to the purpose.

We acknowledge pleasant visits from Supervisors Conser and Smith. Acknowledging also your many courtesies during the year, I remain, very respectfully, your obedient servant,

JOSEPH C. HART,

Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN NORTH DAKOTA.

REPORT OF DEVILS LAKE AGENCY.

DEVILS LAKE AGENCY,

Fort Totten, N. Dak., August 22, 1898.

SIR: I have the honor to submit the following as my annual report of the affairs of the Devils Lake Agency for the fiscal year 1898:

The Devils Lake Agency is composed of two reservations—the Fort Totten and the Turtle Mountain—situated about 100 miles apart.

The Turtle Mountain Reservation contains but two Congressional townships, and is about equally divided by lakes, timber, and prairie, less than one-third of the area being tillable, and is occupied by the Turtle Mountain Band of Chippewas, and about thirty families of Canadian Chippewas, who settled on the reservation before the commission of 1892 was appointed to ascertain the names and number of said Turtle Mountain Band. Said families were rejected by the commission, but refused to move from the reservation, and steps have not since been taken to remove them. The reservation is much too small to support the population. A majority are in favor of removal to more suitable lands. Their treaty should receive an early settlement and the band given a chance to become self-sustaining. For full report of the Turtle Mountain Band see report of Capt. E. W. Brenner, farmer in charge, which is attached hereto and made a part hereof.

The agency is located at Fort Totten, on the south shore of Devil's Lake, from which the agency takes its name, and which forms its northern boundary, the Sheyenne River forming its southern.

The reservation is about 35 miles from east to west and from 8 to 18 miles north and south. It is composed of the whole and parts of 19 townships and contains 166,400 acres of high rolling lands, thinly timbered along the lake and river shores (many allotments being now entirely chopped off and the balance is in a fair way to be consumed in the near future, as the people are more or less dependent upon the same for subsistence, owing to the repeated failure of crops), well watered, and adapted to mixed farming.

Buildings.—The agency buildings (except the grist mill) are located at Fort Totten, which is 15 miles from Devils Lake City, on the Great Northern Railroad, and 12 miles from Oberon, on the Devils Lake branch of the Northern Pacific, and about the center of the reservation from east to west. The buildings used by the white employees are sufficiently commodious, but needing paint and other repairs. The Indian employees are compelled to inhabit the loft above the carpenter shop, which is uncomfortably cold in winter and almost insufferably hot in summer. The guardhouse is small, built of logs, some twenty years since, is very rotten, poorly lighted, and in winter extremely cold. New buildings for Indian employees and guardhouse are imperatively necessary.

In this connection will say that, in my opinion, stone buildings can be as cheaply constructed as any other, and will be much more durable; and that at odd times I have had the Indian farmers and occasional prisoners hauling stone (of which there is an abundance along the lake shore), with this end in view, and have at this writing nearly enough conveniently piled to build one of said buildings. Lime can be had at no other cost to the Government than that of sufficient wood to burn it. I shall in the near future ask authority to expend a sufficient sum, in the hiring of a skilled mason and the purchase of roofing, doors, windows, etc., to construct either the guardhouse or employees' quarters, and continue hauling stone for the balance of the buildings.

The barn is a two-story building with a basement for stabling, the side next the bank being boarded up and the dirt filled in against it, which forms a constant pressure by settling, and has long since crowded the barn out of plumb. This fact I find reported in the annual report of my predecessor for the fiscal year 1897, page 210, Report of Commissioner of Indian Affairs. The barn, quite an expensive one, must soon be condemned, if not repaired.

The grist mill is situated 7 miles east of the agency, is run by steam, and has four run of stone, but is not supplied with sufficient water for continuous work and is quite badly out of repair; has not been run for about eighteen months; should be removed to the agency, where better water supply may be had, and rebuilt and improved.

Number of Indians.—The number of Indians, as shown by the census just completed, is as follows, and is a slight increase over that of the last year:

| | |
|---------------|-----|
| Males | 501 |
| Females | 545 |

| | |
|-------------|-------|
| Total | 1,046 |
|-------------|-------|

School children between 6 and 18 years:

| | |
|-------------------------------|-----|
| Males, 122; females, 94 | 216 |
|-------------------------------|-----|

People over 60 years of age, destitute and dependent:

| | |
|------------------------------|-----|
| Males, 46; females, 68 | 114 |
|------------------------------|-----|

| | |
|---|----|
| People blind, crippled, and otherwise incapable of self-support | 20 |
|---|----|

| | |
|------------------------------|-----|
| Total wholly dependent | 134 |
|------------------------------|-----|

| | |
|--|----|
| Births during the year: Males 14, females 24 | 38 |
|--|----|

| | |
|--|----|
| Deaths during the year: Males 12, females 19 | 31 |
|--|----|

Agriculture.—There are 240 houses, inhabited by one or more families, 269 families residing upon and cultivating lands allotted in severalty.

There are about 4,124 acres either sown or planted to some kind of crop. This seems to be quite a shortage compared with last year's report. For some reason there was but little fall plowing, summer fallowing, or breaking ready for crop this spring. The ponies were spring poor from drawing wood to distant markets without feed other than hay, and the spring's work had to be done by them without other feed. Poor teams and poor plows resulted in poor plowing. The combination of poor plowing, late seeding, hail, and gophers has resulted in a poor crop in all parts of the reservation and a total loss in many. The Indians seemed badly disheartened with their numerous failures, yet seeded everything obtainable by them in the way of seed.

There are 263 acres of flax on the reservation, seeded throughout the various districts, and is at the present time looking particularly thrifty. It being the first attempt at flax culture among them, they are well pleased to find something the gophers will leave alone until it heads, at least.

Potatoes, corn, turnips, and gardens are looking well. The following is the amount of each kind of grain and the estimate of what it will yield:

| | Number of acres. | Estimated yield. |
|------------------------|---------------------|---------------------|
| By Indians: | | <i>Bushels.</i> |
| Wheat | 1,859 | 9,295 |
| Oats | 1,351 | 25,000 |
| Barley | 200 | 4,000 |
| Flax | 263 | 2,630 |
| Corn | 275 | 11,000 |
| Potatoes | 135 | 6,750 |
| Turnips | 20 | 2,000 |
| Onions | 1 | 500 |
| Beans | 10 | 200 |
| Other vegetables | 10 | 200 |
| By Government: | | |
| Flax | 39 | 585 |
| Corn | 12 | 600 |

Stock.—There are about 914 head of horses, mostly Indian ponies weighing less than 800 pounds each. Of horned cattle there are but 68 head remaining on the reservation, which includes 2 yoke of work oxen, due not so much to inclination as to necessity. There are 80 sheep, 2 mules, 90 hogs, and 610 domestic fowls. There is sufficient hay land on the reservation to sustain some thousands of cattle and

plenty of pasture. The hay land is either burned off every year or is sold to the neighboring whites for much less than it is actually worth, thus adding but little to their sustenance.

Police and court of Indian offenses.—The police force consists of 1 captain and 10 privates, who are faithful and efficient. The court of Indian offenses is composed of 3 judges, representative and popular, one of whom, Ignatius Court, is an educated and progressive Indian. One noticeable feature is that, after having received a sentence from said court to the guardhouse at labor, the guardhouse needs no lock or key, and the labor is faithfully and cheerfully performed.

Sanitary.—The people are troubled by pulmonary diseases to quite an extent. The births exceed the deaths for the year—7. The death rate for the year was about 30 to the thousand. The water for agency use is poor. It has to be boiled before using. It should be piped from the school supply, as the windmill and pump at the agency are badly worn and will soon have to be replaced in any event.

Schools.—The school facilities consist of the Fort Totten Industrial School at the old military post, and include the buildings formerly occupied as a contract school by the Grey nuns of Montreal, since purchased by the Government, in which buildings the Grey nuns are still employed exclusively as teachers. I am sorry to be obliged to report the fact that there are but 4 children in the industrial school proper, and 65 in the Grey nuns' department that belong to the Fort Totten Reservation. The boys, after 12 years of age, are not allowed in the sisters' department, and return to their Indian homes instead of being forwarded to the industrial department, which results in an almost entire loss of their knowledge of the English language. We are hoping to have a better showing for the next school year, having already been assured by many Indians that they will put their children in school next season. W. F. Canfield, superintendent of the industrial school, takes great pride in, and is thoroughly interested in the success of, the institution.

The reservation, if possible, should be divided into civil school districts and day schools established under the State laws. There are 216 children of school age. The State apportionment of tuition fund for some years back has been in round numbers \$6 per school capita per annum, a loss to the children here of \$1,296, to which as citizens (which the State supreme court has declared their parents to be), they are justly entitled.

Missionary and church work.—This work is conducted by the Catholic, Episcopal, and Presbyterian denominations. The Catholic, under the charge of the Rev. Father Jerome Hunt, has the largest following, and has 3 church buildings. The Presbyterian, under the charge of the Rev. Alfred N. Coe, a mixed-blood Sioux, has the second largest following of church members; has 2 church buildings, beside other preaching stations. The Episcopal Church, under the charge of the Rev. W. D. Rees, has one chapel, situated at the agency, and preaching stations at various points on the reservation. All three denominations are doing good work, and should receive more liberal allowances from their church societies at large.

Agency stock and farm.—The agency farm should be a matter of the first consideration on an agency where, like this, the people must depend on agriculture for their sustenance, for two reasons:

First, as an object lesson. They may be taught proper methods much more readily than by short, desultory visits by a boss farmer, who, having so much territory to cover, can give but little time to any one individual.

Second, as a relief measure. I find that for some years there has been an annual expenditure of from \$800 to \$3,000 and upward in the purchase of seeds to issue to destitute Indians, besides the ration to the old and feeble. Recognizing the importance of this item, I asked to expend a sum something in excess of \$800 in the purchase of teams and machinery, which, on account of exhaustion of funds, was denied. However, that a commencement might be made, I purchased one Flying Dutchman gang plow at my own expense, costing \$85, and furnished one Rock Island disk pulverizer, with which, and by the courtesy of Superintendent Canfield, of the industrial school, who furnished one team, when not engaged in the school service, and further, by his planting and cultivating about 40 acres of the old agency field to corn, I have been enabled to reclaim the old field and have broken on the military reserve, convenient to the agency, about 100 acres, of which 39 acres were disked and seeded to flax and $\frac{1}{2}$ to onions. The flax, though necessarily somewhat late, promises an abundant crop. The balance of the breaking is already disked for next year's crop. Of the old field we have 4 acres in garden and about 12 acres in corn, all of which is doing well.

The agency stock consists of 2 stallions; one old, has been on the reservation many years; the other, a Clyde in his prime, has been on the reservation about three

years—2 good draft mares; 4 drivers, 2 of which are banded and old, used now as team horses; 1 old mare, good only for breeding; 1 colt, and 117 sows and pigs.

In conclusion, I will say that on the whole this people are well disposed, peaceable, law-abiding citizens, though lacking in a marked degree the sense of responsibility as individuals and as a people. Though they are surrounded by disadvantages, and their nearest neighbors are poverty, hunger, and failure, they yet have faith in their ability to achieve, and high hope for the future.

I am, sir, at your command,

F. O. GETCHELL,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF FARMER IN CHARGE OF TURTLE MOUNTAIN CHIPPEWAS.

TURTLE MOUNTAIN RESERVATION SUBAGENCY,
Belcourt, N. Dak., August 11, 1898.

SIR: I herewith transmit the annual statistical report of this subagency, accompanied by a list of the people belonging to the Turtle Mountain band of Chippewa Indians residing on the reservation and immediate vicinity. The census was taken during the month of July, and every place was visited or reliable facts obtained wherever the parties were absent.

The reservation is a subagency of the Devils Lake Agency, N. Dak., located in Rolette County, N. Dak., in township 162, range 70 west, and township 162, range 71 west, containing 46,800 acres, divided into farming, timber, and grazing land. A considerable number of the people enrolled reside outside the reservation in the immediate vicinity, as there is not room for all on the reservation. Many of these have filed Indian homesteads and some the regular white man's homesteads, and others are living on land that is vacant and subject to filing or already filed on and abandoned. These people are in constant danger of being ousted, and have a great deal of trouble and cause much friction between themselves and white settlers.

The following is a recapitulation of the census:

| | Adults. | | 6 to 18 years. | | 1 to 6 years. | | Total. | Families. | Births. | | Deaths. | |
|---------------------------------------|---------|---------|----------------|---------|---------------|---------|--------|-----------|---------|---------|---------|---------|
| | Male. | Female. | Male. | Female. | Male. | Female. | | | Male. | Female. | Male. | Female. |
| Mixed bloods on reservation..... | 386 | 318 | 236 | 240 | 146 | 155 | 1,484 | 327 | 27 | 37 | 9 | 13 |
| Mixed bloods outside reservation..... | 121 | 96 | 66 | 59 | 46 | 40 | 421 | 95 | 10 | 16 | 6 | 9 |
| Full bloods..... | 74 | 89 | 42 | 29 | 21 | 18 | 277 | 93 | 5 | 6 | 3 | 4 |
| Total..... | 581 | 503 | 344 | 328 | 213 | 213 | 2,182 | 515 | 42 | 59 | 18 | 26 |

Acres culture.—The acreage in crops for this year is less than the previous year, as, owing to the short crop of 1897, hardly any of them had any seed of their own saved. Some of them have usually added to the amount of seed issued by the Government seed of their own, or purchased some for the purpose, giving liens on the crops for payment; but in 1897 the most of them who had purchased seed were very hard pressed to meet the payment, and this spring the price of seed was high and scarce, and those who had it to sell were reluctant to let it go on credit, and so less was put into the ground.

As the season has turned out, it was well that they did not go into debt, as the crop is almost a total failure, many places not being worth harvesting and the best very light. The crops in other parts of the State are good, but in the Turtle Mountain country and immediately around it everything has failed. The spring was very dry. There was little snow the previous winter and the ground was devoid of moisture. When it did commence to rain it was too late. During July there was a frost, which injured many of the vegetables in low places, and, as is usual, the crops have been affected according to the lay of the land, some getting a little and many nothing at all. It will be a very serious matter for many of our people to get through the winter.

The Government furnished for seed 2,500 bushels wheat, 850 bushels barley, 200 bushels flax, 1,300 bushels potatoes, and 55 pounds of ruta-baga seed. The land was ready to be seeded and the seed was distributed in good season. The following table will show the amount of land cultivated. The fencing is for pasture, as there is a herd law on the reservation, and crops are not fenced:

| | Wheat. | Oats. | Barley. | Rye. | Flax. | Vegetables. | Summer plowed. | New breaking. | Old land vacant. | Fencing. |
|--|--------|--------|---------|--------|--------|-------------|----------------|---------------|------------------|----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| Mixed bloods, inside reservation..... | 2,147 | 82 | 348 | ----- | 236 | 174 | 670 | 384 | 746 | 2,108 |
| Mixed bloods, outside reservation..... | 1,244 | 107 | 82 | 129 | 112 | 59 | 352 | 232 | 170 | 233 |
| Full bloods..... | 36 | ----- | 11 | ----- | ----- | 17 | ----- | ----- | 59 | 80 |
| Total..... | 3,427 | 189 | 441 | 129 | 398 | 250 | 1,022 | 666 | 975 | 2,471 |

Education.—There are connected with this reservation one boarding school, under contract with the Sisters of Mercy, and three day schools, managed by the Government. Estimates have been made to increase the capacity of the present day schools and to build a fourth one. In addition many of the children are at school at Fort Totten and Haskell Institute, at Lawrence, Kans. The school facilities are inadequate for all who wish to go to school or can be induced to attend. A midday meal is furnished at the day schools. The attendance at the day schools is not very regular. In summer the children are called on to help their parents in work and in winter the severity of the climate and blizzards often interfere with the attendance.

The following table gives the school statistics for the sixteen months ending June 30, 1898:

| School. | Largest attendance at one time. | Largest attendance for one month. | Average attendance. | Capacity. |
|-----------------------|---------------------------------|-----------------------------------|---------------------|-----------|
| Boarding school | 138 | 128 | 112 | 150 |
| Day School No. 1..... | 42 | 36 | 27 | 50 |
| Day School No. 2..... | 63 | 49 | 36 | 50 |
| Day School No. 3..... | 48 | 36 | 31 | 50 |

Court of Indian offenses.—Three members of the reservation, two mixed bloods and one full blood, compose this court. They hold their sessions twice a month, and oftener if occasion requires. The court had twenty-nine cases before it during the year, all disputes about debts and similar misunderstandings. They were all settled without confining anyone in the prison. One case of a white man for cutting timber was brought before the United States grand jury, but no indictment was found. Three cases for the sale or introduction of liquor were brought before the United States court, but the cases had not been decided at the time of making this report.

Churches.—There are 3 church buildings on the reservation, 2 Catholic and 1 Episcopalian (the latter is not in use at present), with about 1,000 communicants. The mixed bloods are all Catholics; some of the full bloods are Episcopalians. There is very little dancing among the full bloods. The medicine and sun dance are strictly prohibited, but there seems to be no great inclination to have them. About once a year they skip over to Canada and there meet other Indians and have the dances.

In conclusion, permit me to say that the settlement of the claims of these people should be a matter of early concern to the authorities. They are increasing in number every year, while their resources are diminishing. The mixed bloods, as a class, are as industrious as the same number of any race with their surroundings and advantages. They have no trades and are only capable of ordinary day labor. This country is so new that there is little demand for labor, and when there is a job there are so many after it that small wages are given. The wood on the reservation, from the sale of which they have been able to add to their support, is nearly all gone by having been cut down and sold and burnt up by timber fires, and they are liable to arrest if they cut wood anywhere else. The digging and selling of seneca root, which has been an important industry with them during the summer months, is being restricted by the settling up of the country and plowing up the land, by dry seasons, scant demand, and low prices. There is no game to hunt, the lakes have no fish in them, and the fur-bearing animals are nearly extinguished. Farming, always and everywhere an uncertainty, is doubly so here, and can not be depended on as a certain means of support, especially so where they are crowded together as on this reservation, and the area for cultivation is so limited that it is mostly confined to small patches, which should yield big in order to give them the necessary income.

The treaty made by them in 1892 and which would help them considerably has never been acted on by Congress and other measures for the settling of their affairs are in abeyance, and the Government is yearly spending money in relieving direct want without canceling any claims or helping them on their feet. In fact, the expectation of a settlement and better things is keeping many here who might do better if they went away to other places and started new.

In this connection it is proper to state that there are now living on this reservation 27 families who were stricken off the rolls by the treaty commission of 1892 as having no rights here. No instructions have ever been received to remove these people. They get no help from the Government, but they occupy and use land which should be used by those who are recognized, and they use wood and hay to which they have no right. There are also 12 families who have relations enrolled here and who, it is generally conceded, have rights as Turtle Mountain Chippewas, but whose names were not acted on by the treaty commission on account of their absence. Their names have been acted on by a committee and submitted for authority to place them on the rolls.

It would be a great aid in the administration of affairs here to have these admitted to equal advantages and those who have been rejected removed. None of the above are included in the census.

Very respectfully, your obedient servant,

F. O. GETCHELL, *United States Indian Agent.*

E. W. BRENNER, *Farmer in Charge.*

REPORT OF FORT BERTHOLD AGENCY.

FORT BERTHOLD AGENCY,
Elbowoods, N. Dak. (via Bismarck), August 24, 1898.

SIR: I have the honor to submit the following annual report of this agency for the fiscal year 1898:

The location of the agency, the buildings, the soil and climate, and the industrial pursuits of the Indians have been described in so many previous reports that they need no mention here,

Population.—The census taken June 30, 1898, shows a total population of 1,148, divided as follows:

| | Arickarees. | Gros Ventres. | Mandans. | Total. |
|---|-------------|------------------|----------|--------|
| Males | 196 | 236 | 125 | 557 |
| Females | 230 | 233 | 128 | 591 |
| Males over 18 years | 114 | 113 | 70 | 297 |
| Females over 14 years | 146 | 147 | 85 | 378 |
| School children between 6 and 18 years: | | | | |
| Males | 52 | 72 | 30 | 154 |
| Females | 42 | 48 | 24 | 114 |
| Births | 19 | 20 | 15 | 54 |
| Deaths | 21 | 18 | 27 | 66 |

Decrease in population, 12.

Condition of Indians.—I believe the general condition of the Indians here is improving. During the year they sold to the Government produce, etc., valued at \$16,548.56, and received for transporting supplies the sum of \$836.43. These figures are taken carefully from the cash record here actually paid to Indians, and in addition thereto the Indians received from contractors \$413.57, making a total for transportation of supplies \$1,250. All the beef and part of the wheat (to be ground into flour) needed for issue during the year was furnished by Indians of this reservation. There were recently issued to them 1,000 heifers and 40 bulls. These, in addition to the cattle already on the reservation, should go a long way toward making the Indians self-supporting. The great and most urgent need still is better houses—houses with more light and ventilation.

Sanitary condition.—The report of the physician shows that a surprisingly large percentage of the deaths that occurred during the year were caused by consumption. This should not be so. The death rate from consumption is remarkably low in North Dakota and adjoining States. One need not seek far for the alarming death rate among these people from that disease. One look at most of the dwellings will disclose it. Some new houses were erected during the year, and I secured authority to purchase 25,000 feet of flooring, 100 windows, and 50 doors, to be issued to deserving Indians. The health as well as the civilization of these Indians demand better dwellings. I trust they will be given every encouragement to make better homes for themselves. The health of the employees has been fairly good during the year. Nearly all have suffered somewhat with influenza of a mild type. Diphtheria and scarlet fever appeared with a few cases during the year, but by rigid quarantine measures were quickly suppressed.

Notwithstanding the increase of tuberculosis there has been a marked improvement in the sanitary condition of the people at large. Many new houses have been built, most of which are a great improvement upon the old ones, as they are always larger, better lighted, and ventilated. The greatest defect in most of the houses is that they have dirt floors and are insufficiently lighted and ventilated.

Education.—The school system of this reservation was described in my last annual report. The work done in the various schools during the year has been entirely satisfactory. The boarding school was unfortunately destroyed by fire March 27. A contract for a new building was recently entered into, and I earnestly hope that work will begin at an early day. The new building will be larger than the old one, and will probably accommodate all the children who should be in the boarding school.

General.—The past year has been an uneventful one. Whatever progress has been made has been made quietly and without any sounding of trumpets. There is nothing romantic or dramatic; nothing that would make an exciting narrative in the uplifting of the race. The story is simply a story of labor—steady, patient labor, day after day and year after year. To the patient, uncomplaining workers who have toiled with me through the year I extend my thanks.

The work of the field matron the past year was very gratifying, and the good accomplished will be felt for a long time.

The statistics accompanying this report are self-explanatory and need no further remarks from me.

In conclusion, I desire to express my gratitude to your office for the kindness and courtesy shown me during the year just past, and for the cordial support given me in my administration of affairs at this agency.

Please find inclosed herein the report of the superintendent of the Browning Boarding School.

Very respectfully,

THOMAS RICHARDS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF FORT BERTHOLD SCHOOL.

FORT BERTHOLD AGENCY, *Elbowoods, N. Dak., August 22, 1898.*

SIR: I have the honor to submit this the fourth annual report of the Browning Boarding School.

The school building was destroyed by fire March 27. The fire originated in an unused attic and when discovered could not be reached on account of the dense smoke. The condition of the bricks of the fallen chimneys indicate that they were responsible for the fire.

The attendance during the time school was in session was unusually large and many children were refused admittance because we had no room for them. It is hoped the new building which is to be erected will be large enough to accommodate all who should be in this school.

Supervisor Rakestraw visited the school in November. All employees who are trying to do their duty will be glad to see him again. Supervisor Smith visited us after the fire, but of course saw nothing of our work.

The employees, with the exception of the industrial teacher, have been transferred to other schools. The work of the majority of them was satisfactory. As a whole, they were as competent a corps of workers as I ever expect to find in the Indian service.

The agent has at all times been ready and willing to aid us in every possible manner, and we fully appreciate his many kindnesses.

Very respectfully,

OLIVER H. GATES,
Superintendent.

THE COMMISSIONER OF INDIAN AFFAIRS.

(Through Thomas Richards, United States Indian agent.)

REPORT OF STANDING ROCK AGENCY.

STANDING ROCK AGENCY,
Fort Yates, N. Dak., August 25, 1898.

SIR: I have the honor to submit this my first annual report of affairs at this agency and reservation, accompanied by statistics and a census of the Sioux Indians under my charge; also, reports of the agency physician and of the superintendents of the four boarding schools of the reservation for the fiscal year ending June 30, 1898.

I took charge of this agency on the 11th of March, 1898, and except as to statistics, which are gathered from the records of the office and other sources, my report will necessarily be brief.

Location of reservation, agency, and subissue stations.—The reservation is situate on the west bank of the Missouri River, and its northern boundary (the Cannon Ball River) is about 40 miles south of Mandan, N. Dak., about two-fifths of the reservation lying in North Dakota and three-fifths in South Dakota, the population being equally divided between the two States.

The headquarters of the agency are situate in the State of North Dakota, about 1 mile from the Missouri River and 60 miles south of Mandan. The buildings are adjacent to the military post of Fort Yates, N. Dak., which is the post-office address of the agency.

Subissue stations are located near the mouth of the Cannon Ball River, 25 miles north of the agency; at the Porcupine, 30 miles west of the agency; at Bullhead, on the Grand River, 40 miles southwest of agency, and at Oak Creek, about 38 miles south of agency.

Census.—The total population, as shown by the census taken June 30, 1898, is as follows:

| | |
|--------------------------------------|--------|
| Families | 1, 003 |
| Males over 18 years..... | 992 |
| Females over 14 years..... | 1, 347 |
| Males under 18 years..... | 763 |
| Females under 14 years..... | 624 |
| Total of all ages..... | 3, 726 |
| Number of children between 6 and 16: | |
| Males | 365 |
| Females..... | 326 |
| Total..... | 691 |

This shows an increase in the male population of 5 and an increase in the female population of 1, equaling a net increase of 6 in the total population from that of last year.

Education.—There were 3 Government boarding schools, 1 mission boarding

school, and 4 Government day schools in operation on the reservation during the year, viz:

Industrial Boarding School (Government), situate at agency headquarters. Total enrollment, 169; average attendance, 122.

Agricultural Boarding School (Government), situate 16 miles south of agency. Total enrollment, 133; average attendance, 110.36.

Grand River Boarding School (Government), situate 32 miles southwest of agency. Total enrollment, 88; average attendance, 71.09.

Cannon Ball Day School, situate 25 miles north of agency. Total enrollment, 63; average attendance, 38.46.

Number 1 day school, situate 18 miles north of agency. Total enrollment, 27; average attendance, 16.79.

Number 2 day school, situate 3 miles north of agency. Total enrollment, 29; average attendance, 23.31.

Porcupine Day School, situate 30 miles west of agency. Total enrollment, 29; average attendance, 11.03.

I invite attention to the several reports herewith of the superintendents of our boarding schools with reference to the condition and progress of those schools. The day schools appear to have been well conducted, but I have not had much opportunity to form any judgment regarding their progress, etc.

St. Elizabeth's Boarding School, situate on Oak Creek, is aided by the Government to the extent of issuing rations and some clothing for the pupils; in all other respects the Protestant Episcopal Church supports the school. Miss M. S. Francis, the principal of the school, has favored me with a report, which is inclosed herewith.

Missionary work.—The missionary work of the reservation is carried on by the Catholic, Protestant Episcopal, and Congregational churches.

The Catholics have 13 missionaries (4 males and 9 females) engaged. The superintendent of the mission reports 976 communicants and 7 churches; that the society has expended \$8,330 during the year for education, religious, or other purposes; that 20 formal marriages, 113 baptisms, and 67 funerals were solemnized by the missionaries. The St. Mary's and St. Joseph's societies of Catholic Indians of the reservation collected about \$2,500 and expended \$1,900 for religious and charitable purposes.

The Protestant Episcopal Church Mission, located in the Oak Creek district, under the direction of the Right Rev. Bishop Hare, of South Dakota, is in charge of Rev. P. J. Deloria, a native missionary, and 4 native assistants. The missionary in charge reports 271 communicants and 5 church buildings; that the mission expended \$415.71 for educational and \$809.11 for religious and other purposes, and that 12 marriages and 20 funerals were solemnized by the society's missionaries during the year.

The Congregational Church (American Missionary Association), under charge of Rev. George W. Reed, reports 9 missionaries engaged (4 males and 5 females), 297 communicants, and 4 churches, and that \$3,175 was expended for religious and other purposes. Five formal marriages and six funerals were solemnized during the year by the missionaries of this society.

Field matrons.—The field matrons are essential to the employee force at an Indian agency, and in case they do the duty as prescribed for them, their usefulness is far-reaching in improving the condition of Indian women and their homes. Every field matron should be furnished with a horse and buggy, as their work under present circumstances is necessarily curtailed for want of means to reach families living long distances apart.

Court of Indian offenses and police.—My incumbency of the office of Indian agent, extending over a little more than four months, has given me but little opportunity to note particularly the working of the Indian judiciary, but, so far as I have observed, the existence of this court is a very useful adjunct to an Indian agency. From reports received there were 123 cases tried and punished by the court of Indian offenses during the year.

As to the Indian police, I have satisfied myself that their services are highly valuable and necessary, but badly remunerated for the work that is required of them on this reservation.

Agriculture.—Since I assumed charge I have insisted that every Indian should put in some seed for crop, and the results show a fair success; but, except corn, potatoes, and other vegetables, good crops can not always be depended upon in this section of country on account of the uncertainty of sufficient rainfall; but the reservation in all parts is a fine soil, and would be very productive if not for droughts and hot winds. The present season has been unfavorable in this respect; although we had sufficient moisture to start the grain, yet the long-continued dry

weather since that time somewhat stunted the growth, and in many cases poor crops are the result. I am of the opinion, however, that mixed farming (raising crops and stock raising) would be a success on this reservation among Indians if proper attention and instruction could be given them by the farmers in both branches of this industry.

The approximated yield on the reservation this year by Indians is as follows:

| | | |
|------------------------|-----------|--------|
| Oats | bushels.. | 9,375 |
| Corn | do..... | 57,224 |
| Potatoes | do..... | 20,476 |
| Turnips | do..... | 1,957 |
| Onions | do..... | 1,045 |
| Beans | do..... | 593 |
| Other vegetables | do..... | 5,000 |
| Melons | | 28,389 |
| Pumpkins | | 40,437 |
| Hay cut | tons.. | 18,050 |

Industries.—The raising of cattle is the most important industry for the Indians of this reservation, and should be fostered in every way. The Indians have too many horses and too few cattle, but there is a marked increase in a better class of horses now being raised. Department orders have been carried out, and this spring more than 200 stallion ponies have been castrated.

The report of my predecessor as to the number of cattle on the reservation on June 30, 1897, is somewhat in excess of what I have found, as, by a careful census taken since I took charge of the agency, I find but 8,849 head, which includes 2,156 increase since June 30, 1897, leaving 6,693, to which should be added 1,379 sold by Indians to the Government and others last fall, making a total of 8,072 last year instead of 10,658, as reported.

The following table shows the total revenue received by Indians during the year ending June 30, 1898, being the products of their labor and from other sources, as shown by the records of the office and by reports received from Indian traders and others, viz:

| | |
|---|-------------|
| Sales of beef cattle to Government for subsistence of Indians | \$48,103.90 |
| Sales of beef cattle shipped to Chicago markets | 1,781.53 |
| Sales of wood to Government for agency and school use | 5,280.00 |
| Sales of hay to Government for agency | 1,020.00 |
| Sales of oats for Government use | 254.19 |
| Sales of corn for Government use | 236.81 |
| Freighting Indian supplies and materials from contractors' railroad point of delivery to agency and from agency to substations (1,812,889 pounds) | 9,606.55 |
| Pay of interpreters | 205.00 |
| Pay of Indian police | 5,813.33 |
| Pay of additional farmers | 1,560.00 |
| Pay of school employees | 10,868.38 |
| Pay of judges, Indian courts | 600.00 |
| Salaries of agency employees, including apprentices and irregular employees | 8,226.47 |
| Interest on Sioux fund, Standing Rock | 11,823.00 |
| From sales of hides, wood, hay, and other merchandise to Indian traders, and for freighting for traders | 8,122.00 |
| Total | 118,501.16 |

Road making and bridges.—According to the reports of the farmers of the several districts, 7 miles of new roads have been made on the reservation, and 30 miles repaired.

One substantial bridge was built by the labor of Indians, under the direction and supervision of the additional farmer at the Bullhead subissue station. The bridge crosses a stream called Oak Creek, which crossing has always been a great annoyance in the spring during high water. The bridge is 56 feet long and at the center pier 20 feet above the creek bed. There were 45 loads of stone used in its construction, and the woodwork is comprised of large logs and heavy bridge timber, with a substantial railing on each side for protection. One hundred and forty-nine Indians assisted in the building of this bridge, and 459 days' labor performed on the work.

Artesian wells.—From the records I find that an artesian-well plant has been promised this agency for several years past, but it has never reached this point so far.

The plant is supposed to be located at some of the Southern Sioux agencies, but whether in use there or not I am unable to find out. It would be of vast importance at this agency just now, as it would solve the question of a water supply at several points, especially at the Grand River Boarding School, where water facilities are in bad condition.

Sanitary.—I invite attention to the following remarks of Dr. Ross, the agency physician:

The total number of cases treated by me on this reservation during the last twelve months was 518; the number of deaths was 142 and the births 129, showing an increase of deaths over births, due, I believe, to the mild, open winter of 1897-98 more than to anything else. The deaths were divided principally as follows: Tubercular diseases, 71 (of which phthisis caused 58); other diseases, 66 (of which pneumonia caused 22, cholera infantum 19, and acute bronchitis 18); the remaining 5 deaths were due to the following causes: Burned by a prairie fire, 1; fracture of skull from being thrown from a horse, 1, and 3 were lynched by a mob in Emmons County, N. Dak. By the above it will be seen that just 50 per cent of the total deaths was due to tuberculosis, which is a decrease in the percentage to that of the previous year.

There were 71 cases treated in the hospital with two deaths, and 79 cases treated in the two boarding schools under my jurisdiction with one death. I have made over 120 visits to Indians on the reservation, living from 3 to 45 miles from this agency, to do which I had to drive my team over 2,500 miles.

I would like to call attention again to the great necessity of a water supply and sewerage system at the Agricultural and Grand River Boarding schools; especially the latter as its extremely poor location is conducive to sickness of which there is more at that school than any other on the reservation. Good drainage and water supply will to a large extent greatly improve their hygienic conditions and thereby decrease the liability to sickness, and for that reason, if not for any other, they ought to be put into the schools as soon as possible.

The sanitary condition of the agency and industrial school is better than ever before and is due to the excellent water supply and drainage system.

I would also like to call your attention to the fact that medical supplies reach this agency so late in the year, about midwinter, that in many cases the drugs have been frozen, which either spoils their efficiency or breaks the bottles and thereby wastes the medicine. This could be easily remedied if the medical supplies would arrive at the railroad station before cold weather.

The doctor stationed at Grand River Boarding School has treated 366 cases in the last fiscal year, of which 91 were at the school and 275 on the reservation.

Trusting when another year has passed that I may be able to report a considerable advancement and improvement in the condition of the Indians of this agency,

I am, sir, very respectfully, your obedient servant,

GEO. H. BINGENHEIMER,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF STANDING ROCK SCHOOLS.

INDUSTRIAL BOARDING SCHOOL, July 7, 1898. \

In accordance with rules of Indian school service, I have the honor to submit herewith my second annual report of the Industrial Boarding School of this reservation:

Attendance and capacity.—The supposed healthful capacity of this school is 120 or 130, but we had better place the number at 100.

The total enrollment of the fiscal year 1898 was 169 pupils; 1897, 144; the average attendance of the fiscal year 1898, 122; 1897, 106. It will be seen that there is a great gain in the enrollment and in the average attendance.

The school has at all times been overcrowded. Without any extra effort the attendance could have been increased, but considering the limited accommodations, an increase would not be justifiable, as the health of the pupils is a matter to be considered.

The parents.—The attitude of the parents is friendly, although we have incurred the displeasure of some by gradually discontinuing the very reprehensible custom of allowing pupils to go to the tents of relatives when the relatives came to the agency. These visits were a source of disorder and a detriment to the pupils, hence my endeavor to suppress them.

Runaways.—Runaway pupils are almost an unknown factor at this school.

Discipline.—Order has been maintained without any corporal punishment. In fact, I consider the infliction of corporal punishment an injury, as it gives the pupils and parents a hatred for the school and is detrimental to the better development of the Indian character. No doubt there are conflicting views on this subject, but I base my opinion on twelve years' experience in the Indian school service.

Sanitary conditions.—Great improvements have been made during the past twelve months in the sanitary condition of the school. All dormitories have been provided with globe ventilators, and other rooms of the building have also been furnished with better ventilation. There is now a system of baths for boys and girls. While this system is not the most desirable, it is a great improvement on the methods used formerly. The steam plant has been in operation since the latter part of December. It has been a perfect success. One system of water-closets is very defective. The vault was built at a great expense, but there seems to be a radical defect in the plan. I have personally, with the assistance of the carpenter and one of the pupils, spent many nights at work endeavoring to remedy the evil, but the closets are still in a very bad condition.

Water system.—During a part of the year we did not have sufficient water, but recent improvements and repairs have increased the supply.

Health.—The health of the pupils was not as good as in the preceding year. We had a great many sick during the months of February, March, and April, but I presume the crowded condition of the school was to some extent responsible for this condition of affairs. Scrofulous children were not admitted; however the tendency to scrofula was apparent in a great many.

English speaking.—Most of the pupils are full-bloods of the great Sioux Nation. We have reasons to congratulate the school on the success in English speaking, considering the natural tendency to the contrary where so many of the same tribe are together.

Detail of work.—The pupils are detailed as required by the regulations, special attention being given to their aptitude to the different kinds of work. The boys are instructed in gardening, the care of stock, and carpentry. The industrial teacher is a man of experience, and I feel that after a boy has been under his guidance for some years he will have formed the habit of being industrious—a habit very desirable in any man, but especially in an Indian on this reservation where so much idleness exists on account of the ration system and where success in the future will depend very much on individual exertion.

Seamstress department.—The dresses, cloaks, and general wearing apparel of the girls and the overalls of the larger boys, as well as the pants of the smaller boys, were manufactured in this department. The work has always been done in a tasty manner and reflects credit on the efforts of the seamstress. We received a circular letter from the Department dated March 5, informing us that it had been decided to adopt the "New York French tailor system," devised by Mrs. Williams, of Wichita, Kans. We were directed to ascertain how many girls were sufficiently advanced to acquire the art of cutting and fitting and to make requisition accordingly. We did as directed, but at this writing we have received no reply, and are awaiting instruction on the matter.

Kitchen.—We still lack facilities, so very desirable, to enable the girls to conduct the cooking on the scale required for an ordinary family. We desire such improvements as will help us to carry out this plan. It is something very much needed for the future improvement of the Indians.

Laundry.—I have made up my mind that one of the hardest tasks in a large Indian boarding school where steam facilities are lacking is that of the laundress. It requires but a casual glance at the mountains of clothing which pass through this department every week to dishearten a courageous person. Every effort to lighten this task has been made. Both boys and girls are detailed for the work, but still there is very much to be done. It is to be hoped that the Department will be able to take such action as will bring about a change in this work.

Garden.—We have about 7 acres under cultivation, and in prosperous seasons we obtain enough vegetables to do us for the year. The present season promises to be a very successful one. Our school garden is an object lesson to the Indians. The industrial teacher is a very successful man in this as in most other work.

Carpenter.—A number of boys have become very handy in the use of tools. The carpenter has also been a great factor in saving the expense of additional help for repairs. As he is familiar with the steam system, he has been of special service during the introduction of the steam plant, as also ever afterwards, being an engineer.

School premises.—Repeated efforts have been made to beautify the premises by planting trees and shrubs, but thus far all attempts have proved unsuccessful, and it seems doubtful if a change can be made under present conditions.

Schoolrooms.—A marked improvement has been made in all classes, and the teachers are to be highly commended.

Kindergarten.—As heretofore, great importance has been attached to this part of the school work, and very satisfactory results have been obtained.

Improvements.—A number of improvements have been made since my last report. Among the most important are the completion of a new addition and the change of the heating system from stoves to steam. Some rooms have been replastered and some new floors were laid.

Agency employees.—Great praise is due the district farmers for the manner in which they cooperated with the school. I have received all help to secure good attendance, and to their prompt action in carrying out orders and in complying with my requests is due in a great measure the good attendance here.

Field matrons.—Field matrons have been of service to the school by looking after the pupils during their temporary absence. I have received many helpful suggestions from them, and consider them of vast importance when connected with the school service.

Attention.—I feel that I must call attention to about the same points I mentioned in my last report. The matter of lack of facilities for escape in case of fire is apparent to anyone visiting here, and my attention has been called to the fact by disinterested parties. It has been suggested that a porch be erected which would answer all the requirements of a fire escape, and I think that the material has been asked for.

I desire to state that the shoes and hose furnished were insufficient and of poor quality. I bought ten or twelve pairs of shoes last September from private funds, and have taken active steps to manufacture hose in order to supply the deficiency.

In conclusion, I desire to say that there has been an improvement in every department of the school. I have many reasons to be thankful. The school is blessed with excellent employees, who have taken great interest in the work and who could be trusted under all circumstances to do their duty toward the school. They fully understand the spirit and intention of the Government in establishing schools for Indians, and I believe it has been the aim of all to carry out the views of the Department.

I feel especially grateful to Mr. E. Forte, agency carpenter, for the interest he has taken in all repairs and improvements that have been made. Everything he does is done for the best interest of the service and for the welfare of the school. I desire to thank the agent and his excellent wife for the interest they have taken in the advancement of our pupils, and I would urgently request the Department to allow the expense for repairs that he has asked for. Standing Rock does its duty in the agency and schools. Our schools are crowded. Our employees a unit in carrying out the views of the Department. We need more buildings to do our duty properly. Shall we be remembered?

Very respectfully,

E. C. WITZLEBEN.

SUPERINTENDENT OF INDIAN SCHOOLS.

(Through United States Indian Agent).

REPORT OF SUPERINTENDENT OF AGRICULTURAL SCHOOL, STANDING ROCK.

AGRICULTURAL BOARDING SCHOOL,
Standing Rock Agency, July 30, 1898.

SIR: I have the honor to submit the annual report of this school for the fiscal year ending June 30, 1898.

There was a total enrollment of 133 pupils, 64 boys and 69 girls, with an average attendance of 110.36 for the ten months school was in session. Of those enrolled 117 were still present at the

end of the school year, not including 4 who had been promoted to positions at the school during the year. They were divided according to the different grades, as follows:

| | I. | II. | III. | IV. | V. | VI. | Total. |
|-------------|----|-----|------|-----|----|-----|--------|
| Boys | 18 | 16 | 5 | 6 | 14 | 5 | 64 |
| Girls | 11 | 19 | 7 | 13 | 11 | 8 | 69 |

Most of the pupils of the sixth grade were withdrawn before the end of the year, which left the school rather destitute of larger scholars, especially boys, who were altogether in the minority, as the idea seems often to prevail here like on other reservations, that as soon as a boy can ride a horse the average Indian father thinks he needs the boy by all means to care for his ponies or work about the house. And the mothers very often think also, much too soon to do their daughters any good, that they are getting old and weak and sickly, and have so much to care for (in their mind at least) that they need the help of the girls very much at home. For these reasons also some who should go on further with their studies and be transferred to nonreservation schools can not be influenced or persuaded to go, although the school is in favor of everything that might benefit these children, no matter where or wherefrom they would derive those benefits of a good useful education and the perfection thereof.

None of those enrolled died. Except a siege of la grippe, which came upon us during the month of March, there are only minor ailments, such as coughs, colds, some sore-eye cases, etc., to be reported, in which we have certainly been very fortunate, considering that in all the country around diphtheria, measles, scarlet fever, and other diseases prevailed for some time and decimated many white families in a most distressing manner.

I would respectfully call attention to the remarks made by our agency physician, Dr. Ross, in his last annual report (1897), where he says: "With regard to the Agricultural Boarding School, if it were not for the excellent natural surroundings (and I may add constant precaution and care for the health of the children), there would be great liability to sickness, as this school is without a drainage system. I would strongly recommend the laying of a sewerage system there, which could be done at a small expense." The very same recommendation and petition I repeated for several years already, but without any avail. We have waterworks, but they do not go far enough, and can not be utilized as it should be done; consequently we have only a very small taste of them.

The school work was carried on as nearly as possible and practicable according to the requirements of the course of study laid down by the Department and commendable progress made in the different grades. Efforts were made not only to pay attention to the old traditional three R's, but also, to the three H's, i. e., the cultivation and training of hand, head, and heart, which must of necessity involve character building, and make even school education not only a preparation for life, but life itself, full of high inspirations and noble purposes, which mostly produced on the part of the children a ready, willing spirit that made everything pleasant and profitable.

A harmonious union of the literary, domestic, and industrial work was aimed at. The school carpenter was requested to base his theoretical instructions on Goss's Bench Work in Wood, which is an excellent manual to give good and correct ideas of the use of tools, materials, etc. The industrial teacher or farmer drew many helpful suggestions and hints from Mills and Shaw's First Principles of Agriculture as far as they can be applied to farming and stock raising in this section of the country.

All instruction was imparted with the view to the future home life of the pupils and its requirements.

The larger pupils divide their time between half a day of work and half a day of school. About 14 boys are regularly detailed for work around the barn, woodhouse, farm, and garden, 6 about for the shop, 18 girls and 8 boys for the matron's department, care of dormitories and other rooms, 8 girls for the sewing room, 5 girls for the kitchen, and 8 for the laundry. These details are made for one month.

Of the 100 acres of cultivated farm land 20 acres were put in wheat, 18 acres in corn, 50 acres in oats, and 5 acres in potatoes. The garden comprises 4 acres, and promises a good and plentiful yield thus far. Small grain suffered from want of rain at the right time, which left it very short. Corn and potatoes may still do well if the latter part of summer will not be too dry.

As the most urgent wants of the school, I would mention the necessity of repainting the whole plant inside and outside, of replastering and whitewashing or alabastining most of the rooms; also, reflooring the schoolrooms and others, rebuilding the porch in front of the girls' dormitory, reshingling the roofs of the older buildings, establishing a good system of sewerage, and putting up such new buildings as are necessitated for housing the required number of children comfortably. Good tank-flushing water-closets should be placed in the dormitory buildings and the outside vault closets removed or renewed. All these things were asked for and estimated upon repeatedly, and, as I notice with pleasure, were also taken up anew and with a will by our new agent, George H. Bingenheimer, and I will gladly hope that his efforts in this line will be crowned with final success, so that his administration may bring to us what was not granted before.

I regret that the most necessary repairs can not be made now during vacation, as such an institution should from time to time be thoroughly renovated, in order to present a new, fresh, inviting, and attractive appearance when the children return to school. Having no sewerage, and consequently poor bathing and closet facilities, no steam-heating apparatus, only wood as fuel and coal oil for light, which causes many and grave dangers from heating and lighting the buildings, we have much work and responsibility which other schools do not have, although we have the same number of children, and mostly smaller ones, who have to be helped more than they do and can help themselves. But in spite of all we have tried to make the school what the honorable Commissioner of Indian Affairs, according to the last annual report, expects a reservation school to be when he says that, situated in the heart of the Indian country, it should be a perpetual reminder of the civilization which lies outside the reservation, where the Indian parent can occasionally see his children, note their progress, and involuntarily receive some idea of the benefits of education.

It was very gratifying to me that also this year some of our former pupils, who have now families, brought their children to school, showing thereby their confidence in our work and grateful appreciation of the benefits they derived from education, giving thereby their own people to understand that the school is not such a bad place as some might think it to be. It also affords me much pleasure to state that on occasional visits to the homes of our pupils I can

notice that the work of the school is not altogether lost, but that many make honest efforts to put into practice in daily life what they have learned at school, may it be in speaking English, in housekeeping and good order, complying with rules of politeness, or in other ways.

In conclusion, allow me to express my sincere thanks for the favors and courtesies received through our agent, his chief clerk, and other agency employees who have manifested kindness, good will, and sense of accommodation toward the school, which I fully appreciate.

Very respectfully,

MARTIN KENEL, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through George H. Bingenheimer, United States Indian agent.)

REPORT OF SUPERINTENDENT OF GRAND RIVER SCHOOL.

GRAND RIVER BOARDING SCHOOL,
Standing Rock Agency, August 1, 1898.

SIR: I have the honor to submit the fifth annual report of the Grand River Boarding School: Location.—The school is situated 32 miles southwest of Fort Yates, the agency and post-office, and nearly 100 miles from Bismarck, the most convenient point having railway connections.

Attendance.—Total enrollment, 88; average attendance, 71.09+; highest average attained during February, 77.67+; average age of pupils, 11.75 years.

Runaways.—A few runaways occurred at the beginning of the year, but this pernicious habit was soon completely overcome by prompt though kindly treatment. Spotted Horse, the school policeman, was especially efficient.

Health.—One girl died of tuberculosis three months after being excused from school. With this exception the general health of the pupils has been excellent, owing largely to the vigilance and efficiency of the school physician, Johnson C. McGahey. The series of physiologic and hygienic lectures given by Dr. McGahey throughout the year proved interesting and instructive.

Literary work.—The work in this department has been conducted by earnest and conscientious teachers. The form studies were used as means to the thought studies, while the latter were made to enter into the development of the former. Necessarily not all of the means included in the above designated studies were presented during the year, but those that were had particular reference to each child's need and period of development. The results were very gratifying.

Industrial work.—As customary the pupils in each of the two divisions devote an equal amount of time to class room and industrial instruction. The details are changed biweekly. A good 8-acre garden containing corn and a variety of vegetables, a new log ice house filled with ice, logs cut and hauled to build a cattle barn, about 15 acres partially cleared of underbrush, besides the caring for the stock, cutting wood, etc., represent the work performed by the boys under the charge of the industrial teacher. The girls were instructed in the various departments of household duties and their progress was commendable. An effort has been made to secure as complete organic connection as possible between the industrial and literary work.

Ethical and social.—A Sabbath school was conducted throughout the year. The pupils attended their respective church services regularly. Christian ethics as applied to practical life was presented in a series of informal talks by the superintendent during the general evening exercises.

Several of the employees frequently had small evening parties for the children detailed to their departments. Suitable desserts were prepared and served by the girls, games were played, and enjoyable times passed. Several socials for all the children were also held. All proved valuable for instruction in social ethics. The holidays were observed with suitable exercises and diversions.

Transfer of pupils.—Quite a number of the larger boys and girls voluntarily offered themselves for transfer to nonreservation schools, but when the consent of the parents was requested it was given in only one case. Material for future valuable careers will thus be allowed to remain inert.

Improvements and needs.—A log ice house, a well, a windmill, and a fine 60-foot flagstaff are the principal accessions for the year.

Our needs, which are imperative, have been presented for your kind consideration, and our request, if granted, will increase the efficiency of the school many fold.

Acknowledgments.—My sincere thanks are due to those of the school employees who have been loyal and who have labored earnestly for the prosperity of the school; to the missionaries whom I have met for their interest and encouragement in this work; to the ladies of Wellesley College and others in the East who kindly contributed many beautiful Christmas presents for the children; to the clerks and other agency employees who have extended us many courtesies during the year; to our genial agent, Maj. George H. Bingenheimer, and his predecessor, J. W. Cramsie, for their continued assistance and support, and to the Indian Office for favors granted.

Very respectfully,

H. M. NOBLE, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through G. H. Bingenheimer, United States Indian agent.)

REPORT OF SUPERINTENDENT OF ST. ELIZABETH'S SCHOOL, STANDING ROCK.

OAK CREEK, STANDING ROCK RESERVE, S. DAK., *July 23, 1898.*

DEAR SIR: By your request I have the honor of submitting my annual report of St. Elizabeth's School for this fiscal year.

After the destruction by fire of our school buildings the previous year, our people under the Rev. Philip J. Deloria, native priest in charge of our mission at Standing Rock, raised nearly \$500 towards the erection of new buildings—boarding-school home, chapel, and recitation room combined—which through Bishop Hare's indefatigable efforts were planned for and completed by the 1st of September at the cost of about \$9,000. Five thousand of the amount was secured from the fire insurance company. For the remainder we are indebted to our many friends East and West.

The buildings are more commodious and attractive than the former ones, and through the assistance of the church missionary societies were furnished comfortably. Clothing for the children was also provided by the same source, which enabled us to reopen our school the 25th of September.

Sixty pupils were enrolled in November. Two native assistants and seven employees have been the working force a part of the year. To procure an ample supply of good soft water, a well was dug 12 feet deep at the distance of about 3 miles from the school, which has proved to be a great luxury when our cistern water has been exhausted.

The spirit of grateful appreciation on the part of the children and parents has marked the year, if we may so judge from the promptness with which the former were entered and the cheerful compliance of the latter to the rules of the school. There has not been one runaway. Several pupils were withdrawn on account of scrofula affections, one of whom has died. As we treat the children homeopathically, it has not been necessary, except in extreme cases, to send for the agency physicians, who have always responded readily when called upon.

The issue of requisitions has been ample, but that of Government annuity very limited.

The industries of a farm boarding-school home have been taught in a general way. About 300 garments have been manufactured, besides the weekly mending for the household. The disposition of our older and more advanced pupils to assist in an emergency has been encouraging and helpful, for which result much praise is due my faithful associates who have been with me several years.

Each of the pupils according to their efficiency received a payment of an amount from 5 cents to \$5 monthly. From the limited recompense they have contributed to the church and missions. One child gave his whole 50 cents to his mother to pay for a bottle of medicine for her. While all were privileged to do as they were disposed with the amount earned, they were taught to be consistent, and the most advanced used their little fund in the purchase of hats and other attire which was deemed commendable and progressive.

Thanking you and your employees for the courtesies extended in behalf of our mission, trusting in your continued interest in our work, I am,

Very respectfully, yours,

GEORGE H. BINGENHEIMER,
United States Indian Agent.

MARY S. FRANCIS, *Principal.*

REPORTS OF AGENCIES IN OKLAHOMA.

REPORT OF CHEYENNE AND ARAPAHO AGENCY.

CHEYENNE AND ARAPAHO INDIAN AGENCY,
Darlington, Okla., August 31, 1898.

SIR: I beg to submit herewith my sixth annual report of the affairs of this agency.

The Cheyennes and Arapahoes were given allotments of land in severalty in 1891. At that time they were what is generally known as "blanket Indians," who were utterly unfitted to assume the rôle of citizenship conferred upon all allotted Indians. They were in complete ignorance of the laws by which they were to be governed, and totally unprepared for the sudden change from tribal to that of local civil government. Nearly all their habits and customs militated against submission to the requirements of the new laws to which they had unwillingly been subjected. It must be understood that these people did not willingly seek to have their lands segregated, but were practically forced to do so. They were made to believe that the Government would take their lands anyway, and that they had better accept what was tendered in apparent generosity, than to refuse the terms offered and get nothing. Thus it came that the Cheyenne and Arapaho Reservation was thrown open to settlement and in a single day thousands of white settlers rushed into the country from which they had been, prior to that date, excluded, and which these Indians had been accustomed to believe they owned forever. Is it, therefore, a matter of wonder that they cling so tenaciously to their old-time customs and so slowly yield to the demands of their new environment?

Their progress in the adoption of civilized habits has been gradual, but very marked. By evolution they are emerging from a savage to an embryonic condition of citizenship. Slowly the veil of darkness, superstition, and ignorance is being lifted and they are being brought to see and appreciate the benefits of a higher civilization. The abrogation of old customs and the adoption of newer and better methods of daily life tend to elevate and free them from the old hermetic shell, so impervious to the influences of a civilized existence. By attrition with their white neighbors they are fast acquiring habits of industry and thrift. They are learning to enjoy the benefits and comforts of permanent homes; of houses, instead of "tepees;" of individual ownership, instead of a tribal community of property; of education and its great resultant good to the rising generation; of a higher moral and Christian life, in lieu of heathenish devotion to unknown gods, and to contrast their present advanced status with their former condition of nomadic camp life, spent in idleness and sloth. They are beginning to see that

there is a promising future for them; a day when, in the quiet and peaceful enjoyment of their individual possessions and settled in permanent homes surrounded by home comforts, they may fully enjoy and appreciate the resultant benefits of an advanced civilization. During the long years of tribal government many habits that are barriers to their advancement have so ingrown with their lives that they are exceedingly difficult to eradicate.

It requires no slight effort to promote the progress of a people who for generations past have spent their lives in perfect abandonment of any desire to adopt civilized habits. To roam at will with no thought of care for what the future may have in store for them, and confirmed in the belief that the lives led by their forefathers is the correct and proper thing, they have been content to let the future take care of itself. To break up habits of indolence and to institute those of industry is no small undertaking. To impart a proper regard for local, civil, and criminal laws, and especially those regulating marriage and divorce and the rights of property, and the observance of the rules and regulations of the Department as they apply to forbidden customs, calls for the exercise of earnest, zealous, firm, and determined perseverance.

An agent must needs sacrifice any desire to be popular if he be inspired to do his whole duty. He must seemingly at times to them appear to be harsh, exacting, and even unjust and cruel. To convince an Indian that his way is the wrong one, that he is blind and can not see the right way, or to make a convert of him against his inclination, is a most difficult undertaking. He is the veriest of demagogues and very much of a diplomat in his own way. To refuse permission to an Indian to do something which he ought not to do, or decline to issue him some article which he does not deserve, makes an enemy of him. Though he may be an idler and a vagabond, without a home or permanent place of residence, and though he may be nonprogressive himself and have ridiculed and derided those disposed to be so, and have counseled opposition to the methods employed by the Government for the uplifting of his people, yet he thinks he is as much entitled to recognition and reward at the hands of his agent as the most deserving.

The uneducated Indian is not a reasoner. He accepts what appears to him as a fact without first knowing or inquiring into the cause or reason why it is a fact. He has been so long provided for by a generous Government that he can not understand why he should not always be supported and cared for, and consequently his indifference as to what the future may have in store for him.

To state that these Indians have made rapid progress during the past year is but to state a fact, but they are yet so far from an advanced civilization that it will require years of patient labor on the part of those in charge to bring them up to the plane of good citizenship. That they have done so well as compared with their neighboring tribes is a matter of comment by those observant of their condition.

There is among them a marked absence of drunkenness. They live amicably with their white neighbors. Intermingled as they are with the white settlers, with unlimited opportunities to procure liquor, it is surprising how little friction there is between them, and while much apprehension was felt that trouble would ensue on account of the withdrawal of the United States troops from the military posts in the Territory, the former peaceable status has not been disturbed.

A delegation of twenty-five Cheyennes and Arapahoes, with their families and camping outfits, is now in attendance at the Trans-Mississippi Exposition at Omaha, Nebr.

Issue of rations.—The ration system is by many considered pernicious, and without doubt there is reason for the belief. The consensus of opinion seems to be that as long as an Indian is fed by the Government he will make no effort of his own for self-support. While this is undoubtedly true in the main, it would be inhuman to leave the old and decrepit, the sick and the blind to starve—for starve they would if they had to depend on their relatives for support. If it were possible to separately provide for them by the issue of provisions which could not be shared with the undeserving, then the indiscriminate issue of rations could and ought to be stopped. While under existing orders at this agency rations and other gratuitous supplies are withheld from able-bodied men who refuse to work, and from those who will not place their children in school, it has proven impracticable to prevent the nonprogressive ones from sharing in the issue to others, and thus the undeserving evade the penalty for failure to comply with the requirements of the Department. All eatables among Indians are looked upon as common property as long as any remain in the larder. Hungry visitors never leave the abode of a friend or relative until their hunger is appeased. It is hard for the progressive to succeed in the accumulation of personal property on this account. To be charged with stinginess is equivalent to being accused of robbery. One who refuses to share his provender with his neighbors is villified and abused

and afterwards shunned by all. No wonder that it requires great courage for them to say no to the hungry.

Hindrances to progress and remedies suggested.—Nothing operates so disadvantageously to the development of meritorious traits of character as tribal councils, dances, visiting, and intermingling of the tribes. Such intercourse enables so-called "chiefs" and "medicine men" to wield their vicious influences over young men and women who have been educated at Government expense, who would otherwise throw off the yoke of tribal government which but serves to perpetuate rites and customs that prove a menace to their civilization. How should these be abrogated? By a determined stand by the Department in absolutely prohibiting all customs that exercise a baneful influence over these people. By prohibiting tribal visiting, which militates against all advancement. By upholding the agent in his efforts to break down the influence that counteracts the adoption of progressive habits. By ignoring so-called "chiefs" and the encouragement of individual independence among the men of the tribe. Why should "chiefs" be recognized among allotted Indians who are declared to be citizens? By rewarding the meritorious and progressive, and by withholding gratuitous issues to the idle and indolent as well as from those who encourage opposition to the methods of the Government adopted for their benefit and civilization. By encouragement and assistance of those who desire to live in houses, in supplying the necessary materials, furniture, etc. By the purchase of breeding stock and necessary farming implements. By the employment of a sufficient number of farmers and field matrons to give instructions in farming and stock raising, and in household duties; the care of the sick, the preparation of food, and the observance of hygienic methods. By compulsory education of all children of school age. By the suppression of "medicine men" and their incantations on the sick. By a strict enforcement of the laws regulating marriage and divorce. By prompt punishment for introduction of liquor and other crimes. By compelling permanent local residence upon their allotments and the abandonment of nomadic habits. By interdiction of frequent gatherings, councils, dances, and ceremonies which engender old habits and customs that should be abandoned; and above all, by compelling able-bodied men and women to labor for their own subsistence.

The prejudice manifested throughout the West toward the Indian is due largely to the fact that he is a consumer and not a producer. In other words, that he is living in idleness off the labor and industry of others. The civilization of the Indian is the unsolved problem of the nation. There is no other race of people under our Government for whom so much has been done with so little amelioration of their condition. It has, with lavish generosity, supplied all necessary means to save the Indian from extinction, and yet an apparent stoical indifference is manifested by them as to their future welfare. One thing probably more than any other cause for this is the seeming disposition of the Government to temporize, while no absolute, fixed policy, involving the efforts at civilization of the Indian race, has been adopted. The several tribes have remained subject to the whims of each incoming agent with varied resultant success or failure in their undertakings to improve their condition.

The agent who fearlessly, honestly, and determinedly initiates newer and better methods and strictly and firmly enforces their adoption is assuming a Herculean task, and can only succeed after long and patient endeavor, supported and upheld, as he must be, by the Department. Should he assume this undertaking with anything less than an interested, earnest, and zealous endeavor, he will fail. These conclusions are the result of long years of personal observation of Indian character and wide experience as an Indian agent.

Stimulus.—The policy adopted at this agency of rewarding the progressive by a generous issue of the articles furnished by the Government and imposing privation upon others who obstinately persist in refusal to adopt civilized habits, has produced marked good results. It has brought forcibly to them an object lesson and the knowledge of the fact that while the Government is disposed to be kind and generous to them if they will accept the instruction and advice imparted through its agents, it will not support them in idleness. Gratuitous issues at this agency of such articles as wagons, lumber, and materials for houses are confined to deserving Indians. A deserving Indian is one who has established permanent residence on his allotment and cultivates the same in a proper manner, who is loyal to the Government and obeys the instruction of his farmer, who sends his children to school and complies with all the requirements of his agent and the farmer of his district, thus proving by his actions that he is inclined to adopt civilized habits and to improve his condition.

Improvements.—A new school plant to accommodate 125 pupils was authorized and completed at Cantonment, 70 miles from the agency. A new dormitory for

girls at the Arapahoe school, this agency. The Red Moon boarding school, 90 miles distant, was completed and organized by the attendance of Indian pupils who had never been enrolled in any school. A new bath house and sewer system at the Arapahoe school was completed.

During the year twenty-eight dwelling houses for Indians have been constructed and largely from proceeds of their own labor. There are many others anxious to have houses but are too poor to secure the necessary material, and the appropriation by the Government is too limited to furnish it. The desire of these people to live in houses is increasing and ought to be gratified if practicable.

Conclusion.—I desire to acknowledge to the Department its uniform support and approval during the past year of the methods employed in the conduct of the affairs of this agency, without which my efforts must have failed.

To the employees of this agency who have labored with me I desire to express my due appreciation of their cooperation and assistance.

Respectfully submitted.

A. E. WOODSON,
Major, U. S. A., Acting Indian Agent

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF KIOWA AGENCY.

KIOWA AGENCY, *Anadarko, Okla., August 26, 1898.*

SIR: I have the honor to submit the following report of the affairs of this agency for the fiscal year ended June 30, 1898:

I relieved the ex-acting agent, Capt. Frank D. Baldwin, United States Army, and took charge of the Kiowa Agency on May 16, 1898. I found that by reason of there being so many different subissue stations and schools upon the reservation, and the reserve being itself so large, that it would take a considerable length of time to take a complete inventory of all the Government property which I was to receive. I immediately commenced to make this inventory, which consumed over a month of my time. Immediately after the close of this work I made a semiannual payment to the Kiowa, Comanche, and Apache Indians of the moneys derived from the leasing of their lands. This occupied my entire time until the close of the fiscal year, and taking the above into consideration in connection with the many minor duties of an agency of this size, I found it utterly impossible to collect information and data upon which to base an intelligent report of the affairs for the months prior to my coming here. Therefore my general report must necessarily be abbreviated, but to the statistical reports accompanying I would invite attention, as they could be more generally compiled from office records. It is also found that there are many situations here which take more than two or three months' experience to enable a person to report thoroughly upon, but it is hoped that my future reports will be full in all branches.

Reservations and location of agency.—The Kiowa, Comanche, and Apache Reservation contains an area of about 3,000,000 acres of land, and is bounded on the north by the Washita River, on the south and west by the North Fork of the Red River, and on the east by the ninety-eighth meridian, the boundary of the Indian Territory. The Wichita Reservation contains an area of about three-quarters of a million acres, and is bounded on the south by the Washita River, on the north by the South Canadian River, on the east by the ninety-eighth meridian, and the Cheyenne and Arapaho lands on the west.

The agency headquarters are located at Anadarko, on the south side of the Washita River, on the Kiowa, Comanche, and Apache Reservation, and about 20 miles from the nearest railroad point, due west from Chickasha, Ind. T. All supplies for the agency are shipped to Chickasha and transported overland from that point by Indian freighters.

In about the center of the Kiowa and Comanche Reservation the military post of Fort Sill is located, which, before the opening of the Spanish war, was garrisoned by four companies of infantry and two troops of cavalry. There are now but two troops of cavalry stationed at that point, and they are mainly necessary on account of the Geronimo band of Apache prisoners of war being quartered on the military reservation. The military occupies about 50,000 acres in the Kiowa and Comanche Indian Reservation.

The Wichita Mountains extend through the center of the Kiowa and Comanche Reservation, and make that portion of the reserve unfit for either farming or grazing purposes.

Tribes and population.—The Indians of the Kiowa Agency are the Kiowas, Comanches, Apaches, and Wichita and affiliated bands. The latter are composed of Wichitas, Caddos, Delawares, Towaconies, Keechies, and Wacoos. From the census taken June 30 last the following is shown, total, all tribes, being 3,833:

| | Kiowas. | Comanches. | Apaches. | Wichitas, etc. |
|--------------|---------|------------|----------|-------------------|
| Males..... | 533 | 723 | 92 | 484 |
| Females..... | 593 | 830 | 101 | 477 |
| Total | 1,126 | 1,553 | 193 | 961 |

Agriculture.—The reservations in connection with this agency are not, as a general rule, well adapted to agriculture, but there are along the streams and in the bottom lands some very fine farms, and on these the Indians for the past year have been very successful in their farming operations; in fact, it is believed from the prospects at this time that the crops will be better than they have been for several seasons, and this will be especially true in regard to corn. The abundant rains matured the corn before the very hot weather commenced, and the result is all Indians that planted corn at all and cared for it (which they usually do in a good manner) will have excellent yields. With the success this year it will be a great encouragement toward getting the Indians to farm to a greater extent, and I believe, with the assistance which I expect to give them and instruction of my agency farmers, that they will materially increase their acreage next spring.

Stock raising.—The uncertainty of raising crops in this locality and the adaptability of the reservations generally for stock raising and grazing purposes makes that industry the leading one here and the one which should, in my opinion, be encouraged to its greatest capacity among the Indians. The reservation is thoroughly watered and the best of grass abounds in all portions, and as the pursuit which the Indian can most naturally follow is that of looking after stock, the cattle industry among these Indians is the one that must be paramount in their every undertaking. They are gradually getting to take better care of their cattle, and now there are many Indians that have nice herds, and which are sufficient to furnish them with a comfortable living and supply all their needs. The Indians have cut and stacked a large amount of hay this season, as it has been exceptionally good, and are in every way providing for feed for their stock during the winter months.

Summing up the two questions of agriculture and stock raising, and drawing the comparisons between the two, it certainly is greatly in favor of the latter. As I heretofore stated, there are along the streams and bottoms some fine farming lands, but these lands are all selected and cultivated by the Indians, and the balance remaining is unfit for any purpose whatever except grazing. There are numerous streams that go through the country that have no bottoms or lowlands at all, but merely furnish stock water, and taking all these things into consideration, the reservation can practically be classed as a grazing locality purely and solely.

Evidences of progress.—The increased desire of these Indians to provide houses and homes for their families is the best evidence, in my judgment, of their progress on the road to civilization. A person can not go in any portion of the reserve that is in any way adapted to farming but what houses of the Indians can be seen, and, as shown in my statistical report, there are over 600 houses on the reservation. A great number of these houses have been built by the Government furnishing the material and the Indian paying for the labor of construction. There are now about 50 Indians who have money deposited in my hands to be held in trust to pay carpenters to build houses when the Government will furnish the lumber, and I have recently estimated for enough material to provide for all of these, and I can not urge too strongly the benefits of giving them this aid, and especially so when they are so anxious to secure a home, and in evidence of their good faith are willing to pay nearly half of the expense.

The Indians of these reservations furnish all of the hay, grain, and feed necessary for the use of this agency; and receive a large income therefrom. They also furnish large quantities of hay and wood for use of the military post of Fort Sill, for which they receive good prices. All of the wagon transportation of Government supplies is handled by Indians, and in fact they are ready and willing to work at all times at anything they may find to do that will enable them to earn something

for their benefit, and I believe they are rapidly becoming more provident in every respect, many of them providing with their own labor for themselves and families very comfortably. We also have a large number of regular employees who are Indians, and they receive for this service about \$10,000 per annum.

Education.—There are three Government boarding schools and one Government day school upon the reservation. There are also five mission schools. Of the Government schools the day school is located at the agency proper; the Riverside Boarding School is located on the north side of the Washita River, on the Wichita Reservation, about a mile and a half from the agency; the Rainy Mountain Boarding School is located about 45 miles west of the agency on the Kiowa and Comanche Reservation; the Fort Sill Boarding School is located about 2 miles south of the military post of Fort Sill, and about 40 miles south and a little west from the agency. Among the Wichitas and affiliated bands there is the Wichita Baptist Mission School, which is about 5 miles north of the agency; just south of the agency, on the Kiowa and Comanche Reservation, is the Methodist (South) Mission School and the St. Patrick's Mission (Catholic); about 4 miles east of the agency is the Mary Gregory Memorial Mission School (Presbyterian); about 25 miles southwest of the agency is the Cache Creek Mission School (Reformed Presbyterian). Of the Government schools the Riverside is filled with pupils from the Wichita and affiliated bands solely; the Rainy Mountain School is filled with Kiowa pupils, and the Fort Sill School with Comanches; the mission schools, outside of the Wichita Baptist, are filled with different tribes.

All of these schools are doing excellent work, and as the opportunity does not frequently offer itself to speak of the mission schools, I desire to especially commend their work. With all the schools, both Government and mission, on the reservation, they do not then have capacity enough to accommodate all of the school children, but a great deal will be accomplished in this line when the new improvements at the Government schools, which are now under way, are completed. These improvements consist of a new dormitory and new mess hall at the Riverside School, both to be built of brick, with all the new appliances in the way of heating, lighting, ventilation, sewerage, etc., both costing \$19,000. At the Rainy Mountain School there is a new dormitory, new mess hall, on the same plans as those at Riverside, of brick, and a superintendent's cottage of frame, all costing \$24,000. At the Fort Sill School a new mess hall, of brick, costing \$4,900.

Missionary.—In addition to the five mission schools above mentioned and their corps of teachers and employees under the different denominations, there are fourteen other field missionaries on the reservations of the Baptist, Methodist South, and Protestant Episcopal denominations. These missionaries do a world of good among the individual Indians and have expended during the year nearly \$10,000 for their benefit. They hold services in the different localities in churches which have been erected, and use their influence at all times toward the betterment of the Indian and his advancement on the road to civilization. In fact, I can not say too much in favor of this work, and in the short while I have been in charge of this agency appreciate their help and desire to thank all for their cooperation.

Sanitary.—The sanitary condition of the reservation generally is good. There has been an unusual number of cases of malarial fever on account of the abundance of rain and overflowing of streams, but there have been but few deaths from these cases and all are well handled by our two physicians. In this connection I would state that we have one physician at the agency proper, then another at the Fort Sill school and subagency, 40 miles south. This leaves the district of the Rainy Mountain school 40 miles from either physician, without any medical aid except when one or the other of the two physicians are called upon, and I would strongly urge that a third physician be allowed us in the near future to be stationed in the Rainy Mountain district.

Field matrons.—In this connection I desire to express my acknowledgment of the good work performed by the two matrons on this reservation, and the work of assisting Indian women in the learning of household duties is one that can not be too highly commended and nothing tends more toward the rapid advancement of the Indian tribes than the knowledge of how to make and keep a home, and I can not too strongly represent and urge the necessity for an additional appropriation for more of this class of employees on these reservations. When it is remembered that we have nearly 4,000 Indians scattered over nearly 4,000,000 acres of land, the necessity for an increased number of field matrons is easily to be seen, and I would therefore recommend that we have three additional allowed us, one for the Wichita Reservation, and two more for the Kiowa and Comanche Reservation. It is in the same class of work that the field matrons are engaged that the lady workers of

the missionary force of the reservation spend the most of their time, and the same commendation of the field matron's work can be applied to the missionaries.

In conclusion, I desire to say that the employee force of this agency has been inadequate in numbers, but will be increased for the year 1899, and it is then hoped to be sufficient. At any rate they have been and will all be taxed to their utmost physical capacity in the performance of their several duties.

I desire to thank the honorable Commissioner for his support and assistance during my administration to this time, and feel indebted to him for the same.

The agency statistical report, together with the statistical reports of the Government and mission schools, and annual reports of two superintendents, are herewith transmitted.

Respectfully submitted.

W. T. WALKER,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF RIVERSIDE SCHOOL.

ANADARKO, OKLA., *August 1, 1898.*

SIR: I have the honor to write this my seventh annual report for the Riverside Boarding School, located on the north side of the Washita River, 1½ miles northwest from the agent's office—Kiowa, Comanche, and Wichita Agency. On the morning of the first Monday in September, 1897, we opened the school with the most discouraging surroundings. There were more than 100 children ready to enter school, but only had comfortable quarters for 50, however we patched up the old buildings the best we could and have had a fairly prosperous year with an average attendance of 95 pupils.

We were greatly gratified when the honorable Commissioner of Indian Affairs visited us and promised relief. We are pleased still more to see the fruits of that promise in the form of a splendid brick dormitory and mess hall now being built. These two buildings will soon be finished and turned over for our use, a thing far better than we dared hope for before he visited us and saw our many needs.

The health of the children and employees has been good notwithstanding the overabundance of rain, which is generally a source of sickness in this dry climate.

This has been a great year for the farm and garden except oats. The oat crop was a failure, because of the great rains and hot weather which caused the rust to strike it before the grain had filled. The wheat crop was fairly good in yield while the quality is excellent. Corn never was better. We have raised on the school farm an abundant supply of wheat, corn, potatoes, beans, cabbage, onions, tomatoes, sweet potatoes, and melons. We have no fruit this year on account of the late frosts in the spring.

Our cow herd has increased during the year by 25 head of fine calves. The Texas fever is now raging in this neighborhood, and I have been in fear for our cattle, but all have escaped so far and I still hope they may stay rid of the dreaded scourge.

We have added to the farm this year a 40-acre field with a good tight fence of woven wire for hog range. This field has plenty of shade and water in it, as well as land for the cultivation of forage crops for hogs. It is the best farm improvement we have made for two years.

We have raised one colt, which is a credit to the industrial department of the school, and we shall have more in the future. We have sold two hogs, which netted us \$20.75. We shall have more for sale this winter, as well as wheat and cattle.

The money which was taken from the Wichita children and spent for the benefit of the Fort Sill and Rainy Mountain schools under your predecessor has never been refunded. We are striving to teach the Wichita children the benefit of close application to business, but if what they earn and put away for their own benefit has to be squandered to buy luxuries for some other people, it is hard to make them see the benefit of labor. Therefore I ask the Department once more to see to it that these Wichita children have justice done them.

The schoolroom work has been fairly well done during the year, but we hope to be able to do better another year. We shall be greatly embarrassed, I fear, at the beginning of school this fall, as the new buildings will not be complete.

Respectfully submitted.

G. L. PIGG,
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF FORT SILL SCHOOL.

FORT SILL, OKLA., *July 1, 1898.*

SIR: I have the honor to submit herewith my fourth annual report of the Fort Sill Boarding School.

This school will comfortably accommodate 100 pupils, but we have had an enrollment of 129 children—68 boys and 61 girls—with an average attendance of 118+ for the ten months during which school was in session. The average age of those attending school this year was 11+ years. With the erection of the new mess hall, for which the material is now being delivered, the school accommodations will be materially increased. No difficulty is experienced in keeping the school filled. During the past year I have been under the necessity of saying to some parents who were willing to put their children in school that we did not have room for them.

While it is an easy matter to keep a full school at home, it is very difficult to induce the parents of the Comanches to allow their children to leave the reservation for the purpose of attending school. Very many of the children express a wish to go to school away from the reservation, but the parents say no. I feel, however, that this strong opposition is gradually being overcome.

English speaking.—In the industrial departments, as well as in the literary department, every effort is made to induce the child to use the English language. All of the employees command the use of English in their department work and endeavor to show the children why it is desirable to have it so. The influence has been such that it is a rare thing to hear a word of Indian spoken except when some one is in from the camp. They seem anxious to learn how to express themselves in good English, some of them realizing that the time is approaching when it will be almost essential to their success in life.

Children are regularly detailed to do work in the different departments represented at the school. The details are changed at the beginning of each month so that all may have an opportunity of learning how to do those things which must be done in a home life such as our efforts should tend to lead them to know.

Farm.—The school farm is in good condition, having been well cultivated by the employee in charge of it, with the assistance of the boys detailed to assist him. If the season continues favorable the school crop will be good. Since the most of the crop is as yet unharvested it is impossible to state what the yield will be, but the acreage is as follows:

| | Acres. | | Acres. |
|------------------|--------|--------------------------|--------|
| Field corn..... | 35 | Orchard and nursery..... | 2 |
| Sweet corn..... | 4 | Rye..... | 3½ |
| Pop corn..... | 2 | Oats..... | 32 |
| Kaffir corn..... | 55 | Cotton..... | 6 |
| Garden..... | 2½ | Alfalfa..... | 5½ |
| Sorghum..... | 1½ | Potatoes, Irish..... | 2½ |
| Millet..... | 5½ | Wheat..... | 14 |

Total acreage cultivated this season, as reported by the farmer, is 172 acres.

Health.—The general health of the children has been very good. There have been no deaths at the school. Two children who have attended school died of consumption. At the request of their parents, these ex pupils were buried by the school in the graveyard at the subagency.

General results.—I feel that the results obtained by the year's work with these children has been reasonably satisfactory. There is much to encourage a faithful continuance of effort with these people, even though advancement is much retarded by the influence of their home associations during vacation time.

Needs.—The needs of the school are rather numerous. In addition to the work already begun there should be—

1. A good sewer system.
2. A good water system.
3. Better lavatory and bathing facilities.
4. The school building should not be used any more without being made safe. The walls of the building (which is stone) have so spread that it is certainly unsafe for use.

Conclusion.—In concluding my report, I wish to express my appreciation of all help received during the year that is now complete. The visit of the honorable Commissioner of Indian Affairs, W. A. Jones, was very helpful and encouraging. We were also favored with a helpful visit from Supervisor Bauer a short time before the end of the school year.

Again thanking all who have in anywise contributed to the success of the school, I subscribe myself,

Your obedient servant,

W. H. Cox,
Superintendent Fort Sill School.

The COMMISSIONER OF INDIAN AFFAIRS.

(Through W. T. Walker, United States Indian agent.)

REPORT OF OSAGE AGENCY.

OSAGE AGENCY, *Pawhuska, Okla., August 29, 1898.*

SIR: I have the honor to submit my annual report of affairs at this agency for the fiscal year ending June 30, 1898. As I have had charge of this agency but a short time, my report will be necessarily brief and confined mainly to statistics.

The Osage Agency is located near the center of the Osage Reservation, at Pawhuska, Okla., 30 miles south of Elgin, Kans., the nearest railroad and telegraph station. The Kaw subagency is located 35 miles west of this agency and 15 miles east of Kildare, Okla., which is the nearest railroad and telegraph station.

The history, location, extent, and general features of the Osage and Kaw reservations have been written so often that they are well known, but as it is the custom to repeat this information, or at least a portion of it, every year, I would say that the Osage Reservation consists of about 1,400,000 acres of land, lying in the northeast corner of Oklahoma, adjoining the State of Kansas on the north and the Indian Territory on the east. The reservation consists of some fertile valleys, many rocky hills, prairies, and scattering woodlands; is fairly well watered, and is an ideal grazing country.

The Kaw Reservation consists of 100,000 acres of land adjoining the Osage Reservation on the west, and has the same general physical characteristics.

Census.—

Osages:

| | |
|----------------------------------|-------|
| Full bloods | 906 |
| Mixed bloods | 855 |
| Total | 1,761 |
| Males | 882 |
| Females | 879 |
| Males above 18 years | 401 |
| Females above 14 years | 430 |
| Children between 6 and 18 years: | |
| Males | 236 |
| Females | 284 |

Kaws:

| | |
|----------------------------------|-----|
| Full bloods | 100 |
| Mixed bloods | 108 |
| Total | 208 |
| Males | 128 |
| Females | 80 |
| Males above 18 years | 68 |
| Females above 14 years | 32 |
| Children between 6 and 18 years: | |
| Males | 36 |
| Females | 30 |

Government.—The Osage tribal government is vested in a governor or chief, an assistant chief, and fifteen councilors, who are elected for a term of two years. That of the Kaw tribe is similar, but on a smaller plan. I am at present unable to say whether the present plan of the two tribal governments is a decided success or not.

Farming and stock raising.—Farming and stock raising are the principal industries of the two tribes, and I am led to believe that both are on the increase, although mainly carried on by white men, either as employees or tenants of the Indians. Rains have been frequent and abundant thus far this season, and the grass, corn, wheat, and other crops are very promising.

It is reported that the Osages have cultivated during the year 15,000 acres of land, have 75,500 acres under fence, and that they produced 100,000 bushels of wheat, 40,000 bushels of oats, 600,000 bushels of corn, 6,000 bushels of potatoes; cut 1,000 tons of hay; made 15,000 pounds of butter, besides raising a large quantity of vegetables and fruit.

The Osages own 7,200 horses, 700 mules, 5 burros, 10,000 cattle, 11,020 swine, and 10,000 domestic fowls. They sold to the Government products amounting to \$2,802.43, and it is estimated that they sold to others products amounting to \$15,000.

The Osage Indians have too much money to be successful farmers or stock raisers. Following, or rather leading, his white brother in this respect, he prefers the conveniences, luxuries, and dissipations of village life to the solitary and uneventful avocation of a plain farmer. He loves to sing, to dance, and to rest. There is no object in his working, as he has plenty of money to support himself and family in idleness. He is human.

Wealth.—The Osage Indians are probably the wealthiest people per capita on earth, owning as they do over 800 acres of land for each man, woman, and child, and each receiving an annual annuity of over \$200 in cash. To illustrate: If an Indian and his wife have eight children, the annual cash income of the family is over \$2,000. They are aristocrats and, like all wealthy people, scorn to perform manual labor. "They toil not, neither do they spin." Who can blame them, and who is to blame for this state of affairs?

Education.—There are about 570 children of school age in the Osage tribe and 65 in the Kaw. Of this number, 448 have attended during the year either the schools on the reservations, nonreservation, public, or private schools. The mixed bloods take considerable interest in education and many of them send their children to public and private schools outside the reservations, at their own expense. There are three industrial boarding schools on the Osage Reservation and one on the Kaw Reservation. Two of these schools are conducted by the Government and two are contract Catholic schools. The four schools have accommodation for over 400 pupils, but have not all been filled to their full capacity during the past year.

The Osage Boarding School is located at the agency and can comfortably accommodate 180 pupils. The largest attendance at any one time during the year was 166; the average attendance was 141. The total cost of maintaining the school was \$29,168.91, which includes salaries of teachers, employees, and all other expenses. Eighty acres of land are cultivated by this school; 2 horses, 5 mules, 23 cattle, and 22 swine constitute the school stock. Appended will be found the report of the superintendent of the school, giving a detailed account of the workings of the school during the past year.

The St. Louis Boarding School is located on the Osage Reservation, about 1 mile from the agency, and is a contract Catholic school. This school can accommodate 125 pupils. The largest attendance at any one time during the year was 78; the average attendance, 67. The total cost of maintaining this school during the year was \$8,302.49.

The St. John's Boarding School is located on the Osage Reservation, 15 miles from the agency, and is also a contract Catholic school. This school can accommodate 150 pupils. The largest attendance during the year was 67; the average attendance was 52. The total cost of maintaining the school during the year was \$6,512.22. Farms are connected with both of the contract schools.

The Kaw Boarding School is located on the Kaw Reservation, at the subagency, 35 miles distant from the headquarters of the agency. This school will accommodate, without crowding, 50 boarding and 5 day pupils. The largest attendance at any one time during the year was 51 boarding and 5 day scholars; the average attendance during the year was 45. The total cost of maintaining the school during the year was \$7,398.34. A fine farm is connected with the school, and excellent crops are produced. The report of the clerk in charge of the school is hereto appended.

At all the schools the boys are taught farming, fruit growing, gardening, the care of stock and tools. The girls are taught general housework, sewing, cooking, and laundering.

School buildings.—All the school buildings are well located and fairly well equipped, but some repairs are badly needed.

Transfer of teachers.—The frequent transfers of competent teachers from one school to another is not at all advisable. Indian children are very shy and, I may add, suspicious. It requires time and the exercise of great tact and patience to gain their confidence, and therefore frequent changes of competent teachers is a great drawback to any Indian school. Incompetent, lackadaisical, and careless teachers should be promptly dropped from the service.

Missionary work.—Catholic priests conduct religious services at each of the contract schools. They also have a church at the agency. The Methodist society has a church at the agency and a resident minister. These churches, in their respective spheres, are doing faithful service for the spiritual welfare of these people; but there are a large number who will not come under their influence.

Health.—The health of the Indians, generally speaking, has been good, and the births have exceeded the deaths.

Whisky traffic.—The whisky traffic, which has so severely afflicted these people, and which was claimed to be so nearly stamped out under former administrations, is far from extinct. To entirely prevent its use by all of these Indians or upon this reservation, with 300 miles of exposed frontier, could not be accomplished by the constant watchfulness of 300 policemen.

Conclusion.—In conclusion, it may be said that peace and harmony prevail generally, though the usual agency malcontents here are more intelligent, more vicious, and perhaps more determined than elsewhere.

Very respectfully,

WM. J. POLLOCK,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF OSAGE SCHOOL.

OSAGE AGENCY, *Pawhuska, Okla., August 11, 1898.*

SIR: I have the honor to submit my third annual report of the Osage Boarding School.

Location.—The school is located north of the village of Pawhuska, on an elevation overlooking the village and valley. This elevation gives the school ground a good natural drainage. A part of the school yard retains its native trees, while on the other part these have disappeared from the effects of the severe drought of several years ago. It is about 30 miles from Elgin, Kans., with which it is connected by stage.

Buildings.—The buildings consist of a boys' home, a girls' home, a school building, a boiler house containing the ice plant, a barn, and a pump house, all stone buildings, and a boys' dining room, a hospital, and engineer's house, frame buildings. The boys' home and the girls' home

are some distance apart, with the school building, boiler house, and hospital between them, and the school building forming the center of the group.

The barn and the school pasture are on the northwest of these buildings, while the agency farm, now used as the school farm, lies southeast and beyond the village of Pawhuska. It is a mile by the road and more than half a mile on a bee line from the barn to the gate entering the farm. This makes it almost of no value for educational purposes and must necessarily be operated at a financial loss. Too much time is consumed in going to and returning from the farm. This farm should be rented and new ground be broken near the barn in the pasture. There is sufficient good land near the barn in the pasture that is well drained which will produce as good crops, if not better, than what the present farm produces. The farm now in use requires thorough draining. In a wet season there are more than 10 acres of it where crops will be ruined by standing water, and other parts are damaged because they can not be reached for proper cultivation.

Improvements made.—The boys' building was reroofed with hard pine and thoroughly oiled. The plastering was repaired and the building papered and the woodwork in the upper stories painted. The boiler house was partly floored with flagging and ceiled and part of the basement in the girls' building floored.

Improvements needed.—A new hospital is needed. The old one is falling to pieces, and is too small and not suitable for that purpose. It should be replaced by a new building, larger and capable of affording proper accommodation for sick children. I am not surprised that the Indians object to having their children taken to the hospital, where, instead of finding a pleasant and comfortable room, the patient finds a place less inviting than his regular play room.

An electric light plant is needed. We have a boiler that could be used for the purpose, and a dynamo, with the lights and connections, is all that would be needed. Our kerosene lamps are still an ever-present danger for fire. Electric lights would remove this danger, and our precautions against fire would be all that could be desired.

A wagon and tool shed is needed. A part of our wagons and tools is necessarily exposed to the weather all the time. A shed for the cattle which can not be housed in the barn during the inclement weather of winter and spring and a new fence along part of the east and north of the campus are necessary.

The casings on the steam pipes are rotten and the covering is worthless, so that there is much loss of heat on its way to the buildings. These must be replaced with new ones, for the old ones are beyond repair.

All the buildings need a coat of paint and several of them two coats, and the fence needs repainting.

A steam laundry would be a great help and could be built with little extra expense outside of the machinery when the boiler house is reroofed, which will be necessary in the near future.

Industrial work.—This was not satisfactory on the boys' side. For some time we were without a farmer and we had a change of industrial teacher, which made work unsatisfactory in both positions. No boys worked with the engineer and two only for a short time with the carpenter. We had none that were suited for that kind of work. The carpenter made the repairs for the school and agency, and the engineer and his assistants, in addition to their regular work, made 231 tons of ice. The farmer, industrial teacher, and laborer, with the help of the boys, attended to the farm, garden, and yard and took care of the cattle, hogs, and horses. Fifty-eight hogs, and 30 cattle were butchered, netting 8,172 pounds beef; 50 hogs, averaging 84 pounds, were sold, and 3,341 gallons of milk were produced.

Persimmon sprouts required considerable attention, and therefore but 23 acres of oats were sown; 10 acres were planted in Kaffir corn and about 35 acres in corn. The oats started well, but the exceeding wet weather and the rust almost destroyed the crop. Corn looks well where the ground had fair drainage.

The industrial work among the girls was not marred by the changes in employees. The girls were divided in two divisions for chore work, one washing dishes and taking care of the dining room and the other assisting in the dormitory work. Each division continued the same half of the year, and then took up the work of the other. This gave them longer practice at the same work and a better chance to learn it well. In the regular detail the girls were arranged in classes, so that each class had one or more lessons a week in sewing, cooking, housekeeping, and laundry work. The matron says in her report: "The daily changes of details seem to work much more satisfactorily with the parents and children. There has been decidedly less dissatisfaction expressed this year on account of the work than in any other year of my duties here." Each department knew just what class was coming the next day, and the work suited for the class could be prepared.

In the dining room the older girls had charge of the tables, and most of them took pride in having their tables look nice and in doing the cooking and baking well. In regard to the housekeeping, I insert part of the matron's report: "I am quite glad to say that nearly all of the girls took special pride this year in leaving their rooms neat and orderly when they left them to go home."

In sewing a class of beginners made good progress, but the other classes did not do so well. The class system did not work as satisfactorily as in the other departments; 1,719 garments and articles of various kinds were made and the mending and darning done and some fancy work taught. In the laundry good progress was made.

Literary work.—The work in the schoolroom suffered much from frequent changes of employees and lack of interest. All the rooms had changes and none but the kindergartner remained during the whole year. The number of pupils in the kindergarten was necessarily larger that it should be, but by hard work and patience the kindergartner succeeded in doing excellent work. In the other rooms fair work was done, but much valuable time was lost in the changes of teachers, and the school felt the deleterious effects.

The pupils made considerable progress in vocal music under the direction of the music teacher.

Official visitors.—During the year we were favored by visits from the Commissioner of Indian Affairs, Hon. W. A. Jones; the superintendent of Indian schools, Dr. W. N. Hailmann; Special Agent Gilbert B. Pray, Inspector Charles F. Nesler, and Supervisors H. B. Peairs and R. C. Bauer.

In conclusion, I appreciate the efforts of the employees in helping to meet the difficulties of the past year, and thank you and Lieut. Col. H. B. Freeman, former agent, for the interest in the welfare and success of the school and the support in the performance of my duties.

Very respectfully,

S. L. HERTZOG, *Superintendent.*

WILLIAM J. POLLOCK, *United States Indian Agent.*

REPORT OF SUPERINTENDENT OF KAW SCHOOL.

KAW AGENCY, OKLA., August 15, 1898.

SIR: In compliance with your request, I present herewith a brief summary of the Kaw Boarding School for the year 1898.

The school began promptly September 1, and continued for ten consecutive months, with an average attendance of 45 pupils, which were drawn from a school population of 65. The school-room work has not been all that could have been desired, yet creditable work has been done. Especially is this true of the kindergarten department, where marked progress has been made. The health of the children has been comparatively good; no deaths, and but one case of a very serious nature.

The school yard, garden, and farm, with the care of the stock and stables, has given the boys almost constant employment, furnishing from the garden an ample supply of vegetables, and in prospective more than a thousand bushels of corn and wheat, with pork and lard sufficient for the requirements of the school the next year.

The work done by the girls I consider worthy of mention, though most of them are but nursery tots, who are charges that weigh heavily upon employees. Regular details have been made for kitchen and dining and sewing rooms, where they have been taught to cook, sew, knit, etc., while in the regular household duties of sweeping, cleaning, and making beds they also bore a part. When it is remembered that the average age of the pupils of the school is only 8 years, the task that has been performed can be the more readily understood and appreciated. On the whole, I am constrained to believe this has been a successful year for the school.

There are several things to be supplied here yet, with a number of necessary improvements, all of which have been presented minutely to your office, hence I will not embody in this report.

Most respectfully,

W. H. ROBINSON, *Clerk in Charge.*

WILLIAM J. POLLOCK, *United States Indian Agent.*

REPORT OF PONCA, PAWNEE, OTOE, AND OAKLAND AGENCY.

PONCA, PAWNEE, OTOE, AND OAKLAND AGENCY, OKLA.,

September 1, 1898.

SIR: I have the honor to submit herewith my annual report as agent for this consolidated agency for the fiscal year ending June 30, 1898.

On July 1, 1897, I receipted to my predecessor, J. P. Woolsey, for the public property, trouble, etc., belonging to this agency, and assumed formal charge of affairs. I will forego the usual statement that I found everything in a run-down and dilapidated condition, and say that here, like nearly all places of this character, I found room for improvement and set about as rapidly as was practicable to make such changes as I deemed wise for the improvement of the Indian service at this particular point.

In my labors throughout the entire year I was aided by kind and self-constituted advisers and assistants, of which there are no few residing adjacent to the reservation on the "strip"—men who, from long dealings with former agents and their natural love for poor Lo (when he can be used to further some scheme of their own to enhance their exchequer), are perfectly willing to devote some of their valuable time, and that, too, without compensation, to telling the agent just how he should run things. I can point to many reforms inaugurated by me during the year with no small degree of satisfaction, and, taken all together, I feel well satisfied with the work done, except as I shall state further on in this report.

The location of this agency is just the same as it has been for the last twenty years. Nothing has been moved. The headquarters office is at Ponca Agency, just 3 miles from White Eagle, a station on the Atchison, Topeka and Santa Fe Railroad, 30 miles south of Arkansas City. The site is a beautiful one, healthy and pleasant.

The Poncas have all been allotted their lands in severalty, but the reservation lines have been preserved, a thing that should always be done until there is no room to doubt the capability of the Indians to cope with their white brethren as citizens of the United States. Many thousand acres of individual allotments have been leased to white farmers at a fair rental, and the reservation, instead of being a barren prairie, roamed over by Indian ponies, is thickly dotted with well-cultivated farms and homes of thrifty and energetic farmers. The revenue derived from the rental of these lands is no small item and goes far toward furnishing the allottees with all the necessities.

A portion of the tribe still stands faithfully opposed to allotments, and will not acknowledge that they have land of their own, but contend with that tenacity peculiar to a disgruntled Indian that the Great Father had no right to apportion their land to them in small tracts and therefore they still own the reservation in common. I am pleased to state, however, that this class is gradually growing fewer in number, and I opine that very few moons will come and go until all will see the benefits derived from having their lands in severalty, and come into the fold.

The Poncas are poor in the way of cash annuities, and can appreciate the revenue coming in from the rental of their farming land. The renting of their lands to white men has not to any great extent kept them from doing some farm work for themselves. It has been the policy of the office to reserve a sufficient amount of land for each able-bodied Indian to cultivate. Some of those for whom land is reserved are not able to cultivate the same, for the reason that they are not possessors of the requisite horses or implements with which to do the work, nor have they money with which to purchase them. However, the past year they have done very well in the way of farming, as will be seen by the statistics accompanying this report.

At Ponca Agency I found two nice fields producing luxuriant growths of weeds. These fields I had plowed by Government employees, and planted, one of about 12 acres to wheat, the other of about 20 acres to corn. The season was not favorable to wheat, yet enough will be harvested, if sold, to provide for the purchase of many needed things at the agency. The corn is doing well and will yield more than enough for use at the agency barn in subsisting Government stock.

Pawnee subagency is located about 35 miles southeast of Ponca, and is under the immediate supervision of Mr. W. B. Webb, clerk, whose report I append. Here the Indians have been allotted and their surplus lands sold to become homes of the white men. The Indians are considered citizens of the United States, are voters, and are amenable to the laws of the Territory in which they reside. The majority of them are about as well qualified for citizenship as a 10-year-old child. The agent has little or no control over them, and he is importuned by the Department to use moral suasion and good advice with them that they will give up such nefarious practices as drinking, gambling, and ghost dancing. Such medicine has been dosed out to these people in old-fashioned allopathic doses for several years, with the very flattering result of a wry face and a faithful continuance, if not increase, in their death-producing habits. It requires stronger medicine to produce a recovery. The case has been diagnosed; the remedy should be applied, and it should be a specific.

Otoe subagency is just 8 miles from Ponca, is third in size as to numbers, but first when it comes to trouble, or at least that has been my experience. I regret I can not make as good a report of this place as of the others in the agency, but circumstances and an incompetent employee are against it. I do not wish to criticise the Department, but a serious mistake was made when the positions of clerk and physician at Otoe were consolidated. I do not think any one man can fill the place as it should be filled. * * *

There has been continual strife and discontentment here throughout the year. The Indians have protested vigorously against the arrangement, but to no avail. They have spent much of the year in camp, and would, very few of them, call on the agency physician for even simple remedies for their sick, preferring to go to physicians residing in the Strip towns. Such a state of affairs is very deplorable and relief should be given. I worked hard for the first six months of the year to placate matters and bring about a more pleasant and prosperous state of affairs, but must confess that I had to give it up as a bad job and content myself with trying * * * to take care of the public property for which I was responsible, and make the best I could of a bad bargain. I had all I could do at that, yet, with these drawbacks, some good was accomplished, and I feel that the entire year was not lost.

As is customary, I called on the physician and clerk for the required statistical report relative to the Otoe Reservation, and instructed the agency farmer, John M. Tyler, to assist him in the preparation of same. * * * Mr. Tyler reported as follows as to the farming by Indians on the reservation, which I have reason to believe is correct: Number of acres broken during the year, 500; rods of fence built, 500; number of houses erected during the year, 2 frame, cost of each \$150; number of acres under fence, exclusive of large pastures, 11,365. Crops raised: Wheat, 2,300 bushels; corn, 45,750 bushels; potatoes, 450 bushels; turnips, 260 bushels; onions, 50 bushels; beans, 50 bushels; other vegetables, 100 bushels; number of melons, 10,000; number of pumpkins, 275; tons of hay cut, 835. Stock owned: Horses, 495; mules, 10; burros, 3; cattle, 16; swine, 134. Houses occupied by Indians, 70. The farmer has had hard work to get the Indians to do anything on their places, owing to circumstances heretofore called to your attention, and nearly all had more or less of their work done by white men, under labor contracts; yet the products of the farms were as above, and the Indians deserve much credit for what they have done.

The Indians of this reservation have been bitterly opposed to the allotment of their lands in severalty, caused by the influence of the cattlemen, who are leasing their reservations for pasturage at the rate of 6 to 8 cents per acre, and in

many instances subleasing it for 20 to 30 cents per acre, thereby making it profitable to them to induce the Indians to oppose allotments; and these same cattlemen apparently make it very warm for an agent who has nerve enough to administer the affairs of the agency in the interest of the Indians instead of the cattlemen.

An attempt was made to allot these Indians several years ago, at the same time that the Poncas and Pawnee were allotted. They refused to select their allotments, except a few families, and nearly the whole tribe was assigned. The schedule of allotments as assigned, having never received departmental approval, was ordered readjusted last November, and after vigorous counseling with them for nearly one month, they decided to select their allotments, and Miss Helen P. Clark, the allotting agent in charge of the work, reports that over 200 have made their selections. The greater part of this reservation contains land well adapted to agricultural purposes, and their selections include the best land on the reservation for that purpose.

The matter of a settlement between the purchasers of Otoe lands in Nebraska and Kansas and the Otoe Indians is in statu quo, nothing toward a settlement having been done during the year. The Indians are anxious for a settlement, and feel that the matter should be brought to a crisis at once.

The Tonkawas now number 57, and are in very comfortable circumstances, their land, most of which is leased to white farmers at \$1 per acre, bringing them sufficient money, added to the small cash annuity paid them each year, to supply the necessities of life. They are a very contented and happy people.

A census of the Indians of the agency, taken June 30, 1898, which accompanies this report, shows a population as follows:

| | |
|---------------------------|-------|
| Poncas | 608 |
| Males over 18 years old | 151 |
| Females over 14 years old | 194 |
| Children between 6 and 16 | 148 |
| Males, all ages | 291 |
| Females, all ages | 317 |
| Males over 21 years old | 137 |
| Pawnees | 706 |
| Males over 18 years old | 187 |
| Females over 14 years old | 229 |
| Children between 6 and 16 | 167 |
| Males, all ages | 337 |
| Females, all ages | 369 |
| Otoes and Missourias | 356 |
| Males over 18 years old | 89 |
| Females over 14 years old | 111 |
| Children between 6 and 16 | 88 |
| Males, all ages | 178 |
| Females, all ages | 178 |
| Males over 21 years old | 81 |
| Tonkawas | 57 |
| Males over 18 years old | 17 |
| Females over 14 years old | 22 |
| Children between 6 and 16 | 10 |
| Males, all ages | 26 |
| Females, all ages | 31 |
| Males over 21 years old | 14 |
| Total number | 1,727 |

The health of the Indians has been exceptionally good throughout the entire year. No fatal epidemics have prevailed at any time, the mortality confining itself to infants and old age, with a few deaths from pulmonary troubles.

The schools of the agency have done a good work, and have been in a flourishing and prosperous condition. For reasons over which I had no control, some needed improvements in the plants and repairs to buildings were not accomplished. I append a report from each of the three schools. The Tonkawa children of school age are in school at Chilocco Training School.

A police force of one captain and three privates at each place has been maintained at Ponca and Otoe. The members of the force are used more as messengers and office janitors than peace officers, the Indians being under the jurisdiction of the courts of Oklahoma. A court of Indian offenses has been maintained both at Ponca and Otoe. The court at Ponca was convened once during the year, and at Otoe probably a half dozen times. The position of judge of an Indian court is

purely a sinecure, and the court itself a farce and an unnecessary quantity at this agency.

I regret to say that liquor drinking among the Indians has increased wonderfully. The Indians apparently have no trouble to get all the whisky, beer, or other intoxicants they want in the Strip towns adjacent to the reservations, despite the strenuous efforts of the agent to suppress the sale of the same to them. I caused several arrests, with what I considered absolute proof of guilt, but all offenders were dismissed or the cases lost in the fog. The system of boot legging seems to be at its best here, and the officers apparently helpless in putting a stop to it.

A new missionary has been installed at Ponca and religious services are held regularly. A few Indians have been induced to attend, and some have become members of the church. The missionary and his wife are good, energetic Christians, with their souls in the work, and good can only be the result of their labors. Forty acres of land were set apart during the year on the Otoe Reservation for the use and occupancy of the Associated Indian Friends. A missionary is now on the ground and some comfortable quarters have been erected. The field is a broad one and I bespeak for the good people success.

In conclusion I desire to express my sincere thanks to those employees who were faithful and untiring in their efforts to make the year's work pleasant and successful; also to extend to you my appreciation of the assistance rendered by your office and the kind consideration with which my recommendations were met.

Very respectfully,

ASA C. SHARP,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF PAWNEE SUBAGENCY.

PAWNEE SUBAGENCY, OKLA., *June 30, 1898.*

SIR: I have the honor to submit my report for the fiscal year 1898. The census submitted herewith shows a total population of 706 Indians, of whom there are 337 males and 369 females, a decrease of 4 since my last report.

The effect upon this tribe of the payment to them of large sums of money semiannually is injurious, and has been kept up since I have been in charge of them. Life, never very seriously taken by them, is now more lightly considered than ever. The regular payments of money may now be depended upon to take care of that. With a majority of them there seems to be no day but the present. While a few of them are industrious and strive to imitate their white neighbors, others of the tribe have virtually deserted their homes and have camped almost the entire year.

The greatest difficulty in the way of getting these Indians to remain permanently upon their allotments is their dislike of the isolation, their fondness for visiting, which leads them to congregate at the camps or at dancing grounds, where they feast and dance until one would suppose they had exhausted their capacity for both. I have striven to impress upon them the necessity of looking forward and staying at their homes, to look more closely after their property and the education of their children.

Heretofore the prevailing idea among the tribe has been that, did they not voluntarily bring their children to school at the beginning of each school year, the agent or clerk in charge was empowered to visit the Indian homes, gather up the children and return them to the school, but since they have been told and have been brought to believe that they can follow their own wishes in the matter, I have experienced some difficulty in keeping the children in school. The opposition to an education prevails to an alarming extent in this tribe. The child pleads not to be sent to school and the parent seems to not have any appreciation of the benefits which the child will receive in after years from an education. When the parents are entreated to place their children in school they will inform you that they are citizens and that they can do as they like about the matter. Invariably the result is that the child is retained at home and allowed to grow up in idleness and ignorance.

There has been an endeavor on my part to induce the Indians to engage in stock raising, as this is a grazing country proper, but I have not met with any degree of success in this line. So sure as a death occurs in a family who have begun to start a small herd, the animals thereof are slaughtered and feasted out to Indian friends in memory of the departed one.

The Pawnees have cultivated 1,486 acres, which will yield them, with a fair season, it is estimated, 33,775 bushels of corn, 927 bushels of potatoes, 135 bushels of turnips, 85 bushels of onions, 450 bushels of beans, and a bountiful supply of other vegetables. They have transported all of the Government freight a distance of 35 miles, and earned by such freightage \$422.81. The hay, corn, and wood for agency and school have been furnished by them, besides a quantity of lumber, purchased for the use of the school. They have sold about \$2,000 worth of corn to other parties, products of Indian labor during the year. There has been sawed for Indians, with which to improve their allotments, 182,601 feet of lumber at the Government sawmill during the past year.

Thanking you for kindness and valuable assistance in conducting the affairs of this subagency,

I am, very respectfully,

W. B. WEBB, *Clerk in Charge.*

ASA C. SHARP, *United States Indian Agent.*

REPORT OF SUPERINTENDENT OF PAWNEE SCHOOL.

PAWNEE, OKLA., July 1, 1898.

SIR: I have the honor to submit my fourth annual report of the Pawnee Boarding School at Pawnee Agency, 1 mile east of the town of Pawnee, the county seat of Pawnee County, Okla.

During the year there were enrolled 60 boys and 79 girls; total, 139. The average attendance was 132.92, the average age, 10.06 years. There were two deaths, and several other severe cases of sickness were prevented from terminating fatally only by most faithful nursing and constant attendance. Two pupils were transferred to Chilocco, and four sent home on account of poor health.

Crops are somewhat better than usual. Wheat has thrashed out 14 bushels to the acre; oats are rather poor; corn, millet, and sorghum promise well; vegetables are abundant and fine. On account of late frosts peaches are short for the first time in many years. Cherries and grapes made a large yield. The alfalfa has been a help to cattle and hogs. The dairy has been successfully managed.

An addition to the laundry has been completed and numerous other improvements have been made. A mangle has been purchased for the laundry, and a piano for the chapel bought from proceeds of sale of wheat and hogs.

By the shoemaker 400 pairs of shoes were made and 1,072 pairs repaired, besides repairs of harness, and twenty-four days' work outside. Two boys were detailed to learn the trade and made fair progress. In the sewing room were manufactured 1,630 articles, including neat, braided uniforms for thirty small boys. The standard of work has been high and instruction thorough. In the laundry the former high degree of excellence has been maintained; 68,928 articles have been laundered, an average of 1,641 per week.

Superior teachers have been in charge of the class rooms, and the work done in this department has been particularly meritorious. Fifteen were reported ready for transfer. The closing entertainment was given for the benefit of the Red Cross Society, and the proceeds, amounting to \$27.50, were forwarded to the society through the honorable Commissioner of Indian Affairs.

The Sunday school, Sunday-evening services, and teachers' meetings were kept up as usual. The Sunday-school collections, taken by classes and forwarded to the Women's National Indian Association, amounted to \$54.48.

The children were bounteously remembered on Christmas through the generosity of the ladies of Smith College, Miss A. F. Cornell, and the firms of Montgomery Ward & Co., of Chicago, and Doggett Dry Goods Company, of Kansas City, Mo.

During the year we were much favored and correspondingly helped and encouraged by official visits from Hon. W. A. Jones, Commissioner of Indian Affairs, Inspector Charles F. Nesler, United States Special Agents Gilbert B. Pray, and James E. Jenkins, and Supervisors of Indian Schools H. B. Pears and R. C. Bauer.

Very respectfully,

C. W. GOODMAN, *Superintendent.*

ASA C. SHARP, *United States Indian Agent.*

REPORT OF SUPERINTENDENT OF PONCA SCHOOL.

PONCA SCHOOL, July 15, 1898.

SIR: I have the honor to submit my annual report of Ponca Boarding School for fiscal year ended June 30, 1898:

Enrollment for the year, 115; average attendance, 104; average age, 8.7. At the beginning of the year 11 of our pupils were transferred to Chilocco. This did not reduce the enrollment, there being a sufficient number of younger pupils entered to replace them, but it did reduce the average age.

The health of the school has been quite good in general, though we have had several cases of severe illness, one of which resulted in death (cause, tuberculosis); and two pupils were dismissed by order of the physician for the same cause.

The year has been marked by a steady improvement in almost every department. In the class rooms the pupils have shown more freedom of speech and action and a better conception of what they were doing. This same freedom from restraint, voluntary speech and action have been noticeable throughout the school. In the sewing room and kitchen also there has been more teaching done. The pupils made a very creditable display of their own handiwork at the close of school in the way of completed garments of various kinds and many pieces of fancy work, delicious bread, cake, pie, jelly, etc., also samples of laundering. These, in addition to a display from the schoolrooms, which would compare well with that of any school of same grade. It was a source of regret that we could have no display of industrial work from the boys.

Just here, however, I wish to commend our farmer, George Howell, a Pawnee Indian, as being industrious, energetic, and helpful, looking to the best interests of the school. During the months of May and June, after having completed his day's work on the farm and attended to his evening chores, he spent from thirty to sixty minutes each evening giving the boys military drill.

There has been a spirit of discontent among some of the boys, induced principally by a few pupils who had been in attendance at nonreservation schools for some years. They had lost interest in school and refused to return. Being of school age, however, they were placed in this school. We never succeeded in arousing their interest fully and they frequently broke from the restraint of school to roam over the reservation. This, of course, had its effect upon the other boys. I think it is detrimental to reservation schools to receive pupils who have spent a number of years at nonreservation schools and who have passed from under the control of their parents on the reservation. They are discontented, and their influence over the other pupils is not beneficial.

The needs of the school in the way of buildings and repairs have been fully reported in a recent communication. They are imperative. We are also greatly in need of more help. We can not attain that degree of success which we desire without it. The children are too small to render any valuable assistance, and the work is too heavy for the employees. Furthermore, if the employees have all the labor to perform, they have no time for teaching, and the tendency is to rush the work through and neglect the teaching. We should have another assistant

matron, an assistant cook, and a second assistant laundress. With this additional help and the improvements asked for I am sure that much more can be accomplished in the coming year than has been in the year just closed.

I desire to thank the Indian Office, visiting officials, agent, and clerk for the many kindnesses received.

Very respectfully,

KATE W. CANNON,
Superintendent.

ASA C. SHARP, *United States Indian Agent.*

REPORT OF FIELD MATRON AMONG PONCAS.

PONCA AGENCY, August 15, 1898.

SIR: A malarial state of the atmosphere, the result of much rain, has caused much sickness on this reservation this summer both among whites and Indians. Some Indians have died that, I doubt not, with suitable care and nourishment might have lived. This fact will, I hope, help the Poncas to realize the importance of practicing economy and lead to greater interest in the lessons on nursing. I hear less talk that certain kinds of food are "all right for white people but not good for Indians," because I never give them food they do not like. I am certain the bad health of the Indians in Oklahoma is caused, to a great extent, by eating much meat; so am trying to make fruits and cereals of more importance.

It seems to me most important that Indians should be taught to help themselves, and that begging is disgraceful, so I am careful in my giving and they almost never beg from me as they know I will help them where I see a real need, and they unable to supply it, and they get nothing by begging.

Although we have a law against Indian marriages in Oklahoma, it has never been enforced, although the Indians expected it would be and made some preparation for it. This is to be regretted.

I have spent one hundred and twenty-five and one-half days in visiting Indian homes and instructing them there; have noted 750 visits from adult Indians in my own home. These with the children would amount to over 1,000, and with the information and help I have given them has made my life a very busy one.

The Indians have made great improvement in cleanliness and in many other ways. Thanks are due the agent and clerk for help in this respect.

ASA C. SHARP, *United States Indian Agent.*

SARA E. MITCHELL.

REPORT OF PHYSICIAN AND CLERK FOR OTOE SCHOOL.

OTOE, OKLA., June 30, 1898.

SIR: I have the honor to submit this my first annual report of the boarding school at this agency.

We have had an average attendance of over 68, and an enrollment of 70 pupils. One was transferred to Chillico in December; seven were recommended for transfer, but the consent of parents was not obtained for three of the number, and four only were transferred. All the children of school age belonging to the tribe have been in school here and elsewhere during the year. The average age of those in attendance at our school is 8 $\frac{3}{4}$.

The schoolroom work has been good and thorough, and the closing exercises were particularly gratifying to all friends of the school who were present.

The general health of the school has been unusually good, there having been almost no sickness among the pupils during the year, excepting only an epidemic of measles, from which each one afflicted made a good recovery.

The regular monthly system of details placed all the larger and medium-sized girls in the sewing room, where the work consisted in fabricating and repairing, omitting nearly all fancy work. Details alternated with each other in the several industrial departments, thus affording each pupil an opportunity which could not otherwise be provided. The general housework, laundry, dairy, and culinary departments have been under the immediate supervision of the matron, who has done faithful service in her persistent effort to bring the work from confusion to a higher measure of efficiency.

The school farm has been improved and the area in cultivation has been enlarged by the assistance of the agency employees. Much of the fence has been rebuilt, and tons of millet have grown where only wild grass and weeds grew before. Wild sunflowers and other noxious weeds are not now allowed to grow about the buildings and on the roadside as in other days, though the want of an enthusiastic practical farmer in the school force at this agency is plainly apparent. We have more than 75 head of horses, mules, cattle, and swine belonging to the school, which should either be sold or subsisted by the products of regular employee labor. The annual purchase of subsistence for this stock, located in one of the finest agricultural regions in the world, evidences too great a want of interest.

The dairy has supplied an abundance of milk and about 450 pounds of butter, and if the school herd were headed by a bull from some beef-producing breed of cattle instead of a Jersey, a part of the meat consumed could be obtained without purchase.

We have been visited by the honorable Commissioner of Indian Affairs and Special Indian Agent Pray. Their visit was pleasant to us and beneficial to the service.

Your obedient servant,

W. MCKAY DOUGAN, *Physician and Clerk.*

ASA C. SHARP, *United States Indian Agent.*

REPORT OF SAC AND FOX AGENCY.

SAC AND FOX AGENCY, OKLA., *August 31, 1898.*

SIR: I have the honor to submit my annual report of affairs at this agency for the year ending June 30, 1898.

Location.—This agency is located on the SE. $\frac{1}{4}$ sec. 21, T. 14 N. of R. 6 E., in Lincoln County, Okla. It is 6 miles south from the city of Stroud, Okla., on the St. Louis and San Francisco Railroad, this road having been completed to this point during the year, making it our railroad and telegraphic station, which heretofore has been Sapulpa, Ind. T., or Shawnee, Okla., a distance of 50 and 33 miles, respectively.

The Sac and Fox boarding school of this agency is located on 640 acres of land adjoining the agency, the school buildings being about half a mile northeast of the agency proper. The Absentee Shawnee boarding school is located one mile south of Shawnee, Okla., on a reservation of 476 acres 39 miles southwest from this agency. The post-office address, telegraphic, and railroad station is Shawnee, Okla. The Sacred Heart Mission (contract school) is located 65 miles southwest of the agency, in Pottawatomie County, Okla. The telegraphic and railroad station is Shawnee, Okla.; and post-office address is Sacred Heart, Okla.

The following table shows the population of the different tribes under this agency:

| | |
|---------------------------------------|-------|
| Citizen Pottawatomes: | |
| Males above 18 years of age | 241 |
| Females above 14 years of age | 249 |
| Children between 6 and 16 | 263 |
| | 756 |
| Sacs and Foxes: | |
| Males above 18 years of age | 135 |
| Females above 14 years of age | 162 |
| Children between 6 and 16 | 139 |
| | 521 |
| Mexican Kickapoos: | |
| Males above 18 years of age | 66 |
| Females above 14 years of age | 80 |
| Children between 6 and 16 | 79 |
| | 246 |
| Iowas: | |
| Males above 18 years of age | 23 |
| Females above 14 years of age | 32 |
| Children between 6 and 16 | 22 |
| | 89 |
| Absentee Shawnees: | |
| Males above 18 years of age | 124 |
| Females above 14 years of age | 159 |
| Children between 6 and 16 | 157 |
| | 493 |
| Total number of the five tribes | 2,105 |

Indians.—The Sac and Fox Indians were allotted 160 acres of land per capita in 1891, 80 acres of each allotment to be held in trust by the Government for a period of twenty-five years, exempt from taxation; the remaining 80 acres to be held in trust for a period of five years, exempt from taxation, with the privilege of a longer term at the request of the tribe and the approval of the President of the United States. In accordance with the above clause the five years' trust period was extended to fifteen years, thus barring sale or taxation until the year 1906.

With the exception of the Mo ko ho ko band the Sac and Fox Indians are rapidly adopting the ways of their white neighbors, both good and bad; very few wear their old Indian costumes; their children are attending school.

The Mo ko ho ko band still cling to their Indian customs and ways of living; they refuse to send their children to school, and live in a village instead of occupying their allotments. Until within the past year they have refused to lease their lands or improve the same; have now succeeded in breaking the ice by making several leases, and I believe within the next year they will see the advantage gained by others and follow the example. The only way, in my opinion, to compel them to farm or work their lands and send their children to school is to abolish the payment to them of annuities and thus force them to go to work. Their lands are

the most fertile in this country, and with a little industry on their part a good living can be obtained.

The Absentee Shawnee Indians received their allotments in 1890. They have all accepted the land except a small band under Big Jim, who yet contend that they hold their land in common and refuse to send their children to school. With the exception of this band the Absentee Shawnee Indians are doing for themselves. Within the past year many of them have farmed their own places that have been placed in cultivation by white lessees; some are breaking out their own land, and improvement among them is becoming apparent. They receive no annuities, and are thus compelled either to work their land or lease the same. Many of them are compelled to lease in order to get their lands in cultivation, as their stock is not able to do the work. Their children attend school, and are bright and progressive; with proper encouragement will make fair citizens.

The Citizen Pottawatomie Indians have received their lands in severalty. They receive no annuities and in most cases are self-supporting. This tribe of Indians is scattered from one end of the United States to the other, working at all trades. Many of them are extensive farmers, and set a good example for some of their white neighbors. Their condition fully demonstrates that an annuity is a curse to the Indians. They have no reservation school, but their children are being well educated at nonreservation industrial schools.

The Mexican Kickapoo Indians were allotted 80 acres per capita in 1894. A number of them have refused to accept their money or lands, and are known as the kicking Kickapoos. This portion of the tribe is under a special agent, who is supposed to be locating them on their several allotments. Before the allotments were made these Indians were virtually self-supporting, but under the present conditions they seem to be entirely dependent, receiving this year for their support \$10,000.

Under the present system the kicking Kickapoos are receiving help from the Government and thus encouraged to kick, while those who are living on their allotments and trying to do as the Government has directed are receiving nothing from the funds set apart for the support of the tribe. The bad effect is now apparent, as many who had accepted their lands have joined the kickers in order to get rations. Of the true kickers there has not been over five located on their own allotment during the past year. The Indian Office has not been positive enough in its instructions relative to the Kickapoos to enable me to know just what was its desire. The result is much friction among employees and an unsettled condition among the tribe.

The Iowa Indians were allotted in 1891, receiving 80 acres per capita. They receive annuities amounting to about \$80 per capita. They live on their annuities and lease money, few of them doing any work. Most of their lands are leased, and their time is spent visiting the Otoe Indians and drinking liquor. It is impossible to get them to work as long as they have money. Their children are nearly all in school.

Leasing.—There are now on the records of this office 605 farming and grazing leases made by allottees of the five different tribes under this agency, paying an annual rental of \$30,928.44. Of this number only eight lessees are delinquent with the January, 1898, payment. On account of the bountiful crops in this country the demand for leases of Indian lands will be greatly increased, for farming purposes.

The term of three years for leasing these lands works a hardship upon both lessor and lessee. A three-year lease is just long enough to get the land in good cultivation to raise a crop, and the lessee can not afford to pay much of a cash consideration for a lease of so short duration. I heartily recommend that some action be taken to secure an act of Congress changing the term from three to five years for farming and grazing purposes.

The lease work of this agency for the next year will require the constant attention of one clerk to keep it in proper shape, and I trust that authority for same will be granted.

Sales of Indian lands.—The Citizen Pottawatomie and Absentee Shawnee Indians, by act of Congress dated August 15, 1894, are permitted to sell all of their allotment in excess of 80 acres. The passage of this act has very materially increased the work of this agency. During the first year or two after this law was passed many frauds were perpetrated upon the Indians by trading them stock, at an exorbitant price, for the lands; paying them cash in the presence of the Indian agent and afterwards making them refund the greater portion of it. During the past year many changes have been made in the rules to be followed in the conveyance of Indian lands, which has reduced the chances for fraud to a minimum, and the Indians are now receiving full value for their lands.

The effect upon the Indians of the sale of their lands is yet to be seen. In most cases the money does not last the Indian longer than one month, frequently only a day or two. This office has made frequent requests and recommendations that the money received for these lands be held and paid to the Indian in small amounts, that he might derive some benefit from the same. As it is now paid, many of the Indians get no benefit from the sale, but in lieu thereof have a big drunk and disburse the money broadcast. I hope the next year will develop some relief on this line.

Since January 1, 1898, there has been paid to Indians, through this office, \$28,515.78, representing the sale of 5,310 acres of allotted land at an average of \$5.37 per acre. These lands range in price from \$2.50 to \$25 per acre. Much of the land allotted to the Pottawatomie and Absentee Shawnee Indians is very poor. Many of them were absent when the allotments were made, so land was given them as the allotting agent came to it, regardless of quality. The sale of this cheap land cuts down the average price very materially.

Taxes.—Under the recent ruling of Judge Keaton, of the United States district court in Pottawatomie County, Okla., rendered in January, 1898, the assessors of the various townships have been instructed to assess for taxation all improvements found upon Indian allotments, such as fencing, buildings, etc. The rate of taxation in this country is so high that in many cases the taxes on improvements will be more than the cash rental paid on the land. This will be a severe drawback to any advancement contemplated by the Indian. He dreads taxes as much as his predecessors did the white man. The result will be that he will not want any improvements made on the land by a lessee, nor will he put any there himself. Action should be taken at once by the Department of Justice to prevent the collection of these taxes. Unless some action is taken, the Indians will surely quit making improvements on their lands, and thus defeat the object of the Government.

Buildings.—The buildings at this agency are in a fair state of repair, but needing a good coat of paint.

Employees.—Many changes have been made in the working forces of this office and the schools during the past year. This has interfered, to some extent, with the efficiency of the work. I trust that the next year will find the employees in a more settled state and the work go forward in better shape. I wish to express my appreciation of the interest and efficiency of my present force, and of the many favors extended by you to this office.

Very respectfully,

LEE PATRICK,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF ABSENTEE SHAWNEE SCHOOL.

SHAWNEE, OKLA., June 30, 1898.

SIR: The Absentee Shawnee School is located 2 miles south of Shawnee, Okla., a city of 5,000 inhabitants, on the Choctaw, Oklahoma and Gulf Railroad, and 2 miles north of Tecumseh, the county seat of Pottawatomie County. It is 40 miles southwest of the agency. The farm consists of 480 acres, 100 of which is under cultivation, and the remainder pasture and timber. The buildings are old, inadequate, and very much out of repair.

At the beginning of September all available young children were gathered in, and the large overgrown ones who had been a source of trouble on account of bad habits and influence were weeded out. Good results have come from this departure, and it has had a wholesome effect on the school. The health of the school, generally speaking, has been excellent. The average attendance has been 88; largest for any one month, which was 99, in March; number of boys between ages of 6 and 18 was 47; number of girls, 53.

We hauled water the greater part of the year, but care, patience, and promptness on the part of employees and pupils caused us to get through very satisfactorily. No water was used for drinking purposes only the best obtainable. We have completed drilling a new well, placed a gasoline engine in operation to raise the water, and it is to be hoped they will prove a success in every respect.

Five horses were condemned and three good ones replaced them; ten good young cows were furnished us in June, for which we feel very grateful to the Department and Agent Patrick for liberality and efforts to secure them.

Special mention should be made regarding the thoroughgoing earnestness manifested by the school-teachers in educational work. Modern methods and up-to-date work has brought about encouraging results in every department. Correct English, conversation, and composition are evidence of what has been done.

Much credit is due George Hartley, resident missionary at this place and Territorial superintendent of the Friends' missionary work in Oklahoma and Indian Territory, who has assisted the school and materially aided us by frequently lecturing to the children on subjects of interest and within the range of their knowledge; also Ella Hartley, his wife, for the kind and devoted interest she has manifested in their intellectual and spiritual welfare.

During the year the school was visited by Commissioner Jones, Special Agents Pray and Jenkins, Supervisors Bauer and Peairs, and Inspector Nesler.

Having emphasized what bears upon the school and such information as is most commonly sought after, I have the honor to remain,

Yours, very respectfully,

EDWARD E. REARDON, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through Lee Patrick, United States Indian Agent.)

REPORT OF SUPERINTENDENT OF SAC AND FOX SCHOOL.

SAC AND FOX MISSION SCHOOL,
Sac and Fox Agency, Okla., June 30, 1898.

The Sac and Fox Mission School is situated at the agency of the same name, in Lincoln County, Okla. The school plant comprises three large main buildings and lesser structures, all comparatively new and in excellent repair. It is situated upon an elevation that slopes gently in all directions and surrounded by a grove of young oak trees that lends much to the beauty and comfort of the school.

Only children of the Sac and Fox tribe have enrolled in the school during the year past, though Kickapoos and Iowas are allowed to attend. The capacity is rated at 120, but that attendance would crowd the dormitories greatly. During the year the highest enrollment was 94; average attendance about 90.

Sanitary conditions are excellent. Little sickness and no deaths. The appropriations for repairs and improvements at the school during the year have been generous and well applied. The Kansas Sacs living in the northern part of the reservation represent the nonprogressive element, and it is only within the past two years that any encouragement has been derived from attempts made to bring their children into school. A more vigorous policy of compulsory attendance would result in much good to this band.

Many of the progressive band are well educated men and women living in good and, in many cases, luxurious homes at or near the agency. There is a strong disposition on their part to lend all possible aid to the advancement of their tribe. The best white families connected with the agency mingle socially and freely with this class, and both have accomplished much more than is ordinarily attempted for the social side of life of the children at the school. Perhaps to this as much as anything else is due the success of the past years' work. Perfect good feeling has prevailed among the employees of the school and between them and the agent. Almost no changes have been made during the year in the working force, and activity and enterprise have characterized the work of all the departments.

Respectfully,

MARY C. WILLIAMS, *Superintendent.*

REPORTS OF AGENCIES IN OREGON.

REPORT OF GRANDE RONDE AGENCY.

GRANDE RONDE SCHOOL, OREG., *August 4, 1898.*

SIR: I have the honor to submit the following report concerning this school for the fiscal year 1898:

All of the buildings at this school are in good condition, with the exception of the school building proper. This building is so old and so poor in every respect that no repairs other than rebuilding could make it comfortable or suitable for the work.

The enrollment for the past year has somewhat exceeded that of the previous year, with an average attendance of 74.

The health of the pupils has been excellent. We have had no serious illness whatever—nothing worse than coughs, colds, and minor ailments.

The work in the sewing room, and in fact in all the departments under the care of the matron, such as dining room, kitchen, laundry, and house cleaning, has been very satisfactory.

In the two schoolrooms faithful and effective work has been noticeable. The advanced class in the primary room was transferred to the principal teacher's room, and 7 of the pupils (4 boys and 3 girls) from her room were transferred to the Chemawa Indian Industrial School.

The farmer and industrial teacher have been willing workers. They, with the help of the larger boys, have put in 57 acres of grain and 5 acres of garden; also hauled all the school freight a distance of 15 miles. The farm produced well, and good crops have been raised. The orchard will yield a fair crop of apples and prunes, a few pears and cherries.

The discipline of the pupils the past year has been very satisfactory.

A water system is greatly needed to supply this plant and afford fire protection.

The entertainments given by the pupils on the various holidays and at the close of the school were a great success, and reflect much credit upon them and their

teachers. These entertainments are always attended by the parents and friends of the children, and no matter what the weather is we always have a large and appreciative audience.

The custom of allowing the pupils to go home once a month, from Friday evening until Monday, was discontinued, and they were allowed to visit their homes only one day, going home in the morning and returning in the evening.

In conclusion, I will say the general condition of the school is in all respects greatly improved. Accompanying this annual report you will please find statistics for 1898.

In closing this report, I desire to thank the Indian Office for the kind consideration extended me during the past year.

Very respectfully,

ANDREW KERSHAW,
Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF KLAMATH AGENCY.

KLAMATH AGENCY, OREG., *August 30, 1898.*

SIR: Having only been in charge of this agency since July 1, 1898, I will not be able to present as comprehensive an annual report of my predecessor's last year as he could have done himself. However, I respectfully submit the following:

Having been the first employee of the agency, thirty-three years ago, the tribes under my charge are not new to me, and I am able to compare their advanced condition with that presented by a people yet quite rude. This comparison gives ample evidence of the fact that the humane and judicious efforts of the Government, generally effected through capable agents, have advanced these people to a very gratifying state of civilization. I am convinced, however, by wide acquaintance with Indian tribes, that the Klamath and Modoc Indians are a superior aboriginal race, more readily taking up the "white man's civilization" than have many other Indian tribes.

The Klamaths and Modocs being naturally of the same blood, have almost blended into one tribe, and it is almost impossible to number them separately. The whole number of Indians on the Klamath Reservation, as shown by the annual census now in preparation, amounts to approximately 1,072 individuals. Of these about 487 are Modocs and Piutes and 585 Klamaths; 488 approximately are males and 584 females.

The Klamaths before taken under control by Government authority were formidable people, and, with their allies, the Modocs, were masters of all surrounding tribes, among them the Snakes (or Piutes), Shastas, Pitt Rivers, and the warlike Rogue River Indians, formerly occupying the fertile valleys of southwestern Oregon.

The nomadic Snakes (or Piutes), though quiet and docile, do not advance rapidly in industrial pursuits and the representatives of this tribe we have on the reservation are quite poor, and I think they may need a little help in the way of subsistence this winter. I intend making especial efforts to get them to work in cultivating their lands in the spring, and I am quite certain it will be necessary to furnish them with seed grain and to detail an experienced man to assist them in seeding their ground.

The Pitt Rivers (or Mo at was) now on the reservation, consist of former slaves and their descendants. Many Pitt Rivers were originally held in servitude by the Klamaths, having been captured during warlike forays into the Pitt River country, a district lying in California south of the Klamath Basin. Soon after the treaty of October 14, 1864, was concluded with the Klamaths, Modocs, and Ya hoos kin Snakes, the Mo at was slaves were given their freedom and were adopted into the Klamath tribe. Although possessing distinct tribal characteristics, these people have become practically Klamaths, having married with them and become fully assimilated. A few of them are now prominent and even wealthy men. Henry Jackson, for instance, formerly held as a slave by a chief now living, owns 500 or 600 head of cattle and his annual sales of beef animals amount to from \$3,000 to \$4,000 a year. As a tribe, the Klamaths have always been friendly to the whites and assisted us as allies during both the Snake and Modoc wars.

The Indians now usually known as Piutes were treated with as Snakes, and were originally nomadic bands roaming over the plains of eastern Oregon and Nevada. Of these, the Ya hoos kin band, under Chockfoot and Kile to ik, was treated

with in 1864, in connection with the Klamaths and Modocs; the Wall pah pe band, under the war chief Po ni na, at Yainax Butte, August 12, 1865. Ocheho's band, after the termination of the Snake Indian war, was brought from Camp Harney to Yainax, near the eastern border of the Klamath Reservation, and established there in the autumn of 1869. They have many of them wandered away during the last twenty years, and the once powerful chief, Ocheho, now old and blind, resides with the remnant of his people near Fort Bidwell, in California. There they have had lands allotted to them, and patronize the Bidwell Indian school. Wherever found they are now quiet and peaceable, and their children are easily controlled as pupils.

The home tribe of Pitt Rivers, residing on the river of that name in California, not far distant from the Klamath Reservation, are somewhat without school facilities, although claiming to have over 300 children of school age. Some of them are anxious to send their children to Yainax. While they might be able to send a limited number here and more to Bidwell, these two institutions are rather far away for general patronage by them. Certainly it would seem a reasonable thing to maintain at least one good day school in the Pitt River country where it can be readily reached from the home of the tribe.

Commendable progress has been made by the Indians during the year in improving their land. Col. John K. Rankin, United States allotting agent, is yet in the field making allotments. He has made some 300 allotments and expects to complete his work this fall. Charles E. Worden, Mr. Rankin's predecessor here, reported having made allotments. Many of these locations are in the Klamath Marsh country and border on extensive areas of swamp land. Within its timbered border the Klamath Marsh, with its surrounding meadows, comprises an area approximating 100,000 acres and was originally inhabited all the year round by the Klamath Indians, who called the region Oux y.

On a peninsula entering the marsh from the west Capt. John C. Frémont, with his exploring party, visited a village of Klamaths in the year 1843 and found them friendly. Decimated by smallpox and other maladies introduced by the white man in later years, the Klamaths withdrew to the warmer localities about Klamath Lake and ceased to use the marsh country for a winter residence. Since the location of many allotments upon the marsh the Klamaths have returned and are making extensive improvements there. A careful estimate of the amount of fencing done by them since about the 1st of May shows that they have built nearly 54 miles of good fences to inclose their hay and pasture lands about the Klamath Marsh. Their fences are, as a rule, skillfully built of rails and poles and represent a large amount of labor, indicating a larger degree of industry and enterprise than our aboriginal people are usually credited with. On these lands they are already pasturing for outside parties not less than 3,000 head of cattle and horses, in addition to making for themselves a large amount of hay for their own stock.

The two schools of this reservation, Klamath and Yainax boarding schools, which are situated about 40 miles apart, are in a prosperous state, and have instructed in the aggregate 250 pupils during the year. Ten pupils completed the course and are ready for their life work or for promotion to more advanced schools. It is gratifying to see how much interest the Indians are taking in the schools, and that they are making commendable progress.

A number of the buildings are in a fairly good state of repair and others are quite dilapidated. Some very essential buildings have never been provided. A girls' dormitory is very much needed at Yainax and a more efficient water system is also required at that place. The crowded condition of the school there greatly impairs its efficiency. As desired by you, estimates have been submitted covering the expense of additional buildings needed and of repairs desired during the next fiscal year. These I have submitted with confidence that the Department, appreciative of the importance of Indian education, will do everything practicable to assist us in our school work. Without the improvements estimated for we can not hope for a successful conduct of the Yainax school during the ensuing year.

I sincerely hope we can be furnished both with a carpenter and a sawyer at Yainax, instead of a carpenter and sawyer represented by one person, as at present. There is more work for a mechanic to do in the line of carpentering alone than one man can do in repairing the school buildings and in making essential improvements, while the sawmill should run constantly, not only to provide lumber needed at Yainax, but for the use of the Indians who are endeavoring to construct residences and barns on their recently allotted lands. Not less than a half-dozen frames of barns are now up and ready for lumber which has not yet been sawed. This condition of things is very discouraging to the Indians.

In the way of improvements at Klamath Agency, a commissary building, not

yet completed, is a very creditable structure, 110 feet long, 26 feet wide, and fills a long-felt want. The old log commissary still stands, a memorial of early days, but it has been condemned and will soon disappear. If the several residences occupied by the carpenter, sawyer, farmer, etc., constructed some thirty years ago and repaired a little from time to time, could have plain but convenient cottages substituted for them, the change would add greatly to the comfort of the employees and to the neatness and sanitary condition of the agency. Having a splendid water power contiguous to the school at Klamath, I think we should have, if practicable, an electric plant, which would afford us a safe and convenient system of lighting both school and agency buildings at an inconsiderable expense.

The season having been unusually dry and frosty, it has been a very unfavorable one for farming operations. Although a large acreage was sown, the Indians will realize a very light crop. As the harvest has not yet been gathered, I am not yet able to state, even approximately, what it will be. In this connection, I would state that the fine fertile lands lying between Williamson River and Modoc Point, embracing an area of about 20,000 acres, could probably be irrigated at an expense of less than \$5,000 and would provide the Indians with one of the richest areas for either grain or grass in southeastern Oregon. Lying as it does near the shore of Klamath Lake and somewhat distant from the Cascade chain, it is less frosty than other portions of the reservation and is a favorable locality for either cereals or vegetables.

The lowering of Klamath Lake by blasting out a portion of a rock ledge at the head of the Klamath River (locally called Link River), which is the outlet of the lake, is worth considering. It is thought that an expenditure of less than \$5,000 would lower the lake 2 feet without interfering with navigation, thus reclaiming vast areas of meadow land on the reservation, especially about the mouth of Williamson River. Doubtless this improvement would increase the acreage of meadow land of the agency farm sufficiently to enable us to make more than 1,000 tons of hay annually.

The court of Indian offenses holds its sessions alternately at this agency and at Yainax Boarding School or subagency. The judges are quite intelligent men, are careful in their investigations of cases, reasonably equitable in their decisions, and relieve the agent of the trial of many charges, a large percentage of which are of rather a trivial character. I think the scheme is a very good one and one that may be largely educational if properly managed.

The regulations with respect to roads have not been fully observed, and, notwithstanding that our usually level country possesses many naturally fine routes of travel, there are some roads much needing intelligent and judicious work. This matter we promise to take up at as early a date as practicable and organize our force for active work. During the current year we hope to make a respectable showing in the improvement of our roads.

The Klamath Reservation possesses many attractions for the fisherman, having in Spring Creek and some other pure cold tributaries of the Klamath lakes some of the finest trout streams in the world. Tourists have often been permitted to camp for some weeks at a time on these streams for recreation and the pleasure of angling, but this they have not been permitted to do without the consent of the Indians and agent, and, so far as I am informed, no such persons during the past year have abused the privileges extended to them by imposing upon Indians in any way. Such persons are given to understand that the exclusive right to take fish on the reservation was guaranteed to the Indians by the treaty of October 14, 1864, and that no one not belonging to the reservation can indulge this privilege except through the sufferance of the tribes. No angling is permitted except with a hook, baited with insects, real or artificial, and no nets, spoons, or explosives are allowed to be used by fishermen. It is true, however, that fish are less abundant than formerly in our trout streams and that an important resource of the country is not what it once was, either as a source of food or pleasure. The establishment of a fish hatchery on Spring Creek or some other eligible stream in the Klamath region would be worth considering by the proper authorities.

At this date haying is still in progress at the agency and at many other points on the reservation. At Yainax we have put up 115 tons for the school stock, an ample amount for that place. Here we expect to put up 200 tons, although delayed by swampy ground. On Sprague River, in the vicinity of Yainax, the hay crop is very light, on account of the dry season, and it is doubtful if the Indians get hay enough to feed their stock this winter, unless it should prove a very mild one.

Respectfully,

O. C. APPLGATE,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF KLAMATH SCHOOL.

KLAMATH AGENCY, OREG., August 15, 1898.

SIR: I have the honor to submit this my third annual report of the Klamath Boarding School, for the fiscal year ending June 30, 1898.

Attendance.—During the year we have had enrolled 136 pupils, classified as to age as follows:

| | Boys. | Girls. | Total. |
|----------------------|-------|--------|--------|
| Under 10 years | 11 | 25 | 36 |
| 10 to 17 years | 46 | 35 | 81 |
| Above 18 years | 7 | 12 | 19 |
| Total | 64 | 72 | 136 |
| Average age | 13½ | 12½ | a 13 |

a Almost.

Average attendance for each month:

| | | | |
|-----------------|-------|---------------|--------|
| September | 102 | March | 119.5 |
| October | 123 | April | 115 |
| November | 123.6 | May | 111.3 |
| December | 118 | June | 90 |
| January | 121.7 | | |
| February | 121 | Average | 114.57 |

Health.—The general health of the school for the past year will not compare favorably with the two preceding years, tonsillitis, pneumonia, and mumps having visited us, and each pupil was affected with one or more of them. One fatality occurred among the boys. He was permitted to leave school, but soon after succumbed to pulmonary trouble. Others were near death's door but recovered.

Buildings and capacity.—We have five buildings pertaining directly to the school. There are others erected with school money which are properly under the direct control of the agent.

The boys' dormitory is the oldest and most unworthy building we have here. According to the best information obtainable, it was erected sixteen years ago at an expense of about \$1,000, built mainly by the schoolboys. It is entirely inadequate in its present condition, and I hope the Department will be able to allow the appropriation, for which we have asked, for its repair. It is three stories high and 90 feet long, and has a capacity for 70 boys, besides employees' quarters.

The girls' dormitory has capacity for 65 girls, and is in good condition.

The schoolhouse contains school rooms for 120 pupils and a large assembly room.

The laundry and bath house are not fully equipped, but will be ample.

Water system.—Our water system consists at present of a wooden flume conveying water 2,200 [feet] from a large spring, which affords sufficient power to a large sawmill and other machinery.

Improvements.—Several improvements of importance have been made during the past year, including the erection of a bath house, the second floor of which has been fitted up as a sewing room. A machinery shed is in process of construction, and we have built several miles of fence, only a small showing as compared to the improvements which should be made by replacing our old and inefficient fences by more modern and better inclosures. The most pressing need at present is a cattle shed, an estimate for which has been made.

Live stock.—We have pertaining to the school besides the swine, 6 horses and 33 cattle. Our cows are principally of the roan Durham breed, and with proper care will give us an abundance of milk. A dairy house with all modern conveniences has been estimated for, the advantages of which in the way of utility and instruction are manifest.

Household department.—In addition to the cooking and general housekeeping, the girls have laundried over 50,000 articles, and in the sewing room more than 2,700 articles were made and about 3,000 mended. I inclose herewith as an addendum report a list of the articles manufactured.

The small boys did the housework pertaining to the boys' apartments.

Industrial department.—The school carpenter has had three boys under his direction during the past year, all of whom progressed nicely. The shoe and harness maker has instructed two boys in the intricacies of his trade, and the blacksmith had one boy as a helper.

The farm.—The grain crop has not been the success that we desired, but equal to any in our locality. The drought was so severe at one time that we despaired of making any crop. The haying is now in progress, and the farmer reports having cut 200 tons.

Literary department.—The various holidays were observed in an appropriate manner, and the advancement among the pupils was quite satisfactory. A class of 10 were graduated, all of whom should enter training schools, and they have been urged in every way to do so. No one without the actual experience can realize the difficulty encountered by those seeking recruits on this reservation for other schools.

An interesting reading circle was established, but after a spasmodic existence of a few months it collapsed, and while we say "Requiescat in pace" over its ashes, we bespeak a better fate for its successor.

Conclusion.—During the year we were visited by Special Agents Jenkins and Taggart and Supervisor Conser, to whom we extend our thanks for assistance and suggestions. With hopes that the past work has not been in vain and with confidence for the future, I am

Very respectfully,

W. J. CARTER, Superintendent.

O. C. APPLEGATE,
United States Indian Agent.

REPORT OF THE SUPERINTENDENT OF YAINAX SCHOOL.

YAINAX, OREG., *July 1, 1898.*

SIR: The entire number of pupils enrolled during the year was 125. Average attendance during the time school actually was in session, 106. The pupils nearly all had the mumps, and there was a rather large amount of sickness of other kinds, resulting in three deaths.

The dormitories, not including two small sick rooms recently fitted up, aggregate 29,400 cubic feet of air space, or about 280 cubic feet to each pupil. If there were more dormitories a greater percentage attendance might have been maintained, and I think an average attendance of 120 could be secured. This is the number for which the annual estimate for 1899 is made. Another dormitory building, with kitchen and dining room, located so as to secure better sewerage, is the most urgent need of this school.

The old dormitory needs an additional flue, and two flues are defective.

We have no adequate fire protection. With a hydraulic ram worth \$30, and pipe and fittings to the value of \$150 to \$175, we could raise water from the spring to a tank on the hill in rear of the dormitory sufficient for all purposes except for drinking.

During the winter three dwelling houses were built for employees at an expense of \$240 each. The fact that their value is more than twice the cost is due in large measure to the energy of Agent Joseph Emery. The employees are all comfortably located now.

The classroom work is in excellent hands. The principal teacher is a sterling young man, who has borne up well under a large amount of work and has maintained a creditable degree of discipline in the schoolroom.

The farmer also deserves special mention for faithful and energetic work. He possesses tact for managing men as well as children. Five hundred rods of draining and irrigation ditch have been dug. By reason of this ditching, and in spite of the general shortness of grass, we will likely be able to make enough hay for our own use. All the land on the school farm capable of producing hay, including 40 acres never before touched, can be cut over. Irrigation ditches have been surveyed for several Indians.

Inasmuch as a large part of the time of one school employee is consumed in looking after agency affairs at this place, it is desirable that we have another employee, and he should be a sawyer, who can devote all his time for several years to making lumber for Indians and the school. Without a provision of this kind it will be uphill work to make much headway in the way of permanent improvements. The Yainax Indians are as numerous and as worthy of lumber as those at the agency, and, with the sawmill running, another school employee will be needed to run the engine. There is a large amount of work for a carpenter here outside the sawmill, and more especially with a supply of lumber assured.

Supervisor Conser has just inspected this school.

Very respectfully,

KNOTT C. EGBERT, *Superintendent.*

SUPERINTENDENT OF INDIAN SCHOOLS.

REPORT OF SILETZ AGENCY.

SILETZ INDIAN AGENCY, OREG., *July 15, 1898.*

SIR: In compliance with instructions from your office, I have the honor to submit my first annual report of the conditions of this agency, the work done during the year, and the needs of the agency and school during the coming year, together with the annual statistics called for.

Population.—The census roll accompanying this report shows a population of 487; number of males above 18 years of age, 161; number of females above 14 years of age, 150; school children between the age of 6 and 16, 101; others, 75; or a total of 487. Number of deaths, 19; births, 15.

Educational.—We have only one school at this agency, the Siletz Boarding School, located at the agency. It has made fairly good progress during the past year. The average attendance of 69 is not as large as it could or should be, yet it is fully as many as ought to be crowded into the dormitories. Every child of school age that is healthy should be in school and will be as soon as I have room for them. One way to obtain more room would be to send a number of the older children away to nonreservation schools, yet it is very difficult to obtain the consent of the parents to send them away.

One very great drawback to the success of this school is the frequent changes of superintendents. It is very demoralizing to the discipline of the school. During the past four years there have been five different superintendents. One would hardly be here long enough to establish his peculiar notion of discipline until for some reason he would be transferred to give place to another, and he to another. Is it any wonder the larger boys are hard to control?

Our present superintendent, Mr. Walker, is himself a young man, and he has had much trouble in establishing discipline at the school. Backed up by the authority and assistance of the agent, he has to a large extent overcome this difficulty and now has the boys under very good control. While inexperienced, he is yet a very energetic man and desires to succeed, and I fully believe will be able to make a much better showing another year. The employee force generally has been faithful and competent.

The condition of the Indian.—Nearly all of the Indians on this reservation are industrious, and, except a few of the older ones, self-supporting. The following state-

ment will show the greater portion of their earnings for the past year, with annuity added:

| | |
|---|---------------|
| Beef and salmon purchased for the school..... | \$720 |
| Earned picking hops..... | 2,800 |
| Fish sold to cannery..... | 3,000 |
| Wood sold to school, to agency, and to employees..... | 775 |
| Hauling supplies..... | 359 |
| Sale of hay, grain, and stock..... | 2,300 |
| Lumber for school and agency..... | 78 |
| Earned laboring for the white neighbors..... | 800 |
| Annuity payment..... | 5,820 |
| Total..... | 16,652 |

This large sum of money, except the annuity payment, has been earned by hard labor and good management, and speaks volumes for their ability to control their own finances, and in most cases it is used just as economically as the average poor man will use his money.

Their oat and hay crops that are now coming on are in excess of last year, both as to quantity and quality. About all raise potatoes and other vegetables sufficient for their use. Many have very good teams and wagons and take good care of them. Nearly all put away a little hay for their horses and some have plenty of feed for all their stock. There is a little improvement here and there all the time, and while it seems very slow, yet, covering a period of the past ten years, there has been quite a marked improvement among these people in their home life.

Missions.—The missionary work is carried on at this reservation by the Methodist Episcopal and Catholic churches. The former have erected a parsonage, but use the schoolhouse for holding services and Sunday-school. The latter have built for themselves a neat little church and parsonage. The membership seems to be about equally divided. They are both doing good work, and the wishes of the parents observed as to which church the children shall attend.

Public roads.—Since the reservation was thrown open the highways have become regularly established county roads, and the Indians, generally, have been appointed as supervisors, and they take just as much interest in the roads and do fully as much work as our best-regulated white communities. This season much has been done improving these roads.

Court of Indian offenses.—This court is absolutely indispensable in the proper control and adjustment of differences among these people, and will continue to be so as long as the present conditions prevail, or until final patent issues.

It is quite difficult, however, to get good men to serve on the police force for the sum allowed by law—\$10 per month. I would recommend in addition to this that the police be allowed to draw rations of flour and beef.

Improvements.—Since I took charge in November last I have had very little means to work on, yet the employees have all been kept busy in their various departments, repairing and improving as best they could with the means at hand. The industrial teacher, besides putting in his crop, has cleared about 3 acres of brush land and now has it in cultivation. The roads about the agency and school have been nicely graded and about 200 loads of gravel placed on them; a general repairing of fences all around, and much of the fencing and barns whitewashed. The best of the old lumber taken off in the repair of fences has been utilized in the construction of walks, and much more of the same is to be done when we obtain material to work on.

Needed improvements.—We are very much in need of some substantial improvements at this agency. It has drifted along for years in a makeshift fashion, until now it is hardly possible to get along further without something being done of a substantial character. The hospital building that was authorized, and failed on account of the lowest bidder failing to enter into contract, should be relet at once and completed this fall, if possible. There is not room enough in our dormitories to hold all the children on the reservation of school age. It is even too much crowded for the number we are now keeping there, and I have made estimates on a building to be used as dining room and kitchen, the second floor to be cut up into sleeping apartments for the employee force. By removing them out of the dormitories it will then give us ample room for all our children. We also need a house to store vegetables for the school, as we have nothing of the kind. The water system is in bad shape and must be improved in some way; have also made estimate on that improvement. The farm land is overrun with wild radish, and it can not be exterminated unless by a thorough system of summer fallowing. We need about 20,000 feet of fence lumber to divide up this land for this purpose. The houses occupied by the clerk and farmer are old dilapidated shacks, not fit to

live in and not worth repairing. There should be two small cottages, to cost about \$300 each, built for their use. It will take \$6,000 to make the improvements here that we absolutely stand in need of.

In general.—Notwithstanding that these people are far in advance, in point of civilization, to most of the Indians, just as industrious and businesslike as many of their white neighbors, yet they have a bone of contention over their land or that of their deceased relatives. This land is not necessary, as a rule, to their prosperity, but affords something to growl and wrangle over. If it could be administered on and sold and the proceeds divided up among the legal heirs it would put a stop to all this trouble and confusion.

The physician, Dr. John F. Turner, reports:

In November an epidemic of measles visited these Indians for the first time in many years, and the middle-aged and young alike contracted the disease, which caused much additional care on my part, and shortened the lives of a few consumptives and others constitutionally weak not a little.

Gonorrhea does not prevail to any great extent, but syphilis in its tertiary or hereditary form enters into the majority of grave cases and must be met with appropriate treatment in conjunction with the treatment for the intercurrent diseases.

At all times a number of cases of incipient phthisis are developing, and in the summer season they do well, but during the rainy winter and springtime a number of these die. This seaside climate is not suitable to a people in whom the diathesis to consumption is as great as in this. The lungs are not inflated in this dense, salt atmosphere as they should be. The chest measurements grow less, and finally the lungs break down, partly from compression and disuse.

The number of cases reported on the sanitary reports during the year represents a small percentage of those actually treated. The minor troubles of these people require constant care, while many chronic cases are carried from month to month. During the year 19 deaths occurred and 15 children were born.

The medicine men among the Siletz Indians are an unpopular class, and their practice is confined exclusively to the old and most ignorant. The barbarous custom of sweating until almost prostrate and then plunging into the river in the winter season prevails here. It is very injurious and often proves fatal.

I have repeatedly visited all the Indian homes during the year, and the Indians, without an exception, call at the office for medicine when needed.

Cascara sagrada, which grows in this section in profusion, is much used by the natives, and often does good. I would respectfully suggest that the estimated amount of tonic remedies and empty bottles be sent here; also that much more good could be done by the physician if he were supplied with a more complete line of modern remedies.

The sanitary condition of a number of the agency buildings is bad, as shown by a previous report. It is to be hoped that some of these worthless, infected buildings will be destroyed; others moved to better locations or be replaced by new and more healthful dwellings.

The general health at the school has been good during the year. The children in the school were afflicted with the measles in November, but with close attention all fully recovered from the disease.

The new hospital will be a valuable aid in caring for the sick, and will also provide a means of isolating cases of tuberculosis, which at the present time are apart from the healthier children in a small room which is inadequate for the purpose.

During the year one death occurred in the school and one boy died shortly after he was taken home. A special effort has been made to protect the larger girls from exposure to colds at their menstrual periods, which so often excite consumption in Indian children.

The water supply at the school is good, but the means of conveying it to the building is defective. A complete water system would improve the sanitary condition of the school and surroundings very materially.

The school plant is well located. The natural drainage is splendid, and the sanitary conditions should be perfect.

I am grateful to the honorable Commissioner and his office for courtesies and valuable assistance.

Very respectfully,

T. JAY BUFORD,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SILETZ SCHOOL.

SILETZ INDIAN SCHOOL, *Siletz, Ore., July 5, 1898.*

SIR: I have the honor to submit herewith my first annual report of Siletz Boarding School.

Attendance.—School opened on October 1 with a very small attendance. The children came in slowly, and not until January 1 did we succeed in securing an enrollment of 77, which has been maintained for the remainder of the year, with an average attendance of 69. We hope to retain part of the pupils during the vacation months of August and September to assist in carrying on the industrial work.

Health.—The health of the school has been uniformly good. We have had but one death during the year. An epidemic of measles prevailed among the scholars last November, which, however, yielded to good nursing, and no fatalities resulted.

Schoolroom.—The work among the more advanced grades has not been entirely satisfactory, while with the little people in the primary room the kindergarten method has been pursued with very fair success. In language, number work, and drawing much progress is noticeable. Self-disciplining among these little folks has been tried, and placing them on their honor has stimulated a self-pride which has inculcated in them a sense of truth and justice; and I am hopeful it will eventually raise the standard of womanhood and manhood among them.

Industrial work.—Acting on the principle that children learn by doing, the boys and girls have been regularly detailed to the different departments at the school. The farm and garden have

been carefully cultivated, and the garden gives promise of producing an abundance of potatoes, cabbage, pease, radishes, turnips, carrots, etc.

The wild-radish plant predominates in the oat field, and the present outlook for a good crop is not very encouraging. This plant has come up so thick that it has materially lessened the growth of the oats, and will continue to do so in years to come if not thoroughly killed out now. The ground must be plowed and then summer fallowed. To do this successfully it will be necessary for the Department to provide us with a disk harrow and some lumber for fencing, in order that we may utilize the remaining pasture and fields while we are "summer fallowing" the oat field.

Our herd of ten milch cows has produced sufficient milk to enable us to serve butter twice daily, and also milk to drink. The butter making will continue during the vacation months, and next year I hope to have an abundance of milk and butter for the children. We are striving to increase the herd to a maximum strength of twenty cows, which will then be sufficient for all our needs. The work in the sewing room, kitchen, dining room, and laundry has been performed in a creditable manner by the girls regularly detailed for that purpose.

Improvements.—At the beginning of the past year the school plant was much in need of repair, and it has been our constant care and endeavor to improve it with the very limited supply of material at hand. New walks, fences, and outhouses have been built and repaired. The uncleanly and otherwise pernicious zinc bath tubs have been replaced by the ring baths. The sanitary condition of the dormitories has been improved by the addition of four new ventilators, the good results of which are already discernible.

Needs.—I desire to call your attention to a few of the most imperative needs of the school. We need a new building which shall contain a dining room and kitchen on the lower floor and sleeping rooms for employees above. Our dining room is much too small, and we are compelled to crowd the children around long tables to seat them all. We have not sufficient quarters for employees and have recently partitioned off two rooms for them and utilized the office for a clothing room. The proposed new building would obviate all these difficulties, and the old dining room and kitchen would furnish dormitory room for the small boys, which is much needed.

Our waterworks system as at present constructed is a failure, and we are without water much of the time. The source of our water supply is a spring $1\frac{1}{2}$ miles from the school, and at this spring a concrete reservoir of about 4,000 gallons capacity should be constructed and the pipe relaid from there to the school. The hole in the ground now at the spring is constantly filling up, and it requires the ceaseless attention of some employee to keep the pipe clear of sediment. The pipe for the most part has simply been coupled together on top of the ground, hung on limbs of trees in crossing gullies, etc., and should be relaid properly, using larger pipe at the head. Industrial training is of equal if not greater importance to the Indian than literary training.

During the long rainy seasons here outside industrial work is impossible. I therefore would respectfully urge the necessity of erecting a carpenter shop, in which instruction could be given the boys during that period in the simpler elements of the trade and the handling of tools. Part of this building could also be used as an implement house, the necessity of which well deserves this mention.

We have no suitable storage facilities for our potatoes, apples, and other vegetables, and a small vegetable house would be a desirable addition to our plant.

The proposed new hospital, the plans of which are already here, will enable us to isolate and care for the sick much better than has been possible in the past.

The bakery oven, never properly constructed, is cracked and crumbling away, so that it renders the task of properly baking the bread an exceedingly difficult one. This should be remedied this summer.

Employees.—The weekly meetings of our reading circle have proven a source of much instruction and amusement to us. To those of the employees who have taken a general interest in the success of the school, and rendered willing and efficient service during the year, I extend my sincere thanks.

In conclusion, permit me to thank you for uniformly courteous treatment throughout the past year.

Very respectfully,

CHAS. A. WALKER,
Superintendent.

T. JAY BUFORD, *United States Indian Agent.*

REPORT OF UMATILLA AGENCY.

UMATILLA AGENCY, OREG., *August 15, 1898.*

SIR: In submitting this my first annual report permit me to say that, having discharged the duties of this agency for a few months only, I do not feel able to furnish as full a statement of the present condition and needs of the Indians as might have been expected from longer experience. Further association with these people will enable me to report comparatively in the future.

Population.—I find that my predecessor has not taken the census of this reservation for two years, which duty I have just completed, but with considerable trouble, owing to this being the time of the year when the Indians are scattered in the collection of the various root edibles which they store up for winter use. I would respectfully suggest that it would facilitate matters if the census were taken in the winter, when the severity of the weather necessarily compels them to congregate in their most compact associations. The census of the Indians on this reservation seems to imply a slight decrease in the past two years. I find at this time as follows: Cayuses, 362; Umatillas, 168; Walla Wallas, 483.

Morals.—So far as I have been able to observe, the moral condition of the Indians upon this reservation will, perhaps, compare favorably with any similar number on any reservation, although a great many of the young men seem to be naturally

inclined to intemperance, and would be constantly intoxicated if extraordinary means were not employed to prevent it, surrounded, as they are now, by every species of temptation in the towns along the reservation border. Most of their troubles can be traced directly to the effects of liquor. One good trait in particular I have noticed in the full bloods is that their statements can generally be relied upon for veracity, and that their sense of honor is unusually keen. A peaceful and orderly spirit seems to prevail among them, and they deal justly with those who grant them justice. The women behave properly and, with but one or two exceptions, seem to be chaste and strict as regards their marital relations.

Condition.—It is generally thought that the Indians upon this reservation are living upon and farming their individual allotments, but I find such not to be the case, except in a few instances. Their sole ambition seems to be to rent their lands to the whites and draw the rents. But very few of my Indians are employed in trying to earn money from the whites, although the opportunities for doing so are plentiful. They do not, to any extent, exert themselves to imitate the customs and habits of the whites. A great majority of them still paint their faces, wear gaudy blankets, adorn themselves with native styles of ornament, and adhere to various superstitions as in the days of yore.

Ceded lands.—The Indians of this reservation imagine they have grievances, and I think they show a great deal of forbearance and patience. They do not think the Government is doing right by them in regard to those lands which were set aside from the reservation to be sold and the net proceeds reverted to the benefit of the Indians, but which were not so sold and are now being squatted on by whites, who are denuding those lands of the timber in a most reckless manner.

Dwellings.—Many of the Indians have had frame houses erected for them, yet, while eager and delighted to point out and show you "my nice house," they still continue to live in the mat or canvas tepee erected near by. They evidently value their houses as ornaments or curios to show to visitors, and do not wish to despoil them by dwelling therein.

Health.—In visiting the Indian camps I found many of the Indians troubled with blindness and many other forms of diseases of the eye. This is probably due to the fires continually burning in the center of the tepee, which keeps the tepee everlastingly filled with smoke, and the alkali dust, to which they are now exposed much more than in the days when the country was uninhabited and there were no vehicles to cut up the alkali beds into the very finest of dust, from which there is no escape during the summer months. Many are also troubled with cataracts on the eyes, for the removal and curing of which I have recommended, as requested by our agency physician, that an eye-operating case of instruments be purchased for use at this agency, and am pleased to note that the same has been allowed by the Commissioner. Hereditary scrofula and tuberculous cases are numerous among them, but, as a whole, I think their general health is good. During the year there was an epidemic of measles, which was promptly checked. While some sixty were stricken with the disease, only one death occurred from that cause.

Schools.—The two schools on this reservation, the Government and the Kate Drexel, I am proud to say, are a credit to the Indian Department. The scholars seem to evince a laudable application, and the faculties are untiring in their efforts to promote the welfare of the little ones. I am of the opinion that it would be difficult to find institutions of this kind in the Indian service which will compare with the Government school and the Kate Drexel contract school on this reservation in the matter of cleanliness, neatness, unusually competent teachers and employees. It has been a pleasurable duty to me to inspect thoroughly both schools and the manner in which everything about them is kept, and the proficiency exhibited in studies and work is alike creditable to the superintendents, teachers, and scholars.

Usually at the commencement of school considerable trouble and annoyance is occasioned by the nondesire of heads of families to send their children to school, which necessitates many trips to their homes, whence at times the little ones have to be taken by force. I will endeavor to gather them in thoroughly at the beginning of the next school year.

Shops.—The existence of the carpenter and blacksmith shops at this agency are potent factors in the Indians' advancement. Knowing that damages to wagons and agricultural implements will be repaired at these shops free of charge, the Indians freely indulge in the purchase of wagons and farming implements. The work done by the above two shops during the year for the agency, school, and the Indians is worth not less than \$5,000. These two shops are a real necessity, and I respectfully recommend their continuance.

The Indian court.—The great amount of good resulting from these weekly judicial bodies, in the nature of causing the Indians to dread the big fines usually imposed,

is observable. These fines are mostly worked out by the prisoners, and the abhorrence the red man has for work is simply astonishing. If this court were not in existence, drunkenness and lawlessness of every description would be common, and it would not be safe to be on the reservation near those young bucks who delight in being "bad men."

Allotments.—In allotting Indians upon this reservation I think a grave mistake was made in giving the husband, as the head of the family, 160 acres and leaving the wife without land in her own name. A number of instances have come to my notice where the husband has deliberately thrown away, or ceased to live with, his wife, leaving her without anything. The land being in his name, he naturally receives all the benefits accruing from the same. In most cases he squanders away the rent for whisky and trinkets, and leaves his wife and children to die of starvation. I am satisfied this was not the intent of the allotment act, and the matter should by all means be remedied by Congress.

CHARLES WILKINS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF UMATILLA SCHOOL.

UMATILLA INDUSTRIAL BOARDING SCHOOL,
Pendleton, Oreg., July 23, 1898.

SIR: I have the honor to submit to you the following report for the year ending June 30, 1898: As I have stated in a former report, the greatest drawback we have to contend with is the fact that the children come into school so late in the fall. The Indians go to the mountains the latter part of the summer to gather berries and remain with their families to hunt, many of them not returning until cold weather; consequently, our school is slow in filling up. As soon as they do return the children are anxious to enter school, and many of them never care to leave until they go home for the summer vacation. They are contented and happy here, as the fact that we have not had a runaway during the year will sufficiently attest.

The children have made rapid progress in their studies. We had three public entertainments during the year, which were well attended by the parents and other visitors.

When I took charge of this school five years ago three-fourths of the children were nearly white, many of them having but little Indian blood in them; now three-fourths are full Indians, as a number of the half-breed children are attending the public schools.

Health.—Before our school was filled in the fall measles broke out and we were quarantined for nearly two months. There were 54 children in attendance at the time, 45 of whom had the measles, one death resulting. We lost two other children during the year from consumption. The general health of our children is good, and the sanitary condition of the school is excellent.

Transferred.—Five of our pupils were transferred to other schools; 2 went to the Chemawa Training School, and 3 to the Pendleton Public School.

Ages of children.—Although we had so many discouragements during the fall, we were able to get in a number of very small children, and our school closed with an attendance of 75, the ages of 32 of them ranging from 4 to 7 years, and of 33 from 8 to 12. Our oldest boy is 15 years old, and is delicate; our 2 oldest girls are each 14.

Industrial department.—Notwithstanding the children are so young, the amount of work they accomplish is astonishing. The industrial teacher, with the assistance of the boys, during the spring and summer painted all the outbuildings and the roofs of all the buildings, besides cultivating the garden of 10 acres, in addition to the regular routine work. During the winter the boys sawed wood for 27 stoves. This work is too hard for young children to perform; a wood-sawing machine should be allowed.

Below is a list of the articles made in the sewing room by the seamstress and girls during the year:

| | | | |
|----------------------|-----|--------------------|-------|
| Aprons..... | 188 | Pillow shams..... | 7 |
| Bags..... | 35 | Sheets, bed..... | 93 |
| Bibs..... | 30 | Shirts, over..... | 37 |
| Bonnets..... | 8 | Shirts, under..... | 49 |
| Cloaks..... | 6 | Skirts..... | 20 |
| Curtains..... | 10 | Suits, union..... | 123 |
| Drawers..... | 47 | Tablecloths..... | 8 |
| Dresses..... | 192 | Table covers..... | 3 |
| Gowns..... | 2 | Towels, hand..... | 184 |
| Jackets..... | 25 | Waists..... | 122 |
| Napkins..... | 76 | | |
| Pants, assorted..... | 64 | Total..... | 1,329 |

A reading circle was organized by the employees this year, and the course followed was that prescribed by the Superintendent of Indian Schools. We met for an hour every Monday evening.

Religious exercises.—Our Sunday school increases in interest each year. The ministers from the different churches in Pendleton continue to hold services for us as frequently as they can do so. Their kind interest is of great value to the school.

English speaking.—The children learn to speak English very readily, using it almost exclusively in conversation after having been with us for a year. The very small children who entered late last spring spoke English quite well at the close of school.

Child marriage.—The girls marry just as they are prepared to enter a training school. Their mothers encourage and, in many instances, force them to take this step, often against the child's wishes. Something should be done to prevent this great crime among the Indians on this reservation, and some plan should be devised to oblige them to attend a training school.

Ornamentation.—The hot, barren place we once had is very much changed. The many trees planted three years ago, which are fast growing in usefulness as well as beauty, the porches covered with vines, and the numerous flower beds give the school an attractive and homelike appearance, and the shade afforded by trees and vines materially adds to our comfort. Besides these, a sod of Kentucky blue grass and clover is year by year encroaching upon the weeds which once monopolized our yard.

Nor do we neglect the interior of our buildings. The walls of the schoolrooms, also every room in both boys' and girls' buildings, are prettily decorated with attractive pictures, tastefully mounted and framed by the different employees assisted by the children. In winter the windows of our dining room and sewing room are filled with growing plants. Both boys and girls take great interest in the ornamentation of grounds and buildings, which we are glad to see, as we feel sure it has a refining influence upon them.

Employees.—All of the employees are faithful and conscientious in the discharge of their duties. In conclusion, I am gratified to be able to state that I have the hearty cooperation of the agent, Mr. Charles Wilkins, and hope, with his help, to have a much larger attendance at our school next year.

Respectfully,

MOLLIE V. GAITHER,
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

(Through Charles Wilkins, United States Indian Agent.)

REPORT OF WARM SPRINGS AGENCY.

WARM SPRINGS AGENCY, OREG.,
Warm Springs, August 15, 1898.

SIR: I have the honor to submit this my second annual report as to condition of affairs at this agency, together with statistics and census file of the confederated tribes and bands of Indians in middle Oregon and under my charge:

Location and climate.—The northern boundary of this reservation lies 50 miles south of The Dalles, in middle Oregon, the western boundary being the summit of the Cascade Range of Mountains, with the Des Schutes River as the eastern and the Matolesse River the southern boundary, with an area of about 40 miles square. The agency buildings and office of this reserve, as well as all the school plant, are located 75 miles south of The Dalles, which city is our telegraphic terminus, as also our nearest railroad and shipping depot.

The character of the land is mainly rough and mountainous, although much good land is to be found along the water courses, which are numerous throughout the reservation. These bottom lands are of excellent quality, and will produce grain, fruit, and vegetables of most any variety in abundance. The first benches, or table-lands, will in ordinary seasons bring good crops of rye, barley, and wheat, but during a dry year can not be made to yield anything. While the lands and products are best adapted to the raising of stock, there is still sufficient good agricultural land to produce all the hay, grain, fruit, and vegetables needed for this population.

The climate is good and healthful; no severe weather during the winter months. We have a high temperature during July and August, but heat is not oppressive, the atmosphere being rare and dry.

Agriculture.—Although about 10 per cent greater acreage was sown to grain this year than last, the yield in the aggregate will be 25 per cent less on account of the extreme dry weather, having had very little snow during the past winter, with only one light rain in June. I am glad to report, however, that the yield will be sufficient for self-support.

Population.—As shown by the census filed herewith, the number of Indians composing the confederated tribes and bands in middle Oregon is apportioned as follows:

| | |
|---|------------|
| Wascoes and Teninoes | 356 |
| Warm Springs | 512 |
| Piutes | 94 |
| Total | 962 |
| Males | 443 |
| Females | 519 |
| Males over 18 years | 277 |
| Females over 14 years | 380 |
| Males and females between the ages of 6 and 16 years | 227 |

School plant.—The buildings composing the school plant at this agency consist of one double dormitory, school building and assembly hall, mess hall and kitchen,

hospital, laundry, employees' quarters, bakery, oil house, two outhouses, one combination bell tower, band stand, flagstaff, and weather vane. All of these buildings are in good condition except the dormitory, which needs to be wainscoted and the plastering repaired.

Water and sewer system.—The water and sewer system at this agency is all that could be desired, the water system being constructed of 4-inch cast-iron pipe and 2-inch laterals, and the sewer system consisting of 6-inch and 4-inch vitrified pipe lead. The power is by water, safe and inexpensive.

Character and habits.—I am glad to be able to report to you that a great majority of these Indians are industrious, and are anxious to acquire the methods and habits of those who are prosperous and in comparatively easy circumstances. They want to build good houses, barns, and fences, and also learn how to properly seed and cultivate their fields. Right at this point consists the Indian problem—how to properly utilize his labor that the few poor acres that are left to him may yield the best return. In my opinion, much attention should be given to the instruction of these people as to the proper method of farming and stock raising.

Indian ponies.—These worthless ponies are the evil of the reservation, consuming the feed that should be reserved for profitable stock. I am gratified, however, in telling you that last year the Indians sold some 600 of these ponies, to be consumed in a cannery at Linnton, Oreg., and during the coming fall I hope to dispose of 2,000 head to the same parties. The Indians now see the necessity of getting rid of them at any price, and cheerfully part with their horses when the opportunity offers—one long step in the march to civilization.

Self-support.—While the Indians belonging to this reservation are mainly self-supporting, there are some 70 to 80 old men and women who are unable to work, are destitute, and hence have to be provided for; and I desire to here repeat that one of the most objectionable characteristics I find among the well-to-do Indians is the disposition to neglect the old and poor of their race—even their own families. They seem to think it the duty of the Government to support this class, thus entailing great hardship upon the agent.

Missionary work.—This work has been done under the jurisdiction of the United Presbyterian Church of North America, with Rev. J. A. Spear and Rev. J. A. Morrow as local pastors. Their zeal for the welfare of the Indians has been commendable, and their efforts in such direction fairly successful. Three churches and two parsonages have been built by the above organization. The teachings and example of these missionaries has been most valuable to me in maintaining order and morality, and encouraging industry. The Sabbath church exercises are well attended, at which I require the attendance of a policeman, that perfect order may be maintained.

Police.—The members of the police force are all young, courageous, and reliable. All speak English fluently, except two. They are prompt in executing orders, tidy in deportment, and obedient to superiors. There has been some disposition to gamble, which I have summarily crushed. They should be allowed full rations.

Court of Indian offenses.—The three men who compose the court of Indian offenses are Indians of middle age, heads of families, and have been selected for their discretion and recognized integrity among the Indians. Their decisions are recognized, and their orders are promptly obeyed. These men have been made familiar with their duties, and my observation warrants me in stating that their decrees are prompted by justice and right.

Public roads.—During the month of May all the public roads on the reservation were put in good repair, the Indians willingly responding to the call for such labor. Fifty-three miles of road was thus put in order, with the making of two miles of new grade.

Improvements.—Since my last annual report the following improvements have been accomplished at this agency and are now in order and use:

The water and sewer system; painting of campus fence; plowing and seeding campus to lawn grass; planting 150 native trees in campus; building 700 yards sidewalk; 1 oil house constructed; 1 combined bell tower, band stand, and flagstaff; 2 outhouses; 1 bakery, stone; repairing clerk's house; repairing physician's house; all of which was performed by agency and school labor, except the first, which was done by contract. These improvements are all in good order and all serving a good purpose. By the aid of our excellent water system our school campus is being nicely set to lawn grass and clover, which, with the growing native trees, adds much to the comfortable appearance of our school plant.

Educational.—Only partially equipped (a portion of the school furniture being in transit), the boarding school was opened on November 1 last for the reception of pupils. Three years having elapsed since there was a school in operation at this agency, many families with school children had left this reservation and gone to

Yakima, Hood River, Celilo, and other places, hence the great difficulty in rapidly filling up the school. Notwithstanding the difficulties, I am pleased to inform you that at the close of school on June 30 last there were enrolled 130 pupils and a regular attendance of 125, and I confidently hope to have 150 in attendance from October 1 to July 1 next.

I beg to suggest that our school is now only fairly opened. The school employees are industrious, painstaking, and faithful to their obligations; and while the discipline during the past has been somewhat lax, there has been great improvement recently, and I believe the coming year will show a perfect system and a splendidly conducted school.

Needed improvements.—I desire to again emphasize the great need of a flouring mill at this agency. It is a crying necessity in an economical as well as an educational point of view. The following improvements are also highly necessary to the efficiency of the work in hand at this agency: Two playhouses for pupils, covering to reservoir, housing of water wheel, building for kindergarten uses. With these additions the school plant at this agency would be in modern completion, and all that could be desired.

In conclusion, I am endeavoring to teach these people to work, and to make them sufficiently selfish to take care of their individual holdings. Arrived at such state they become good citizens, and require no donations of beef and flour. The employees, both agency and school, have been mindful of their duties and courteous to myself, and I take great pleasure in recommending them for reappointment. I am grateful to the honorable Commissioner and the Indian Office for official forbearance and for the valued assistance furnished me for the dependents under my charge.

Respectfully,

JAMES L. COWAN,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF AGENCIES IN SOUTH DAKOTA.

REPORT OF CHEYENNE RIVER AGENCY.

CHEYENNE RIVER AGENCY, S. DAK.,
August 25, 1898.

SIR: In compliance with instructions contained in circular letter of June 11, 1898, I have the honor to submit this my first annual report of affairs of this agency for the fiscal year ended June 30 last, accompanied by statistics pertaining to schools and agency, together with a complete census of the Indians of this reservation.

As I have but recently assumed charge of this agency, having relieved Maj. Peter Couchman on July 9 last, my report will necessarily be brief and confined chiefly to statistics, and owing to my short period of service my observations in my official capacity will be meager and perhaps not enable me at this time to make as full and complete recommendations as a later period will afford. Since assuming charge of this agency I have visited each day school and nearly every portion of the reservation, and at the same time have gone into and through a large number of the houses of these Indians for the purpose of ascertaining their condition, with a view to more intelligently ministering to their wants and requirements in the future.

Location.—This agency is located on the west side of the Missouri River, directly opposite the town of Forest City, S. Dak., and is reached by rail via the Chicago and Northwestern Railway to Gettysburg, S. Dak., thence by stage to the agency, a distance of about 20 miles due west. The telegraph station is Gettysburg, S. Dak., and mails are received and sent out daily.

Census.—The census of these Indians, as appears from the detailed roll herewith submitted, taken at the close of the last fiscal year, shows the population to be 2,557, as follows:

| | |
|--|-----|
| Males over 18 years of age | 687 |
| Males under 18 years of age | 563 |
| Females over 18 years of age | 797 |
| Females under 18 years of age | 510 |
| Males between the ages of 6 and 16 years | 308 |
| Females between the ages of 6 and 16 years | 266 |

Sanitary.—The sanitary condition of these people seems now to be very good. The report of the agency physician, Dr. Adoniram J. Morrill, is herewith submitted for a more full and complete statement upon this subject:

From September 20, 1897, to June 30, 1898, I visited 454 Indians sick at their homes or in camp, of whom 203 were males and 251 were females. Of the whole number treated 8 died while under treatment, of whom 2 were males and 6 were females. During the period covering this report there were 93 births and 105 deaths. A large proportion of the deaths reported were of infants soon after birth.

The sanitary condition of these Indians during the past year has been exceptionally good. There have been no epidemics of any description, with the exception of several cases of measles of a mild type. During my nine years of service at three different agencies, I am constrained to say that in point of civilization, intelligence, and a desire to adopt the customs of white people, and follow the rules and regulations laid down for their benefit and advancement, these Indians excel any with whom I have been brought in contact.

With their improved mode of living and with better houses, I am of the opinion that the birth rate will soon keep pace with the death rate, and eventually exceed it, and thus prevent the entire extinction of these people from that most dreadful and fatal of all diseases, and to which they are so susceptible, consumption.

Agriculture.—Results at this time show that nothing of any consequence has been done in this direction during the year. This, however, is not wholly the fault of the Indians, for various reasons: First, the land of this reservation is not adapted to agriculture, of which fact your office no doubt has been advised before; second, the past season throughout this locality has been one of continuous drought, resulting in an almost entire failure of crops of all kinds; and third, because in my opinion the farmers have not been required to display as much interest and energy among their respective Indians as there should have been, for the purpose of encouraging and urging them in this pursuit. An Indian, even though it is for his own best interests to labor, must be stimulated to do so by example.

At this time I have every farmer in the field and require him to see that each Indian puts up sufficient hay for his stock during the winter months. There is not a mowing machine or hayrake but what is in active use at this time, and will be for some time to come; and while hay is very scarce on account of the very dry season, and further diminished by reason of a large prairie fire which swept over the best hay lands on the reservation, yet I think by diligent work sufficient quantity can be obtained to meet the actual requirements if economically used.

Stock raising.—There is scarcely an Indian on the reservation but what owns some horses or cattle, and some of the mixed bloods have several hundred head of each. The raising of cattle is the leading industry pursued by them and certainly the most profitable, and when once that desire to kill an animal every time some member of the family is ill is broken up, their herds will increase more rapidly. I have instructed the police to be vigilant in this particular, and to report promptly all cases where cattle are killed or disposed of without permission, and I think after a few such cases have been rewarded with prompt punishment the practice will be abandoned.

Allotments.—No allotments of land have as yet been made, although a portion of the reservation in the eastern part thereof and lying along the Missouri River has been surveyed. When the survey is completed, which has been delayed on account of insufficient funds for that purpose, I apprehend but little if any objection on the part of the full-blood Indians to take their respective allotments; but whatever objection there may be will come from the mixed-blood Indians, who are the owners of the largest herds of cattle and horses and feel that their range and thereby their rights will be somewhat abridged.

Police.—The police force consists of 2 officers and 25 privates, the most of whom are reliable and faithful in the discharge of their duties. I have increased the number of those that are regularly on duty at the agency, and keep constantly a detail of one man at the ferry landing to guard against the introduction of liquor and the promiscuous crossing of the river by Indians and others without permission.

Court of Indian offenses.—This court consists of three full-blood Sioux Indians of mature years, who sit jointly every four weeks in the trial of cases arising among the members of the tribe. I have so far found their decisions to be fair and impartial, so far as they were able to arrive at the facts in cases brought before them.

Schools.—The agency boarding school had closed its year's work before I assumed charge of this agency, but from the reports made during the year, as appears from the files of this office, it appears that it has been in a crowded condition the greater part of that time, and hence I assume that the work could not have been as successful and satisfactory under those conditions as it might otherwise have been. I do not, however, wish to create the impression that there has been any dereliction of the part of any of the employees if the desired results have not been attained.

I am strongly of the opinion that a school of this size and of the importance it bears to the youth of this reservation should be provided with systems for electric lighting and steam heating, and have so recommended and shall submit detailed estimates therefor at the earliest day practicable. For a more complete and detailed statement of affairs of this school, I respectfully invite your attention to the report of Mr. Oakland, superintendent, and to my statistical report, both of which are submitted herewith.

I think it would not be an unwise move to begin to consider and look forward to the construction of a new plant, so far as boys' dormitory and schoolroom building are concerned, with a capacity for at least 200 pupils, for next year. With a scholastic population of nearly 700, a boarding school with increased facilities can easily be maintained, besides the three day schools and surrounding mission schools, which also obtain their pupils from this reserve. On account of the overcrowded condition of this school during the past year, I have recommended the erection of two buildings to be used for employees' quarters and schoolroom purposes. And, besides this, the addition of one more teacher (kindergartner) for the ensuing year makes it a necessity that more room should be provided.

There are three day schools located at various points on the reserve, and during my recent visit found that some repairs are needed at each of them. As they have been under the same management the past year as they were the year previous, and without any marked changes, I can only give them a passing notice and invite your attention to my statistical reports concerning them, which are herewith submitted.

Missions.—There are three denominations represented by missionaries on this reservation—the Protestant Episcopal, Roman Catholic, and Congregational churches—and the work by the several missionaries in charge and their coworkers has by no means been neglected in this field. There are 18 churches and chapels on the reservation where services are regularly held, and as a result of their teachings these Indians are very much in earnest in their protestations of their religious belief.

In conclusion, I desire to thank your office for courtesies shown me during my short period of service, and to state that my census rolls are herewith transmitted under separate cover.

Very respectfully,

JAMES G. REID,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF CHEYENNE RIVER SCHOOL.

CHEYENNE RIVER BOARDING SCHOOL,
Cheyenne Agency, S. Dak., June 30, 1893.

SIR: I have the honor to submit the following annual report of the Cheyenne River Boarding School, Cheyenne Agency, S. Dak.:

During the year there were enrolled 107 boys and 56 girls; total, 163. The average attendance was 126.31. The work in the schoolrooms has been fairly satisfactory. The school has been closely graded, and the "outlines of school work" followed as nearly as possible.

A kindergarten is very much needed, there being about 30 pupils too young to begin grade work.

Evening work consisted of drawing, music, gymnastics, and social games.

A great hindrance to school work arose from interruptions caused by the sickness and transfer of two teachers in the fall, and again this spring by an epidemic of measles. The schoolrooms were made pleasant and attractive by drawings and crayon work of the pupils.

The advanced pupils took much interest in current events, especially in the war with Spain. A long table was placed in the advanced schoolroom, on which were placed all available books suitable for pupils in the fourth grade and above. These books were read and reread by the pupils out of school hours, a proof that a reading room is very much needed.

Two entertainments were given by the pupils, one at Christmas, at which the children had a tree of their own, remembering each other with presents of their own making or purchased by their own money. The other entertainment was given at the close of the school year. On both occasions the children did well, and deserve much credit.

During the first months of the past year we had many cases of pupils running away, but since January we have not had a single case.

The improvements most needed for the school are two cottages for employees' quarters and mess kitchen, a root cellar, a meat house, a school warehouse, and a boys' dormitory.

We have a garden of 12 acres planted to corn, potatoes, onions, squashes, raspberries, etc., but gardening in this country is not altogether an unmixed success, on account of the gumbo soil and scarcity of rain.

Supervisors Bakestraw and Anderson visited our school during the past year.

Thanking you for your many courtesies in the past, sir, I have the honor to remain,

Very respectfully,

JOHN A. OAKLAND, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF CROW CREEK AGENCY.

CROW CREEK INDIAN AGENCY,
Crow Creek, S. Dak., August 29, 1898.

SIR: In making this, my first annual report, I will of necessity be brief. I assumed charge of the agency March 1, 1898, and found its affairs in very good general condition. The agency itself and the agency buildings are very pleasantly located on the east bank of the Missouri River, 25 miles above Chamberlain. A fine grove between the agency and the river adds much to the desirability of the location.

The issue house, coal house, iron house, grain warehouse, barn, carriage house, and wagon sheds are in good condition. The large warehouse for general storage purposes was never strongly built and is not in good condition. It is too frail for its size. The dwelling houses for white employees are old and small and are in generally unsatisfactory condition. The inadequacy of these buildings will be partially compensated for by repairing an old hotel building now unused. Authority for this work has been received. Some minor improvements have been made during the summer, notably in extending the premises around the employees' quarters, moving outbuildings, etc., this being necessary for sanitary reasons.

A formerly cultivated field adjoining the agency (included in the agency reserve) which had been abandoned for several years past I have had put into crops, mainly corn and oats. Good crops have been raised, and the cultivation of the field has been as good an example to the Indians, I think, as its previous neglect had been a bad one. They have at least been practically shown what they could accomplish by making proper effort.

The houses of these people are, with a few exceptions, in deplorable condition, there having been but one or two built for them during the last ten or twelve years. In this connection I would call attention to a report of the agency carpenter herewith. I shall try to build three houses this year, if possible, and will also submit an estimate and recommendation that a much greater number be built each year for some time to come.

In my predecessor's report for 1897 mention is made of the desirability of erecting two houses for farmers employed by the Government, his recommendation being that they be erected on the east and west sides, respectively, of the reservation. Instead of that plan I would urgently recommend the following; that is, that there be built in what is known as "The Big Bend Country" one house and stable for an agency farmer; also that there be erected in the same locality the necessary buildings for a subissue station. These would be a small warehouse, slaughterhouse, and corral. I would then recommend, further, that the farmer for that section of the reservation be made a subissue clerk and be detailed to issue rations to the Indians in his district, having also charge of the farm implements, etc., for their use. I consider this a very important matter for the Indians concerned, as they are now obliged to come 40 to 45 miles once in every two weeks for their rations, making a trip of from 80 to 90 miles. During bad weather, and especially during the long and severe winters, this involves serious hardship. And at all times it is a serious hindrance to the proper care of live stock and poultry, to the cultivation of their allotments, and to the formation of home-staying habits which it is so desirable to encourage.

In this connection, I would also urge that some measures be taken to minimize intertribal visiting, which is also a serious nuisance and detriment to progress. This evil is of such a nature that in my opinion no one Indian agent alone can do very much to correct it, even on his own reservation. The entertainment of numerous visitors is nearly as demoralizing as the making of frequent visits, and always creates what are regarded as reciprocal rights and obligations. As at present in vogue, apparently between all the Sioux tribes, the practice is certainly detrimental to progress, because it encourages, or necessitates, idleness and nomadic habits. Crops are abandoned, horses and cattle are neglected, smaller stock and poultry can not be kept at all, and a great deal of property is always recklessly distributed in making presents. The latter is of course practically a matter of exchange or barter, but no particular transaction is closed until the visit which inaugurated it is repaid, and business principles are entirely disregarded. With proper deference to the opinions of other agents, I would individually beg to suggest that your office issue circular instructions or suggestions on this subject.

Ever since assuming charge I have advocated the sale of horses and the purchase of cattle by these Indians. They have in the neighborhood of 2,500 horses, many more than they need, and only about 250 cattle, most of the latter being owned by a few progressive men, namely, Wallace Wells, William Carpenter, John Fleury, Robert Philbrick, Louis Loudner, Dog Back, and Edward Ashley. These men are

worthy of mention because of the steady effort they are making to improve their condition.

If the coming winter should be severe, I fear that many Indians of this tribe will suffer. They had only a very small amount of seed corn and oats, had no implements for cultivating corn, and their fields are too foul for small grain. A very few have considerable crops. Most have very small and very poor ones, or none at all. Hay is abundant this year, and a large amount has been cut and stacked.

This is a grazing rather than an agricultural country, and the grazing value of this reservation is going to waste every year for want of stock. I would urgently recommend that a part of the funds of this tribe be invested in 1,000 young cows, to be bought in the spring and to be held for some years, with their increase, as the common property of the tribe.

Some parts of the reservation are rather distant from water, but we are in the artesian basin, and, I am confident, the entire reservation could be made available for grazing by sinking a very few artesian wells. I regret to report in this connection, however, that the well which was commenced about 15 miles northwest of the agency, on the reservation, last year is not yet completed. It has been drilled for about 1,300 feet. As you have previously been informed, the artesian well on the school farm adjoining the agency nearly ceased to flow early this spring. I am satisfied, however, that this is due to its never having been completed according to contract. No perforated or slotted pipe was put into it, and it has consequently been nearly filled (apparently from bottom to top) with material forced into it by the flow of water. Under authority already received from your office, I hope to have this well properly completed and flowing at an early date.

The schools of the agency are in excellent condition. The Industrial Boarding School is, in my judgment, a desirable model. Certainly it is better in very many respects than any school which is available for thousands of white children. The premises are particularly neat and attractive, and the farm and garden have been excellently managed. The superintendent and other employees are doing effective and valuable work, and are doing it with admirable spirit. The plant, though old, is, on the whole, fairly good. The laundry, however, is very poor, and a new one should be built. The girls' building (including the dining room, kitchen, etc.) is also unsatisfactory, but has recently been put into greatly improved condition by much-needed plastering, painting, kalsomining, etc. This school should also be supplied with a workshop and facilities for manual training, a special report on which subject has been submitted.

The Grace Boarding School, located 12 miles east of the agency, has also, under the principal teacher, F. W. Wertz, done excellent work during the year. This school is badly handicapped by having no adequate or proper source of water supply. The water used is obtained from a creek, is hauled about $1\frac{1}{2}$ miles, and is frequently unfit to use. I would urgently recommend that a 2-inch artesian well for this school be sunk at the earliest possible date. This would be adequate for all purposes. A stable is also needed here, and some repairs to the main building, concerning which a report has been submitted. This school has an excellent farm and garden.

Both of these schools, and the agency, also, greatly need good cisterns, an estimate for which will be submitted soon.

The Immaculate Conception School, under the immediate supervision of the Rev. Father Pius Boehm, is located 18 miles from the agency, and was formerly a contract school. It no longer receives aid from the Government, but is nevertheless doing excellent work, both in its class rooms and in its industrial training. It has a good farm, excellent crops, and a good herd of cattle; also swine and poultry. It will have all the pupils which it can accommodate during the coming year, and in my opinion be justly entitled to subsistence, clothing, and fuel for them. Those in charge here receive no compensation for their work, which seems to be a labor of love. The pupils seem to love their teachers as much as at any school which I have ever visited.

From the report of Dr. Howard L. Dumble I extract the following:

As a rule the health of the Indians has been good during the past year. There has been no epidemic of a serious nature. There were 37 deaths, 26 of persons over 5 years of age and 11 of children under 5. Fifteen deaths were from pulmonary tuberculosis, 2 from lymphatic tuberculosis, 6 from causes incident to old age, 7 from unknown and 7 from miscellaneous diseases. The death rate for the five preceding years was 53, 49, 54, 52, and 48, respectively. There were 52 births, as follows: Full-bloods, 22 males and 22 females; mixed-bloods, 5 males and 5 females. The average birth rate for the preceding five years was 45. Were it not for tuberculosis in the various forms, these Indians would be a comparatively healthy people. Syphilis, so common among the Indians generally, is practically unknown among this tribe. Of acute diseases, conjunctivitis and bronchitis are the most common.

The health of the school children as a rule was good, though several had to be dismissed before the end of the year on account of phthisis.

The sanitary condition of the schools is good, with this exception: Grace School is sadly in need of a good water supply. Except for a small amount of rain water caught in a cistern, all the water used has to be hauled a mile and a half in a tank wagon from a creek which during the summer and fall is not better than a stagnant pond, and that is anything but healthful. A 2-inch artesian well would, at small expense, furnish an abundance of good water and should be sunk without delay.

At the beginning of the school year I examined every child of school age on the reservation and every one in fit physical condition was placed in school.

As a rule the Indians do not keep their premises in the best sanitary condition, though I believe they are slowly improving in the care they give their homes. Two years ago all their houses were whitewashed, and should be again as soon as possible.

The Indian medicine man is practically a thing of the past on this reservation. The Indians very generally apply to me for treatment, though they often allow cases to become very serious before notifying me. During the past year I made 705 visits to sick Indians at their homes and put up about 3,000 prescriptions at my office.

In conclusion, I desire to express my high appreciation of the uniformly courteous treatment accorded me by your office.

I remain, very respectfully,

JAMES H. STEPHENS,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF CROW CREEK SCHOOL.

INDUSTRIAL BOARDING SCHOOL,
Crow Creek, S. Dak., August 29, 1898.

SIR: I have the honor to submit the following report relative to this school for the year ended June 30, 1898:

Attendance.—The total enrollment during the year was 152 pupils, including Indian helpers. The number in attendance one month or more was 147; the average attendance 134.18.

Schoolroom work.—This was more carefully graded and systematized than heretofore, and was, I think, reasonably satisfactory. An exhibit was prepared for the Trans-Mississippi Exposition, which was very kindly mentioned by the Indian Office, and makes a creditable showing. A good deal of time and labor were spent in preparing a closing programme, manufacturing costumes therefor, etc., but the interest which both the pupils and their parents take in these programmes seems to wholly justify the interference with routine work which they necessitate.

Industrial work.—The domestic and other industrial departments have, I think, been exceptionally well managed throughout the year. In these I believe that the most valuable work of the school is being done, and in this line rather more is accomplished for the girls, I think, than for the boys, though as to this I may be mistaken. The girls rotate regularly through the kitchen, bakery, dining room, sewing room, dormitories, laundry, and dairy, and in each line of work they become really capable and proficient. Each large girl in the school can cut and make her own clothing; can, without assistance, prepare a good meal, and bake the bread and pastry therefor; can properly care for milk and make good butter, and can do all other kinds of ordinary housework. Owing to parental opposition to transfer to nonreservation schools, a good many of our older girls have for several years been graduating directly into homes of their own by marriage. And it is very encouraging to note that their homes very markedly evidence their school training.

The boys, under the supervision of the manual-training teacher and the farmer, care for the school live stock, and for the school buildings and premises in the way of repairs and general outside work. They also cultivate the school farm and garden. We have no shops other than a small shoe shop, for repairs only; and a very inadequate carpenter shop, located in a corner of the barn which is needed for more appropriate uses. Constant effort is made to cultivate thrift, industry, and self-reliance, as well as to impart elementary information.

Farm and garden.—The school cultivates about 100 acres of land. This season has been an exceptionally favorable one, and our field and garden crops are better than they have been for several years past. An abundance of early vegetables was raised. Oats have been harvested and are very good. Corn promises well, and we expect to dig 1,500 to 2,000 bushels of potatoes, about one-half of which will be sufficient for the school. Many hundreds of pumpkins, melons, cabbage, etc., are maturing. From 18 acres of alfalfa one crop of hay has been cut and a second crop is ripening. These results have been secured this year without irrigation, but in an ordinary year would be impossible without it. The artesian well from which it was expected to irrigate the entire farm nearly ceased flowing last spring and we have been unable to reopen it. The failure of this well seems to have resulted from its never having been completed according to contract.

Stock.—The school live stock and poultry have done well during the year. The pupils have had a reasonable abundance of milk, butter, and eggs, and about \$600 worth of surplus stock was sold from the school herd.

In this connection I desire to call attention to the fact that the school has no grazing land for its stock. Considerable land near the school has heretofore been used by the school as grazing land, but it is all allotted to Indians, who are beginning to object to such use of it unless they can be paid for it.

Buildings and premises.—The school is favorably located and the premises are naturally attractive and suitable for school purposes. The buildings though old are, with one exception, in good repair, and the painting and calcimining now being done will put them in excellent condition. The exception referred to is the laundry building, which is not worth repairing, and concerning which several special reports have been made. Some other needs in the way of equipment have also been mentioned in special reports.

Health.—The report to be made under this head is similar to that which has frequently been made before. There have been no epidemics, no deaths in the school, and but few cases of serious acute illness; but scrofulous and consumptive tendencies have been always with us. The difference between total enrollment and average attendance is almost wholly due to health considerations. A large number who were enrolled were subsequently excused by the physician

for varying lengths of time because they were found to be breaking down in school. In further explanation it may be mentioned that (this being a reservation school) it frequently seems desirable, because of home conditions, to enroll pupils whose health is doubtful or unsatisfactory. Sometimes there is obvious gain in school and sometimes the reverse. Also, with painful regularity each year, some of those who have previously been considered strong and healthy break down more or less suddenly into consumption. The truth seems to be that the entire tribe of Crow Creek (Lower Yanktonai) Sioux Indians is scrofulous and consumptive.

In the school very especial attention is given to sanitary conditions, to the general care of health, and to the matter of arranging schoolroom and industrial work with careful reference to the health and strength of each individual pupil. But 6 pupils who were enrolled during the year have died, and as many more will probably never be able to return. In this connection it may be pertinent to mention that the school continues to care for its sick pupils in so far as it is possible to do so, even after they are excused and go to their homes. The pupils' society in the school has a committee for that purpose, and the school regularly supplies milk, vegetables, ice, etc., to those who are sick and can be reached. Incidentally this very desirably affects the attitude of the adult Indians toward the school.

Employees.—The school has 11 white employees and 13 who are Indian. In the latter class are one schoolroom teacher, at a salary of \$540 per annum; and the farmer, at \$900 per annum. With a very few exceptions, which have been noted in efficiency reports, all employees have been admirably faithful and efficient throughout the year. Social unpleasantness and lack of harmony in work have been practically unknown, though perhaps in a few cases some effort has been required in maintaining that condition.

An employees' reading circle was maintained from about October 1 to May 1, and was very pleasant and profitable.

The statistical information required by the Indian Office I have handed you in a separate report.

In conclusion, I desire to express my high appreciation of the intelligent interest in the school which you have manifested, and to thank you for your courtesy and vigor in contributing in every practicable way to its successful conduct.

Very respectfully,

FRANK F. AVERY,
Superintendent.

JAMES H. STEPHENS, *United States Indian Agent.*

REPORT OF SUPERINTENDENT OF GRACE SCHOOL, CROW CREEK RESERVATION.

GRACE BOARDING SCHOOL,
Crow Creek, S. Dak., August 31, 1898.

SIR: I respectfully submit my first annual report of this school for the year ending June 30, 1898:

We opened school August 28, 1897, with an attendance of 43 pupils—17 boys and 26 girls. Within a month the number increased to 50 pupils, and later one more was added, making the total enrollment for the year 51 pupils—21 boys and 30 girls. This made an increase of 15 pupils over the enrollment of the previous year. There were others who desired to enroll their smaller children in this school, but, the school having all it could accommodate, we could not take more than the above number. The average attendance for the year was 49½.

The health of the school was good. We had no sickness to speak of during the year. The pupils seemed contented and happy, and did their duties, with a few exceptions, cheerfully. We did not have any runaways in the year.

This school being small, enabling the employees to give personal attention to each pupil, and the arrangement of the building being such that the employees and pupils mingle together all the time, makes it a very desirable school for young children first entering school life. This school is very much in favor with parents who have children old enough to enter school the first time. Of the number enrolled last year, 18 were 5 and 6 years of age; 16 entered school the first time. All these at the end of the year could speak English readily and had overcome their timidity. All our pupils made rapid progress in acquiring habits of civilized life.

There was a change of matrons during the year, which necessarily unsettled the general running of the household affairs, but, as a whole, everything moved satisfactorily.

We had 14 acres under cultivation during the year—8 of oats, 3 of corn, 1 of potatoes, and 2 garden. The productions were as follows: 72 bushels corn, 60 bushels oats, 56 bushels potatoes, 647 melons, 764 pumpkins, 426 squash, 6 bushels beans, 4 bushels pease, besides cabbage lettuce, radishes, cucumbers, cantaloupes, and onions.

Owing to the incompetency of the industrial teachers, I thought it necessary that I, with my schoolroom duties, see to the planting and caring of the crops in the garden and on the farm. The industrial teacher and the boys above eight years of age did the greater part of the work. The work was done in a manner not only to teach the pupils under our charge, but as an object lesson to the older Indians. Every Indian in the vicinity of our school has the same lands, implements, and tools that we used.

The progress in the class rooms was fairly good. On account of my being compelled to give so much time to outside work I could not give the attention to the schoolroom which I desired. My assistant, Miss Wright, did all she could, but a school of this size, and the ages and grades we have, it is necessary that two teachers should be in the class rooms during school hours.

I recommended that six of our most advanced pupils be transferred to a more advanced school.

The work done in the kitchen and dining room is commendable to the larger girls. All the larger girls, two at a time, were required by turn, weekly, to go to the dining room and kitchen. Under the cook they were required to make light bread, cakes, biscuits, pies, etc., to cook vegetable and meats, to arrange the tables, and care for the dining room. At the close of the year all the larger girls made, without any directing or oversight, as nice light bread as can be made. They showed similar progress in the rest of the work. They were urged to use their individual tastes in arranging the china on the tables and in the general arrangement of the dining room. This caused vying between the girls to see which could have the nicest tables and dining room. They showed exquisite taste.

The work in the sewing room was managed principally by the matron and the largest girls. The oldest girls have had very good instruction in former years in the sewing room, and they are quite efficient in the cutting and making of clothes. The credit of keeping up the work in the sewing room as it has been is more due to these girls than to the seamstresses we have had.

Under the supervision of the cook and laundress the work was done in the laundry by an Indian assistant and the larger girls. The work was done in a way to fit the pupils' conditions at their homes.

The school suffered on account of the incompetent help we had in the positions of industrial teachers and seamstresses. We had during the year three different industrial teachers, necessitating four changes. The seamstress's position was vacant three months during the year, and to keep it filled the rest of the year it required two changes.

To our live stock of the school we added 2 calves, 50 chickens, and 2 pigs. With the exception of a small cistern, our water supply for this school is the Missouri River, nearest point about 5 miles; and the Crow Creek, $1\frac{1}{2}$ miles from the school. We have been getting our water from the latter. For three months in the year the water of this stream is stagnant. During the winter it is dangerous and laborious work to keep a sufficient supply of water for the school and our stock.

Grateful for the kindness and courtesy of my associates in the Indian Service,

I am, yours, very respectfully,

F. W. WERTZ, *Principal Teacher.*

JAMES H. STEPHENS,
United States Indian Agent.

REPORT OF MISSIONARY, CROW CREEK RESERVATION.

CROW CREEK AGENCY, S. DAK., *September 3, 1898.*

SIR: The Crow Creek Mission of the Episcopal Church was begun in 1872, and has since been steadily growing. Its influence is spread over the whole of the reservation. A white clergyman, the Rev. H. Burt, is in charge, and under him is a native minister, the Rev. David Tatiyopa, and 3 native lay readers.

There are five mission stations, at four of which are frame church buildings and at one a log chapel. Sunday services are held at all of the stations.

The women have their societies and meet weekly for sewing and religious exercises. During the past year they contributed \$200 or more for church purposes. There are 400 baptized members of the church connected with this mission.

Very respectfully,

H. BURT.

JAMES H. STEPHENS,
United States Indian Agent.

REPORT OF LOWER BRULÉ AGENCY.

LOWER BRULÉ AGENCY, S. DAK., *August 23, 1898.*

SIR: In compliance with instructions contained in your letter dated June 11, 1898, I have the honor to submit the following report of the affairs of this agency for the fiscal year ending June 30, 1898:

Agency.—The agency headquarters are located on the Missouri River, about the middle of the reserve, 30 miles from Chamberlain, S. Dak., on the Chicago, Milwaukee and St. Paul Railroad, which is the railroad station and shipping point. The post-office address is Lower Brulé, S. Dak., and we have a mail service six times a week via Crow Creek Agency to Chamberlain. The agency buildings are in good repair, though in need of painting, which I hope can be done the coming year.

Reservation.—The land on this reserve is classed as grazing land, for which use it is fairly well adapted, although in some sections of it water is difficult to obtain, and a considerable portion is devoid of timber. No seeds were issued this year and no special effort was made to induce the Indians to cultivate the land, it being far more advisable to have the Indians devote their time to the care of stock and storing of hay, which is likely to prove more remunerative.

The Indians on this reserve are a portion of the Sioux Nation, and the annual census taken June 30, 1898, shows the following:

| | |
|--------------------------------------|-----|
| Males over 18 years of age..... | 342 |
| Females over 14 years of age..... | 306 |
| Children of school age, 6 to 16..... | 210 |

The past year could scarcely be called a successful year for these Indians in consequence of many of them losing their cattle last year on account of the severity of the winter, though whatever cattle they have left are doing well, and every effort has been put forth the present season to have these Indians store sufficient hay to carry their cattle through the coming winter.

The Indians have furnished the Government, during the fiscal year ending June 30, 1898, with 150,000 pounds of gross beef, for which they were paid \$4,604.75. They have transported with their own teams 370,088 pounds of Government freight, for which they were paid \$1,480.48.

Education.—The industrial boarding school has had a prosperous year, and I am pleased to say much good work has been done. The attendance has at all times

been kept up to its full capacity. The schoolroom work has been very good, the several teachers displaying much earnestness and efficiency in instructing the children in the various grades of the school. The other departments have been presided over by competent and faithful employees, who have done their work well. The school farm and garden have been well cultivated by the boys, with the assistance and under the direction of the farmer.

Missionaries.—Three churches are represented on this reserve, viz, Protestant Episcopal, Presbyterian, and Roman Catholic, and they have all labored faithfully in the work of civilizing and Christianizing the Indians.

Sanitary.—There has been no sickness of a serious character during the year. Consumption and scrofula are the main afflictions of these people and demand the greater part of the time and attendance of the agency physician. No epidemics or contagion have occurred. By experience and teaching the Indians are realizing the importance of proper ventilation in their houses and the necessity of cleanliness in their habits. Good results will follow. The physician has been faithful in the discharge of his duties, responding promptly to calls and making regular semimonthly trips to the White River subissue station, 30 miles distant.

Police.—The police force has continued to perform its duties in the same satisfactory manner as in years past. Their duties are sometimes arduous, and the pay of these faithful employees should be increased.

Conclusion.—I desire to thank the Department for the assistance and support rendered me in the performance of official duties; also the employees for the prompt and faithful performance of their several duties pertaining to the conduct of the affairs of the agency.

Statistics and report of Superintendent Crandall herewith inclosed.

Very respectfully,

B. C. ASH,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF LOWER BRULÉ SCHOOL.

LOWER BRULÉ, S. DAK., *June 30, 1898.*

SIR: I hereby submit my first annual report of the industrial boarding school at Lower Brulé Agency. I took charge the 1st of August, 1897, and found the school well organized, the buildings in good repair, and the plant a very excellent one, consisting of the following buildings:

Girls' dormitory, boys' dormitory, schoolhouse (4 rooms), mess hall and kitchen, laundry, cottage, warehouse and shoe shop, coal house, horse barn, cow barn and cattle sheds, hennery, hog house.

The grounds are regularly laid out and include some 8 acres, all inclosed, with painted picket fence. The capacity of the school is 140, but the average attendance has been somewhat above that. The following is the enrollment and average for the year:

| | Enrollment. | | Average. |
|----------------------|-------------|---------|----------|
| | Male. | Female. | |
| First quarter | 58 | 64 | 109.90 |
| Second quarter | 81 | 85 | 157.41 |
| Third quarter | 81 | 84 | 156.93 |
| Fourth quarter | 77 | 82 | 153.70 |

Literary.—The class-room work is in charge of four teachers. There are eight grades of work, exclusive of the kindergarten. The course of study is essentially that outlined by the superintendent of Indian schools, though latitude in the adherence to a curriculum is necessary in order that certain peculiar local conditions be successfully met.

The character of the work done is not dissimilar to work done in corresponding grades of public schools, though to the casual observer it would seem so, since the Indian child has yet to overcome his inherited racial stolidity. This causes him to be unsatisfactory in all work requiring oral expression. It must be remembered, too, that the communistic social system of which he has always been a part has deadened his originality and made him painfully conscious of the opinions of his associates. These drawbacks are partially offset by great aptness and painstaking in imitative work.

Several pupils are ready for transfer to schools of higher grade, though some have not reached the age limit, and others can not obtain the consent of their parents for removal to a training school.

Evening sessions have been held, but the defective sight of the children and the inadequate lighting of the rooms limit the variety of the work.

Much supplemental reading has been done; a surprising knowledge of current events, as related in newspapers, is shown by the older children.

A literary society has been organized among the children. Except the executive committee, of which the superintendent and the teachers are members ex officio, the officers are pupils of

the school. Frequent debates have demonstrated that the children are capable of some independent thinking.

During the year no slates and very little crayon were used in the principal teacher's department. Writing pads were asked for and received. After serving its purpose the paper was burned. As there were no cases of serious sore eyes among the children of this room, even in March, when sore eyes were epidemic, it is thought that slates and chalk dust contribute not a little to the ocular ailments to which our children are so painfully subject.

The rolling partitions between the recitation rooms continue the source of endless annoyance. It is impossible to secure complete attention in any of the three rooms so separated, as the ordinary conversational tones of teachers and pupils are clearly heard in the other rooms. On this account much of the teachers' energy is wasted and all of the children's thoughts were more or less dissipated by trying to attend to two or more things at once. If a second story were added to the schoolhouse and this new space utilized as an assembly and a reading room, the necessity for rolling partitions would no longer exist. Then sound-proof walls could be substituted for the present nuisances.

Industrial work.—The boys have been taught to care for horses, swine, and the milch herd. They have worked with the farmer in planting and cultivating corn and potatoes. The garden has furnished employment and a good object lesson. Six boys have been detailed to the shoe shop throughout the year. In addition to the general repairing some new shoes have been manufactured. The shoe department is under a full-blood Sioux who learned his trade in the East. He is not only an excellent shoemaker, but is an apt teacher in his line. The apprentices have made excellent progress, and not only do repair work skillfully, but, with the assistance of the shoemaker, turn out a very good shoe, one that lasts much longer than the issue shoe.

The manual-training teacher has had charge of all repairing. He has manufactured considerable new work, including tables, picture frames, etc. The boys with him have been taught the use of tools, to set and glaze glass, to repair locks, to paint, and to do endless little jobs that will be of benefit to them hereafter it is to be hoped.

The girls have, as in most boarding schools, done the work of the kitchen and dining room. They have learned to cook, to set tables, to make bread, to sweep, and do house cleaning. In the laundry they have done most of the washing and ironing. Boys have been detailed to operate the washing machines and do the heavy work.

In the sewing room the girls under the seamstress have made all their own clothing, besides most of the underwear for the boys. The following shows the number of articles manufactured in this department during the year:

| | | | |
|------------------------|-----|------------------------|-------|
| Aprons | 228 | Slips, pillow | 214 |
| Bonnets | 6 | Sheets | 129 |
| Curtains pair .. | 20 | Skirts | 40 |
| Dresses, night | 124 | Tablecloths | 86 |
| Drawers | 79 | Towels | 254 |
| Dresses | 248 | Waists, assorted | 81 |
| Elastics | 343 | | |
| Pants | 29 | Total | 2,016 |
| Suits, union | 135 | | |

Sanitary.—The health of the children has been very fair. Out of a total enrollment of 162, 16 have been withdrawn, 12 on account of ill health. There have been no deaths in school, but three of the withdrawn pupils died at their homes. Many of the children are afflicted with scrofula, which manifests itself in different forms. About all the sickness among the children, including eye trouble, has been from glandular or pulmonary scrofula or tuberculosis. There have been many cases of conjunctivitis. It is also true in this school, and has been my observation elsewhere, that Indian children are as a rule much more afflicted with eye troubles than white children. It would be a wise provision if they could have their eyes examined at least once a year by a professional oculist, and those requiring glasses be properly fitted.

Farming.—The school farm is not extensive, but sufficient to teach our boys the value and importance of planting corn and raising vegetables. The artesian well, which was completed in the early fall, gave promise of abundance of water for irrigation, but the well soon clogged, and now only furnishes a limited supply of water for stock.

Religious training.—The children have attended on Sundays worship in their respective churches. Sunday-school in the afternoon has been held in the churches, and for those not affiliating with the Episcopal and Catholic churches, the only two represented at the agency, a Sunday-school has been held in the school.

Improvements.—I take pride in referring to the improvements granted and made during the year. Among the first and most important may be mentioned the sale of the school herd of range cattle and the purchase, with funds accruing from same, of a herd of 21 head of Jerseys, 18 of which are registered in the American Jersey Cattle Club books. The substituting of base-burners for the common wood and soft-coal stove added materially to the comfort of the children the past winter and insured the water pipes from bursting. The purchase of a larger and improved bake oven has added much to the kitchen and bakery. Further improvements may be mentioned in the purchase of a school hack, fixtures for the laundry, including a Wilks hot-water heater and 101-gallon hot-water boiler, stationary tubs, mangle, and laundry stove. A dairy building, 16 by 28, with cement basement for cooling room, with water and sewage connections, will be completed at the close of school. A hospital is being constructed and will be ready for the opening of school in the fall.

Recommendations.—One of the greatest needs at present is a better system of closets. At present the earth vault is in use, but is unsatisfactory, and the portable trough that has been recommended is impracticable in a cold climate.

The school buildings need repainting, which should be done before cold weather.

An industrial building, with a shop for the manual-training teacher and one for the shoemaker, is needed.

Conclusion.—In conclusion, I desire to express my thanks to the employees of the school, both Indian and white, who have at all times performed their duties faithfully, and to them is due much credit for the advancement and success of the school.

To Maj. B. C. Ash, United States Indian Agent, I acknowledge my thanks for the hearty support and cooperation in building up and advancing the interests of the school.

C. J. CRANDALL,
Superintendent.

REPORT OF PINE RIDGE AGENCY.

PINE RIDGE AGENCY, *August 24, 1898.*

SIR: In making report of affairs on this reservation for the fiscal year just closed, I have the honor to submit the following:

The year has been one of peaceful progress among these Indians, none the less certain and lasting because slow.

Agriculture.—As stated in previous reports, farming on this reservation is not practiced by these Indians, and is not practicable, except to a very limited extent where there are means of irrigating the land. Heavy and unusual rains in April and May last gave reason to expect a crop this year. Some fields were planted in that hope, but three days of hot winds in June utterly ruined them, and there will be no yield.

The country has no value except for stock raising, to which it is well adapted. This industry is steadily gaining, and the Indians show a growing desire to have cattle and to care for them. Many of them are experts in handling stock at round-up occasions and when delivering beef cattle at the agency. The sale by the Indians of more than 2,000,000 pounds, annually, indicates the extent of this industry. With proper care the yearly output of beef steers will soon double. At the round-up this spring nearly 8,000 calves were branded, a larger number than ever before. The determination to fence the northern boundary of the reservation is a long step in the right direction, and will greatly promote the industry of cattle raising among the Indians.

White men married to Indian women, enterprising mixed bloods, and nearly all Indians who are large owners of cattle, formed during the winter a stock association, with the purpose of protecting brands, exterminating wolves, and for mutual benefit. So far this action has not received the official sanction of the Office, without which it will probably prove a failure.

Allotments.—No allotments have been made on this reservation, and the Indians prefer to continue the joint ownership of their lands, fearing that if allotments are made white settlers will be permitted to come upon the reservation and monopolize the grazing.

Education.—The work of educating the Indian youth is progressing satisfactorily. In February the new boarding school was opened, with nearly 200 pupils, and continued in session until the close of the school year. The employees sent, although generally without previous experience, proved on the whole unusually desirable and efficient. They showed earnestness and zeal in their work, and the school gives promise of being one of the best in the service.

It is, however, still my opinion that the results obtained in well-conducted day schools located in the camps are far greater than those gained in any boarding schools. The reservation had 31 of these in successful operation at the close of the school year. In them were enrolled 895 pupils, with an average attendance for the year of 90.1 per cent. This rather low average is due to the distance from school of many of the pupils, who during inclement weather are frequently prevented from attending; also to the prevalence of measles in the camps for a period of several weeks. In the mere advancement of pupils these schools do not show the results obtained in boarding schools, where children are separated from their homes, but they furnish on the whole far the most beneficial mode of educating Indian youth. The influence of each school on the people living within its sphere is at all times plainly noticeable. The Indians realize that in the teacher and his faithful wife they have devoted friends to whom they can apply for help and for advice.

For this reason none but white teachers and their wives should be employed at these schools. Teachers of Indian blood, no matter how well equipped mentally, fail to obtain the respect and influence among the people to the extent necessary for complete success. They lack in self-reliance, are timid in their dealings with the Indians, and do not command their full confidence. They also, as a rule, are unthrifty, saving nothing of their salaries, usually deeply in debt, and frequently desiring a change, do not make permanent homes and get about them the conveniences and comforts usual with white families and desirable as object lessons to the Indians. I would therefore recommend that such as are deemed qualified be employed only in boarding schools, where by association with white employees and continued observation of proper methods they may in time gain the self-reliance and executive ability necessary for the proper conduct of day schools.

I am gratified at being able to report that the children of this reservation of school age, excepting those physically disqualified, are now practically all enrolled, and will be attending school another year. Attention is invited to the reports of

Superintendent Butterfield, Ogallala Boarding School, and Mr. W. B. Dew, inspector of day schools, herewith, for further information on this subject.

Missionary work.—Rev. C. E. Snavely, Episcopal missionary; Rev. A. F. Johnson, Presbyterian missionary, and Rev. Father Aloysius Bosch, S. J., Catholic missionary, have continued their labors on the reservation during the year with good results.

Court of Indian offenses.—This court, consisting of four full-blood Indians, selected from different districts, has met regularly, holding two sessions each month. The court commands the respect of the Indians and is of great assistance to the agent in dealing with minor cases of wrongdoing.

As heretofore reported by me, there is pressing need for remedy regarding divorces among Indians. Either the Indian court should be given jurisdiction in these cases, under such safeguards as may be considered necessary, or other lawful means found whereby divorces can be obtained by Indians in the numerous justifiable instances constantly arising.

The question of jurisdiction in criminal cases arising on Indian reservations is a perplexing one. Under the decision of the Supreme Court in the Draper Case the United States courts hold that jurisdiction, except regarding full-blood Indians, is vested in the State courts. This causes the anomaly of Indians considered as having equal treaty rights, and who are subject to the same control on reservations, being under entirely different jurisdictions according as they are full bloods or mixed bloods. Fall River County, S. Dak., to which this reservation is attached for judicial purposes, is deeply in debt, and as no taxes are collected by it on the reservation, the burden upon the county incurred by prosecuting criminal cases arising on the reservation is a serious one. It appears to me that Congress should fix the status of these mixed bloods, and provide for them the same jurisdiction as is provided for Indians of full blood, or that they should cease to be considered Indians in any sense, or for any purpose whatever.

Road making.—The usual amount of road repairing has been done under direction of the district farmers, the work being performed by Indians, as required by regulations.

Industries.—There are no industries practiced upon this reservation except stock raising, freighting of supplies, and furnishing wood and hay for the schools and the agency. As before stated, interest in stock raising is increasing each year, as is the number of horned stock. Freighting is confined to hauling supplies from the railroad to the agency, and from the agency to the outlying districts. By means of this the Indians derive no inconsiderable revenue, and have been enabled to purchase and pay for all the wagons and haying machinery they require. As farming is not practicable, and the reservation affords no opportunity for mining, fishing, lumbering, or manufacturing, the sole industry of a permanent character must continue to be, as now, the raising and fattening of cattle, and this is being fostered in every possible way.

There have been during the year 279 births and 207 deaths, showing an increase of slightly more than 1 per cent in population. This is attributable to the increasing confidence of the Indians in the agency physicians, and the consequent more rational treatment of the sick. Attention is invited to the following extracts from the report of Dr. James R. Walker, agency physician:

The agency physician is expected to attend 6,600 people, whose homes are scattered over 5,000 square miles of hilly country and bad lands, where one must travel more than 100 miles going from the agency to visit those living farthest away. The agency physician has received simultaneous calls to visit sick at the extreme settlements in opposite directions, and his trip may be extended several days because of the calls he receives from Indians who learn of his presence in the various settlements; consequently the sick must wait some days before he can see them.

It is important that a physician remain at the agency, for the boarding school daily requires his services, and daily many persons come, some from the longest distances on the reservation, for treatment or supplies of medicines, and if the physician be absent their disappointment will be quite serious.

For these reasons it is impossible for the two physicians who are now at this agency properly to attend the sick, and the Indians are compelled to depend in some degree upon their native medicine men, consequently prolonging their influence and equally delaying civilization. This does not appear to be by choice of the Indians, for in every instance when the agency physician was near, the Indians have asked him to see and prescribe for the sick, even when the native medicine men were present and performing their ceremonies.

If conditions similar to those prevailing on the reservation existed in communities of white people, they would give remunerative employment to five or six physicians, for during the fiscal year closing June 30, 1898, the agency physician and his assistant treated 2,522 cases, all of which required the exercise of professional knowledge. In addition to these, there were daily a number of trivial complaints which required time and attention, and because of the growing inclination of these Indians to rely upon the medicines supplied by the Government rather than those of the medicine men, the physician must dispense the remedies they ask for.

A bare statement of the cases treated gives but little idea of the work done, for rarely a day passes without the physician being required to visit patients at a distance from the agency, one case requiring 600 miles of travel, another over 500 miles, and many others little less. Without considering the minor work, or the medicines supplied, the cash value of these services of the physicians, at a moderate charge, if rendered in an ordinary community, would be \$12,732.

The prevailing disease among these Indians is tuberculosis; their habits promoting its transmission and development. A larger part of the remaining diseases which afflict them are the results of filth, exposure, and indiscretions, and at least 75 per cent of all the cases treated are of preventable diseases. For this reason the agency physician planned field work among the people to aid them in bettering their sanitary conditions, but the urgency of sick calls has so far prevented his carrying out this plan.

According to the returns of the several farmers in charge of the various districts of this reservation, which returns have been embodied in the quarterly reports forwarded to the Department at Washington, there have been 273 births and 197 deaths among the Indians and mixed bloods during the last fiscal year; during the next preceding year there were 278 births and 286 deaths, which shows an improved condition among the people.

In February, 1898, the boarding school at this agency was opened, and the day-school physician was placed in charge of the medical requirements of the school, since which time he has treated 122 cases of sickness there, including one case of typhoid fever and one of scarlet fever, which were so admirably handled that they were not communicated to any other persons. Besides attending to the sick, the professional knowledge of the physician was frequently called for in matters pertaining to the welfare of the school. The events of the school fully establish that it must have the services of a physician conveniently located. The day-school physician has also acted as assistant agency physician, his services in this way being of great benefit to the Indians in meeting their wants at the agency and permitting the agency physician to attend those at a distance, without disappointing those who might come to the office during his absence. It is probable that this arrangement has proven much more satisfactory than would the appointment of a physician for the school alone.

The demands of the sick would give full employment to another physician on this reservation, who should be a married man, and located at Kyle, about 50 miles from the agency, where there is a good dwelling on a desirable location, fenced in, with a good well and outbuildings.

The two physicians here are greatly overworked, and no expenditure of money to civilize these Indians brings so many and such lasting good results as does the employment of faithful and efficient physicians to treat their sick, and, by gaining their confidence, teach them an improved manner of living. Since I came to this agency there has been a very marked improvement in this respect, due entirely to the ability and zeal of Dr. Walker and his present able assistant. His recommendation that another physician be allowed is heartily approved.

In conclusion I wish to commend the employees of this agency, who are zealous and painstaking, and who, with very few exceptions, are all that I could desire.

I also wish to express to the Office my thanks for the confidence and support so liberally given me on all occasions.

Very respectfully,

W. H. CLAPP,

Major United States Army, Acting Indian Agent.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF OGALLALA SCHOOL.

OGALLALA BOARDING SCHOOL,

Pine Ridge, S. Dak., July 1, 1898.

SIR: I have the honor to submit the following report of the Ogallala Boarding School for the fiscal year ending June 30, 1898:

Opening.—School opened February 7, 1898. The delay was owing to the failure of the contractors to complete the buildings sooner. In this short term of less than five months I can not report particularly on progress. The organization of a new school is perhaps, if well done, enough for so short a time. It seemed that the year's work must be done in five months. Of the extra work included in the settling and arranging of a new plant, some has been done and some remains to be done. In the way of disciplining, organizing, and classifying preparatory to the next year's work, the school has been a success.

February is the most unfavorable month in the year to require children to begin this new mode of life. This, together with the fact that several important employees did not report until a month later, made hard work and long hours as an introduction to the new work.

Attendance.—The highest enrollment for the term has been 97 males and 97 females. Of these the largest number were selected from the day schools, some from localities not within reach of the day school, and other pupils from nonreservation schools. Among these latter were a number who had attended at Carlisle, Lincoln, Hampton, Haskell, Genoa, Flandreau, Pierre, and Wabash. These were not graduates from these schools, but had been returned from there. It seemed like reversing the desired order of transfer, and very objectionable, to accept these children after attending nonreservation schools, but they were of school age and not in school, so could not well be refused.

I desire here to speak of the good work done by the day school, noticeable as pupils were received. As a rule the pupils from the day school were those of full Indian blood. In most cases they came from the camp clean and neat, and pleased to show by their appearance that they had been to school before. Parents, too, were generally proud of their children, and wanted to tell us of their good records in the day schools.

We were obliged to record a few runaways, but only as the result of an uncontrollable though natural homesickness. This, however, wore away and gave us no trouble toward the latter part of the term, when contentment seemed to be general.

The plant as a whole is admirably adapted to the needs of such a school, and is in this respect, perhaps, one of the most desirable in the service. The separate dormitories for girls and boys, each with a capacity of 100 to 110 pupils, are well lighted, comfortably heated, and well ventilated. The shower baths are now all that can be desired. The dining room, kitchen, and bakery, important features, are so arranged and equipped as to reduce the labor in those departments to a minimum. The laundry, usually a scene of extreme drudgery, here, with its partial equipment of steam machinery, affords a pleasant work for laundress and pupils. Steam heat and electric light, enjoyable always, are extremely appreciable in that they so greatly reduce the danger by fire. The water and sewer system excellently supply our demands in those lines.

There are, however, many minor needs which were overlooked and which we hope, with our own force and assistance from the agency, to supply during the coming year.

Health.—I am glad to report a constant care as to sanitation, also general good health of pupils and employees. The improvement in health of pupils was quite noticeable. This department is in the hands of a trained nurse, who acts under the direction of Dr. L. D. Snyder, assistant agency physician, who calls every morning, usually for one hour. These officials have won an excellent record in the treatment and care of a few serious cases. I desire particularly to mention a case of scarlet fever. This occurred in April. It was necessary to keep the patient in the dormitory, occupied at the same time by 96 girls. The case was so carefully quarantined and so skillfully treated that the patient fully recovered and the disease did not spread. In such hands we feel a confidence in the welfare of the school in this line.

Employees.—A majority of our employees are new in the service, but I am thankful for their general interest in the work, faithfulness, willingness, and ability.

Influence.—The moral influence of the school is most excellent. Neither tobacco nor liquor is used. The example of abstinence from these things being set by employees, it is easy to require pupils to abstain also. This has been done quite effectually.

The agency affords three churches, Catholic, Presbyterian, and Episcopal, supported by the missions of these societies. Being within convenient walking distance for the pupils, all attend church every Sunday when allowed to do so, and it has been interesting to note with what pleasure this is done. Employees as a rule attend church. This relation of church and school, each being helpful to the other, is a valuable feature.

Farm.—Farming is not a success in this country without irrigation, and in general not practical for the Indians here; but with a comparatively small outlay, and the labor the school can furnish, about 100 acres of school land may be irrigated, and the farm may become an important feature of the school. There is now about 60 acres under cultivation, a part of which by a very unsatisfactory plan may be overflowed during the winter, with occasionally fair results. We have in this year 15 acres of oats, 25 acres of corn, 10 acres of potatoes, 10 acres of garden, with prospects of a fair yield. Within the fiscal year, but before it came under my charge, the farm produced 79 tons of fodder (rye and oats unthrashed) and 500 bushels of potatoes.

In this connection I should mention the irrigation ditch. This ditch is 2½ miles long and has furnished a small amount of water at the school grounds. This year it has not been of any use, though we have done a great deal of work on it. Before it can be a practical benefit it must be enlarged and given a better flow. Now it is easily thrown out of repair, and at its original capacity it is hardly worth the cost of repair.

Dairy.—The school dairy herd is one left over from the old school. It was perhaps originally an excellent strain of Jersey stock, but having for four years been poorly milked by Indian help or turned with calves to save milking it is at present very unsatisfactory as a milking herd. There is, however, a growth of young heifers which should in time prove all that is desired. The children have had for the term a fair amount of milk for cooking and table use. No attempt has been made at butter making.

There is a need of improvement in stable accommodation for cows and young stock and the same for hogs.

We have not yet started in poultry. A sufficient stock in this line with suitable housings would be a profitable investment.

I desire to thank Maj. W. H. Clapp for his support, as agent, in everything for the interest of the school. Much of the success of the school is due to his kindly advice and helpful assistance. In very many ways has he lightened the labors of the school and added to the comfort of the employees and pupils. I also thank Mr. W. B. Dew day-school inspector, for his help in this school through his own work for the day schools.

Very respectfully,

THE SUPERINTENDENT OF INDIAN SCHOOLS,
(Through Maj. W. H. Clapp, U. S. A., Acting Indian Agent).

GEO. M. BUTTERFIELD,
Superintendent Ogalalla Boarding School.

REPORT OF INSPECTOR OF DAY SCHOOLS, PINE RIDGE RESERVATION.

PINE RIDGE AGENCY, *August 25, 1898.*

SIR: I have the honor to submit herewith my report on the day schools of this reservation during the fiscal year ending June 30, 1898.

The census taken June 30, 1897, shows 1,603 children over 6 and under 18 years of age. The following numbers attended school at the places named:

| | Under 6 years. | 6 to 18 years. | Over 18 years. | Total. |
|---------------------------------|-------------------|-------------------|-------------------|--------|
| Day schools | 39 | 859 | 6 | 904 |
| Ogalalla Boarding School | | 195 | 3 | 198 |
| Holy Rosary Mission | | 157 | 4 | 161 |
| Nonreservation schools | | 47 | 25 | 72 |
| State and private schools | | 11 | | 11 |
| Total | 39 | 1,269 | 38 | 1,346 |

Of the 334 children between 6 and 18 years of age who did not attend were the following:

| | |
|--|-----|
| Married, died, or absent | 68 |
| Mentally or physically incapacitated | 144 |
| Excused, as too old to be benefited | 38 |
| Excused for various reasons | 30 |
| No school facilities | 54 |

The average attendance of the pupils in the day schools was 831.53.

The opening of the Ogalalla Boarding School in February, and day schools Nos. 27, 28, 29, 30, and 31, in April, furnished much needed facilities for education, and, as the above table will show, only a few were deprived of school privileges. The moving of two old school buildings to a location convenient for about thirty children will complete our system of day schools and

enable us to place nearly every available child in school. The contract for this has been let, and it is a matter worthy of note that the patrons have agreed to do the hauling, etc., gratis. The opening of the new schools allowed the crowded day schools to be relieved of their excess and furnished facilities for many pupils heretofore without them. The quarantining of the Ogalalla Boarding School, on account of a case of scarlet fever, prevented about ten, who were delayed for various reasons, from attending. The opening of these schools in the middle of the school year naturally caused a great deal of confusion and prevented two of the day schools from getting their quota of children.

The main end sought during the year has been to put every available child in school, especially the younger ones, and it is thought that during the coming season not a single child will be out of school, except a few who are considered too young for the boarding school and who live too remote from a day school. When each child is required to attend school from the time he is 6 until he is 18, the resultant benefit must needs be great, more especially as he is daily subject to discipline and has some occupation. He can see something in the future better than the war path, and will consider the white man's silver dollars more to be sought after than the scalps of enemies. And though he can get but little instruction in the only occupation possible on the reservation—stock raising—yet the habits of industry acquired will cause him to pay more attention to this when he becomes a man.

The day schools are becoming yearly better systematized, and a clearer conception of what education is needful is being gained. The employees are exercising more watchful care over the physical and moral conditions of the pupils by visiting them in their homes, administering simple remedies, and showing their sympathy in every way possible.

The district teachers' meetings, which are held monthly when the weather permits, are productive of much good, more especially to the new employees. These meetings are held wherever a sufficient number can reach a central point.

Probably the greatest progress during the past session has been made in speaking English. Two schools forbid the use of the vernacular on their school grounds, and though some of the attempts were crude in the extreme, yet the desire to learn was the greater, and the consequent progress more marked.

In the housekeeper's department special care was given to providing each child with changes of warm underwear; the quantity of cotton flannel was sufficient for this purpose, and by requiring the children or their mothers to wash these garments at home, regular changes were inaugurated.

In this connection I desire again to emphasize the crying need of some room at each school in which children can be bathed regularly. Clean clothes on unwashed bodies is an anomaly abhorrent to the civilized man, but not to the Indian; and he must be shown the utility and comfort of cleanliness before he will make the necessary exertion to obtain it. Anyone aware of the amount of vermin on some of these people knows how necessary regular bathing is. A marked difference can be seen between the children of schools where there are bathing facilities and those where there are none.

The girls make good progress in their industrial work, and are faithful therein. It takes all of their time, as well as the housekeeper's, to do the necessary sewing and cooking, and in some instances, where many of the pupils are small, they can not do the necessary work.

Boys have been taught the use of simple carpenter and blacksmith tools, but from lack of raw material not much has been accomplished.

Gardening has received special attention, and the amount of vegetables raised has been surprising, though in some instances there were failures, due to hot winds and lack of moisture. About one-third of the schools raised potatoes and pumpkins sufficient to supply the pupils during seven months of the session, while most of them raised all the early vegetables they could use. One of the schools has a nice irrigating plant, constructed by the teacher and pupils at no expense to the Government; this irrigates about 10 acres. Others will be constructed during the present year. Seven shops were built of logs, and about as many from worthless buildings on the plant.

The health of the pupils was good, there being few cases requiring dismissal from school, and only six deaths.

The supply of clothing was entirely inadequate. The boys had usually two suits each for the entire term, but about one-fifth could not be fitted at all. One pair of shoes each was furnished, and the same difficulty found as to fit. The amount of gingham and linsey was barely sufficient to make each girl two dresses. Material for underclothing was ample. The deficiency in clothing was supplied in many instances by the parents, but there were numerous pupils in rags and tatters.

The reservations of Rosebud and Pine Ridge held an interreservation teachers' institute at the Ogalalla Boarding School, on this agency, during July 5, 6, and 7. The attendance was about 70. The papers read and the discussions following showed deep interest and careful thought, and will have excellent influence on the work during the coming session. The proceedings were marked by unanimity and good feeling, with scarcely any friction. The evening entertainments, consisting mostly of music, were much enjoyed by all. The total expense for each person did not exceed \$2.

All of our school employees are satisfactory, and most of them eminently so.

The following is a list of employees at the 31 day schools, with enrollment and average attendance. Salary paid each teacher is \$60 per month, and that of each housekeeper \$30 per month for ten months of the year only.

| School | Teacher. | Housekeeper. | Enroll-ment. | Average attend-ance. |
|---------|---------------------|---------------------|--------------|----------------------|
| No. 1. | Mary H. Brun. | None | 29 | 18.84 |

REPORT OF ROSEBUD AGENCY.

ROSEBUD AGENCY, S. DAK., *August 25, 1898.*

SIR: I have the honor to submit the following annual report of this agency:

The agency is located in the southwestern part of the reserve, about 35 miles from Valentine, Nebr., which is on the Fremont, Elkhorn and Missouri Valley Railroad, to which point all supplies are shipped, and then hauled by Indian teams to the agency and substations on the reserve. The post-office address is Rosebud Agency, S. Dak., and we have mail service to and from Valentine six times a week, and a telephone line connects the agency with Valentine.

The reserve contains about 3,250,000 acres of land, all within the State of South Dakota. The Big White River forms the northern boundary; the State line between South Dakota and Nebraska is the southern boundary; on the east the Missouri River is the boundary, and on the west a line running due south from the mouth of Black Pipe Creek to the State line.

The land is all allotted as grazing land. The amount adapted to agriculture is very limited, and in consequence of the scarcity of water and timber in many portions of the reserve no use can be made of the land beyond grazing cattle during the summer and fall months in seasons when the rainfall is sufficient to fill the water holes.

No seeds have been issued to the Indians for three seasons past, and no special effort has been made to induce the Indians to cultivate the soil, although some of them have planted small patches in selected low ground, but the yield has not been such as to justify any great amount of labor being expended in this direction. I have always considered that the Sioux Indians could much more profitably spend their time in raising stock than in any other industry, and consequently every effort is put forth to induce them to take care of their cattle and store hay as being the only means by which they can ever attain self-support.

The Indians of this reserve are the Brulé Sioux, and the census taken at the end of June in a very careful manner gives the following results:

| | |
|-------------------------------------|-------|
| Males over 18 years of age | 1,162 |
| Females over 14 years..... | 1,426 |
| Males under 18 years..... | 974 |
| Females under 14 years..... | 889 |
| Males between 6 and 18 years..... | 708 |
| Females between 6 and 18 years..... | 665 |

The annual census of these Indians is taken on one and the same day in all the districts by the farmers and teachers, each district being properly subdivided, and an enumerator, interpreter, and policeman, who know the Indians, are assigned to this work. The census of 1898 shows an increase over the 1897 census, mainly caused by the enrollment of children of white men married to Indian women, who have been declared by the act of Congress approved June 7, 1897, Public No. 3, to be entitled to the rights of Indians.

The Rosebud Indians entered into an agreement with Inspector McLaughlin, on the part of the United States, on the 10th day of March last, whereby about 430 of the Lower Brulé Indians, who have been living on the Rosebud Reserve south of White River for the past two years, should be incorporated with the Rosebud Indians. This agreement, it is believed, will be ratified by Congress at its next session, and a troublesome matter be permanently settled thereby. These Indians are practically unanimous in their desire to admit the Lower Brulé Indians to this reserve.

During the fiscal year 1898 these Indians have furnished the Government with 1,345 head of beef cattle, weighing 1,385,050 pounds gross, for which they have been paid \$43,725.51; also 600 cords of wood, for which they received \$3,169.13; and 230 tons of hay, for which they were paid \$1,950; and they have transported with their own teams 2,993,356 pounds of freight, and were paid therefor \$10,507.67. In addition to the beef cattle sold to the Government there has been shipped to the eastern markets about 1,000 head, for which they received an average price of \$35.

The year 1898 has been a successful one with these Indians. There has been the usual number of cases of minor offenses, but no serious breach of the peace has occurred, and with the exception of considerable "cattle rustling," order has been fairly well maintained, and I think it can be properly claimed that the Indians are making slow but sure progress.

Allotments.—This work has been continued throughout the year by Special Agent Winder and his assistants. At the close of the last fiscal year 1,355 allotments had been made, and during the fiscal year 1898 there were 883, making a total to June 30 last of 2,238. This number does not represent the actual number of people allotted, because a husband and wife are allotted together; but the agreement lately entered into with these Indians, when ratified by Congress, will enable the wife to receive one-half of the land heretofore allotted to the husband, and this will be a step in the right direction, for in some instances where husband and wife have separated after the allotment has been made, the woman has been left without any land, the husband having received the entire allotment as the head of the family.

The cash payment of \$50 to the 300 allottees of 1896 has been made, and the 400 allottees of 1897 have received the mares, cows, wagons, harness, etc., to which they are entitled under the 1889 agreement.

Schools.—The Government Boarding School having been completed in July 1897, was opened September 1 last, and filled as rapidly as the children could be cared for. Two mission boarding schools have also been maintained during the entire school year, as well as 20 Government day schools. These schools have been conducted in the same satisfactory manner as in previous years, and all have done good work. Visits have been made to all of them by the agent and day-school inspector as often as practicable, and each has been examined by the supervisor. The reports of the superintendents of these boarding schools and the day-school inspector are herewith respectfully transmitted.

Missionary.—The missionary work on this reserve is under charge of three churches, viz: Protestant Episcopal, Roman Catholic, and Congregational, and their representatives have labored in a faithful manner for the advancement of these Indians. The missionary of each church has been invited to make a report of his year's work, and their reports are transmitted herewith for publication.

In this connection I would invite attention to that portion of my report for last year relating to divorces.

Sanitary.—Dr. L. M. Hardin, the agency physician, submits the following report, and I invite special attention to all the recommendations he has made:

During the past year the general health of Indians has been better than any year of my service among them. No epidemic has prevailed to any great extent, and the winter, being of only moderate severity, the number of cases of bronchitis and pneumonia, usually so fatal in the early spring, was diminished. The greatest number of deaths due to any one cause is doubtless traceable to tuberculosis, which seems to make its greatest ravages on the present generation, whose civilization seems to be too rapid. The transition from a stage of savagery to that of prospective citizenship within one generation furnishes a good field of operation for the tubercle bacillus, and we have an abundance of evidence for the statement.

A delayed dentition shows the low vitality among the young children, and partially accounts for the number of deaths from infantile diarrhea during the summer months. Neglect and want of proper care, both of nursing and professional attendance of physician, make the results far from what we would have them.

The great distance physician has to travel and the infrequency of being able to see patient a second time never can be productive of best results. My travel over reservation annually amounts to over 3,000 miles, and that of assistant to an equivalent distance.

A hospital would greatly facilitate our work, yet we do not get any material encouragement from the Department, though the benefits of such an arrangement has been stressed for several years. Many of the Indians are already patronizing a private hospital in an adjacent town, where better advantages are within their reach. Yet many who do go can ill afford it, but as no provision is made at home for them they can not be altogether blamed. The tendency of this procedure is to build up reputations for "town doctors" and to minify the qualifications of those furnished by the Department. Without making any invidious comparisons, we fully

realize that we are hampered in our work in not having provided a hospital at this agency, where operations which require surroundings and attention could be performed and better results hoped for than accrue to patients in their own homes. As it is, the Indian employees around the agency are burdened by having thrust on them their friends who come for professional attendance, and without accommodations for their entertainment, they are forced either to camp out or go into overcrowded houses, and are but little better off than at home, and often worse.

Another crying need of our medical department is a revision of the medical estimate and the addition of many of the newer remedies and proper surgical equipment, as well as better means for dispensing what is furnished. Again, the failure to allow estimates after they are made is discouraging, to say the least.

During the year we have attended 571 males and 489 females—a total of 1,060 cases. Births reported, 99 males, 94 females—a total of 193. Deaths reported, 52 males, 45 females—a total of 97—the greater number of whom were unattended. Among the whites of the reservation, 2 males and 2 females died, while 1 male and 2 females were born during the year. One Indian school girl suicided by hanging on account of some domestic trouble, and two others unsuccessfully attempted the same fate by throwing themselves from the second-story windows of their dormitory. One case of violent death occurred in a young Indian being struck by lightning. Two insane Indians were committed to an asylum during the year. About 25 obstetrical cases among the Indians were attended during the year, many being among fullbloods, and a number have been attended a second time during my three years' service here, attesting the fact that much of their former timidity in calling a physician in these cases is wearing off. The influence of the native "medicine man" is yet quite a potent factor among many of these people, and will continue until better means for better attention is afforded them.

The sanitary condition of Indians' houses is not what it should be, yet it is to be hoped that the influence of the field matrons and teachers, which is always helpful, and who come in more direct contact with them, may improve them on these lines. Better sanitation is becoming possible at the agency, and when repairs and improvements have all been completed, employees and their families will be very pleasantly and comfortably situated.

In my last annual report I called attention to a decision of the United States judge for South Dakota regarding the jurisdiction of the Federal court over Indians in criminal cases. It is very desirable that some action be taken whereby cases coming under the provisions of this decision can be tried in the State courts.

Police.—The police force is to be commended for the highly satisfactory manner in which it has performed the duties required during the year. The pay of this faithful class of employees should be materially increased.

The statistical report is herewith respectfully transmitted.

Very respectfully, your obedient servant,

CHAS. E. MCCHESENEY,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF INSPECTOR OF SCHOOLS, ROSEBUD RESERVATION.

ROSEBUD AGENCY, S. DAK., July 25, 1898.

SIR: I have the honor to submit herewith my report of day schools and agency boarding school of this reservation for the year ending June 30, 1898.

The enrollment and average daily attendance at each of the schools during the year has been as follows:

| Name of school. | Enrollment. | Average attendance. |
|-------------------------------|-------------|---------------------|
| Boarding schools: | | |
| Agency boarding school..... | 224 | 178 |
| St. Francis's Mission..... | 227 | 210 |
| St. Mary's Mission..... | 50 | 49 |
| Day schools: | | |
| Milk's Camp..... | 31 | 27 |
| White Thunder..... | 29 | 26 |
| Little Crow's Camp..... | 20 | 18 |
| Little White River..... | 25 | 21 |
| Oak Creek..... | 33 | 30 |
| Cut Meat Creek..... | 37 | 29 |
| He Dog's Camp..... | 27 | 25 |
| Spring Creek..... | 34 | 30 |
| Black Pipe Creek..... | 28 | 27 |
| Corn Creek..... | 32 | 28 |
| Butte Creek..... | 26 | 24 |
| Whirlwind Soldier's Camp..... | 32 | 27 |
| Upper Cut Meat Creek..... | 40 | 34 |
| Agency..... | 40 | 23 |
| Upper Pine Creek..... | 26 | 21 |
| Lower Cut Meat Creek..... | 30 | 28 |
| Ring Thunder..... | 28 | 27 |
| Red Leaf's Camp..... | 25 | 24 |
| Ironwood Creek..... | 38 | 32 |
| Pine Creek..... | 32 | 28 |
| Total..... | 1,114 | 966 |

I consider the daily attendance of these schools very good, especially when we take into consideration the physical condition of the children and the distance which some of the day-school pupils have to go.

Day schools.—The day schools of this reservation have maintained their excellent record for efficiency and worth that they have had in the past. So much has been said in former reports as to the great good of day schools that it does not seem necessary for me to add anything to what has so often been reported. Having been in the service for several years, and having had both boarding and day school experience, I am fully convinced that the day schools accomplish much more good for the amount of money expended than any other class of schools in the Indian school service.

In this connection I wish to call your attention to some of the needs of day schools. The buildings in many instances need repairs and painting. In most cases there are not sufficient stable and shelter for the teacher's team and wagon. When it is remembered that the teacher provides the team at his own expense and furnishes the feed for same, it does seem that the Government should provide the shelter.

The clothing and schoolroom supplies are in many respects all that could be desired. However, the boys are much better supplied with clothing than the girls. I can not understand why this is so, as it is certainly the policy of the Government to counteract the pernicious characteristic that has existed among these people of treating the women as inferior to the men. For instance, the boys are given two or three suits of warm, comfortable clothing and overcoats; the girls are given only gingham for dresses, cotton material for underwear, and very light shawls. All are exposed to the same climate, and it does seem cruel to have girls so thinly clothed attend school, probably two or three miles from their homes, especially during the winter season. I have not infrequently seen girls come to school with their bedding wrapped around them in addition to their thin shawls, and did not reprove them for it, for it was necessary to keep them from freezing. I would recommend that the girls of the day schools be given material sufficient to make at least two woolen dresses; that they be supplied with woolen underclothing, and good, heavy cloaks and hoods instead of shawls.

Rosebud Boarding School.—This school is located 15 miles east of the agency and 30 miles north of Valentine, which is on the Fremont, Elkhorn and Missouri Valley Railroad. All communication with the school is by the agency, there being no stage or mail facilities for reaching Valentine. I took charge of above school as acting superintendent on April 4, and, being there only a short time, my report must necessarily be short and incomplete.

Plant.—The buildings are all new. Eleven buildings are of brick, well constructed. The dormitories, school building, dining hall, and cottages are heated by steam and lighted by electricity. The heating apparatus, though somewhat expensive, is all that could be expected of a first-class plant. The lighting is satisfactory. During the year there were erected a hog house, henhouse, ice house, and slaughterhouse. These were much needed and will be of much use to the school.

Farm.—There has been allotted to this school 6,640 acres of land. A large part of this land is fit only for grazing purposes. When the school is well supplied with stock cattle it should produce a large part of the beef used by the school. The present herd of cows should be increased. There are now thirteen cows, and as some are not first-class not enough milk and butter are supplied for the use of the school.

The land near Antelope Creek is well adapted for farming. However, little can be expected without irrigation. During the last quarter a dam across the above creek was begun and about half completed, which, when finished, will supply water for irrigation purposes to about 50 acres. This will produce vegetables sufficient for the use of the school and will also provide excellent instruction for the boys.

Literary.—The schoolroom work, while begun under some difficulties, has been very satisfactory. A large number of the children in this school had previously attended either some of the day schools or mission boarding schools. A few had attended nonreservation schools. Consequently it was quite difficult to properly classify and grade the pupils. A course of study was adopted and followed and much good, systematic work accomplished.

Employees.—With few exceptions I consider the employees well fitted for their work and thoroughly efficient.

I believe that the schools of this reservation will favorably compare with those of other reservations, and trust that we may be able to show much progress the coming year.

I thank you for the many courtesies shown me in this work.

Very respectfully,

J. F. HOUSE,
Day-School Inspector, Acting Superintendent Boarding School.

DR. CHAS. E. MCCHESENEY,
United States Indian Agent.

REPORT OF SUPERINTENDENT OF ST. FRANCIS MISSION SCHOOL.

ROSEBUD AGENCY, S. DAK., August 15, 1898.

DEAR SIR: I herewith submit my annual report of St. Francis Mission Boarding School for the year ending June 30, 1898.

The school is situated 8 miles southwest of Rosebud Agency and about 10 miles north of the Nebraska line, on one of the highest points of the reserve. The next railroad station of the Fremont, Elkhorn and Missouri Valley Railroad is 18 miles from the mission.

The institution consists of the following buildings: Besides a church, 50 by 110 feet, the three main buildings contain the schoolrooms, dormitories, play halls, kitchen, and dining room. In two side buildings are the laundry, drying and ironing rooms and the carpenter and shoemaker shops, besides a bath house, blacksmith shop with sawmill, a granary, and four stables for horses, cattle, swine, and poultry, and butchery.

From the quarterly reports of 1887 to 1898 I quote the following respecting average attendance, viz: 65, 73, 83, 94, 96, 99, 127, 148, 163, 182, 209. This steady increase speaks for itself. On the 1st of September, 1897, we had 140 pupils present. The entire enrollment for the year was 233—boys 103, girls 130, their average age being 11 years. The original aversion of the Indians to sending their children to school has been overcome. They offer them on their own accord already at the age of 5. For the coming year I have this day over 60 applicants. This past year we had on roll children of former pupils of this school.

With the exception of some cases of scrofula and pneumonia the health of the pupils has been good. One 11-year-old girl died last June at her home of consumption. We are indebted to Dr. Hardin for his kindness and ever-ready assistance.

Supervisor Anderson, inspecting our school in the beginning of the second term, "found everything in perfect good shape," and acknowledged the good work done by this school.

The grading of the school was arranged into eight grades. In the highest grade Barnes' Complete Geography and advanced history were introduced. History reading was substituted for the sixth reader. Books and papers from a well-supplied library were always on hand for silent reading at appointed times. There was a fixed time for the two higher grades to reproduce what they had been reading.

The work on the farm, in the shops, the sewing rooms with 14 machines, and in the laundry has been carried on like last year. A steady progress was noticeable everywhere. At the end of the year prizes were awarded to those who had distinguished themselves in diligence and proficiency. Among others, two girls each took a sewing machine home. One of them returned last week, saying she had earned already \$3 by sewing.

The dairy work was improved and facilitated by the purchase of a separator and another churning vat.

The applicants for music lessons were so many that it was found necessary to detail a sister exclusively for this branch, and Sister Hildegard had to do all in her power to do justice to her eager scholars. The interest the pupils took in their various instruments was gratifying. Piano, organ, mandolin, guitar, and violin, together with vocal music, were produced at the closing exercises of the school and won for them much praise.

As to our missionary work, I have recorded 199 baptisms and 22 Christian marriages for the past twelve months. These figures show a growing interest in religion. However, in my opinion true Christianity is not so much to be measured by the number of baptisms, marriages, etc., but by the earnest endeavor to live up to their religious convictions, abandoning their old customs, and trying to make an honest living by judicious work. For the past twelve years I have been among these Indians I have seen a steady, though slow, progress also in this line. If the teaching of the missionaries and the executive power of the agent, his teachers, farmers, and all in the field go hand in hand, as it has been the case on the reserve for years, the time can not be far when the last vestige of savage customs will have disappeared.

One gratifying feature of the past year was that girls were not nearly so often "stolen," as has been the tradition for many generations, but previous formal engagements were made like among civilized people. The horror of the "sacred marriage" begins to dwindle away in the same degree as they understand that this is the only basis of a prosperous and happy family life.

Thanking you, dear sir, for your kindness and ever-ready assistance, I am,

Very respectfully, yours,

P. FLOR DIGMANN, S. J.

Dr. CHARLES E. MCCHESNEY,
United States Indian Agent.

REPORT OF MISSIONARY, ROSEBUD RESERVATION.

ROSEBUD AGENCY, S. DAK., *August 15, 1898.*

MY DEAR SIR: For the tenth time I have occasion to present a report with statistics of the work under my charge on this reservation. Consideration of the advance made in many ways during the last nine years curbs somewhat the impatience with which we regard the great obstacles still lying in the way of those who would bring the Dakota Indians wholly into the ways of civilized life. Yet serious obstacles there are, and one of the greatest is the evil of divorce, which, striking at the root of that real unit of Christian civilization—the family—destroys its life and purpose.

Somehow about our borders there seem to be influences creeping in and inoculating the people here and there with the evil virus of the "divorce fever." Are the so-called divorces legal? If not, what of the future status of children, and what of the property which might be inherited?

One hopeful sign in material things is the building of more substantial dwellings by many families, with the evident determination to settle down and court prosperity on that portion of land now allotted to them. One such large family of Indian children now living in a good stone cottage have had before them this season the excellent object lesson of well-cultivated fields of hundreds of acres of wheat, oats, barley, and corn, which they sowed, cultivated, and are now reaping. Such little settlements all over the reservation might help to improve the entire well-being of all the people. The head of that family is an industrious white man. But Indians are as apt as Chinese to imitate the successful labors and experiments of other men when they see the profit in doing so.

I inclose a memorandum of statistics for the past year, to which I may add that 142 souls have been added to the church by holy baptism. With grateful remembrance of your kind sympathy,

Faithfully yours,

AARON B. CLARK.

Dr. CHARLES E. MCCHESNEY,
United States Indian Agent.

REPORT OF MISSIONARY, ROSEBUD RESERVATION.

ROSEBUD, *August 15, 1898.*

DEAR SIR: In compliance with your instructions, I submit the following as a report of the work carried on by the American Missionary Association:

The financial conditions of the society made it necessary to reduce our force on this reservation, so we have had one less native preacher than for several years past. This threatened to be quite disastrous, as our church members are scattered over a very large district; but those who have remained have traveled more and carried on the work with new zeal, and the result has not been what we feared. On the whole, the year has been the most fruitful and hopeful of any in my experience.

I think there is a growing spirit of right living. New standards of living—and of judging actions—are displacing the old and crude ones. This is coming about through the work of the missionaries and day schools very largely, as well as through the work of all right-living employees.

At the same time there is a viciousness growing out of the new forms of vice seen among the whites. While the Indians can not be prevented from coming into contact with these vices away from the reservation, every means ought to be used to prevent drunkenness, licentiousness, and vulgarity on the reservation in the immediate sight of the Indian.

During the year 8 missionaries have been engaged in our work—4 males and 4 females.

| Total..... | 210 |

Very sincerely,

Dr. CHARLES E. MCCHESENEY,
United States Indian Agent.

JAMES F. CROSS.

REPORT OF SISSETON AGENCY.

SISSETON AGENCY, S. DAK., *September 1, 1898.*

SIR: I have the honor to submit herewith my annual report for the fiscal year ending June 30, 1898.

The agency headquarters are located near the central part of the reservation, 10 miles from the village of Sisseton, the terminus of a branch of the Chicago, Milwaukee and St. Paul Railroad, which station is our nearest freighting point. There is a telephone line connecting the agency with the above-named town.

The location of the agency buildings on the eastern slope of the Coteau Hills, a range of natural beauty, has one fault, and that could easily be remedied by the expenditure of a little money. I refer to the supply and conduction of water, which has to be hauled in barrels from a spring three-fourths of a mile from the buildings. This way of getting our water is found to be a drawback, and owing to the inclemency of the weather during a good portion of the year is made disagreeable. More than this, it is dangerous to the buildings to have our water supply so limited, as in case of a fire we would be almost without any means to fight it. But situated as this spring is, higher up than the buildings and only three-fourths of a mile away, the water could easily be piped to the buildings and thus add much to the efficiency of our water supply and protection to the buildings.

The Sisseton Indian industrial boarding school is situated about $1\frac{1}{4}$ miles northwest of the agency. The farm comprises a tract of 480 acres of good land, 40 acres of which are in crop this year for the benefit of the school. During this past summer we have made fences and inclosed a tract of prairie which is now being broken up for crops, and by next season we hope to add nearly an hundred acres to our cultivated land.

I can not speak too highly of our school under the management of Supt. J. L. Baker. It has made a very perceptible gain, although our average attendance will be lower this year on account of sending many of our older pupils away to nonreservation schools. The care that is taken and the general appearance of all the children show an advancement toward the goal that is sought.

The buildings at the school are sadly in need of repair, which should be made in the near future to prevent the buildings from being rendered unsightly and in poor condition for the accommodation of pupils.

The water is of excellent quality, and is forced from a spring about 20 rods from the main building of the school by a hydraulic ram in sufficient quantities for drinking, culinary, and bathing purposes. By a proper system of conduction there would be plenty of water for all sanitary uses. For an extended account of the school I respectfully refer you to the report of Supt. J. L. Baker, transmitted herewith.

The land allotted to these Indians is of very good quality, and with a fair season, if properly cultivated, will yield them sufficient crops to reward them for their labor. This last year was bad for the farmer. Late frosts and lack of moisture caused an almost total failure of crops. However, the prospect for this year is very encouraging. In a great many cases the Indians have rented their lands to white men, for which they receive a fair rental. The lack of seed at the proper time and the funds wherewith to buy prevented many of the Indians from seeding their own land.

The sale of intoxicants to the Indians is still carried on, but in a less degree than formerly. The prosecution of the most notorious of the white men engaged in this dishonorable business has had a very good effect in stopping the sale of liquor to the Indians.

The police force of this agency consists of six privates, and in all cases they have rendered good and efficient services, being always prompt in the discharge of their duties and careful in the obedience of all orders.

The missionary work upon this reservation has been carried on by the Presbyterian, Episcopalian, and Catholic churches, and the result of their good work can be seen on all sides. For detailed accounts of their work I respectfully refer to the following reports of Rev. G. Sumner Baskerville, superintendent of the Good Will Industrial School, and Rev. John Robinson, pastor of the Episcopalian Church:

The following is a report of Good Will Industrial School, located 2 miles north of Sisseton Agency, boarding and day school, sustained by ladies of the Presbyterian Church:

| | |
|--|-------------|
| Teachers (male 1, females 3) | 4 |
| Pupils enrolled (girls 43, boys 45) | 88 |
| Average age of pupils (years) | 13 |
| Number of months school maintained | 9 |
| Average attendance of pupils | 75½ |
| Total cost maintaining school | \$10,430.42 |
| Employees (males 5, females 7) | 12 |
| Acres cultivated | 85 |
| Bushels of wheat raised | 470 |
| Bushels of oats raised | 1,405 |
| Bushels of potatoes raised | 415 |
| Horses belonging to school | 5 |
| Cattle belonging to school | 45 |
| Hogs belonging to school | 22 |
| Buildings, exclusive of barns | 11 |
| Communicants in the seven Presbyterian churches on the reservation | 505 |
| Total contributions of the seven churches | \$1,729.88 |
| Sabbath-school membership | 212 |

Respectfully submitted.

G. SUMNER BASKERVILLE,
Superintendent.

ST. MARYS RECTORY, *Sisseton Agency, S. Dak.*

SIR: I have the honor to report that this mission of the Protestant Episcopal Church in the United States has three church buildings and two dwellings. About 600 persons (160 families) are connected with it. During the year past 42 persons, infants and adults, were baptized; 14 persons were confirmed. Marriages, 1; burials, 30.

Yours, respectfully,

JOHN ROBINSON.

In conclusion, I will state that with a liberal appropriation for repairs of our school buildings, so as conveniently and comfortably to accommodate our full quota of pupils, I have every reason to believe that we will have a year of successful advancement in all lines of work. The payment to the Indians from their capital fund this fall will undoubtedly enable them to meet nearly all their past obligations and put them in a condition to improve and seed their own farms during the coming year.

I take pleasure in acknowledging the faithful and efficient cooperation of all employees under my charge. Thanking your office for the many courtesies extended during the past year,

I am, sir, very respectfully,

NATHAN P. JOHNSON,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SISSETON SCHOOL.

SISSETON INDIAN INDUSTRIAL BOARDING SCHOOL,
Sisseton Agency, S. Dak., August 30, 1898.

SIR: I have the honor, in compliance with instructions, to submit this my fourth annual report of this school for the year ending June 30, 1898.

Although experiencing some drawbacks, the school has had a prosperous year. The Indians were slow in bringing in their children at the beginning of the school year, but when once established in the school they became happy and content in the duties and home life of the institution.

In April 22 of the pupils were transferred to the nonreservation school at Chamberlain, S. Dak. This was quite a loss to our school, both in class-room work and in the various industrial departments; but as most of those transferred were among the older pupils, I felt that the period of years required for attendance at Chamberlain would secure them from the vices and evils of a home life on the reservation longer than we could hope to keep them at this school. Many children of school age upon this reservation did not attend any school during the past year, and hope that more stringent measures will be adopted the coming year to compel the attendance of such.

Literary work.—This school has a corps of teachers who have been untiring in their efforts for the literary advancement of their pupils, the children, with but few exceptions, responding to

the efforts of the teachers by earnest application and ready obedience. English speaking was the rule of the school not only in the class room but upon the school grounds. The rapidity with which even the youngest children have acquired the English vocabulary sufficient for ordinary conversation has seemed astonishing.

A reading circle was maintained by the employees of the school, in which very good work was accomplished. One beneficial result of the interchange of ideas in these meetings was a greater unity of labor between the literary and industrial departments for the general education of the children of the school.

Industries.—In the carpenter shop, as no building material has been furnished the school, very little work could be done. There has not been one foot of lumber furnished this school for about three years, and every building is in need of repair. The harness shop has also been hampered by an insufficient amount of material, although much good work was done in the shop. The work of the laundry, under the management of a good laundress, has been carried on as well as possible under the difficulties of falling plastering and other hindrances incident to a very leaky building. We have been particularly fortunate in the service of a very good cook. She is faithful and efficient, and her meals are prompt and well prepared. Good work and a large amount have been accomplished in the sewing room. The girls' dresses and aprons are well fitted and neatly made, and considerable fancy work has been done.

Farm and garden.—The farm is small, only 40 acres, but is yielding splendid results this year. The estimate yield is:

| | | | | | |
|--------------|-----------|-------|----------------|-----------|-----|
| Wheat..... | bushels.. | 150 | Potatoes..... | bushels.. | 500 |
| Oats..... | do..... | 200 | Turnips..... | do..... | 300 |
| Corn..... | do..... | 50 | Rutabagas..... | do..... | 25 |
| Cabbage..... | heads.. | 1,200 | Onions..... | do..... | 40 |

The school table will be amply provided with vegetables, and the grain will materially lessen the expense of the school. A general plan of farm extension has been inaugurated this year. Thirty-three acres of sod has been broken, leaving 27 acres to break next spring, making altogether a farm of 100 acres under cultivation. Two and one-half miles of new fence has been built and some old fence repaired. Next year half a mile of new fence will be needed, and a considerable portion of the old fence rebuilt. This arrangement will provide ample and convenient pasturage, and the products of the farm should materially lessen the expenses of the school. This increased capacity seemed especially advisable, too, for educational purposes. This is a farming country, and the boys must inevitably rely on farming for support in after years, and a well-equipped farm is essential.

Live stock.—The school stock is in good condition, so far as care and keeping applies, but some of the animals are old and many are of inferior grade. The school has been supplied with 7 horses, but of this number 2 are kept by the agent, 2 more are very old and unfit for use much of the time, leaving but 3 able-bodied horses for school use. The dairy herd consists of 11 cows. Some of these are inferior milkers and the supply of milk has been limited. And then several of them have developed disease, and great care has been necessary to protect the health of the school. The danger from this source has seemed so great that the matter has been taken up in a special report. The school now has 20 head of hogs and pigs in good condition. These will furnish all the pork the children should use and a considerable portion of the lard. These hogs have cost the Government but very little and the product obtained will be almost clear profit.

Buildings.—The buildings are in very bad repair. Many of the roofs are so old that the shingles are dropping out from decay, and leakage has existed so long and is so universal throughout that there are very few rooms that have not loose plastering caused thereby, and in many places it has fallen away, leaving the bare lath. All has been done for their preservation that is possible without material for repair. A carpenter has been kept on the school pay rolls for more than three years, but no material has been provided for repairs, and he has been employed on the farm and wherever work could be found, while the buildings are going to ruin. I recommend that a complete estimate of necessary repairs be called for and the material furnished without delay. There is now before the Indian Office an estimate for repairing and improvements for the laundry, and it is hoped that this will be accomplished yet before winter.

Sanitary.—The general health of the children was good, although in February the school suffered from a severe epidemic of measles, 69 children being in bed at one time with the disease. One fatality occurred.

Hoping that the necessary repairs of the school buildings, etc., will receive immediate attention,

I am, very respectfully,

J. L. BAKER, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

(Through Nathan P. Johnson, Agent.)

REPORT OF YANKTON AGENCY.

YANKTON INDIAN AGENCY,
Greenwood, S. Dak., August 30, 1898.

SIR: In compliance with instructions, I have the honor to transmit herewith my annual report for the fiscal year ending June 30, 1898:

Population—

| | |
|--------------------------------|-------|
| Total number of families | 584 |
| Males | 801 |
| 6 to 17 years, inclusive | 203 |
| Females | 927 |
| 6 to 17 years, inclusive | 250 |
| Total population | 1,728 |
| Population of 1897 | 1,728 |

Water supply.—The Missouri River still supplies a large share of the drinking water used at this agency, as the artesian water has a strong mineral taste, but at the schools the artesian water is used for drinking purposes. The artesian well at the agency, which was finished some time before my taking charge, unhappily began to give way in the early winter, the water forcing itself up between the pipe and packing, which threw out the dirt. For a time the agency seemed threatened with a miniature flood. For a number of months it required a force of five men, working quite constantly, to keep dirt filled in around the pipe and check the escaping water. At last, I succeeded in checking this flow, and since January the agency and school have been supplied with water constantly. At present, about one-fourth of the flow of this well passes off by waste pipes into the Missouri River, through a well-worn channel of its own.

In regard to the two artesian wells which were sunk at the Lake Andes, I would say that they have been a great success, filling that once dry lake, thereby increasing the value of the land about it. I believe the volume of water in this lake is increasing. I would extend thanks to the United States Fish Commission for the kind interest they have taken in stocking Lake Andes with 7,000 fish.

Farming.—The four Indian farmers have been faithful in the discharge of their duties on this reservation, and report that more grain is being raised this year than ever before. One thousand five hundred bushels of seed wheat were issued to them this spring, all of which did well; also, garden seed, and many have good gardens. The yield of wheat would have been even greater but for the destructive hail storms in the latter part of July, which swept over a portion of the reservation. I believe the more progressive element is turning attention to farming more and more each year.

Citizenship.—There is some progress in their ideas of true citizenship, and most of them take a great pride in being able to vote.

Shops and shopwork.—The shops consist of a carpenter's, blacksmith's, wheelwright's, tinsmith's, shoe and harness, and paint shop, and these constitute a very important factor in the agency economy, not only in the amount of material manufactured and repairing done, but for the training of the Indians therein employed.

All the force employed in these shops are Indians except the superintendent, who has immediate charge over all of them. The amount of work done, especially in the way of repair, is immense and increasing every year.

Education.—There are two schools at this agency. The reservation boarding school, supported entirely by the Government, and St. Paul's Episcopal Mission School, maintained by the church; both were well attended last year.

The Government school farm consists of 600 acres, of which 70 acres are in cultivation. They raise corn, oats, millet, and garden truck. A portion of the farm is given up to pasturage of the school herd. There were enrolled during the year 137.

The St. Paul's school consists also of a farm, several acres of which are in cultivation, and crops of all kinds are raised, special attention being given to gardening. Their live stock consists of horses, cattle, swine, and domestic fowl. The buildings of this school are pleasantly located. Their school has been managed by Mrs. Jane H. Johnston for many years very successfully. The attendance during the year has been 46. I am not in favor of sending children under 18 to nonreservation schools. I believe it is better for them to remain near their parents until then.

Indian court.—The court continues to hold sessions semimonthly, and all cases of assault, action for damages, disorder, etc., coming before it for trial. The judges keep their own records, and unless appeal is taken their mandates are obeyed and sentences executed. The present Indian judges are particularly well adapted to the responsible position they hold and exercise justice with perfect impartiality.

Road working.—When I first took charge, I found the main street of this agency in a deplorable condition, being extremely rough and cut up by the winter's traffic and hollowed in the middle so that water failed to run off. As soon as the frost left the ground, I commenced operations by crowning this street, digging gutters, and building culverts to carry off water, so that the entire roadway has been reconstructed.

I can not too strongly urge the need of a wooden sidewalk for this street. The whole of winter and spring the school children and employees are forced to wade through this gumbo mud in going from the school to church or the agency. They wet their feet, which causes sickness among them, and they track large quantities of mud onto clean floors. I believe, therefore, that a plank sidewalk would do away with this great inconvenience.

Sanitary.—The general health of this people has been fairly good since I took charge. No epidemic of a serious nature has prevailed among them.

Visitors.—We had a very pleasant visit from Inspector McLaughlin, and School Supervisor Anderson made us a short visit.

In closing I wish to thank you and your assistants for the kindly treatment my recommendations have received and the help you have given me in conducting this agency, and I shall truly appreciate a continuance of the same.

Very respectfully,

JOHN W. HARDING.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF YANKTON SCHOOL.

GREENWOOD, S. DAK., August 23, 1898.

SIR: I have the honor to submit the following report for fiscal year 1898:

The Yankton Industrial School is located on the bank of the Missouri River, at the Yankton Agency. It is 30 miles south of Armour, S. Dak., and the same distance east of Springfield. Both towns are on the Chicago, Milwaukee and St. Paul Railroad. We receive a daily mail from Armour and triweekly from Springfield.

Average attendance for the year was 118; total enrolment, 137. The children came in more promptly than usual; the health of the school better than preceding years.

Schoolroom work was satisfactory. Industrial and farm work was crippled from the fact that only one male employee is here to oversee and perform all the work in these departments. We need a white farmer to take charge of the farm and care for the stock. The amount of stock require more attention than the industrial teacher can possibly give them to make stock raising a success.

The sanitary provisions fail the purpose for which they were constructed. A part of the necessary apparatus has been supplied, but more is needed. The mechanical work and plumbing is not satisfactory, and observance of sanitary laws neglected. Fire protection is unsatisfactory, as we would have to go nearly one-half mile to put on pressure in case fire should break out, and hydrants are not centrally located. However, these matters are receiving the attention of the agent, and the whole system will be renovated. Indications promise better provisions and a more wholesome and healthier atmosphere. It is gratifying that we can look to the future with assurance of improvements in several lines, especially sanitation, general repairs, and an increased attendance of healthier and a more uniform lot of children.

With high appreciation of the work of school employees, and thanks to the Department for its generous consideration of our wants, and to Agent Harding, whose kind approbation of the recommendations I have made, as well as the deep interest he is manifesting in ferreting out all available children of school age and requiring them to obtain the advantages which the school offers, and which we hope will have its reward in creating a more progressive and higher standard of citizenship amongst the Yanktons, I remain,

Yours, respectfully,

EDWARD E. REARDON,
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

(Through John W. Harding, United States Indian agent.)

REPORT OF SUPERINTENDENT OF ST. PAUL'S SCHOOL, YANKTON RESERVATION.

ST. PAUL'S SCHOOL, August 23, 1898.

I take pleasure in submitting my report for the fiscal year ended June 30, 1898.

The average attendance for the year was 45. One of our boys was called home before the close of the year by the illness of his mother. Forty-six was our number enrolled. The health of the boys during the past year has been excellent.

Improvement in schoolroom was most satisfactory; boys took interest and pleasure in their studies. The older ones enjoyed reading the newspapers in the evening and were very much interested in the war items. The New York Times, Illustrated, and Washington papers were sent us by kind friends in the East.

A ready and willing spirit on the part of the children made the school year both pleasant and profitable.

The school building was made more comfortable and convenient by being attached to the main building by means of a covered corridor, so teachers and pupils are not exposed to cold or dampness in going to and from the schoolroom.

We are no longer obliged to draw water from the river, as we have an unlimited supply for house purposes and irrigation from a small artesian well which was put in last year.

The garden furnished abundance of vegetables for all the family. Indian children years ago did not care for vegetables, but now they enjoy all kinds, and milk also, which is a taste acquired of late years. Boys prepared the ground for the crops this year and assisted in all the planting. We hope to have 200 bushels of potatoes, 15 or 20 of turnips, several of beets, and 300 heads of cabbage to house for winter use.

Owing to some misunderstanding, our boys did not receive outside suits of clothing from the Government at the annual issue. However, by care and economy, we were able to keep them comfortable and respectable. I most earnestly hope we may fare better the coming year. I am indebted to you for assistance cheerfully given and encouraging words of comment.

Very respectfully,

JANE H. JOHNSTON.

J. W. HARDING, *United States Indian Agent.*

REPORT OF MISSIONARY, YANKTON RESERVATION.

YANKTON AGENCY, S. DAK., August 22, 1898.

SIR: Please find herewith an abstract of the work of the board of missions of the Protestant Episcopal Church among the Yanktons under my care—for my twenty-eighth year and the twenty-ninth of its existence:

The same evils and hindrances to Christian work and to the progress of the people which have in successive years for a long time been noted still continue. It seems useless to further descant upon them, though in justice to all parties it must be said that there has been less drunkenness noted the past year than for many previous ones. And I am again constrained to lift up a pleading voice, in hopes that it may be heard somewhere, with reference to illegal marriage relations, by which so many of this people endanger the future of their children as to the tenure of lands. Many, I fear, will, at the close of the allotment period, through the plea of illegitimacy, become lack lands and vagabonds; and it seems to me the evil is one which may be very easily prevented by the plan suggested in my last report.

There has been nothing very marked in our work for the past year. Work at our three regular stations and a fourth incipient one has gone on regularly and quietly, with an ordinary measure of success. Indian dances, principally cultivated and encouraged by the older Indians, partly as an amusement, largely as a source of gain without work, a species of gambling, have had more or less effect in drawing within their influence many members of churches, to their demoralization and hurt.

We have been abundantly blessed with rain this year, and the Yanktons are rejoicing in one of the best crops which they have ever had, and are accordingly encouraged in that respect.

The following statistics are for the twelve months from June 1, 1897, to May 31 of the current year:

| | Church, Holy Fellow- ship, agency. | Chapel, Holy Name, Choteau Creek. | Chapel, St. Philips, White Swan. |
|--|--|---|---|
| Number of families | 110 | 42 | 65 |
| Number of persons | 395 | 163 | 223 |
| Baptisms: | | | |
| Adults | 5 | 1 | 3 |
| Infants | 13 | 2 | 8 |
| Confirmations | 19 | 3 | 16 |
| Confirmed people living | 243 | 113 | 135 |
| Communicants on register | 223 | 85 | 106 |
| Marriages | | 1 | 3 |
| Burials | 11 | 3 | 6 |
| Sunday-school teachers | 12 | | |
| Sunday-school scholars | 120 | | |
| Average attendance at chief services on Sunday | 158 | 44 | 59 |
| Church sittings | 200 | 125 | 125 |
| Offerings for outside objects | \$142 | \$44 | \$80 |
| Offerings for incidental and other expenses | \$235 | \$48 | \$47.50 |

Aid received from the board of missions

\$1,578.00

Total offerings of the three congregations

596.50

Missionaries: Male, white, 1; Indian clergy, 1; Indian catechist, 1.

JOSEPH W. COOK,
Missionary of the Protestant Episcopal Church.

JOHN W. HARDING,
United States Indian Agent.

REPORT OF MISSIONARY, YANKTON AGENCY.

YANKTON AGENCY, S. DAK., August 29, 1898.

SIR: I take pleasure in handing you this, my thirtieth annual report as missionary of the Presbyterian Church among the Yankton Indians.

In that time there has been a great change wrought upon them, and as I look on it, largely for the better. Then the tribe, with the exception of less than half a dozen mixed bloods, were wild blanket Indians, and not a Christian among them. Their heads were decked with feathers, their faces smeared with paint, a buffalo robe or blanket thrown over their shoulders, their arms, breasts, and legs very generally bare, and their feet tipped with moccasins. Every man carried his arms, ready for war, perchance a quiver of arrows on his back, or a spear or tomahawk in his hand, or a gun on his shoulder. Then as to manual labor, that was done by the women—everything except war and the chase.

War parties were coming and going all summer, and the scalps of the Rees, Crows, Gros Ventres, Pawnees, and Blackfeet were the great attraction of their dances, and bred the spirit of revenge and ferocity. To the credit of the Yanktons, however, be it said, that they ever maintained peace with the whites, even when their allied tribes all took to the warpath to stop, as they said, the encroachments of the palefaces.

At that time the ration system was unknown. They had annuities of blankets, calico, and trinkets, and some provisions which, like the annuities, were issued in bulk once or twice a year. The rest of the time the body of the tribe were on the trail of the buffalo, who were fast disappearing over the plains toward the setting sun. The young philosopher, as he now comes among the Indians, is ready to explode with a tirade against the ration system. But its adoption was a necessity of the times in a humane civilized Government. The wild buffalo and

civilization could not exist together; so when civilization made his irresistible approach, the buffalo disappeared. The wild Indian of the plain from time immemorial has known of no means of support but the buffalo. If left to himself, with the disappearance of the buffalo, he will disappear. But a Christian civilization, although permitting with a few sighs the extermination of the buffalo, could not stand by and see the Indian exterminated. Hence the ration system.

But still we note with satisfaction that civilization is not satisfied with the ration system. Civilization is progressive. If it does not grow it will rot. The ration system must be the stepping-stone to something better. We do see in the waving wheat fields and drooping ears of corn an outward preparation for a higher step; and still more in the changed tone of conversation as to men engaging in manual labor, and the readiness of spirit manifested by the young men to take hold of any kind of work that will bring in the now appreciated dollar.

This internal change is the great thing to be sought after by those who elevate the Indian to independence. It is a very great change. Few probably stop to consider how great it is. The very object of life, habits of thought, principles, desires, the whole internal man must be made over and reorganized. Considering the mighty transformation required, we are not surprised nor discouraged at the progress made. In fact we see many points of encouragement. When an Indian can take his team and go to the woods and chop a load of firewood and bring it home and throw it off at the door for his wife to chop up into stove length, he has taken a long step upward. Thirty years ago the man who did such a thing would have been hooted out of the tribe. Now we look to see higher steps taken soon.

There has been a marked change in religion. The Yanktons are naturally religious. They formerly worshiped almost every object in creation. The sun dance was a great religious festival, performed once a year for the worship of the sun. The leading performers offered their bodies as sacrifices, and as they continued dancing without food or water, day and night, till exhaustion crept over them, they would take their knives and cut out little bits of flesh the whole length of the body, continuing the process until they fell down senseless. Death sometimes resulted, as was the case with the first Yankton youth who learned his alphabet.

This sun worship has been prohibited by the Government, and is seen no more. But there were many other forms of idol worship. There were altars of prayer for the worship of the stone god on almost every high hill, where offerings of pipefuls of tobacco and kinnikinnic were made tied up in little packages. Then almost every family had its tutelary god, which was wrapped up in a large bundle of cloth, and generally hung on a pole back of the teepee. Then there was the general god. At every important feast the first act was to fill the council pipe and light it, when it was held for a minute on high, with the mouthpiece upward, for this deity to smoke, while the whole assembly were reverently silent. This was asking the blessing. These and other similar heathen practices, though not put under the ban of the Government, have, under the influence of Christian teaching and the frown of civilization, almost entirely disappeared.

Now, although these heathen practices are diametrically opposed to Christianity, the reverence for religion inculcated therein has doubtless been of advantage to the missionary in his work. But there were other ideas and habits of thought among the Indians which more than offset this advantage. The failure to connect morality with religion is one of these. Their gods were never represented as being pure and holy or as hating iniquity. So the foulest murderer was generally a very religious man. Feeling his need of help he called upon the gods. So it was that adepts at assassination, larceny, seduction, and all jugglery were supposed to be in league with the gods and feared accordingly. High morality was therefore looked upon as a matter of small importance. And this was one of the serious obstacles not only to the missionary, but also to those seeking their civilization. We are happy to note some improvement in this line, but much more needs to be done. It remains and will remain for years an object of special effort for all Indian workers—the school-teachers, the missionaries, and all manner of secular superintendents, to establish them in honesty and pure morality, without which all other instruction will fail of success.

The statistics of the Presbyterian Mission are:

| | |
|--|---------|
| Male missionaries..... | 1 |
| Female missionaries..... | 1 |
| Organized churches..... | 4 |
| Church buildings..... | 4 |
| Indian ministers..... | 2 |
| Communicants in the four churches..... | 359 |
| Communicants added this year..... | 26 |
| Communicants died this year..... | 20 |
| Marriages..... | 8 |
| Contributions received from the board of missions..... | \$1,500 |
| Contributions given by the Indians..... | \$1,000 |

Yours, respectfully,

JOHN P. WILLIAMSON,
Missionary of the Presbyterian Church.

J. W. HARDING,
United States Indian Agent.

REPORT OF AGENCY IN UTAH.

REPORT OF UINTAH AND OURAY AGENCY.

UINTAH AND OURAY AGENCY,
Whiterocks, Utah, August 12, 1898.

SIR: I have the honor to submit my first annual report of the Uintah and Ouray agencies, with census and statistics.

I assumed charge of these agencies February 1, 1898, relieving Capt. William H. Beck, Tenth Cavalry, who had been in charge since July 10, 1897.

Farming.—I found many of the Indians in possession of farms and fairly comfortable houses, most of the latter built by former agents, and some few by themselves. Owing to a scarcity of seed, I do not believe that the product of cereals this year will amount to as much as it should, or anything like the capacity of the farms under irrigation. Those who had seed will do well. Others have, by permission, employed white men to assist them, it being distinctly understood that the white man is not a lessee of the Indian's farm, but an employee of the Indian. This, I believe, will bring good results, as I have been particular as to the character of the white men employed. The crop of lucerne will be immense for the acreage, and ample to supply all the hay needed at both agencies and Fort Duchesne. In fact, quite a number of the Indians who have lucerne will be unable to find a market for all excess over their own needs. I estimate that the Indians will sell from three to four thousand dollars' worth of hay this year. The total amount harvested will be, at the minimum estimate, 4,000 tons. Some vegetables, potatoes, melons, etc., will be raised, but in no considerable quantity.

Irrigation.—About 65 miles of ditch have been deepened, cleared out, head gates wasteweirs, and boxes put in, making about 60,000 acres available for farming purposes. On a great majority of this land a good and regular supply of water can be and is furnished. With a reasonable degree of care and moderate expense the ditches now in use can be kept in repair. There is still, however, a large amount of land in the Uintah Reservation which can be brought under cultivation, for which irrigation is necessary, especially in view of the fact that the majority of the Uncompahgres have taken, or will take, allotments on said reservation, and without increasing the amount of irrigated land there will not be enough to provide for all.

Stock.—The advantages offered for stock raising by this reservation are great, but do not seem to have been taken advantage of by many of the Indians in a systematic way. Twenty-eight hundred head of cattle and 3,500 head of sheep, most of the latter owned by the Uncompahgres, constitute all of their possessions in this line which are profitable to them. A few manifest a desire and make an effort to provide good American work horses, and take care of them when they get them.

The great majority of the Indians, however, seem to be satisfied with their ponies, of which I estimate the number at 5,000 or 6,000. These ponies run at large and live on what they can get. While on first thought they seem to be an unmitigated nuisance, in default of something better they are a necessity to the Indians, many of whom live far from the agency and must come from 20 to 50 miles to get their weekly rations. They have no means to support American horses, which would starve in winter. The number of ponies is, however, greatly in excess of the need. I believe that the quality of these ponies could be improved by providing a sufficient number of stallions, which could be stood in each neighborhood during the season, and by castrating the Indian stallions. It would be unjust and impolitic to take their stallions away from them without giving an adequate return.

Drunkenness.—Drunkenness among these Indians is not infrequent. This is principally due to the existence of a pest hole just off the military reservation, near Fort Du Chesne, where they can obtain all the alcohol for which they can pay. It seems almost impossible to obtain evidence against this joint which will stand in court.

Schools.—There are two schools on this reservation, the Ouray School at Randlett for the Uncompahgres, and the Uintah School at Whiterocks for the Uintah and White River Utes. The attendance has not been good at either school, although better at the Uintah than at the Ouray, the average at the former being nearly 65 and at the latter 25. Among the older Indians, as a rule, a strong dislike exists to sending their children to school, due largely to the natural dislike of the children to mental application and necessary confinement; perhaps also to a feeling similar to that of many ignorant whites that what was good enough for the father is good enough for the child. They fail to comprehend the advantages of an education, the ablest and most influential men among them having none. I have endeavored to impress upon the older Indians that their subordinate position to the whites is mainly due to their ignorance, and also the necessity of preparing themselves to become citizens; but I doubt whether this reasoning makes much of an impression.

One special cause which operates against the schools is that unfortunately several deaths have occurred among the scholars during the session. Most of these were sick children permitted to return to their homes, but the Indians seem to hold the school accountable for their deaths. The facilities at the schools are inadequate for the proper care of the sick. To remedy this I would suggest a hospital

in connection with the schools at which other patients might be treated in addition to the scholars. Owing to lack of intelligent nursing, diet, and care of the Indians among themselves, it is doubtful whether in serious cases the efforts of a competent physician meet with much more success than those of the medicine man.

The Uncompahgres having been semiperiodically stirred up during the last two years on the questions of opening their reservation, I have not deemed it advisable to insist too strongly on the school question. I am of the opinion that when the allotments have been finally settled attendance can be materially increased at this school. The superintendents, teachers, and other employees at the schools have carefully and intelligently performed their duties, and I believe with good results.

Mission work.—The Episcopal Church has for several years maintained a mission near the Ouray school, having a rectory and chapel on the reservation. The Rev. Mr. Vest was rector when I took charge of the agency. He and two disinterested and generous ladies devoted themselves to a difficult and laborious task and did much to dissipate the mist of superstition among the Indians and to teach them better ways. Mr. Hersey, the present pastor, has only been in charge a short time. I believe him to be particularly well adapted to this work, and that his strong common sense, energy, and tact can not fail to secure him an influence among his uncivilized parishioners potent for good.

Allotments.—Two hundred and thirty-two of the Uncompahgres have received allotments from the Uncompahgre Commission on lands purchased from Uintah and White River Utes by the commission of which Mr. B. F. Barge was chairman. These allotments are accepted by the Indians in the spirit that it is the best they can do to save something for themselves. I believe they fully comprehend that the opening of their reservation is an accomplished fact, the ethics of which it is useless to discuss, and that the great majority of the Indians have accepted the situation.

A number of the Uncompahgres, located along White River and Willow Creek, east of Green River, desire their allotments in that vicinity. I consider it important that this should be done as early as practicable, and have been informed by the commission that steps have been taken with that end in view. These Indians were the last to give in to the allotment idea. I personally visited them in their camp on White River and believe that they are now anxious to get their allotments.

In regard to the Uintah and White River Utes I will say that, while not regularly allotted, quite a number occupy farms, surveyed in accordance with section lines, of which I have a record. At least fifty more have asked for a survey and location of farms, which will be done as soon as practicable, and records kept. Nearly all heads of families have some sort of a location, which they hold, but this needs to be systematized and properly recorded in order to save future work.

Claims.—In 1880 the Uncompahgre, White River, and Southern Utes made a treaty by which, in consideration of certain benefits, they ceded to the United States land amounting, I believe, to about 8,000,000 acres. One of the provisions of this treaty was that the land should be subject to cash entry only, and that the proceeds therefrom, after reimbursing the United States for sums appropriated and set aside in the act for the benefit of the Utes, and paying for lands which might be ceded to the Utes by the United States outside of their reservation at \$1.25 per acre, should be deposited to their credit in the Treasury of the United States, the interest to be paid to the Utes annually with the rest of their annuity money.

So far as I can ascertain there has never been any settlement of this claim nor any statement as to the amount of money collected for this land. It does not appear that the United States has ceded them any lands outside of their reservation. If it is considered that the late Uncompahgre Reservation was so ceded it has practically again been absorbed by the United States. I believe the Government has appropriated from this Colorado land a large timber reserve, for which, it seems to me, the Indians are justly entitled to pay. I respectfully suggest that this matter be carefully investigated and a full settlement made with the Ute Indians to date, as these here are under the impression that the treaty has not been fairly carried out. It may be discovered upon an investigation that no balance is due the Utes, but I think it would be well to give them a statement.

In this connection I will also refer to second section in the treaty of 1874, which guarantees to the Indians interested the right to hunt on their old reservation "so long as the game lasts." The denial of this right to them now, in accordance with the game laws of Colorado, is felt by the Indians to be an injustice and a violation of their treaty rights. I do not question the validity of the Colorado laws, but recommend that representation be made to Congress, with the view to securing the Indians some compensation for the loss of their right to hunt so distinctly guaranteed by the United States.

There are, I understand, a number of depredation claims pending against the Uintahs, the defense of which is in the hands of Mr. Kie Oldham, their attorney.

Annuity goods.—I respectfully recommend that the distribution of annuity goods be made by November 1, for the reason that if distributed at a later date the Indians will fail to derive full benefit therefrom. Last year these goods were distributed in February, after the worst of the winter, and consequently were not in the hands of the Indians when most needed.

Gilsonite.—Upon the opening of the Uncompahgre Reservation many claims for gilsonite were located thereon, and I believe it is the intention of the locators to contest in the courts the right of the United States to reserve this mineral from entry. It is probable that when the suits for ejectment, now or about to be instituted against these parties, come up they will be found to have pooled their interests and will make a vigorous defense. The value of these lodes is immense, and the claims east of Green River which have not been worked are many more times valuable than any mines which have been worked.

In conclusion I will state that these Indians are fairly moral and industrious as compared with other Indians I have seen. Their principal defect seems to be not so much an indisposition to work as a lack of sustained effort. Many will work for a short time with considerable energy and then leave off with their object unaccomplished and their labor wasted. The policy pursued by the Department of giving employment to Indians, freighting, hauling logs, and furnishing supplies at the Agencies is highly beneficial, and has done more to encourage industry than any other means used. I have endeavored to distribute this patronage as equitably as possible, and it is so eagerly sought for that in some cases there is not enough to supply the demand.

Thanking yourself and the officials of the Department for considerate and courteous treatment during my term of office as Indian agent,

I am, sir, very respectfully,

GEO. A. CORNISH,

Captain, United States Army, Acting United States Indian Agent.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF UINTAH SCHOOL.

UINTAH BOARDING SCHOOL,
Whiterocks, Utah, June 30, 1898.

SIR: I have the honor to submit my second annual report of the Uintah boarding school.

Location.—This school is situated about 105 miles northeast from Price, a small village on the Rio Grande Western Railroad, and is accessible only by crossing a rough desert country. The immediate surroundings are pleasant on account of a beautiful stream from snow-capped mountains flowing through the school grounds.

Attendance.—There have been several causes for the small attendance during the year. We had but one teacher until the middle of January, and during that time no effort was made to increase the enrollment above the 70 we then had. Since then 8 of the school children have died and 3 others are sick at present. There also was a great deal of sickness among the Indians on the reservation. These, in connection with the general dissatisfaction of the Indians since two of their number were killed and two others wounded by white men in Colorado, have caused not only an ill feeling toward the school, but a material decrease in attendance.

Schoolroom work.—The schoolroom work has been remarkably good, considering the number of changes we have had during the year, there having been no less than six teachers in the two rooms during the last seven months of the school. Much more English was spoken during the last half of the year than common and all seemed more interested in their studies than they did last year.

Industrial.—The girls have done very well in their respective places and a few are very efficient in general house work, but the boys are not so industrious. Some of the parents object to their children doing any work unless they receive pay. One of the head men refused to allow his girl to come to school because we would not pay her any money for the work she did. They do not want their children to come to school, and therefore will bring all excuses imaginable to keep them at home, where they are allowed to play around with very little to eat and wear and do no work at all.

Health.—The health of the school children has been poor during the spring months, but not more so than that of those who did not attend school. I do not think the children should be allowed to go home during the winter and stay one night when they live in nothing but a cold tent and have but little bedding. Consumption seems to be the prevailing disease, and I believe the extreme changes cause much of this.

Needed improvements.—Besides the usual amount of repairing the following are very much needed.

First. A storehouse large enough to hold all the school goods is absolutely necessary if proper care of school clothing and provisions is to be maintained.

Second. A complete system of sewerage is actually necessary for the health of the school. The ground around the buildings is becoming very much saturated with the gradually deposited unhealthy substances which should be carried away in sewers.

Third. Waterworks are very much needed and might be a saving investment in case of fire. In winter it is very hard to keep water in vessels without freezing, and it is quite unhandy to obtain it from the streams in sufficient quantities in case of fire.

Fourth. A hospital is very much needed, either at the school or agency, where the sick may be properly cared for. Heretofore as soon as any school children became sick the parents were allowed to take them home if they wished to do so, because we have no suitable place about the buildings for nursing the sick. Six children who were taken home this year died within a short time after leaving school.

Although there has been marked improvement in many parts of the school work during the year, there is yet room for greater progress than has ever yet been made in this school.

Hoping that a greater interest may be aroused in the children next year, I remain, very respectfully,

G. V. GOSHORN, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF OURAY SCHOOL.

OURAY AGENCY, UTAH, *July 1, 1898.*

MADAM: I have the honor to submit the following report of the Ouray Boarding School for the year ending June 30, 1898:

The attendance has been very small throughout the year. These Indians are still bitterly and unreasonably opposed to education. When asked to give their children a chance to learn something, they always have excuses ready. If these excuses are plainly proven to be unreasonable, their last reply is, "Me no give 'um children up; fight first." We have, however, been fairly successful in keeping children in school when they are once enrolled. Only one pupil was dropped as having run away during the year.

The employees in all departments have labored diligently to keep the pupils interested, and to induce them to use only the English language. Three of the girls came from homes where English is spoken. The other girls learned much from them, and through the earnest efforts of the matron the girls were induced before the close of the year to speak English exclusively.

We have discouraged the visits of the camp Indians, after seeing that their only object was to lie around the buildings, get full of bread and meat, and then put mischief into the minds of the children. The children were not allowed to go home during the year, except for three days to witness the cash annuity payment. There is almost an incredible improvement in these children when they are kept away from the old Indians.

Industries.—The girls have been well trained in every branch of housework, and are now showing ability to do cooking, washing, sewing, etc., without assistance. Of course, they show the greatest interest in sewing, because that is natural for them.

The boys have not received as good instruction as I desired. The industrial teacher has too much work to do, and is compelled sometimes to be neglectful. The boys have worked willingly and learned many useful things. They have received careful training in the use of carpenters' tools. We have made strong efforts to have them become familiar with all kinds of farm work, especially the care of stock, the proper watering of crops, and the use of farming implements. We were able to do all the wood sawing by horse power, this greatly lightening the winter's work. The water hauling has been a very heavy task. Think of hauling water in barrels for the use of all departments (laundry included) when the thermometer ranges from zero to 40° below for weeks together.

At this date crops are not sufficiently matured for one to give a correct estimate of quantity produced. We are sure to have an abundance of hay for our 22 head of stock, and enough sugar corn, beans, tomatoes, cabbage, and squashes for school use. We have this summer put out the first fruit trees and vines that have ever been tried here. The grapes and currants are growing nicely and about 60 per cent of the apples, plums, raspberries, and gooseberries will live.

Studies.—The literary department has been made interesting and much advancement has been made. The children almost without exception have a desire to excel, and although five years ago they could not write their names, now many of them are able to do excellent work in the third grade.

Necessities.—Our brick buildings will soon be ruined unless the tin eaves troughs, which are beyond repair, are replaced by new ones.

We could do much more creditable work if a farmer's position were authorized. With our present corps of employees we can not handle our 320-acre farm properly.

On account of the inclement winters our cattle should certainly have a barn or shelter of some kind.

A system of waterworks is sorely needed.

Hoping that the Indian Office will take some decisive steps toward compelling these Indians to put their children in school,

I am, respectfully yours,

H. J. CURTIS,
Superintendent.

MISS ESTELLE REEL,
Superintendent of Indian Schools.
(Through Capt. G. A. Cornish, acting Indian agent.)

REPORTS OF AGENCIES IN WASHINGTON.

REPORT OF COLVILLE AGENCY.

COLVILLE AGENCY, MILES, WASH.,
August 20, 1898.

SIR: In compliance with instructions contained in circular letter bearing date June 1, 1898, I have the honor to submit herewith my first annual report of this agency.

There are three reservations connected with this agency, viz, the Colville and

Spokane, in the State of Washington, and the Cœur d'Alène, in the State of Idaho. The Indians connected with this agency and living upon these reservations are composed of the tribes or bands indicated in the following table, which gives the number of Indians by tribes:

| Tribes. | Males. | | Females. | | Total. | Indian children of school age. | | Total. |
|---|----------------|-----------------|-----------------|-----------------|--------|--------------------------------|----------|--------|
| | Over 18 years. | Under 18 years. | Above 14 years. | Under 14 years. | | Males. | Females. | |
| Lower Spokanes..... | 116 | 56 | 132 | 63 | 367 | 34 | 21 | 55 |
| Upper and Middle Spokanes, on Spokane Reservation.. | 58 | 27 | 69 | 26 | 180 | 13 | 15 | 28 |
| Okanogans..... | 186 | 141 | 228 | 84 | 639 | 88 | 69 | 157 |
| Columbias, Moses Band..... | 108 | 43 | 124 | 36 | 311 | 31 | 32 | 63 |
| Nez Percés, Joseph's Band..... | 36 | 27 | 53 | 21 | 137 | 14 | 10 | 24 |
| Cœur d'Alènes..... | 153 | 96 | 180 | 77 | 506 | 47 | 48 | 95 |
| Upper and Middle Spokanes, on Cœur d'Alène Reservation..... | 42 | 27 | 54 | 22 | 145 | 19 | 17 | 36 |
| Lakes..... | 106 | 62 | 95 | 47 | 310 | 43 | 40 | 83 |
| Colville..... | 108 | 49 | 88 | 47 | 292 | 31 | 32 | 63 |
| Nespilems and San Poils..... | 122 | 70 | 140 | 68 | 400 | 43 | 30 | 73 |
| Calispel..... | 50 | 25 | 25 | 52 | 152 | 13 | 10 | 23 |
| Total..... | 1,085 | 623 | 1,188 | 543 | 3,439 | 376 | 324 | 700 |

a Estimated.

b Estimated; not on any reservation.

The agricultural adaptability of the reservations connected with this agency has been the subject of much discussion in previous reports. I will therefore forego much mention thereof in this report, but speak more particularly of the Indians and their progress during the past year.

Agricultural pursuits are observable among these Indians and many of them have enlarged their farms and holdings of land during the past year. This is especially noticeable among the Cœur d'Alene Indians upon the Cœur d'Alene Reservation, who have fenced and broken large tracts of land which they intend to sow in grain during the coming fall and winter. The Cœur d'Alenes are further advanced in civilization, and in better condition financially, than any other tribe connected with this agency. They are well supplied with all kinds of farming implements, from a plow to thrashing machines, of which latter they now have thirteen in operation, purchased by themselves with their own money.

The condition of the Lower Spokanes and the Upper and Middle Spokanes on the Spokane Reservation has not improved materially during the year. They are very poor; in fact, poorer than any tribe connected with this agency. The entire failure of crops last year left them without the necessary seeds with which to put in crops this spring. The Department was appealed to for authority to purchase the required seeds, but, owing to the lack of funds applicable for that purpose, nothing could be done in that direction. The outlook, therefore, for the winter is not encouraging, and many of these Indians will suffer for the necessities of life. In dress and habits these Indians are endeavoring to emulate the whites, and, with a very few exceptions, they all wear citizens' dress.

The Nespilem and San Poil tribes number about 400 souls, all told. They live upon the south half of the Colville Reservation, along the San Poil River and at Nespilem, and have occupied their present territory for many years. It is almost impossible to elicit any information from them as to statistics necessary to complete an intelligent census. Heretofore their number has been estimated entirely, but within the past year they have become more willing to impart knowledge relating to their general welfare. It can be presumed that before the lapse of a few years they will be accessible for any information called for by the Department. They are possessed of a belief, bordering on a fanaticism, that the acceptance of assistance from the Government is a crime, and that such action on their part would invalidate their claim to their lands. They accept no issues from the Government and are independent and self-supporting. They are peaceable in their own social relations, and courteous to their white brethren. They have made material progress, having good farms, comfortable homes, fine horses, and many of them small bands of cattle. Very few of them possess any creed and their marriages are promiscuous and without ceremony.

The Colville and Lake tribes are located from 40 to 115 miles from the agency, on the north half of the Colville Reservation. They are a thrifty and industrious lot of Indians. They have splendid farms and raise large crops of grain and hay. With the exception of a few farming implements issued to them by the Government, they are self-supporting, and but for the intemperance of some of them, are making rapid strides toward civilization. Living as they do along the border of the reservation they are exposed to the vices and vicious practices of unscrupulous whites, who are at all times willing to prey upon the ignorance and weakness of the natives. This is true particularly in the vicinity of the small villages on the border, where whisky traffic is quite prevalent. However, those practices are somewhat restricted through the chiefs and headmen of the tribes. Being such a long distance from the agency, it is almost impossible to exercise the proper vigilance in restricting many of those vicious practices.

The Okanogan Indians occupy the territory upon the Colville Reservation extending from the confluence of the Okanogan River to a point north known as Osoyoos Lake, a distance of about 100 miles. Their territory is principally adapted to stock raising, and most of them have small bands of cattle. They have small farms and comfortable homes and some of them are comparatively wealthy. A large amount of hay is annually cut and saved for the support of their cattle during the winter season.

In reviewing the general condition of Joseph's Band of Nez Percés, it can not be consistently stated that they have made any material progress during the past year. I venture to state, without fear of contradiction, that no tribe under the jurisdiction of this agency has received the attention and assistance from the Government that Chief Joseph and his band have. Regardless of this assistance, combined with persuasion, advice, and inducements to better their condition, they have been persistent in following their ancient traditions and indulging in their primitive customs. Those customs and practices have retarded their progress and have had a tendency to make them indifferent, careless, and shiftless in matters pertaining to their advancement and general welfare. Located as they are in a territory having a prolific soil, beautiful climate, and possessing every advantage of a fine agricultural and stock country, they are far in the rear of other tribes living in the same vicinity.

From practical experience and personal observation the direct cause of laxity in progress toward being self-supporting is as follows: (1) They should not be allowed to congregate in tepees during the winter months and participate in war dances, songs, and other vicious practices. (2) The practice at present existing among them of making frequent visits to friends on other reservations should be prohibited, or at least curtailed. This takes up almost half of their time, often jeopardizing their interests at home. (3) Issues of rations and clothing to them should cease. (4) Indian doctors should be punished for their hideous performances. This is a vicious practice.

There can be no intelligent reason given why Chief Joseph and his people should not be one of the most thrifty tribes on this reservation. They are all well supplied with wagons, harness, and agricultural implements of every description. With all due respect to the action of the Government, it must be said with emphasis that the issue of rations to these people has a demoralizing effect. It induces indolence, breeds laziness, and begets an indifferent spirit. Being fed and clothed by the Government they have no disposition to cultivate the soil and gather therefrom the necessities for their subsistence. They are inveterate gamblers and the younger members are impudent, saucy, and insolent at times to the white employees who are delegated to assist and protect them, and often treat them with disregard. Situated as they are a long distance from the agency, the unruly ones often escape punishment which they otherwise would be subjected to.

They are strictly "blanket" Indians, and their dress on frequent occasions is hideous in appearance and possesses many of the characteristics of the Indian in his native state. They have no religion, believe in no creed, and their morality is at a low ebb. Promiscuous cohabitation is alarmingly prevalent, and marriage among them is unknown. Medicine men thrive and flourish, and the agency physician is often resisted in administering to the wants of the sick. In order to obtain more gratifying results in the progress of this tribe stringent rules must be applied and enforced with vigor. Closer restrictions should be thrown around them, and by abolishing the issue of subsistence and clothing to them they will be on an equal footing with other progressive tribes in the same locality. A reformation can be brought about through the proper channels, and Chief Joseph and his people can be elevated to a plane where they will be better Indians and more worthy citizens.

Moses and his band of Columbians occupy the territory along the Columbia River,

and are scattered throughout the south half of the Colville Reservation. But a few members of his original band are now with him, and his tribe has been augmented by the introduction and adoption of Yakimas, Umatillas, and Snakes. They are as a class industrious and thrifty, and a decided improvement is manifest in the condition of these Indians during the past year. They have taken a deeper interest in agricultural pursuits than they have for some time past. Larger areas have been inclosed and brought under cultivation, their crops have received more attention than heretofore, and their harvest is abundant. Their disposition to till and care for their farms is more evident, and they more fully comprehend the value of obtaining their means of subsistence from the cultivation of the soil. With what meager financial assistance they receive from the whites for labor, they are enabled to live without any assistance from the Government in the line of subsistence. They have become interested in the erection of substantial dwellings, and for this purpose have cut about 200,000 feet of logs during the past year. They have also assisted in hauling such timber to the Government mill to be manufactured into lumber. They have come to realize that a frame house presents a much better appearance than a log one, besides imitating the example of their white brethren. Many of them are curtailing their traditional bands of ponies and entering into the more profitable employment of raising cattle. For this purpose large amounts of hay have been cut and stacked for feed during the winter months. They make annual journeys to the hop fields, and by their labor earn enough money to purchase clothing and many necessities for their households.

Moses, their chief, has been a conspicuous figure among whites and Indians for many years. He is a progressive, keen, and shrewd Indian, possessing much executive ability and tact in his own personal affairs and those of his people. Although a man of advanced years, he takes pride in impressing upon the minds of his people the benefits and advantages in close attention to their homes, and diligence and industry in the management of their affairs. Moses has a farm consisting of over 1,000 acres under fence, a well-furnished dwelling, a large band of American horses, and a small herd of cattle. Receiving, as he does, \$1,000 annuity from the Government, he is much better provided for than the balance of his tribe. However, he is liberal to his people, often supplying them with money to assist them, and the old and indigent people have received many contributions from him. He has no religious belief, belongs to no church, and adheres to no creed. He believes in a Supreme Being, but that is all. He entertains the most friendly feeling toward the whites, and speaks in glowing terms of his treatment by them while journeying outside. He is somewhat proud, vain, and selfish in dress, and takes special pride in purchasing clothes worthy of people occupying a more exalted position in life.

Like all Indians, he and his people are intemperate at times, and obtain whisky from white culprits in the adjoining towns, who are too lazy to work and too cowardly to steal. It seems difficult to locate the responsibility of this vile practice and it is a deplorable fact that all Indians having the necessary means can secure whisky from unscrupulous and degraded whites, who take this method of increasing their ill-gotten gains.

The introduction of barbed wire for fencing among these people has been a great benefit. It has been a powerful stimulant in increasing the inclosure of larger tracts of land for cultivation, besides being much more permanent after construction and needing less repairs than the ordinary rail fence.

Education among them is somewhat lax, owing to the distance most of them live from the day school. Chief Moses has persistently advocated the erection of a boarding school, where his people's children can be educated and properly cared for. When leaving their homes the parents are obliged to take their children with them, having no place to shelter or provide for them. This necessarily curtails the attendance of the day school and is a source of much annoyance to the school employees. The abandonment of the military post at Fort Spokane and conversion into a boarding school would be a great benefit to the Indians occupying the surrounding territory and could be filled to its utmost capacity with children. Besides educating the younger Indians its presence would lend a beneficial influence to the Indians in general.

The morality of this tribe, while not good, is at least encouraging. Living as they do, away from the influence of any church, their religious training is easily forgotten and they quickly lapse into their original and more primitive customs and practices. A number of them are members of the Catholic Church and attend divine services at St. Mary's Mission two or three times a year. A number of marriage ceremonies have been performed and quite a number of their children baptized.

With the limited assistance received by these people from the Government they

are making rapid strides toward being self-supporting and good citizens. They are a peaceful, harmonious, and honest class of Indians, thankful for any assistance rendered them in manner, pleasant in manner and mild in disposition, and at all times courteous. Chief Moses wields great influence over his people, and while at times stern in his requests and demands, his people honor and respect him with a feeling and disposition seldom exhibited in the red man. Though advanced in years, it is Chief Moses's ambition to live to see his people the most thriving and wealthy tribe of Indians. Judging from the present, his ambition will be gratified.

Freighting.—During the past year the Indians hauled 123,136 pounds of freight for the agency, for which they were paid the sum of \$682.36.

Court of Indian offenses.—The court is composed of three judges. They have been faithful in the discharge of their duties and of great assistance to the agent in passing upon the cases coming before the court. The following is a summary of the workings of the court during the past year:

| Cases. | Number of cases. | Sentence. |
|--------------------------------|------------------|--|
| Adultery | 6 | One, 75 days in jail; five, 60 days each in jail. |
| Wife beating | 1 | 60 days in jail. |
| Drunkenness and gambling | 64 | Eight, 15 days each in jail; twenty, 30 days each in jail; thirty-six, 60 days each in jail. |

Labor on roads.—Two hundred and sixty days' labor on roads was performed by the Indians during the year, making and repairing 32 miles of wagon road.

Purchases from Indians.—The sum of \$3,204.30 was paid to the Indians during the year for hay, oats, wood, and gross beef purchased from them in open market.

Spokane Day School.—This school is located about 12 miles from the agency, on the Spokane Reservation. Mr. John M. Butchart and his wife, Elinor F. Butchart, were teacher and housekeeper, respectively. The school was in session ten months during the year, and was fairly well conducted. The schoolhouse is in good condition.

Nespillem Day School.—This school is located at Nespillem, on the Colville Reservation, about 75 miles from the agency. Mr. Barnett Stillwell and his wife, Dema Stillwell, were teacher and housekeeper, respectively; and it is but fair to say that they acquired for themselves great credit for the able manner in which they conducted the school. The school was in session about nine months during the year. The schoolhouse is in good state of repair.

Lot's Day School.—This school is located upon the Spokane Reservation, and is conducted under the auspices of the Woman's National Indian Association, with Miss Helen W. Clark in charge. Miss Clark's work among these Indians is of the highest order, and too much can not be said in praise of that estimable lady for her devotion to the Indian cause.

Contract schools.—The Catholic contract schools at Colville and Desmet missions have been well attended during the past year. In fact, the attendance during the entire year was greater than that called for by the contract. The fathers and sisters have done everything in their power for the elevation of the Indian children under their supervision.

Indian police.—Twenty Indian police and two officers constitute the Indian police force. They have been faithful in the discharge of their duties. The difficulty is that these employees are not sufficiently remunerated for the services they are expected to perform.

Conclusion.—I wish to express to the honorable Commissioner of Indian Affairs, and to all officers of the Department, my sincere thanks for their kind assistance and support in all matters pertaining to the management of affairs at this agency.

I have the honor to be, very respectfully,

ALBERT M. ANDERSON,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF NEAH BAY AGENCY.

NEAH BAY AGENCY, WASH.,
Neah Bay, August 10, 1898.

SIR: I have the honor to submit my second annual report of the affairs at this agency for the fiscal year ending June 30, 1898.

This agency is composed of three distinct tribes, having each a language of their

own, and number in all, according to the census taken July 1, 1898, 756, divided into tribes as follows: Makah, 437; Quillayute, 248; and Hoh, 71.

The Makahs are subdivided as follows: Neah Bay, 317; Waatch, 34; Suez, 35; and Ozette, 51. The condition of the reservation in some respects is better than when I made my last report. Many of the younger Indians are turning their attention to farming and raising stock since they are not allowed to catch seal. Some of them have fine gardens, and will raise all the vegetables they will want for winter use. The Makahs catch a great many fish, which they ship three times a week on the mail steamer to Seattle, where they have a good market for them. They have caught and shipped as high as 10,000 pounds of halibut in one day.

The Ozette, Quillayute, and Hoh Indians are very poor. They live 20, 40, and 60 miles from steamer landing, and have no opportunity of shipping their fish, consequently they are obliged to go up Sound where they can fish for canneries, and in this way make a little money with which to buy food and clothing. The Quillayutes, I think, will get along better now that the land taken from them by Dan Pullen has been restored to them by the Government.

We have two day schools, the Neah Bay school, under the able management of Miss Kate King as principal and Miss Fanny J. Draper, assistant, and the Quillayute school, under Prof. A. W. Smith, who has given many years of valuable service, and his young and promising assistant, Hanks T. Markishtum.

I think there should be a day school at Hoh. The Hohs have never asked for or received any assistance from the Government.

We are greatly in need of a missionary. There has never been any missionary work done here. I don't know why Christian workers have neglected this tribe, with nearly 800 souls to be saved. I think these Indians are in good condition to receive the Gospel; many of them no longer believe in the superstitions of other days, and I think they should have a leader.

There are five judges, three at Neah Bay, and two at Quillayute, constituting two courts. Their decisions are generally satisfactory.

The police force at the agency numbers five privates and one police captain. Their service during the year has not been altogether satisfactory, but they have been shifted around until we now have a very good force.

As to crimes and misdemeanors, etc., I would state that I think there are few places with as large a population where so little crime is committed. The only real crimes for which anyone has been brought before me within the last year is seduction and liquor drinking; the latter is more a curse than a crime. Whisky drinking is a failing with most of them, and it is almost impossible to find out where they get it. However, their getting drunk on the reservation is about stopped, as the police keep a strict watch over them. In this regard much has been done during the last year.

There has never been a case of theft brought to my observation, neither have I ever heard an oath sworn on the reservation by an Indian. Few white towns with nearly 400 people can say this.

Our reservation was visited during the past year by William J. McConnell, inspector, and Supervisor Charles D. Rakestraw. They both made valuable suggestions in relation to the running of the agency and school.

One of the most needed of all employees at this agency is some good Christian lady as female industrial teacher, to work among the Indian girls and to teach them how to keep house and to cook and to be neat.

I forward by this mail under separate cover a census of all our Indians.

In conclusion I wish to thank your office for its support, advice, and courteous treatment to me during the past year. I have the honor to remain,

Very respectfully,

SAMUEL G. MORSE,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF PUYALLUP CONSOLIDATED AGENCY.

PUYALLUP CONSOLIDATED AGENCY,
Tacoma, Wash., August 23, 1898.

SIR: I have the honor to submit the annual report of this agency and the reservations and schools thereunder for the fiscal year ended June 30, 1898.

Statistics and annual census on separate forms accompany this report.

The agency covers the Puyallup, Chehalis, S'Kokomish, Quinaielt, Nisqually, Squaxin, and Georgetown (Shoalwater) reservations, the Indian villages at Port Gamble and Jamestown, and scattered Indians on the islands and around the south

and west shores and arms of Puget Sound, and along the Chehalis and Cowlitz rivers, even down to "where rolls the Oregon." Besides the large Puyallup boarding and industrial school, located at the headquarters of the agency, there are five day schools, distributed as follows: One each on the Chehalis Reservation, S'Kokomish Reservation, Quinaielt Reservation, and at Port Gamble village and Jamestown village.

All reservations except Georgetown (Shoalwater) and Quinaielt have been allotted, and the Indians live upon their respective allotments. The Indians at Jamestown (Clallams) have a small piece of ground, purchased by them some years ago of white settlers, which they have subdivided among themselves, thus giving each family a small spot of ground, usually about 5 acres. The Indians at Port Gamble live in a little village called "Boston," which is situated upon a sand spit across the little bay from the Port Gamble lumber mills. This sand spit belongs to the Puget Mill Company, of San Francisco, and hence these Indians own no lands. The residue are scattered about the country and living, some upon lands purchased from white settlers, some upon lands homesteaded under the Indian homestead act, while others have no homes at all, neither present nor prospective.

The population by tribes is as follows:

| | | | |
|-----------------------------|-----|-------------------------------|-------|
| Puyallups..... | 530 | Queets (Quinaielts and | |
| Clallams (or S'Klallams)... | 350 | Quillehutes)..... | 56 |
| S'Kokomish..... | 210 | Shoalwaters (Georgetown)..... | 103 |
| Chehalis..... | 156 | Humtulpis..... | 19 |
| Squaxins..... | 113 | | |
| Nisquallys..... | 106 | Total..... | 1,766 |
| Quinaielts..... | 123 | | |

In addition to these there are Indians scattered throughout the country, including Cowlitz and others not classified, enough to swell the number to 2,500.

Some of these Indians are possibly full-fledged citizens of the United States; others have citizenship of a very doubtful nature, while those Indians on the Quinaielt and Shoalwater reservations are as yet wards of the Government. Practically all these Indians dress as civilized men and women and live in houses. These houses vary greatly in point of excellence. Some I could mention are good, comfortable, and roomy, fully equal to the average farm dwellings in prosperous communities of whites, and from these they grade down to the most squalid shacks imaginable. There is great difference also in the manner of keeping these dwellings. I can point to some Indian houses which, internally, are kept clean and tidy enough to satisfy the most fastidious, while numbers are about as filthy as could be. I am glad to believe, however, that under the influence of the schools, the encouragement of the teachers and field matron, and the examples of the more advanced Indians and the better class of white neighbors, there is slow but sure improvement in this particular.

The school population is as follows:

| Tribe. | Males. | Females. | Total. |
|---|--------|----------|--------|
| Puyallups..... | 76 | 87 | 163 |
| Clallams..... | 48 | 52 | 100 |
| S'Kokomish..... | 26 | 36 | 62 |
| Chehalis..... | 26 | 20 | 46 |
| Squaxins..... | 16 | 9 | 25 |
| Nisquallys..... | 13 | 14 | 27 |
| Quinaielts, Shoalwaters, Queets, Humtulpis..... | 35 | 25 | 60 |
| Total..... | 240 | 243 | 483 |

To this number should be added about 200 children, unclassified.

The records of the schools show the following number of children as having attended one month or more during the past year:

| | Males. | Females. | Total. | Average. |
|-------------------------------|--------|----------|--------|----------|
| Puyallup boarding school..... | 167 | 126 | 293 | 186½ |
| Port Gamble day school..... | 13 | 7 | 20 | 13 |
| Jamestown day school..... | 18 | 17 | 35 | 24 |
| S'Kokomish day school..... | 10 | 15 | 25 | 6½ |
| Chehalis day school..... | 14 | 6 | 20 | 10 |
| Quinaielt day school..... | 8 | 9 | 17 | 8 |
| Total..... | 230 | 180 | 410 | 248 |

A small number of Indian children attended the public schools of the State, but I am unable to give the exact number.

The St. George Mission Catholic School, which is located just outside Puyallup Reservation, has accommodated a number of Puyallup children during the past year. This has been done by said school without remuneration from the Government, being supported wholly by missionary funds of the Catholic Church. Their zeal and self-sacrifice in this matter can not be too highly commended.

I am happy to report that there are evidences that the Indians under this agency continue to make some progress along the right lines.

Thanking the Indian Office for assistance given me in my work, I remain,

Most respectfully,

FRANK TERRY,
Superintendent and Acting Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF TULALIP AGENCY.

TULALIP AGENCY,
Tulalip, Wash., August 23, 1898.

SIR: In obedience to the requirements of the Department, I herewith submit my fifth and last annual report as agent for the Indians of this agency, with census and statistics of the same.

General condition of the Indians.—With the revival of prosperity in the West there has been an active demand for all kinds of labor, and consequently every Indian desirous of finding employment has been able to do so at remunerative wages. A large amount of dead and down timber, which every year is going to waste and being destroyed by the forest fires that prevail during the summer months, has been utilized, thus enabling a large number of Indians to find employment on the reservations and some to build for themselves comfortable houses and to make other needed improvements with the proceeds.

Census for the fiscal year 1898:

| Reservation. | Males. | | | Females. | | | Grand total. |
|----------------------------------|----------------|-----------------|--------|----------------|-----------------|--------|--------------|
| | Over 18 years. | Under 18 years. | Total. | Over 14 years. | Under 14 years. | Total. | |
| Tulalip, Snohomish County..... | 139 | 87 | 226 | 177 | 62 | 239 | 465 |
| Lummi, Whatcom County..... | 112 | 79 | 191 | 111 | 67 | 178 | 369 |
| Swinomish, Skagit County..... | 96 | 67 | 163 | 100 | 49 | 149 | 312 |
| Port Madison, Kitsap County..... | 45 | 26 | 71 | 53 | 39 | 92 | 163 |
| Muckleshoot, King County..... | 41 | 33 | 74 | 39 | 33 | 72 | 146 |

Children 6 to 16, inclusive:

| | |
|-------------------------------|-----|
| Tulalip Reservation..... | 81 |
| Lummi Reservation..... | 82 |
| Swinomish Reservation..... | 53 |
| Port Madison Reservation..... | 37 |
| Muckleshoot Reservation..... | 38 |
| Total..... | 291 |

Whisky drinking.—While the act of Congress passed and approved January 30, 1897, has had a marked and salutary effect in suppressing this evil, and has enabled the agent to successfully prosecute parties who violate the provisions of the act, the Indians, under favorable opportunities, still indulge in their favorite pastime of whisky drinking. This is especially the case when they meet together in large numbers to celebrate some gala occasion, when the average Indian thinks he fails to do justice to the day unless he gets drunk.

Schools.—The schools of the different reservations have been in a fairly prosperous condition during the past year, except the Lummi Day School, where the average attendance is much below what it should be. This is not due, however, to any negligence on the part of the teacher. Mr. Blish, but rather to a want of cooperation on the part of the parents of children, without which no school can be successfully conducted.

Employees.—The employees connected with the agency have faithfully performed their respective duties and have contributed their full share toward the successful administration of its affairs.

In conclusion, I beg to tender my sincere thanks to the Department for its unvarying courtesy and kindness to me in all official matters and for generous support and ready compliance with every request which had for its object the improvement of the condition of the Indians under my charge, without which my most earnest efforts would have been in vain.

Very respectfully,

D. C. GOVAN,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF YAKIMA AGENCY.

YAKIMA AGENCY,
Fort Simcoe, Wash., September 5, 1898.

SIR: In compliance with the requirements of your office, I have the honor to submit my first annual report from this agency after an absence of four years.

I assumed my duties as agent September 1, 1897. I note some advancement toward civilization and adoption of the ways of white people, and especially in speaking the English language and in dress. But improvements on land allotted to them has not come up to my expectations. I attribute this largely to the difficulty of obtaining water for irrigating and to the loss of the agency sawmill, including a large amount of lumber belonging to the Indians, destroyed by fire about two years ago.

The agency gristmill is worn out, and in my opinion is not worth trying to repair, and should be condemned. Indians' wagons and machinery are as a rule worn out and unfit for use.

The irrigating ditch, built at an expense of about \$20,000, is entirely too small to carry water sufficient to irrigate the land it was intended and supposed to irrigate.

Allotments of land to Indians.—Allotment of land in severalty was first commenced on this reservation by Col. John K. Rankin in 1892. He made 1,862 allotments. There were quite a number of Indians who refused to have lands allotted to them at that time. When I again assumed my duties as agent last September, I found many of them had changed their minds and wanted land; as well as many of the outside Indians, who belonged here, expressed their willingness to come to this reservation and take land in severalty. Upon my reporting the facts to your office prompt action was taken, and Allotting Agent W. B. Casson was ordered here to perform the very difficult task of completing the allotments on this reservation and to locate Indians who were without homes or land that belonged to this reservation. Mr. Casson has proved himself to be the right man in the right place, and what he was sent here to do has been in every way a very great success, having, the few months he has been here, made 607 allotments. Although much of the land he has had to allot is very poor and without water, he has allotted the best there was on the reservation.

Land.—From reports made to the Indian Office from this reservation and from letters received, I am inclined to believe your office is laboring under the impression that this reservation contains a vast amount of good agricultural land, and all it requires is a little work to make it a garden spot of creation. When the facts are, with the exception of a few sections in the vicinity of Toppenish Station, bordering on the Yakima River, and a very few sections in the central part of the reservation, at and near the junction of Toppenish and Simcoe creeks, and some timber land in the mountains, where the snow lies for about seven months in the year, the balance is a dry sagebrush desert and alkali land. A portion may be redeemed by irrigating ditches from Yakima River; but there is no practical way of irrigating more than one-fourth of the reservation.

The few Indians who have water for irrigating are improving a portion of their allotments and are raising some grain, hay, and vegetables. But a large majority have lands that are without water and are very poor—no teams, no wagons, no plows, no harness, no lumber, and no money—and how many of them live, is a mystery even to those who are most acquainted with them.

These Indians as a rule are a quiet, peaceable, law-abiding people, and seem anxious to learn what they term the Government rule; and when they understand what it is, they never want it changed or deviated from in anyway. They seldom consult anyone in regard to the law except the agent. The agent is supposed and expected to settle all their difficulties; they come to the agent with their family troubles, as well as difficulty they may have with other Indians or white people.

They seem to have but little confidence in the Indian court, and it is with great reluctance they go into court, even when they have good cause for complaint.

Trust patents.—The Department sent me 1,818 trust patents to deliver to the Indians, with instructions to take receipts in duplicate. I have delivered to date 777—all that have been called for. This is one of the most difficult tasks I have been called upon to perform, as many have died since the allotments were made; and many do not know the names they were allotted by, and do not know the location of their lands; also, in many instances land was selected by some relative who has since died. Fortunately, I have a fairly good memory, and can often tell persons what their names are when they do not know themselves. So far, I do not think I have made any mistakes, and have given the patents to the persons entitled to them. When it is remembered that only five years have elapsed since these allotments were made and it is found so difficult to deliver the trust patents to the parties entitled to them, on account of deaths and the many different names an Indian has or is known by, what will it be in twenty-five years when a patent is to be delivered?

This title to land is a very serious question, and in the distant future will undoubtedly cause a great deal of litigation.

Leasing.—There have been only a few leases made on this reservation, as it seems only a few care to lease unimproved sagebrush land, without water, on a three years' lease; and until a longer term of lease is permitted, sagebrush will be the principal production of the soil.

Work of the commissioners appointed to treat with these Indians.—There was a commission appointed about two years ago to treat with these Indians for the surplus land and such portion of the unallotted land on the reservation as the Indians could be induced to relinquish claim to. No agreement has as yet been concluded. The principal obstacle in the way was and is that the Indians first wanted allotments completed, and also declined to enter into any agreement whatever until the portion of land was restored which they claimed to belong to them, which land was cut off by reason of a change in the boundary line of the reservation. As the allotments are now completed, practically the only remaining obstacle in the way of the commission to treat with these Indians is the boundary line.

In connection with this matter, I take the liberty to state that the Indians do seem to have occasion to make a claim for land lost to the reservation, and there seems to be some foundation for their claim that about 400,000 acres have been taken away from them by reason of Government survey of the western and southwestern portions of the reservation about thirty-four years after the treaty was made. There are several reasons why I am inclined to believe the Indians' claim is a just one. One is the statement of old Indians who are still living, who claim the boundary line was pointed out to them by officers of the Government, and monuments erected, many years ago. Another reason is the natural topography of the country as compared by wording of the treaty and as shown by map made by or under the direction of Governor I. I. Stevens in 1857, and admitted by your office to be authentic. This map is a very correct map of this part of the country, and names given to rivers and creeks were evidently obtained from the Indians; and when compared with latest official maps very little, if any, material changes can be noted, except where the reservation boundary line is affected.

I note some changes which I will mention. Governor Stevens designates the Ahtanum Creek (one of the boundary streams of the reservation) extending west from its mouth to near the summit of the Cascade Mountains to a point a little south of Mount Rainier. The Klickitat River, named in the treaty and on Governor Stevens's map, is located west of Mount Adams, and is now known as White Salmon. The Wawumchee River, east of Mount Adams, is now called the Klickitat, and the surveyors in surveying the boundary line headed the river Governor Stevens's map calls Wawumchee. The old line, known to the Indians and Governor Stevens's map, shows the line crosses this river, while the present boundary line and official maps follows the dividing ridge heading all the branches of this stream, which is now designated on late official maps as the Klickitat River, and the name of Wawumchee does not appear on late maps at all. Stevens's map shows the Klickitat River west of Mount Adams, and scale of map shows its location where the boundary line is affected, about 20 miles west of the Wawumchee, or what is now called Klickitat. The Pisco River, mentioned in treaty and named in Stevens's map, is now known and named on late official maps as Toppenish. Again the scale of Stevens's map shows the Yakima Reservation to be about 85 miles long from east to west. Late maps show it to be only about 55 miles from east to west.

The Indians insist on having their lost territory restored to them before entering

into any other agreements, and the work of the commission on this reservation seems to be at a standstill, with little prospects of making any agreement whatever.

School.—I inclose statistics concerning the reservation boarding school at this place for the year 1898. Pupils enrolled, 145; average attendance, 113. On account of nearly all the Indians leaving the reservation to pick hops during September, I find it impossible to get the children in school in that month, and we practically have only nine months school during the year. The general health of the children has been good; no epidemics and no deaths of Indian children in school to report. The kindergarten work under the direct management and direction of Mrs. Mattie J. Poole has been a great success. In reservation boarding schools, where there are so many small children, I consider a good kindergarten class almost indispensable, and I hope a good kindergartner can be secured at every reservation boarding school in the land.

This school is in great need of an addition to girl's dormitory; also addition to laundry. They are also in need of a new school building for class rooms. The one we have was poorly constructed and does not have rooms sufficient to accommodate the school; besides I consider it dangerous in a windstorm. We also are in great need of a water system for fire protection, irrigation, and sewerage.

Census.—Total Indian population, 2,356. Males, 18 and over, 604; females, 14 and over, 822; ages 6 to 16, inclusive, 63.

I desire to make explanation in reference to increase of population as shown by census. Before allotments were made census was taken of Indians residing on the reservation, and from one to two thousand were estimated as belonging to this reservation but not living thereon, and it was impossible to get a correct census of them. Most of these Indians have been induced to take allotments and now are included in the census, except about 200 Wenatchie Indians, who refuse to come to this reservation, and are still living in the vicinity of Wenatchie River, in this State. They are not included in this census, and I find it impossible to obtain their names.

Respectfully submitted.

JAY LYNCH,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF YAKIMA SCHOOL.

YAKIMA AGENCY BOARDING SCHOOL.
Fort Simcoe, Wash., August 30, 1898.

SIR: I have the honor to submit herewith my third annual report of this school.

I have little to say regarding the work of the year except that it has been quite satisfactory in most respects so far as our equipments would permit, but desire to emphasize again some of the needs of the school and some of the lines in which improvement is most needed.

Attendance.—As has always been the case, and I fear always will be, the attendance is irregular in the early part of the year, owing to the fact that the Indians are not on the reservation until late in the fall, returning from the hop fields, mountains, and fisheries at times varying from the 1st of October until in December. Last fall they were made more tardy by the prevalence of measles on parts of the reservation, and we were obliged to use care to prevent its introduction into the school. It always seems advisable to excuse certain large boys in the spring to assist in their farm work, causing further irregularity; however, this is done only where we are familiar with their circumstances.

Most of the pupils are brought in voluntarily, and during the winter months we are unable to take all who desire to enter.

It becomes more apparent each year that attendance in reservation and nonreservation schools should be made compulsory, and that until that is done the proper system—gradation and progress—can not be secured.

It is impracticable and almost impossible to have more than nine months' school here. In September there is scarcely a child on the reservation, as they are all in the hop fields or mountains, and through July it is so extremely hot—often being 100° in the schoolrooms—that it does not seem advisable to keep them, it being impossible to do any good in the schoolrooms and difficult to maintain discipline under such conditions.

Our farming and gardening are limited by the lack of suitable land and dearth of water for irrigation. We produce some oats, alfalfa, and potatoes, and all kinds of garden vegetables, in quantity depending largely on the season, as we have but a limited supply of water at any time and none after the latter part of June. The past spring was unusually dry, and a sparse crop is the result.

Schoolroom work.—The work in the schoolrooms has been very satisfactory in most respects, considering irregularity of grades and attendance. The interest on the part of pupils and teachers has been good and the classes have made fair progress. The work is made much harder by the irregularity in coming in, making close grading and good class organization impossible. Another difficulty is that the pupils change from year to year too much—some being in for a year or two and then their places being taken by others—requiring an expenditure of too much energy on raw material. A great deal better results would be secured if the same pupils continued year after year until transferred or dismissed. The effort required in this case is not only greater, but is largely lost on those who remain in school but a short time.

This is the first year that we have had a regular kindergartner, and the experiment is quite

satisfactory in some respects, in others not so satisfactory. In a school of this size, where there are so many grades and but two teachers and a kindergartner, if the work of the kindergartner is purely kindergarten work, it necessitates too many grades in the other two rooms and the teachers are unable to do them justice. If the kindergartner is to do purely kindergarten work, there should be more help for the work in the other grades in order to do them properly. In this connection I would suggest that kindergartners for these places have some ability as teachers as well, since it seems necessary for them to do some primary teaching.

Though we have no music teacher, we arranged the work so as to give instrumental instruction to several who desired it and who have made fair progress.

While most of these people are willing to have their children in school here, it is very hard to get their consent for them to go to another school, though many of the children are willing and anxious to go away after having progressed well here. This is largely due, I think, to the fact that a number who went from here some years ago to a school not well located for pupils from this climate lost their health and several died. Pupils from here should go to a dry climate, and an effort has been made in that line, but without success so far.

Our work here will never show the results that it should so long as the larger girls are permitted to spend from two and a half to four months at their homes. The past experience is that most of them do well until the age of from 13 to 15. Just when they are getting well started and are able to profit most by instruction and example, they go home to spend vacation and never return on account of an Indian marriage or because somebody's grandmother has decided that they are too old to go to school. Returning to camp life at that age, they are soon lost to recognition as "school girls," and we wonder that there are so few former pupils competent to fill positions of assistants in the school.

Improvements needed.—Our greatest need is a water system providing for domestic use, irrigation of the yards, gardens, etc., fire protection, and to make proper sewerage possible. There is an ample supply of excellent water to be secured either from springs at the school or from a mountain creek some 2 miles above the school which is high enough to give an immense pressure without pumping. We have no sewerage system whatever, but are so located that with the water a perfect system could be put in, as we have good fall and a good outlet.

The laundry is wholly inadequate and should have been enlarged years ago and provided with some equipments for facilitating work. There is nothing very educative about washing by hand day after day and month after month. The time thus spent, and which could be saved by machinery, could be used to much greater advantage in systematic instruction in the various domestic arts.

I am sorry to have to report that our old schoolhouse has not fallen down yet; but unless an addition is built and some improvements made soon or a new one substituted, I hope to be able to report differently before many months. The pupils and teachers upstairs are made seakick by the swinging motion in a high wind. We hope there may be no one in it when it falls over. An addition should be built to girls' house to give sufficient dining-room and kitchen capacity, bake room, girls' bathroom, additional dormitory, etc. The dining room will accommodate only 100 pupils properly, and we have had over 130 in it. The girls' dormitory rooms were badly overcrowded the past year, and they have no bathroom whatever.

In conclusion I will say that if the children of this reservation are to be educated the attendance must be made compulsory, the larger girls kept in school, and the school capacity more than doubled, either by increasing this school or establishing another.

Very respectfully,

CALVIN ASBURY, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through Jay Lynch, United States Indian Agent.)

REPORTS OF AGENCIES IN WISCONSIN.

REPORT OF GREEN BAY AGENCY.

GREEN BAY AGENCY,
Keshena, Wis., August, 1898.

SIR: I have the honor to submit my first annual report of affairs at this agency for the fiscal year ending June 30, 1898.

The agency headquarters are located on the Menominee Reservation at Keshena post-office, Shawano County, Wis., 8 miles from Shawano, the county seat of Shawano County, and the nearest railroad and telegraph station to the agency.

The Indians comprising this agency consist of three tribes, each entirely distinct in language, habits, and advancement in civilization and number, as follows:

| | |
|--------------------------------|-------|
| Menominees | 1,375 |
| Oneidas | 1,945 |
| Stockbridges and Munsees | 509 |
| Total | 3,829 |

As cash annuities are paid the Oneidas and the Stockbridges and Munsees, an exact census is obtainable. But as the Menominees do not receive cash annuities and are scattered over a large reservation, much of which is heavily wooded, with only blind trails leading to their houses, it is an impossibility with the facilities granted me to obtain an exact census of the tribe. I have made a special effort to obtain as correct a census as possible of the tribe, but I am confident that quite a number of families were not found. I estimate that there are fully 1,500 Menominees if a correct census were taken.

Menominees.—The Menominee Reservation is located in Shawano and Oconto counties, and consists of ten Government townships of land, or about 231,000 acres. The most of the reservation is timbered with pine, hemlock, basswood, elm, maple, beech, cedar, oak, tamarack, and poplar, much of which is valuable. The soil is generally fertile, and where it is properly cultivated produces large crops of wheat, oats, barley, corn, buckwheat, hay, potatoes, garden truck, and other vegetables indigenous to this latitude. The reservation is well watered by the Wolf and Oconto rivers and their tributaries, and numerous small lakes are also found. All the streams and lakes abound in fish of an excellent quality.

The principal sources for gaining a livelihood among the Menominees are farming and lumbering. They have under cultivation this year 3,045 acres, which is an increase of 89 acres over last year. They have under fence as cultivated and pasture land 4,655 acres. They produced during the fiscal year 1898 the following crops:

| | | | | | |
|---------------|-----------|-------|-----------------------|-----------|--------|
| Wheat | bushels.. | 1,596 | Oats | bushels.. | 28,000 |
| Rye | do.... | 1,976 | Potatoes..... | do.... | 6,355 |
| Turnips | do.... | 2,600 | Onions | do.... | 950 |
| Beans | do.... | 1,865 | Other vegetables..... | do.... | 665 |
| Hay | tons.. | 1,200 | | | |

They own 623 horses and ponies, 224 head of cattle, 585 hogs, and 5,783 domestic fowls. They live in 331 houses, mostly built of logs.

The Menominees are slowly but constantly improving in their methods of farming and every encouragement should be given them in this direction, for eventually cultivating the soil will be their only means of gaining a livelihood. If the young men of the tribe, and especially those who have returned from nonreservation schools, were assisted to start a farm, it would not only materially benefit them, but benefit the whole tribe by example.

As the Government holds in trust for the tribe nearly \$1,000,000, a portion of it could not be expended to a greater advantage than to assist the tribe in starting farms and maintaining them until they had farms large enough to support themselves. If cash annuities were paid them per capita, I believe that it would cause them to retrograde; but if money were paid them for actual labor performed in clearing and improving farms, crops raised, or other work on their reservation, it would inculcate habits of industry that would have a permanent effect. These Indians are willing to work if the chance is given them, but they can not clear a farm and support themselves at the same time. If a portion of their funds were expended in making roads and building bridges on their reservation, it would not only give them employment, but would permanently increase the value of their reservation.

Also, if they were allowed to cut and sell the spruce and poplar pulp wood on the reservation, which is now going to waste, they could earn considerable money, and as the most of the value to pulp wood is the labor preparing it for market, I would recommend that they be allowed to cut and sell it, each Indian to receive the product of his own labor. Or, if a pulp mill were allowed to be built on the reservation, it would give employment to a large number in preparing the wood and working in the mill. Their money could be advantageously expended in purchasing for them horses, cows, sheep, swine, and more agricultural implements. By judicious encouragement there are no reasons why the Menominees should not become the most contented and prosperous people in the State.

There are two sawmills on the reservation, both used exclusively to saw lumber for the Indians' use or for use of the agency. Both mills are small, but are of sufficient capacity for the purposes for which they are used.

A roller flouring mill is located on the water power at the agency, and is of large enough capacity to grind what grain the Indians raise and to grind for the agency.

Rations of 20 pounds of flour and 10 pounds of pork are issued once in two weeks to the old, poor, blind, sick, crippled, and widows and orphans among the Menominees. About 250 rations of this kind are issued, and if it were not for this aid very many of the class mentioned would suffer.

A large and roomy hospital is located at the agency headquarters, which is supported from the Menominee funds, and used exclusively for the benefit of the Menominee tribe. It is the only hospital on the three reservations comprising this agency. The hospital is under the charge of the physician on the Menominee Reservation, who is assisted by three nurses, a cook, and chore boy. The physician reports that during the year 84 patients have been admitted to the hospital—59 males and 25 females. The total number of days they were treated was 2,451; the number of deaths at hospital, 5.

The general health of the tribe has been good during the past year, as will be seen by the following extracts from the report of the physician, Dr. Joseph F. D. Howard:

| | |
|---|-------|
| Cases reported to the Indian Office as having been treated by agency physician: | |
| Male | 459 |
| Female | 352 |
| Births reported by agency physician: | |
| Male | 19 |
| Female | 35 |
| Deaths reported by agency physician: | |
| Male | 15 |
| Female | 18 |
| Prescriptions dispensed (physician's office, hospital, and schools) | 5,650 |

No epidemics of contagious diseases have visited the employees and Indians upon the Menominee Reservation during the year, except measles and chicken pox among the children. The number of children affected with chicken pox was less than fifteen. The number of cases affected during the epidemic of measles seemed to include every child upon the reservation. The number of deaths following the measles or due to that disease was about seven.

Isolated cases of diphtheria occurred twice and membranous croup with two deaths and one recovery. Pneumonia did not prevail to the extent of the preceding two years. Consumption produces the greater number of deaths. Indians as a race are strongly predisposed to this disease, and civilization does not diminish the tendency to develop lung diseases.

Veneral diseases, both gonorrhoea and syphilis, exist among the Menominee Indians. The few cases treated by the agency physician are a handful compared to the many who apply for treatment to the Indian medicine men, drug stores, and nonreservation physicians.

No cases of disease arising from unsanitary surroundings have come to the notice of the agency physician. The sanitary conditions of the agency and reservation are good.

An asylum for the aged and infirm Menominee Indians is needed. Male attendants should be substituted for the female nurses, who are forced to care for the aged and infirm men sent to the hospital. Where such cases are confined, it is impossible to provide sweet and clean quarters for patients suffering with acute diseases. Under the present conditions, the aged men without homes can not be taken into the hospital when patients ill with acute diseases require the beds and attention of the nurses.

A building set apart for the isolation and treatment of diphtheria cases is urgently needed. Heretofore such cases have been taken to the hospital, and great risk is run by so doing. Those patients already in the hospital must be sent away or exposed to an infectious disease.

Logging.—Under the act of Congress passed June 12, 1890, allowing the Menominee Indians to cut and bank pine timber from their reservation, last winter I entered into contracts with 63 Menominees to cut and bank 16,000,000 feet of pine saw logs. The Indians filled their contracts in a satisfactory manner, and many of them after paying their supply bills had money left. The prices paid for banking the logs ranged from \$3.75 to \$4.75 per thousand feet, board measure. The logs were thoroughly advertised, and on March 15, 1898, were sold to the highest bidder. Sealed bids and a deposit of 5 per cent of the amount bid were required. The bids received were as follows:

Stephen Radford, Oshkosh, Wis., for 10,135,000 feet banked on Wolf River and tributaries, \$12.03 per thousand feet; Pearley, Lowe & Co., Chicago, Ill., for 5,865,000 feet banked on Oconto River, \$13.60 per thousand feet. They also bid for the entire 16,000,000 feet banked on both the Wolf and Oconto rivers, \$11.50 per thousand feet. John Black, Shawano, Wis., for the entire 16,000,000 feet banked on both rivers, \$12 per thousand feet; T. R. Morgan, Oshkosh, Wis., for 5,865,000 feet banked on Oconto River, \$13.27 per thousand feet; Holt Lumber Company, of Oconto, Wis., for 5,865,000 feet banked on Oconto River, \$13.15 per thousand feet, and for the entire 16,000,000 feet banked on the two rivers, \$11.14 per thousand feet; O. A. Ellis, of Oconto, Wis., and S. W. Hollister, of Oshkosh, Wis., for the entire 16,000,000 feet banked on both rivers, \$12.42 per thousand feet.

The logs on Wolf River were awarded to Stephen Radford, of Oshkosh, Wis., the highest bidder, at \$12.03 per thousand feet, amounting to \$121,924.05. The logs on Oconto River were awarded to Pearley, Lowe & Co., of Chicago, Ill., the highest bidder, at \$13.60, amounting to \$79,764. The 16,000,000 feet selling for a total of \$201,688.05. After deducting \$69,999.99 paid the Indians for cutting and banking the logs, there was left the sum of \$131,688.06, or a stumpage value of \$8.23+ per thousand feet.

The Menominees cut and banked from the refuse pine timber—butts and tops not fit for saw logs—781,010 feet of shingle bolts. The bolts were advertised, sealed bids received, and sold to the highest bidders. The bolts banked on the Oconto River sold for \$4.76 per thousand feet, those on the Wolf River sold for \$3.77 per thousand feet, the entire 781,010 feet bringing \$3,270.78. After deducting \$102 for sealing and advertising, the balance of the money was paid those Menominees who cut and banked the bolts as "proceeds of Indian labor."

Oneidas.—The Oneida Reservation is located in Brown and Outagamie counties, about 40 miles from the headquarters of the agency by wagon road or 73 miles by railroad. The reservation consists of 65,440 acres of land, all of which was allotted to the Indians in severalty several years ago. The only occupation of this tribe is farming, and many of the Indians have well-cultivated farms, good buildings, plenty of stock, and are in independent circumstances, equal to their white neighbors. While many of these Indians are in comfortable circumstances, there is a class among them, the same as will be found in every white community, who are poor, and another class who are shiftless. The latter class, however, I am pleased to say, is not very large among the Oneidas.

The Oneida Reservation, being located but a short distance from the flourishing cities of Green Bay, Depere, Seymour, and Appleton, and being traversed by a railroad, affords the Indians an excellent market for all they have to sell.

The Oneidas have under cultivation 4,064 acres, which is an increase of 464 acres during the year. They have erected during the year 19 frame and 17 log houses, at a cost of \$4,392. They have under fence 7,244 acres, and have made 9,076 rods of fence the past year. They raised during the fiscal year the following crops:

| | | | | | |
|--------------------|-----------|---------|-------------------|-----------|---------|
| Wheat | bushels.. | 8,030 | Oats | bushels.. | 67,200 |
| Barley and rye.... | do..... | 930 | Corn | do..... | 11,300 |
| Potatoes | do..... | 23,890 | Turnips | do..... | 330 |
| Onions | do..... | 550 | Beans | do..... | 640 |
| Other vegetables.. | do..... | 3,484 | Hay | tons.... | 1,170 |
| Butter | pounds.. | 32,460 | Lumber, sawed.... | feet.... | 321,200 |
| Timber marketed.. | feet.... | 660,220 | Wood cut..... | cords.... | 7,000 |

They own 704 horses, 3 mules, 403 cattle, 345 swine, 73 sheep, 5,504 domestic fowls.

Nearly all the Oneidas speak enough English for ordinary intercourse. They are very much interested in educating their children, and the younger generation, of school age, are all attending either the reservation or nonreservation schools.

The adult Oneidas exercise the right of suffrage at all State elections, and cast their votes as intelligently as their white neighbors.

The Oneidas receive an annual annuity of \$1,000, but as the amount per capita is only about 50 cents, it is of no particular benefit to them, and could be better used for other purposes for their benefit. On account of the interest the Oneidas take in educating their children, a few years will make a great change in the tribe, and when the time arrives that they are given patents in fee simple for their lands they will be qualified in every way to become independent and as thrifty a people as their white neighbors.

Stockbridge and Munsees.—The Stockbridge and Munsee Reservation consists of 11,500 acres of land, located on the southwest of and adjoining the Menominee Reservation, 7 miles from the headquarters of the agency. The soil of the reservation is generally fertile, and where properly cultivated produces abundant crops of all grains and vegetables indigenous to this latitude. A few of these Indians are turning their attention to farming and have excellent crops, but owing to the unsettled state of their affairs the most of the tribe that reside on the reservation are not making much effort to cultivate the soil.

These Indians are very anxious to cut and dispose of the timber remaining on their reservation, but owing to the bad faith shown by many the previous year in refusing to clear the land for farming purposes after the timber was cut, I refused to recommend that they be allowed to clear land and sell the surplus timber. I, however, recommended that a large number of them be allowed to cut from 10,000 to 20,000 feet of timber each for the purpose of building houses, barns, and fences. They have cut the timber as authorized, but as yet but a few have built new houses or barns.

These Indians raised last year 2,991 bushels of oats, 2,535 bushels of potatoes, 90 bushels of rye and barley, 150 bushels of turnips, 35 bushels of onions, 40 bushels of beans, 136 tons of hay, 450 pounds of butter, 575 bushels of wheat, 6,917 bushels of corn. They have under cultivation 500 acres of land, and live in 88 houses.

Of the 509 Stockbridges and Munsees enrolled, only about 300 live on their reservation, the balance living in various places from the State of New York to the State of Washington.

As reported by my predecessor in his last annual report, the affairs of this tribe are in a complicated state, owing to the jealousy of the different factions into which the tribe is divided. They will never agree on anything, and the only way ever to settle their affairs will be for the Government to settle for them, irrespective of any faction of the tribe. They are as competent to become citizens as the average white man. All of them speak and read English. All of them live and

have the same habits as white men, and are perfectly capable of caring for themselves. Their lands should be allotted to them, the \$75,000 held in trust for them by the Government, paid to them, and the tribe turned loose to look after themselves individually. The longer the Government defers this the worse it will be for the tribe.

A start has been made in this direction, as during the year twenty-nine patents in fee simple, each patent calling for 80 acres, have been issued to them. Many of these patents were given to the heirs of deceased persons, but the heirs are buying each other out, and those who have title to their lands are apparently making an effort to improve their condition.

Schools.—There are two reservation industrial boarding schools, one contract boarding school, and five day schools connected with this agency. The Menominee boarding school is located at the headquarters of the agency on the Menominee Reservation, and has a capacity, when crowded, of taking care of 160 pupils, and as the school is always crowded, its capacity will have to be enlarged if all the Menominee and Stockbridge children of school age are to be accommodated. Both the Menominees and Stockbridges are taking a greater interest in educating their children than ever before, and it is now no trouble to fill up the school. In fact, children have to be refused admittance for a lack of room.

Connected with this school is a large farm, well stocked with cattle, hogs, sheep, and domestic fowls, a shoemaker and carpenter shop, where the boys are taught to farm, the care of stock, carpenter work and shoemaking. Attached will be found the report of Leslie Watson, the superintendent of the school, giving a comprehensive and detailed account of its operations during the past year.

The contract boarding school is located on the Menominee Reservation at the headquarters of the agency. This school is conducted by the Catholic order of Franciscans, and has a capacity of taking care of 170 pupils. The Government contracted with this school to educate and support 60 pupils during the fiscal year 1898, but in addition 58 pupils have been admitted during the year who were supported by the order. This school has large and substantial buildings, which are well furnished, a well-cultivated farm, an able corps of teachers, and are well equipped as a boarding school in every respect. A detailed report by the superintendent of the school is attached.

The Oneida Boarding School is located on the Oneida Reservation, and has a capacity of 120 pupils. This school, as well as the four day schools on the Oneida Reservation, are under the charge of Charles F. Peirce, who is a bonded superintendent, and ranks with the best Indian schools in the country. The Oneidas take a great interest in educating their children, and when graduated from their local school a large number are sent to the various industrial Indian schools throughout the United States. A large number of the Oneidas who have graduated at these schools are now employed as teachers or in other positions at reservation schools.

The Stockbridge Day School is located on the Stockbridge and Munsee Reservation. During the past year a housekeeper as well as a teacher has been employed at this school and noon-day lunches given the pupils, and besides, under special authority, clothing was issued to the children. This has caused a decided increase in the attendance and interest in the school. As the Stockbridges are an English-speaking tribe, every opportunity should be given the children to obtain a liberal education. Charles H. Koonz, the teacher at this school, and his wife as housekeeper, have made a decided success of the school during the past year.

Miscellaneous.—The buildings at this agency, while old, are in very good repair. By the expenditure of a small sum of money each year in repairs they are kept comfortable. The buildings have mostly been painted during the past year, which adds much to their appearance.

Police.—Eleven Indian police are employed; six on the Menominee Reservation and five on the Oneida Reservation. No policeman is employed on the Stockbridge Reservation. The policemen are, as a general thing, attentive to their duties, but an occasional change has to be made in order to preserve discipline.

Indian court.—There is one court of Indian offenses, and that for the Menominees only. The judges of this court consist of three old men, two of whom are pagans—so called on account of their retaining their ancient belief—and one a Catholic Christian. All petty cases and disputes among the Menominees are brought before this court and decided by them, as well as Indians arrested on the reservation for being drunk or disorderly. In the latter cases the judges usually impose a fine or imprisonment in the agency jail. The decisions of the judges are always just, and are respected by the whole tribe.

Religion.—The Menominees, with the exception of about 300, are adherents of the Roman Catholic Church. The 300 are called "pagans," and retain and practice to a certain extent their ancient belief. There are three large and pretty Catholic

churches on the Menominee Reservation, in which services are held by the Catholic order of Franciscans and the services are usually well attended.

The Oneidas are divided in their religious belief between the Episcopalians, Methodists, and Catholics, the majority of the tribe being adherents of the Episcopal Church. They have a fine stone church, a resident missionary rector, and the services are well attended. The adherents of the Methodist Church are next in number among this tribe, have a fine church, and a resident missionary pastor. The Catholics have a church building on the reservation, but have but a few adherents among the tribe.

The Stockbridges and Munsees are Presbyterians, with the exception of a few families, who are Catholics. The Presbyterian Church building on the reservation is an old dilapidated building, wholly unfit to hold services in it, and there is no resident minister. Occasional services are held in the schoolhouse, but interest in church matters are at a low ebb. There is a good chance for the Presbyterian Church organization to do a lot of missionary work among this tribe. The Catholics have a neat and tasty church on this reservation. Only a few of the tribe are communicants of this Church, but regular services are held every month.

Intemperance.—One of the serious drawbacks to the improvement of the Indians under my charge is their love for intoxicating liquors, and it seems that it is an impossibility to prevent them from obtaining it. Since I have been agent I have used every power at my command to prevent the Indians from obtaining intoxicating liquors, but with little success. If an Indian has the money it appears to be an easy matter for him to obtain liquor. If caught by the police on the reservation drunk he is arrested, brought before the Indian court, and fined or imprisoned.

Where I have been able to secure sufficient evidence that a saloon keeper or others have sold liquors to the Indians I have had them arrested and prosecuted before the United States district court, but if convicted the fine and sentence to imprisonment is so light that it has no effect. In other cases the saloon keeper would have as witnesses some of his hangers-on, who would swear him innocent, and he would be discharged. I am of the opinion that when a whisky seller is convicted of selling liquor to the Indians, if the court would impose the full penalty of the law it would in a great measure stop the traffic with the Indians.

Employees.—As a general rule, the employees at this agency [have performed their duties] to my satisfaction and with credit to themselves, and peace and harmony have prevailed.

Conclusion.—Thanking the honorable Commissioner of Indian Affairs for his efficient aid and many courtesies shown me in the conduct of affairs at this agency, during the past year, I am,

Very respectfully,

D. H. GEORGE,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF MENOMINEE SCHOOL.

MENOMINEE BOARDING SCHOOL, *August 1, 1898.*

SIR: Again I have the honor to submit a report of the Menominee boarding school (Green Bay Agency) for the year 1898:

There were enrolled 173 children and an average attendance of 157. At the commencement of the school year we have but little trouble in filling the school, and always without the assistance of police. These children like to be in school, and the parents take much interest in their children's education, quite frequently visiting their schoolrooms and debating society, shops, and Sunday evening services, all of which is very encouraging to teachers and superintendent.

Schoolrooms.—There are four schoolrooms—kindergarten, primary, intermediate, and grammar. All did good work, but especially the kindergarten, intermediate, and primary teachers have worked faithfully and patiently, and by their fruits may be known. Visitors going into these rooms always remark, "What fine schools!" The primary room is, and always has been, very crowded, and until we can have another large room and another teacher I am powerless to prevent it. In fact, this whole school plant should be enlarged and placed upon modern improved lines, with all modern improvements and fixtures, or not expect of teachers, matrons, and superintendents the best work. Why should this schoolwork in small rooms poorly ventilated, poorly lighted, and crowded beyond reason, and with but few modern things to work with? Echo answers why. The Menominees have to their credit in Washington something like \$1,000,000, and would be glad to have a little of it expended in building a new school plant. The attention of the Department has been called to this matter very frequently by inspectors, supervisors, and agents, but it has availed nothing.

Shops.—There is in connection with the school a carpenter and wagon shop; also a shoemaker's shop. Eight boys are regularly detailed in the carpenter shop and four in the shoe shop. All are improving and some are becoming quite proficient at their trades. Much credit is due Mr. Russell, the carpenter.

Girls' work.—Work for the girls is about the same as in all schools of this character—laundrying, sewing, cutting, mending, cooking, cleaning house, making butter, caring for milk, etc. In addition to doing the above, they have prepared rags for about 100 yards of rag carpet that is now in the loom and will soon be upon their hall and sitting-room floors.

School farm consists of 320 acres; is a beautiful location and very fair land. Only a few years ago it was all covered with large timber and many stones, but at this time 135 acres are under cultivation, and in grain, grass garden, and pasture, and all inclosed in a most substantial board fence, about 400 rods being constructed this year, the posts being cut and drawn from the timber by the schoolboys. Separate pastures were made for hogs and cattle, where they can have free access to a beautiful mountain stream of pure cold water. It is truly an object lesson to white people as well as Indians, and is entitled to more inspection and consideration from those coming here to look things over than it receives. It seems hard to get those who are in authority to look the farm over and see what the boys are doing toward storing up knowledge that will prepare them to make good, comfortable, happy homes for themselves.

I am strongly in the belief it is better to get the children to make and love a good home and know how to work than to give them a high education which they will never have a chance to use. So many returned students will not do anything if the honorable Commissioner does not give them a chance to teach or become a Government employee of some kind. Better teach them to work, and then let them do as white people do, work or go hungry. There is much good land upon this reservation, where the young people could in a short time have fine homes and raise grain of all kinds and stock enough to be independent and happy.

This farm, after a careful estimate, will yield this year—

| | | | | | |
|----------------|-----------|-------|---------------|-----------|-------|
| Potatoes | bushels.. | 1,000 | Rye | bushels.. | 200 |
| Beans | do..... | 60 | Melons | | 1,500 |
| Oats | do..... | 1,000 | Onions | bushels.. | 25 |
| Hay | tons.... | 20 | Pickles | barrels.. | 10 |

Vegetables of all kinds in abundance—lettuce, pease, sweet corn, beets, squashes, etc.

Stock.—The school stock consists of 4 horses, 19 head of cows and young cattle, 58 hogs and many small pigs, 20 sheep and many chickens, all in splendid condition. There has been sold at auction \$150 worth of hogs and \$27 worth of wool. The shearing of the sheep, care of the lambs, calves, and pigs, and milking of cows is done by the school boys, and are very valuable lessons for them. They do this work carefully and cheerfully. Will say here there is nothing wrong with the Menomonee boy; all he wants is a chance.

Sickness.—This school had a very severe trial of measles in January, there being in bed at one time about sixty boys and girls, and death of two small boys in consequence. We received much help and encouragement during this epidemic from the old Indian mothers and fathers, who came and sat up nights and helped us care for the children, never complaining about the care their little ones were receiving. With this exception the health of the school was excellent.

Employees.—While it is always expected and a certainty there will be more or less discontent, dissatisfaction, and complaining among people that are confined to certain rules and hours, and are so completely isolated from the outside world for eleven long months in each year, I am much pleased to report that there was but little to disturb our harmony and peace, and that all employees have been faithful to their duties and worked hard for the upbuilding of this people.

More room.—There should be more dining, more and larger sitting and reading, rooms provided for this school. The tables are seated just as close as it is possible for children to get down, with but little room to move their arms and hands. The sitting rooms in cold weather, when the children remain in the house, are crowded so they can not read or move around and enjoy themselves. The truth is, the whole plant should be enlarged so as to accommodate at least 200 children. There are plenty of little ones still in the camps to keep it filled.

Sent away to school.—During the past year there have been sent to Carlisle School 22 and to Haskell Institute 32 children; in all 54.

Conclusion.—I wish to thank you for your deep interest in the school and kindness to myself and employees.

Yours, respectfully,

LESLIE WATSON, *Superintendent.*

D. H. GEORGE, *United States Indian Agent.*

REPORT OF SUPERINTENDENT OF ST. JOSEPH'S SCHOOL, MENOMONEE RESERVATION.

KESHENA, WIS., July 5, 1898.

SIR: Complying with a request made, I respectfully submit the following brief data concerning St. Joseph's Industrial School:

The school has a capacity of 170 boarding pupils. During the past year it has been in session for ten months. For a few weeks in March class work was interrupted by an epidemic of measles, which brought down nearly all of our pupils, but I am happy to state that the sickness did not prove fatal at our school. Not one child died; all have recovered.

The enrollment for the past year shows a total of 118 pupils, 62 boys and 56 girls, they all belong to the three reservations comprised in the Green Bay Agency. The school had a contract formerly for 130 pupils, but owing to a policy followed by the Department for the past five years this number has been gradually reduced to 60; thus nearly twice the number of pupils provided for by the Government has been supported and taught by our school during the year just closed. Charitable help has enabled us to do this.

The branches of instruction taught by our school are those of the common schools of the country, besides various industries mentioned hereafter. Schoolroom exercises are held as follows:

For the little boys and girls from 9 to 11.30 a. m., and from 1 to 3 p. m.; for the large boys, from 8.30 to 11.30 a. m., and from 1 to 3 p. m. during the winter months; after school hours in the afternoon the boys repair to their respective industrial work; for the large girls, from 1 to 4.30 p. m. With the beginning of the warm season class work in the afternoon has been suspended with the large boys and the time given to manual labor.

The industries of our school comprise general farm and garden work, carpentering, shoemaking, and baking for boys, and general housework for girls. The latter includes cooking, laundry work, dressmaking, fine needlework, flower making, mending, etc.

One boy has attended a steam engine employed in cutting the necessary firewood and in raising water to a large tank in the girls' schoolhouse, from which the other buildings are amply supplied with water for the various purposes, not the least of which is to have a sufficient supply at hand in the event of fire.

In their industrial pursuits our pupils have given considerable satisfaction, though it requires constant watching and prompting to have them faithfully attend to their charges.

During the latter part of April our old residence and adjoining wing were removed and a larger and better building is in course of erection to obtain more spacious localities, of which we stood in need.

The lands held by our school at present comprise in all about 30 acres, all of which are under cultivation, with the exception of the grounds covered by the buildings, and the portions used as playground. As to the crops raised by our school, the number of stock, etc., I would refer to the statistical report I have given some time ago.

I remain, very sincerely, yours,

REV. BLASE KRAKE,
Superintendent.

D. H. GEORGE, *United States Indian Agent.*

REPORT OF LA POINTE AGENCY.

LA POINTE INDIAN AGENCY, *Ashland, Wis., August 18, 1898.*

SIR: In accordance with instructions from your office, I have the honor to submit my first annual report of the affairs of this agency, together with the census and statistics of the several reservations comprising the same, for the past year. My report will necessarily be brief, and compiled principally from the office records and not from personal experience and observation, as my connection with the agency has been less than two months.

On July 1, 1898, I assumed charge of the La Pointe Agency, relieving Capt. G. L. Scott, Sixth United States Cavalry, as acting agent in charge. I found the management of affairs excellent and the various branches of the business well attended to and the agency in good running order. I shall endeavor to carry on the work on the same general lines so successfully pursued by my predecessor, no decided changes appearing to be necessary at the present time.

The agency comprises four reservations in the State of Wisconsin and three in Minnesota, as follows:

| | Acres. |
|--|----------|
| Red Cliff, Bayfield County, Wis..... | 14, 102 |
| Bad River, Ashland County, Wis..... | 124, 333 |
| Lac Court d'Oreilles, Sawyer County, Wis..... | 66, 136 |
| Lac du Flambeau, Vilas County, Wis..... | 69, 824 |
| Fond du Lac, Carleton County, Minn..... | 92, 346 |
| Vermillion Lake (Nett Lake), St. Louis and Itasca counties, Minn..... | 131, 629 |
| Grand Portage, Cook County, Minn..... | 51, 840 |
| *Total..... | 550, 210 |

I have visited all of the reservations since assuming charge, many of them several times, and have also inspected such of the schools as were in session.

Census.—The corrected census of the Indians for the past year shows the present population of the agency to be 4,682, divided as follows:

| | |
|---------------------------|--------|
| Red Cliff..... | 212 |
| Bad River..... | 692 |
| Lac Court d'Oreilles..... | 1, 143 |
| Lac du Flambeau..... | 770 |
| Fond du Lac..... | 771 |
| Vermillion Lake..... | 771 |
| Grand Portage..... | 323 |
| Total..... | 4, 682 |

The information required by the regulations of the Indian Office to be furnished in connection with the census is contained in the following table:

| Name of band. | Males over 18 years. | Females over 14 years. | School children between 6 and 16 years. |
|---------------------------|----------------------------|------------------------------|---|
| Red Cliff..... | 62 | 68 | 58 |
| Bad River..... | 269 | 252 | 132 |
| Lac Court d'Oreilles..... | 412 | 452 | 250 |
| Lac du Flambeau..... | 253 | 331 | 161 |
| Fond du Lac..... | 194 | 231 | 232 |
| Vermillion Lake..... | 218 | 235 | 192 |
| Grand Portage..... | 82 | 111 | 95 |
| Total..... | 1,490 | 1,710 | 1,120 |

Ashland, Wis., the headquarters of the agency, is located on the south shore of Lake Superior, and is reached via Chicago, St. Paul, Minneapolis and Omaha Railway, Chicago and Northwestern Railway, Northern Pacific Railway, and Wisconsin Central Railway.

Red Cliff Reservation is located 3 miles from Bayfield, a town on the Chicago, St. Paul, Minneapolis and Omaha Railway, distant 24 miles from Ashland. A wagon way connects Bayfield with the Indian village on Buffalo Bay, Red Cliff Reservation, distant about 3 miles. During the season of open navigation Bayfield is reached by a steamer which makes two daily trips from Ashland, a distance of 22 miles. Post-office and telegraphic address, Bayfield, Wis.

Bad River Reservation lies about 3 miles east of Ashland. The principal village is at Odanah, a station on the Chicago and Northwestern Railway, 10 miles east of Ashland. Post-office and telegraphic address, Odanah, Wis.

Lac Court d'Oreilles Reservation is reached via Hayward, a town on the Chicago, St. Paul, Minneapolis and Omaha Railway, distant from Ashland about 60 miles. The principal villages, Lac Court d'Oreilles and Pahquahwong, are distant from Hayward 23 miles and are connected with that town by means of a fair wagon road. Post-office address, Reserve, Wis. Telegraphic address, Hayward, Wis.

Lac du Flambeau Reservation is reached via the Chicago and Northwestern Railway. The principal village is located at the foot of a large lake named Flambeau, and about 5 miles from the railway station. Post-office and telegraphic address and railway station, Lac du Flambeau, Wis.

Fond du Lac Reservation is located about 95 miles west of Ashland and 24 miles west of Duluth. It is reached via Cloquet, a town on the Duluth and Winnepeg Railway, the principal settlement being connected with Cloquet by 3 miles of very poor wagon road. Post-office and telegraphic address and railway station, Cloquet, Minn.

Vermillion Lake Reservation is situated 3 miles from Tower, Minn., and is reached by boat in summer and a roadway on the ice in winter. Tower is about 170 miles from Ashland, on the Duluth and Iron Range Railway. The Boise Forte Indians have a number of settlements in St. Louis and Itasca counties, in the State of Minnesota, besides the one at Sucker Point, on Vermillion Lake. The farmer and teacher are now established at Nett Lake, on the reservation proper. Post-office and telegraphic address and railway station, Tower, Minn.

Grand Portage Reservation is situated about 200 miles from Ashland, on the north shore of Lake Superior. The village is on Grand Portage Bay, about 10 miles west of the mouth of Pigeon River, which stream forms for a number of miles the boundary between the United States and Canada. Post-office address, Grand Portage, Minn. The reservation is reached during the season of navigation by steamer making semiweekly trips between Duluth and Port Arthur, Canada.

Schools.—Connected with the agency are ten day and three boarding schools. The following table gives detailed information regarding the same:

| Name of school. | Reservation where situated. | Average attendance. | Name of teacher. | Salary per annum. |
|----------------------------------|-----------------------------|---------------------|----------------------------------|-------------------|
| DAY SCHOOLS. | | | | |
| Normantown | Fond du Lac | 13 | Josephine B. Von Felden | \$600 |
| Fond du Lac | do | 19 | Mary Morgan | 600 |
| Nett Lake | Vermillion Lake | 18 | Augusta Bradley | 600 |
| Red Cliff | Red Cliff | 41 | Sister Seraphica Reineck | 600 |
| | | | Sister Victoria Steidl | 300 |
| Grand Portage | Grand Portage | 19 | Ulysses S. G. Plank | 600 |
| | | | Emma E. Plank | 300 |
| Lac Court d'Oreilles No. 1 | Lac Court d'Oreilles | 10 | Cassius A. Wallace | 600 |
| Lac Court d'Oreilles No. 2 | do | 11 | Lena Wallace | 300 |
| Lac Court d'Oreilles No. 3 | do | 38 | William Denomie | 600 |
| Pahquahwong | do | 17 | Sophie Denomie | 300 |
| | | | Sister Hugolina Fischenich | 600 |
| Odanah | Bad River | 55 | Sister Florentia Pehura | 450 |
| | | | Charles K. Dunster | 600 |
| | | | Janett Dunster | 300 |
| | | | Sister Macaria Murphy | 600 |
| | | | Sister Clarissima Walsh | 480 |
| BOARDING SCHOOLS. | | | | |

| | | | Sister Callista | (a) |
| | | | Sister Veronica | (a) |

a Not Government employees.

Since the last annual report was rendered, the day school at the Bad River Reservation, and also one at Lac Court d'Oreilles Reservation, which were formerly conducted by the Roman Catholics, have been taken under Department control and the sisters in charge authorized as Government employees. The school buildings and furnishings owned by the Roman Catholics are leased by the Government at a rental of \$100 per year.

The boarding school at Bayfield and St. Mary's boarding school at Bad River Reservation are still managed by the Roman Catholics, and receive aid under contracts with the Government for a limited number of pupils. These two are the only schools at the agency under control of religious societies.

The day school at Nett Lake, Vermillion Lake Reservation, has been discontinued since June 30, 1898, for the reason that the new boarding school now in process of construction at the reservation will provide ample accommodations and school facilities for the entire scholastic population. The boarding school is fast nearing completion under the efficient supervision of Mr. Edwin S. Radcliffe, superintendent of construction, and I hope soon to be able to report it in successful operation.

The day school at the Grand Portage Reservation has had a prosperous year, with Mr. U. S. G. Plank, a very capable and enterprising teacher, in charge. This school labors under a great disadvantage, as owing to its isolated situation on the north shore of Lake Superior it is difficult to obtain employees who are willing to remain at the reservation during the winter months. For this reason Mr. Plank and wife have recently been transferred to the Haskell Institute, much to the regret of this office.

The Lac du Flambeau boarding school is now fully equipped with a system of electric lighting, and much-needed improvements to the water system have also been added. With its corps of efficient employees, and under the able supervision of Supt. Reuben Perry, I look for a year of successful and progressive work. The capacity of the school has several times been increased, and 180 children can be cared for at the present time. In addition to pupils obtained at the Lac du Flambeau Reservation, a number of children have been in attendance from other reservations of the agency; and it is contemplated to increase this number to 40 during the present year.

A full and complete report of the Lac du Flambeau boarding school, prepared by Superintendent Perry, and showing the advance made in all the lines of work during the past year, is herewith submitted.

I find that a recommendation for an increase in the salary of Superintendent Perry has already been made to your office. It should certainly be granted. Mr. Perry's salary of \$1,000 was fixed by the Department when the school was first established, and when the number of children in attendance and the responsibilities of his office were less than half what they are at the present time. I shall be pleased to see his earnest efforts in behalf of the school receive the substantial appreciation of the Department.

A proposition for the establishment of a Government boarding school at the Lac Court d'Oreilles Reservation is now receiving the consideration of the Department. I have repeatedly enumerated in my several requests the urgent necessity for the same. With a population of 1,143 Indians, dispersed over an area of more than 66,000 acres, the need of the school is very apparent. There are several settlements of the Indians scattered over the reservation from 5 to 10 miles apart, and four day schools have been maintained by the Government at the principal villages, which are accessible only to the children dwelling in the immediate neighborhood. These schools are expensively conducted, and very unsatisfactory results are obtained owing to the nomadic habits of the Indians, which necessitate the frequent withdrawal of their children from the schools, thus preventing all progress on the part of the pupils and causing constant annoyance and hindrance to the work on the part of the teacher.

This irregularity in attendance of the Indian children is bound to operate to the disadvantage of all reservation day schools, as the parents are obliged to leave their homes to engage in sugar making, berry picking, hunting, fishing, etc., in order to obtain a livelihood. The children, under existing circumstances, must accompany them, and the present unsatisfactory condition of the day schools will continue until a boarding school is established on every reservation; the children placed therein and clothed, fed, and educated by the Government with but little interference on the part of the parents. When this is done, material advancement will be made on the part of the younger generation along the lines of civilization and education.

Timber industries.—I have not as yet sufficiently familiarized myself with the timber operations conducted at this agency so as to be able to make a very extensive report or pertinent recommendations in regard to the same. Logging and the manufacture of lumber have been pursued during the past year by Justus S. Stearns and J. H. Cushway & Co., authorized contractors at the Bad River and Lac du Flambeau reservations respectively. Frederick L. Gilbert was also authorized last fall to contract for the sale of timber on the Red Cliff Reservation. Logging was accordingly carried on last season, and a sawmill erected for the manufacture of timber at the reservation, which is now in successful operation. At the Lac Court d'Oreilles Reservation, a small amount of timber was cut and banked under the contract of Henry Turrish with the Government. It is expected that more timber in scattered tracts will be cut the coming winter. Logging, however, at this reservation is almost a thing of the past; the timber is not found in sufficient quantities, or so located as to make the cutting of the same a paying investment. There is, therefore, little or no profit either to the contractor or to the Indian owner of the pine. So far as I am able to learn, the contractors have fulfilled their agreements with the Department in accordance with the prescribed regulations, and the timber operations have been prosecuted with advantage to themselves and to the benefit of the Indian allottees. The dead and down tribal timber is cut whenever necessary on the several reservations, under special contracts made between the contractor and Indian agent and approved by the Department.

None of the timber on the Vermilion Lake, Grand Portage, and Fond du Lac reservations is allowed to be cut and sold. The act of January 14, 1889 (25 Stats., 642), under which the allotments on these reservations were made, preventing the disposal of the same on the part of the Indian. This law not only operates against the sale of the pine timber, but forbids the Indians selling cord wood, ties, cedar posts, telegraph poles, etc. Constant application is made for permission to dispose of such small timber, which I am obliged to refuse. If the same was allowed to be cut and sold under like restrictions as govern the sale of small timber on the Wisconsin reservations, it would be a great source of benefit to the Minnesota Indians under the jurisdiction of this agency and greatly ameliorate their condition.

I include the following detailed statement, obtained from the office records, which evidences the timber cut during the past logging season on the Lac du

Flambeau, Bad River, Red Cliff, and Lac Court d'Oreilles reservations, and also the sum received and expended on account of the same:

Lac du Flambeau Reservation:

| | | |
|---|-------------|-------------|
| Balance on hand July 1, 1897, and due from contractors | \$17,491.43 | |
| Amount received from sale of timber from July 1, 1897, to June 30, 1898 | 49,860.91 | |
| Amount received from advance on contracts | 5,259.10 | |
| | <hr/> | \$72,611.44 |
| Amount paid to Indians on timber accounts | 38,256.79 | |
| Amount paid to contractors, account of advance | 10,039.97 | |
| Amount paid for scaling and other expenses | 1,899.08 | |
| Balance on hand June 30, 1898, and due from contractors | 22,415.60 | |
| | <hr/> | 72,611.44 |

Bad River Reservation:

| | | |
|---|-----------|------------|
| Balance on hand July 1, 1897, and due from contractors | 25,215.00 | |
| Amount received from sale of timber from July 1, 1897, to June 30, 1898 | 71,475.76 | |
| Amount received from advance on contracts | 10,975.31 | |
| | <hr/> | 107,666.07 |
| Amount paid to Indians on timber accounts | 65,027.86 | |
| Amount paid to contractors, account of advance | 5,362.82 | |
| Amount paid for scaling and other expenses | 2,965.16 | |
| Balance on hand June 30, 1898, and due from contractors | 34,310.23 | |
| | <hr/> | 107,666.07 |

Red Cliff Reservation:

| | | |
|---|-----------|-----------|
| Amount received from sale of timber | 82,956.45 | |
| Amount received from advance on contract | 3,750.00 | |
| | <hr/> | 86,706.45 |
| Amount paid to Indians on timber accounts | 33,511.31 | |
| Amount paid to contractors, account of advance | 650.00 | |
| Amount paid for scaling and other expenses | 829.09 | |
| Balance on hand June 30, 1898, and due from contractors | 51,716.05 | |
| | <hr/> | 86,706.45 |

Lac Court d'Oreilles Reservation:

| | | |
|---|----------|----------|
| Amount received from sale of timber from July 1, 1897, to June 30, 1898 | | 7,631.36 |
| Amount paid to Indians on timber accounts | 2,909.45 | |
| Amount paid for scaling and other expenses | 357.19 | |
| Balance on hand June 30, 1898 | 4,364.72 | |
| | <hr/> | 7,631.36 |

Summary of timber operations:

| | | |
|---|------------|------------|
| On hand July 1, 1897 | 42,706.43 | |
| Amount received, sale of timber | 211,924.48 | |
| Amount received, advance on contracts | 19,984.41 | |
| | <hr/> | 274,615.32 |
| Amount paid on timber accounts to Indians | 139,705.41 | |
| Amount paid contractors, account of advance | 16,052.79 | |
| Amount paid for scaling and other expenses | 6,050.52 | |
| Balance on hand June 30, 1898 | 112,806.60 | |
| | <hr/> | 274,615.32 |

| | | | 62,512,060 |

Allotments.—Schedules of applications for allotment by Indians of the Lac du Flambeau, Bad River, and Lac Court d'Oreilles reservations have been forwarded to Washington during the past year, but no patents have issued on account of the same. Twenty-four patents, in favor of certain Bad River Indians, have recently been transmitted to this office for lands selected in lieu of allotments previously made and relinquished by the Indians, on account of the destruction by fire of the timber standing thereon and for other good and sufficient reasons.

The table following shows the number of allotments made on each reservation of the agency, for which patents have been received, the number of allottees—male and female—and the number of acres allotted:

| Reservation. | Number of allotments. | Males. | Females. | Number of acres allotted. |
|----------------------------|-----------------------|--------|----------|---------------------------|
| Lac Court d' Oreilles..... | 684 | 437 | 247 | 53,569.17 |
| Bad River..... | 502 | 323 | 179 | 39,083.21 |
| Fond du Lac..... | 450 | 258 | 192 | 30,296.73 |
| Lac du Flambeau..... | 306 | 186 | 120 | 24,486.84 |
| Red Cliff..... | 204 | 108 | 96 | 14,102.81 |
| Grand Portage..... | 304 | 147 | 157 | 24,191.31 |
| Total | 2,450 | 1,459 | 991 | 185,730.07 |

Agriculture.—The Indians as a whole do not take kindly to the tilling of the soil, and it is extremely difficult to induce them to make permanent homes and settle down to the work of improving their allotments. Many of them have small gardens and patches of cleared land, but few of these clearings can be dignified by the name of farms. Nearly all the reservations are adapted to agriculture, the soil of Bad River Reservation being especially rich and productive. Wherever the Indians have worked faithfully in improving their allotments success has for the most part attended their efforts. The crops, owing to unfavorable conditions of weather, have not been as abundant as heretofore. The different reports for each reservation, elsewhere printed, give the statistics in detail in regard to the stock owned by the Indians, and the hay, grain, and vegetables raised by them.

General improvements and industries.—The improvements in and about the village of Odanah, at the Bad River Reservation, have been continued the past year, several thousand dollars having been expended in clearing land, opening roads, building sidewalks, and providing artesian wells. The work for the most part has been accomplished by Indian labor and paid for with tribal money deposited in the United States Treasury to the credit of the Bad River band of Chippewas. The improvements have been of incalculable benefit to the Indians, and I have already requested the Department to authorize further work on this reservation, the expenditure involved to be settled for from the proceeds of the sale of the tribal timber.

Much work has been done on the highway which connects the Lac Court d'Oreilles Reservation with the town of Hayward, about 13 miles distant. The road runs through the reservation, and work on the same was performed largely by Indians, but paid for by the local authorities.

Since the authorization of the timber industries on the Red Cliff Reservation the Indians have built a number of houses and made many other improvements. Their village now presents a thriving appearance, which compares favorably with the older and more important settlements at Bad River and Lac du Flambeau reservations.

Employment is afforded all the able-bodied Indians who will work in the reservation sawmills, and many of them are so employed. Others are learning the blacksmith and carpenter trade.

Sugar making, berry picking, and rice gathering continue to occupy the Indians during the proper seasons and afford them a considerable revenue. Fish and game furnish a never-failing food supply. The recent enforcement of the stringent fish and game laws of Wisconsin and Minnesota are felt by the Indians to be a great hardship, although they have learned by severe experience that the same must be obeyed.

During the recent carnival held in the city of Milwaukee a representation of Indians from the Bad River and Lac du Flambeau reservations was in attendance by authority from your office. The Indian exhibit proved one of the chief attractions of the carnival. The Indians were permitted to manufacture and offer for sale articles of beadwork, birch-bark work, etc., which found ready purchasers.

A delegation of Lake Superior Chippewas from this agency is now in attendance at the Trans-Mississippi Exposition at Omaha, Nebr., forming a part of the United States Indian congress, under charge of Capt. W. A. Mercer.

Sanitary condition.—The agency physician visits the Indians on the four Wisconsin reservations of the agency whenever his services are required. It is impossible for one physician, with headquarters at the agency office, to also care for the sick on the three Minnesota reservations. The general health of the Indians for the past year has been good. There have been no epidemics. Lung trouble, as usual, continues to be the prevailing disease. There is a dispensary at the agency headquarters, where drugs and medicines are always furnished whenever the Indians apply for the same.

A contract has recently been made with Dr. G. C. Wiechman, a resident of the Lac du Flambeau reservation, to furnish the medical attendance required at the Government boarding school during the current fiscal year. This in a measure relieves the agency physician and affords him opportunity to attend to other professional duties.

In conclusion.—I desire to express my appreciation of the kindness which I have received at the hands of the Department, and to make due acknowledgment of the aid and information received from Captain Scott, my predecessor, on entering upon a field of work entirely new to me. The present satisfactory condition of the La Pointe Agency is in a great measure owing to the efficient force of employees, who give to the agent their hearty cooperation and support in all efforts made to further the welfare of the Indians under his charge.

The foregoing is respectfully submitted.

S. W. CAMPBELL,
United States Indian Agent.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF LAC DU FLAMBEAU SCHOOL.

LAC DU FLAMBEAU, WIS., August 1, 1898.

SIR: I have the honor to submit my third annual report of the Lac du Flambeau Indian Industrial School, covering the year ending June 30, 1898.

During the year there were 181 pupils enrolled with an average attendance of 141.

The literary department of the school has done excellent work during the year. The work in this department has been carried on more systematically than before. A course of study, arranging and outlining the work for each grade, has been adopted. We have found this to be of great value in unifying the work and furnishing a uniform method for promotions. Each teacher has been required to submit, on Monday morning, an outline of the week's work for her room. This is an incentive to the teacher to make special preparation for her week's work and helps her to know just what she will do each day. It is also an aid to the principal teacher and superintendent in keeping close supervision over the school work. Great improvement has been made in all the branches taught, but this has been most noticeable in drawing and language. Many of the pupils have shown talent in drawing, and all have shown a marked improvement in the use of English, both oral and written.

But little difficulty has been experienced in getting the children to talk the English and refrain from the use of the Indian language.

The evening hour has been employed as follows: Two evenings each week have been devoted to note reading and singing; one evening to the study of the Sunday school lesson and chorus practice; and two evenings to the reading of interesting books under the direction of the teachers. The advanced pupils have been encouraged to read the newspapers, and in this way, and by listening to short talks by the superintendent and teachers on current topics, they have kept in touch with the outside world.

In January a kindergarten department was established in the school. This department has greatly benefited the small children by giving them exactly the kind of work they were suited to do. The kindergarten methods have been an excellent means of getting the small pupils to converse in English.

Six of the most advanced pupils are ready and have been recommended for transfer to Haskell Institute.

The industrial departments have furnished excellent training for the children. The boys have been instructed, under the farmer's direction, in caring for the stock, keeping the barn and barnyard in order, repairing fences, and plowing and gardening. Twenty-five acres of marsh land (which was drained last year) have been cleaned for the plow; this land is now being broken by the boys and will be prepared and sown in grass for meadow. A 4-acre tract of this land was broken and planted in potatoes, but owing to the wet season in the early part of the summer this crop will be a failure. On the higher land, which was cleared for garden purposes, crops as follows have been planted: Four acres in potatoes; 1 acre in beans, radishes, beets, etc.; 2 acres in blackberry and raspberry plants, and 1 acre in corn. The berry plants are growing nicely, and the present indications are that the potatoes and garden stuff on the high land will yield reasonably well.

The carpenter work has been very much like the work done in this department during former years. The boys, under the supervision of the carpenter, have done the necessary repairing for the school, have built a hog house and a chicken house, have made washstands, bookcases, tables, etc., as needed for school use. The boys who work in the carpenter shop have a good idea of general carpenter work. They have also learned, under the carpenter's supervision, something about mixing paints and a great deal about painting.

A blacksmith shop has been in working order for seven months of the year. The blacksmith work for the school and reservation has been done by the school blacksmith and his three apprentices. The boys seem to be interested in the blacksmith work and have made commendable progress.

The girls have been ably instructed in housework, cooking, laundry work, and sewing. In the sewing room the girls have advanced rapidly. They cut, fit, and make dresses and other garments. A number of the larger girls can now cut, fit, and make dresses without aid from the seamstress. One day out of each week in the sewing room is devoted to fancy work. The girls have taken a great deal of interest in the fancy work and have learned to do nice embroidering, hemstitching, and fancy stitching.

The school had an interesting and attractive exhibit at the carnival at Milwaukee, June 27 to July 3, inclusive. This exhibit consisted of laundry work, cooking, sewing, and fancy work, carpenter and blacksmith work, and schoolroom work. This work was inspected by a great many people, who seemed surprised at the fact that the articles had been made and the work done by Indian pupils who had been in school less than three years. Forty of the pupils attended the carnival, and by their nice behavior and cleanly habits made a very favorable impression.

The work detail is changed once in three months, thus furnishing an opportunity for the pupils to learn something about the work in the different departments. The carpenter and blacksmith details have not been changed during the year.

The school, at a cost of nearly \$5,000, has been furnished an excellent water system, consisting of a windmill located at an elevation of 100 feet, a tank of 700 barrels capacity located at an elevation of 70 feet, a system of outside piping to all the buildings, and a system of inside piping in buildings where water for general purposes is needed. This system, with hydrants located in the vicinity of each building, 1,000 feet of hose suitable to attach to the hydrants and hose on the inside of each important building, furnishes ample means for fire protection.

Another improvement, which I am very glad to be able to report, is that the school is lighted by electricity, arrangements having been made with the Flambeau Lumber Company to furnish light for the school. The electric lights are far superior to the kerosene lamps, and the additional expense is very small. The water system and electric lights have added greatly to the convenience, cleanliness, and safety of the buildings.

The health of the pupils, in general, has been very good. The appointment of a nurse has made it possible for the sick to be cared for in the new hospital instead of in the dormitories as we were compelled to do before. This change is a great improvement, as it enables us to move the sick away from the noise in the main building and have them under the care of a trained nurse.

With thanks for kind treatment, I remain, very respectfully, yours,

REUBEN PERRY, Superintendent.

S. W. CAMPBELL, United States Indian Agent.

REPORTS OF AGENCY IN WYOMING.

REPORT OF SHOSHONE AGENCY.

SHOSHONE AGENCY, WYO., *August 25, 1898.*

SIR: I have the honor to submit this my first annual report of the condition of affairs at this agency. I assumed the duties as agent of this agency on April 1 of this year, hence my report will be based more upon inquiry than upon experience and personal observation.

The location and description of this reservation has been so fully and regularly described by my predecessors that I deem it unnecessary to repeat the same in this report.

Agency.—In addition to this agency, where all of the Shoshones and a part of the Arapahoes receive their supplies, there is the Arapaho Subagency at the mouth of the Little Wind River, 25 miles from here, where most of the Arapahoes draw their rations. The road to this subagency is bad and at times impassable, owing to high water, hence much of the agent's time is taken up visiting this place, a necessity arising from the fact that there is no responsible person there in charge of the property. The employees stationed there are a farmer, blacksmith, carpenter, and two apprentices, and as most of the farming is done in that vicinity there is necessarily much work and repairing done there.

Industries.—Agriculture is the principal pursuit of the Indians of this reservation, although they also engage to a considerable extent in wood chopping, freighting, and stock raising. During the last fiscal year they filled the contracts at Fort Washakie and the agency for wheat, oats, hay, straw, and wood, and hauled all the Indian supplies from the railroad at Casper, 150 miles distant. They have a large number of horses, far too many, but as they measure their wealth by the number of their horses they can not be induced to eat them or to dispose of them cheaply. They have a few cattle and some show a disposition to increase their herds, but their inordinate appetite for meat makes it almost impossible for them when hungry to resist the temptation of killing and eating their cattle. The wood contracts for the present year, 1,800 cords for Fort Washakie, 150 cords for the Wind River Boarding School, and 50 cords for this agency, have already been filled by them, as well as 300 tons of hay at Fort Washakie. They are yet to furnish to the post and agency the following supplies: 600,000 pounds wheat, 450,000 pounds oats, 150,000 pounds straw, and 50,000 pounds bran. They will also, as heretofore, transport all of the agency and Indian supplies from the railroad, about 300,000 pounds.

Field matrons.—There are no field matrons on this reservation at present, although they are greatly needed. Each tribe should have one, to visit every Indian home, instruct the women in domestic economy and maternal duty, and report conditions that can not otherwise be learned. I find that the women are far behind the men in civilized advancement and seriously impede progress. Having no advice, training, or instruction, they rigorously adhere to their ancient customs, paint and blanket their children, keep them from school if possible, ridicule them for having their hair cut, and in every way possible nullify the efforts of the Government to advance them. Competent field matrons could remedy much or all of this.

Indian court.—Two Shoshone and two Arapaho judges compose the court of Indian offenses and render valuable assistance in preserving order and punishing petty offenders.

Indian police.—The police force is well organized, with a captain, lieutenant, and 12 privates. They are willing and efficient and diligent in preserving order and detecting crime.

Education.—The Wind River Boarding School, of which a detailed report is hereto appended, has been conducted by W. P. Campbell during the past year in an able and efficient manner. The 600 acres of land reserved for this school is all fenced and in an advanced state of cultivation. It furnishes an abundance of hay, pasturage, and vegetables for the benefit and use of the school.

St. Stephen's Mission, located near the subagency, is a contract school, and is managed by Rev. B. Feusi, S. J., assisted by Rev. Sansone, S. J., and seven Sisters. It has accomplished much good, and the effect of their influence and work is made apparent to the most casual observer.

The Episcopal Mission School, situated 1 mile west of the agency, is conducted by Rev. John Roberts and several lady assistants. They have taught a number of Shoshone girls, limited to the capacity of the school, in a very creditable and satisfactory manner.

Sanitary conditions.—The sanitary condition of the Indians of this reservation is good, much better, in fact, than the average in former years.

Allotments.—For some reason unknown to me, very few, if any, allotments have been made since I have been agent, although an allotting agent has resided here continuously. Nearly all of the Shoshones and about half of the Arapahoes have taken their land in severalty, have settled on them, and are trying to build homes for themselves. Those who have not taken their land should be induced or compelled to do so.

Treaties.—As the treaty with the Arapahoes expires with the present fiscal year, and that with the Shoshones next, and as these Indians are far from self-supporting, immediate steps should be taken to make a new treaty with them for the disposal of some of their surplus lands, the proceeds of which to be applied to their future support.

The census taken July 1, 1898, shows:

| | |
|---|--------------|
| Shoshones (males, 422; females, 420) | 842 |
| Arapahoes (males, 408; females, 421) | 829 |
| Total, both tribes | <u>1,671</u> |
| School children between the ages of 6 and 16: | |
| Shoshones | 208 |
| Arapahoes | 169 |
| Number of males over 18 years of age: | |
| Shoshones | 241 |
| Arapahoes | 214 |
| Number of females over 14 years of age: | |
| Shoshones | 257 |
| Arapahoes | 274 |
| Number of births: | |
| Shoshones | 23 |
| Arapahoes | 54 |
| Number of deaths: | |
| Shoshones | 53 |
| Arapahoes | 38 |

I am, sir, very respectfully, your obedient servant,

H. G. NICKERSON,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SHOSHONE SCHOOL.

WIND RIVER BOARDING SCHOOL,
Shoshone Agency, Wyo., August 29, 1898.

SIR: In compliance with Rule No. 58, governing Indian schools, I have the honor to submit my third annual report as superintendent of this school.

The enrollment for the year was 167, and the average attendance 150. The average age of the pupils was 11 + years. The enrollment and average attendance could have been increased and the number of the previous year maintained, but, as indicated in our second annual report, "It is questionable whether it is to the credit of the school to push the attendance above the allowance of clothing, etc." We had hoped for a larger appropriation than for 150 children. The children were here and could have been placed in school, and it was with this object in view that we filled the school to the utmost of our supplies the two previous years to demonstrate that it could be done and to induce the Department to recommend an increase. So this last year, we, in conjunction with the acting agent, determined not to carry more than could be comfortably cared for with the supplies furnished. We are glad at this writing to know that our efforts have not been unavailing and that for the coming fiscal year the additional appropriation has been allowed.

The health of the school has been exceptionally good the entire year. No epidemic of any kind and very few cases of sore eyes. Such of the latter that we had were isolated cases and due to bad blood. We have abandoned the use of basins and have the pupils wash with water running from a faucet. With our small tank this taxes our water supply, but we hope to continue it by replacing our tank, which is in bad condition, with one of larger capacity. We had one death, which occurred suddenly. A little girl complained of being sick about 10 o'clock, and before the doctor arrived at noon was dead.

The school farm supplied us with plenty of vegetables during the year. We had 3,500 cabbages, 18,000 pounds of potatoes, 6,000 pounds of beets, in addition to onions, etc. We raised sweet pumpkins that measured 72 inches in circumference and weighed 57 pounds. We had a nice patch of watermelons in addition. With a good garden crop and the baker's position filled we were enabled to give our pupils a better bill of fare than formerly.

The following bill of fare has been used for the greater part of the school year:

Sunday.—Breakfast: Coffee, bread, meat, beans or hominy. Dinner: Coffee, bread, meat, beets, pies. Supper: Tea, bread, fruit, potatoes, gravy, gingerbread.

Monday.—Breakfast: Coffee, bread, meat, oatmeal. Dinner: Coffee, bread, meat, potatoes. Supper: Tea, bread, fruit, beans or hominy.

Tuesday.—Breakfast: Coffee, bread, meat, gravy. Dinner: Coffee, bread, meat, potatoes, cookies. Supper: Tea, bread, fruit, beans or hominy.

Wednesday.—Breakfast: Coffee, bread, meat, gravy, oatmeal. Dinner: Coffee, bread, meat, beets, pies. Supper: Tea, bread, fruit, potatoes.

Thursday.—Breakfast: Coffee, bread, meat, gravy. Dinner: Coffee, bread, meat, potatoes, cookies. Supper: Tea, bread, fruit, beans or hominy.

Friday.—Breakfast: Coffee, bread, meat, beans or hominy. Dinner: Coffee, bread, meat, beets. Supper: Tea, bread, fruit, potatoes.

Saturday.—Breakfast: Coffee, bread, meat, gravy, oatmeal. Dinner: Coffee, bread, meat, potatoes. Supper: Tea, bread, fruit, beans or hominy, gingerbread.

This year we have in 13 acres of oats and 15 acres of garden, as follows: three acres of potatoes, 7,000 cabbages, and the balance in beets, onions, carrots, turnips, rutabagas, peas, pumpkins, squash, etc. Our garden this year is in much better shape than last, and we will have excellent returns from it. We doubt if there is a garden in this section to compare with it, and it will tax both our storage and eating capacity to take care of it. Our crop of principal vegetables will approximately be as follows: 7,000 cabbages, many of which will weigh 30 pounds and over; they will average possibly 10 pounds; 12,000 pounds of turnips and rutabagas, 14,000 pounds of beets, 5,000 pounds of carrots, 4,000 to 5,000 pounds of onions, and 24,000 pounds of potatoes; this in addition to our peas, pumpkins, squash, etc. If placed in one row our garden would be over 35 miles long. This we arranged for horse cultivation. But even then a horse would have to travel 70 miles at each cultivation, or 105 miles when running irrigating ditches. Fortunately the season this year has been very propitious, rains coming just at the right time, so we have had to irrigate but very little.

We have as fine hay land as there is in the country—71 acres of alfalfa, 31 acres of timothy and wild hay mixed, 80 acres of wild hay, and also 67 acres of mixed hay (timothy, wild, and alfalfa). This latter can not all be cut on account of the roughness of the ground. But that is no drawback, as the hay cures on the ground, and with the addition of over 300 hundred acres of good pasture land, makes good pastures for our herd, and we doubt if there is a ranch in this section that is better equipped in this respect.

The schoolroom work has about held its own, but it has not advanced as we should have liked. There has been a lack of that force and concentration of purpose at the head necessary for the best success. However, there has been a very marked increase in the use of English, especially among the younger children, or those in the three lower grades. We have continued our monthly entertainments with good success. It has required extra work on the part of the teachers, but we have been rewarded in the confidence and use of English it has given the pupils.

We have added a monthly letter, which is placed in the mail, and received by their parents in that way each month. This has been helpful in more ways than one. The children not only have the practice of letter writing, which they enter into with renewed interest each succeeding month, but also their parents see that their children can write letters, and even though they can not read them, yet appreciate the progress they are making.

The school year opened under auspicious circumstances, with apparent harmony among the entire school force, until the arrival of a certain school supervisor, not now in the service, who, receiving his inspiration from the outside, attempted to further his personal aims at our expense. His conduct while here was a disgrace to the service, and instead of supervising and helping the school, after three weeks of idleness, left us with several insubordinate employees as a result of his visit.

We have had eight Indian employees during the year with varying success. In the main we think the rule will hold that the best success will be obtained with employees of this description when they come from other reservations, no matter what their previous preparation may have been.

We have as laundress and assistant laundress Indian women, who have been here for years, and are our greatest drawback. They can not talk English, and on this account their example is very bad. They have the redeeming quality of being hard and faithful workers, but the girls have received little or no instruction in this department. Our sympathies would incline us to overlook these faults, but the best interests of the school imperatively demand a change of conditions. We should have a good, substantial laundry, fitted with some necessary machinery for the heavy work, and a good white laundress in charge, competent to give the girls the essential instruction in this most necessary branch of household work.

The national holidays were all appropriately observed. On Decoration Day we joined with the troop of the Eighth Cavalry in their ceremonies of the day, the school gathering wild flowers and contributing them as their mite in decorating the graves of the nation's dead.

On the Fourth of July, although the pupils were at home, yet on the evening of the 3d a company of the larger boys returned to the school, and on the morning of the Fourth went with us to Lander and participated in the parade and celebration of that city. They carried the various implements and tools which they use in the various departments, and were much praised for their appearance. Thanksgiving and Christmas were celebrated with the usual big dinners. On Christmas eve we had our Christmas tree, and about sixty of the pupils gave the cantata of King Winter. The cantata was a great success; our spacious chapel was filled to overflowing with whites and Indians, and our children never sang or appeared to better advantage.

During the year we have made some improvements, which add to the general appearance of the school, but much still remains to be done in this respect. We planted about 100 additional trees. About 75 of those planted last year are still alive. We have sodded in front of the buildings, which has taken away some of the barrenness and bleakness in their appearance. We have extended our fences; relaid the floors in the dining rooms, halls, kitchens, and play room of the girls' building; put in a telephone system connecting the school with the agency, Fort Washakie and Lander; renovated, kalsomined, and painted the main buildings; supplied the windows of the dining rooms, kitchens, office, etc., with screens; repaired the fences and board walks, and have laundress's house and woodsheds in course of construction. All of which was done with the aid of the pupils.

We have now our plans and specifications in your office for industrial shops, hospital building, electric-lighting plant, and general repairs, consisting of water tank, boiler repairs, cornice for the main buildings, roof painting, addition to the laundry, wainscoting, flooring, etc., all of which were provided for in the last annual appropriation bill, and the need of which has been explained in special letters to your office. There are yet many things necessary in order to put this school where it should be. In asking for these necessary improvements we would call attention to the fact that, while we are far removed from supplies, yet this is not an expensive school, our per capita expense last year being only \$141.07.

Among the improvements needed we ought to have an addition to the boys' building, in order to give them the very much needed sitting room, play room, and wash room. We can not be

expected to give our boys much home life or to lift them into a nobler manhood in basements; and that is where our boys have to play, and we might say live. It would require \$2,000 to remedy this defect. The sewerage should be extended. This will cost \$800. The ventilation has been improved, but we will need \$500 to complete it as it should be. Now that we are to have electric light, we ought to have an electric motor to cut our wood, etc. This will cost \$300. Our boys say that they have about learned the wood trade, having 150 cords to saw and cut each year by hand.

The school should be supplied with a comfortable house for the superintendent. This could be built for \$1,200, and would relieve the crowded condition of the employees' quarters. The main buildings should be painted on the outside, to preserve the brick. It will require \$600 for this purpose. The extension asked for the laundry is but a temporary expedient. This school should be supplied with better facilities in this respect. A good substantial stone building should be built and fitted up with machinery for the heavy work. The building and machinery would cost \$2,000. One thousand dollars will be needed for general repairs, flooring, etc.

In closing this report I wish to thank Capt. R. H. Wilson and Agent H. G. Nickerson for the cordial support and aid that they have both given me in the conduct of this school, and we also feel very grateful for the consideration which has been accorded us by your office.

I am, sir, yours, very respectfully,

W. P. CAMPBELL, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

(Through H. G. Nickerson, U. S. Indian agent.)

REPORT OF OFFICER IN CHARGE OF APACHES NEAR FORT SILL, OKLA.

FORT SILL, OKLA., *August 22, 1898.*

SIR: I have the honor to submit herewith report of the condition of the Apache prisoners of war from June 30, 1897, to June 30, 1898.

The policy followed by my predecessor, Capt. H. L. Scott, Seventh Cavalry, and continued by myself, is to make the Apache prisoners of war depend upon cattle raising as their means of livelihood, and this has been their chief industry. Lieutenant Capron, until relieved from duty here, was in immediate charge of the herd, employing a greater or less number of herders, as circumstances required. The herd has been divided among the Apaches to the extent of branding each animal with the number of the family to which it belongs. The herders have been detailed monthly. The increase during the past year is as follows:

| | June 30, 1897. | June 30, 1898. | Increase (+) or de- crease (-). |
|-------------|-------------------|-------------------|---------------------------------------|
| Bulls..... | 31 | 23 | — 8 |
| Cows..... | 882 | 815 | — 67 |
| Calves..... | 539 | 947 | + 408 |
| Total..... | 1,452 | 1,785 | + 333 |

The 947 calves are as follows: Three-year heifers, 8; 2-year heifers, 98; 1-year heifers, 204; 3-year steers, 18; 2-year steers, 69; 1-year steers, 204; young calves—heifers, 163; steers, 183. No sales of cattle have yet been made. I intend this fall to sell the two and three year old steers.

The reservation is now being fenced, after the completion of which each family will be required to look after its own cattle. A small detail will be made to ride the fences and keep gates closed. The construction of the fence should lead to larger increase of the herd. There have heretofore been large losses from straying, especially among bulls and old cows. The Apaches are not good herders; they allow their cattle to stray away, and this leads to much rounding up and driving, which of course is detrimental to the cattle. There has been little evidence of depredations, except by wolves. The herd at present is healthy and in good condition. With this entire reservation under fence for a cattle range, I see no reason why the Apaches should not gain their entire livelihood from selling cattle.

Hog raising as an extensive industry has proved a failure. Each family was given one sow and the whole band two boars. The hogs increased rapidly, and enough food could not be obtained for them. The kitchen refuse from the companies was the chief supply and was insufficient; corn in any quantity was too heating for summer food, and the growing crops necessitated penning the hogs—a bad plan in hot weather. Numbers escaped from the pens and committed large havoc with the gardens. In April, 148 hogs were shipped to Kansas City and cleared \$322.82, which was divided among the Indians who owned the hogs. I considered the advisability of building one large corral and having the hogs owned

in common. This would prevent their destroying crops, but the food supply would still be insufficient, and it would be contrary to the policy of having each family independent of the others and getting the profit of its own labor.

When the garrison left for Chickamauga the whole food supply was cut off. I gathered the hogs all into one large pen to make a forced sale. The spring freshet came suddenly and drowned a large number of young shotes, I do not know exactly how many. I made a bargain with local dealers, but the hog cholera appeared in the Territory and they refused to buy. Finally I sold the balance, 43 sows and 38 shotes, for \$167, which was divided among the Indians who owned them. The whole drove died of hog cholera about three days after they were sold. The two boars are ranging in the foothills about 2 miles from the most western village.

The Apaches were provided with chickens and turkeys. Very few young were raised, and the amount realized by sale was insignificant compared to the necessary care and labor. The Apache villages are located along creek bottoms, which are infested with small beasts of prey, which makes poultry raising of little value. If the Apaches desire to raise hogs and poultry, it must be for their own use and local sale.

I have not kept exact account of the ponies owned by the Apaches. They have about 200 mares and geldings. Each pony is branded "U. S.," and with the family number. They are ordinary Indian ponies. As soon as they can afford it, I shall have the Indians buy a good stallion.

During the past fiscal year the Apaches undertook to supply the post with the necessary amount of hay—940 tons. To obtain this about 1,200 tons were cut. Three hundred tons were rejected as being too old; 640 tons were accepted by the quartermaster; a small amount was lost by fire and storms, and the remainder used to cover stacks. The amount received by the quartermaster was paid for at the rate of \$5.11 per ton, amounting to \$3,281.59. Of this amount \$684.06 was paid to Rice and Quinette, post traders, for the following implements, which were purchased on credit: Eight mowing machines, 2 balers, 5 hay rakers (horse), 1 hay loader, 2 champion rakes, and 1 crane and tongs (for stacking). These machines are now owned by the Apaches, and are in good condition.

The amount of hay assumed—940 tons—proved greater than they could handle. They were hauling hay until about February 15, 1898, and lost a great deal of time, which should have been employed fencing the reservation and harvesting their corn. The balance of the hay money was divided pro rata among the families, and was almost immediately expended in paying debts they had contracted for necessary articles—chiefly saddles, bridles, and ponies. The amount divided—\$3,281.59—gave each man and each woman who worked \$34.75. Some small boys received half pay.

On account of the urgent necessity of building fence and water tanks for stock, no hay was cut during the present fiscal year. Next year, I hope, the Apaches will be able to supply the post with at least half the necessary hay.

Each family has a farm of 10 acres. One acre is devoted to garden crops, one to cotton, and eight to kaffir corn. Last year 9 acres of corn were raised by each family, and but 1 acre of cotton by the whole tribe, for seed. The cotton did so well that this year I allowed each family to devote one acre to it, and it is in fine condition and promises a fine harvest.

The garden crops were field corn, sugar corn, melons, sweet potatoes, onions, pease, beans, and pumpkins. The corn and melons yielded abundantly, in spite of grasshoppers, which were very numerous and destructive. Considerable corn was dried and saved for winter use. The melons were in much larger supply than the demand, and at least half the crop rotted on the vines. Half as many were planted this year, and there is still more than they can eat or sell. The sweet potatoes did poorly. I do not know the cause—probably lack of rain. About 100 bushels were harvested, small and tough. They were given mostly to the hogs. The pease, beans, and onions were killed by drought. Efforts were made to irrigate, but money and time were both too scarce. Very little can be raised in gardens that can be preserved for winter use. The only crop that can be at all depended upon is melons, and the Apaches eat too many and sell too few to derive much benefit from the crop.

The kaffir corn crop was large and fine, but at least two-thirds of the grain was lost by the late harvest. So many men and mules were employed hauling hay that the kaffir corn had to wait. Enough fodder was secured to feed the cattle during the latter part of the winter and spring. Fortunately the winter was mild and short or many cattle would have starved. There is a large crop of corn this year, much more than enough to provide grain and fodder for cattle during the average Oklahoma winter; but each spring we have to plant enough to provide

for a possible long, cold winter. Kaffir corn does well in Oklahoma. It stands drought well and matures even when planted as late as August. It provides good fodder and grain and makes fair flour.

When spring work begins each family should be in a position to work independently. The farm machinery they own in common, and the use of mules they have in common. These will be divided as far as possible among the villages. Each family will have its herd of cattle and 10 acres of land already under cultivation. More land is at their disposal if they wish it, but 10 acres seems about the limit.

The discipline among the Apaches is excellent. The system of having one enlisted man (scout) at the head of each village, and held responsible for its subordination and police, has proved a success in every way.

No punishment has been administered or has been necessary except making those work on Saturday afternoons whose houses and yards have not been in good condition during the week. Saturday afternoon is a half holiday. No work is done on Sunday except by cattle herders. Sergeant Grab, Seventh Cavalry, performs the duties of police sergeant and holds each scout responsible for the police of his village. The refuse matter is burned and the noncombustible matter carried to a dumping ground. The Apaches have learned that now they have permanent homes the ground in their vicinity can not be saturated with kitchen garbage.

The Apaches as a tribe are willing to work. There are some indolent ones, but they are a small minority. They are learning to depend on themselves, and have become provident enough to consider their need several months in advance. Most of their money has been spent for necessary articles, and every family has more or less of household furniture—tables, beds, kitchen utensils, and tableware. They are abandoning Indian ways for those of civilization.

Their greatest needs at present are a repair shop (blacksmith, wheelwright, and saddlers' shop combined), and their mules are getting old and will soon have to be replaced.

The Apaches are apparently peaceably inclined. I do not believe that as a people they will ever again go on the warpath, unless in case of a general uprising such as was threatened in 1890. The Apaches, like most Indian tribes, have an old tradition that some time there is to be a general war with the whites, when the latter are all to be exterminated and the Indians will repossess the whole country. When the garrisons were withdrawn from Forts Sill and Reno the Indians in this vicinity thought the time for this uprising had come, and two Apaches reported that their people were "making medicine and singing war songs in preparation." It was this report that I sent to Lieutenant-Colonel Kellogg, Tenth Infantry, before his command had left Brush Springs. The introduction of liquor among them, which is carefully guarded against, would most likely lead to local trouble, probably among themselves; or an extensive outbreak among their kindred tribes in Arizona would perhaps lead some of the young men to try to escape and join them.

The Apaches are greatly in need of clothes, and have not money enough to buy them. The sale of steers will not realize enough to clothe the tribe for the winter. Many families have no steers to sell. I must make another requisition for clothing, which I hope and believe will be the last. I recommend that they be hereafter allowed to purchase from the quartermaster the following articles: Canvas fatigue clothing, underclothes, shoes, socks, suspenders, flannel shirts, campaign hats, leggings, canvas hoods and mittens, woolen mittens and blankets.

I also recommend that all young men and boys who have been to Carlisle and other industrial schools and learned trades thereat be allowed, if they desire, to accept such positions as may be offered to them. They are anxious to do so.

The Apache prisoners are much more cleanly in their habits and persons than the other Indians on the reservation. I believe they are so naturally, because it has been unnecessary to make any rules or orders about washing their clothing and persons.

Their health is improving. The interpreter, Mr. George Wratten, who has been with them about fifteen years and kept a roster of deaths, states that reckoning from January to January, the past year has been the first in which the births exceeded the deaths.

They suffer in summer from malaria, due to drinking impure water. This is the reason given by Dr. Dewey, the post surgeon who attends them. Each village has a well, but the water is all of bad quality, and they have no access to the post supply.

They number as follows:

| | June 30, 1897. | June 30, 1898. |
|----------------------|-------------------|-------------------|
| Men | 70 | 68 |
| Women | 112 | 105 |
| Boys, over 12 | 17 | 24 |
| Boys, under 12 | 47 | 46 |
| Girls 7 to 12 | 8 | 9 |
| Girls | 45 | 46 |
| Total | 299 | 298 |

Births and deaths have been reported monthly.

The administration has been as follows: Lieutenant Capron was in charge of cattle; First Sergt. Ernest Stecker was acting as first sergeant of scouts and in charge of clerical work; Mr. Wratten, interpreter, was foreman and instructor in farm work; Sergeant Clancy in charge of horses, mules, and forage; Sergeant Grab, commissary and police sergeant. The Indians worked at the different labor in weekly details and in parties, each in charge of a well-instructed Indian, who was responsible that the work was properly done and the working day (eight hours) completed.

After working hours were over, no restraint was imposed on the Indians except to remain on the military reservation, unless provided with a proper pass. Many of them, especially the women, received passes to visit their children at Anadarko, the mission school of St. Patrick's. Thirty-nine children attend St. Patrick's Mission.

The Apaches are in need of a building for schoolhouse and church. As it will be a long time before they can spare enough money from their earnings to build one, I intend asking the War Department for permission to communicate with some missionary society for aid in this matter.

The Apaches express one source of discontent with their present condition, i. e., the prevalence of tuberculosis. They claim that they never suffered from this disease in Arizona, and therefore they want to return there. Whether or not they actually desire to give up everything here and return to Arizona is an open question. After the death of an Apache by tuberculosis his house is carefully policed and disinfected under supervision of the medical department.

There is some bad feeling between the Apaches and Comanches, due to suspected horse stealing by the latter. No cases of theft can be proved, but the Comanches can usually find a missing pony when the owner has money enough to pay a reward of about \$5. This does not now occur so often as a year ago. Open hostility would be fatal to the Apache crops and cattle.

Respectfully submitted.

F. H. BEACH,
*First Lieutenant, Seventh Cavalry,
In Charge of Apache Prisoners of War.*

ADJUTANT-GENERAL, UNITED STATES ARMY,
War Department, Washington
(Through military channels.)

REPORTS OF AGENCIES IN NEBRASKA.

[Reports received too late to be inserted in proper place.]

REPORT OF OMAHA AND WINNEBAGO AGENCY.

OMAHA AND WINNEBAGO AGENCY, NEBR., *November 12, 1898.*

SIR: Replying to your telegram of the 11th instant, calling for my annual report and statistics for 1898, I have to say that the latter were mailed to you on the 5th instant. As everything pertaining to agency affairs was practically unchanged on the 30th day of last June as compared with my previous report, I felt that the statistics would answer every purpose. Added to this was the fact of my being in charge of the Indian congress of the Omaha Exposition and the clerks of my office at this agency being overwhelmed with the routine agency work and the leasing of Indian lands.

The great change in the affairs of this agency began with the present fiscal year, when the system of collecting rents of Indian lands into the office was inaugurated. This caused much dissatisfaction with that class of white men around here who make their living upon the Indians' ignorance; but to the honest citizen who intends to pay the Indian the amount called for on his lease the system is highly satisfactory.

The income of the Indians will be more than doubled by this method, but the work of the office is also increased at least twofold. The Department has granted authority for the employment of one additional clerk until the new position can be filled from the civil-service list, and this will enable me to keep up with the current business.

The Winnebago school was destroyed by fire, leaving only the boys' dormitory, the barns, and a few outbuildings standing. This is the only matter of very great importance that occurred during the fiscal year 1898, but if a report is necessary, I request that this letter be used for that purpose, with such modifications as you deem necessary.

Very respectfully,

W. A. MERCER,
Captain, Seventh Cavalry, Acting Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF OMAHA SCHOOL.

OMAHA INDUSTRIAL BOARDING SCHOOL,
Omaha and Winnebago Agency, Nebr., July 11, 1898.

SIR: I have the honor to submit this my third annual report of the Omaha School for the fiscal year ended June 30, 1898.

The past year is one which will be remembered by those acquainted with this school on account of the good work done and the general advancement made along all lines. The regularity of the attendance has been without precedent; and the contentment of the pupils and their interest in school work have been very remarkable. The roof of the main building was renewed and the interior put in good condition.

The school pasture has been enlarged by the building of 2 miles of fence; it now comprises one half section and will furnish pasture for a large herd. As reported on previous occasions, I still favor making dairying a prominent industry at this school, and trust that before long the Department may be able to furnish us with a small dairy building and an employee well qualified for this line of work. This country can hardly be surpassed in natural advantages for agriculture, stock raising, and dairying. It seems to me, therefore, to be of the utmost importance for the school to set a good example by improvement in these lines of industry and the giving of thorough instruction to the Indian youth in these branches. Moreover, it will prove to be economical from a financial standpoint for the results must necessarily be far-reaching.

The lines of work carried on have not materially differed from those of previous years. The schoolroom work has been conducted by the same teachers as during the past year. The work has not been entirely beyond criticism, but upon the whole it has been quite satisfactory. We feel that while there is yet much room for improvement there has also been much improvement made, and that the work of the various grades is much better now than at any previous time.

The work of the various departments over which the matron has immediate control has been well conducted and can not but have a very wholesome influence upon the formation of good domestic traits in the girls.

The class-room work of the manual training teacher has been limited, as important miscellaneous duties necessarily diverted a considerable portion of his time from this line of work. However, a good foundation has been laid for more effective work another year. Considerable attention has been given to correspondence, plans, specifications, estimates, etc., pertaining to extensive improvements in the plant, the details of which it is unnecessary to mention here.

In relation to the health of the pupils, it is gratifying to report that no epidemic visited the school during the year; there were very few cases of sickness among the pupils, and no deaths.

The attitude of the older Indians toward the school has been very friendly. Many of the young men of the tribe have been regular visitors at our social hour on Saturday evenings, and their deportment has been most excellent.

The kindly cooperation of Rev. W. A. Galt, Presbyterian missionary, has been very helpful to the school.

The field-day sports and literary exercises at the close of the school were a great success. The Indians and the whites of the vicinity and people from the surrounding towns made a very large gathering and the day was much enjoyed by all in attendance.

The prospects of a much improved school plant for another year's work are very encouraging and highly gratifying to the people at the school and to others interested in the success of the work at this place.

Appreciative acknowledgment is due the Department for its interest in the needs of the plant and to Capt. W. A. Mercer for his constant interest in the school and his most cordial support.

Very respectfully,

D. D. MCARTHUR, *Superintendent.*

The SUPERINTENDENT OF INDIAN SCHOOLS.
(Through Capt. W. A. Mercer, acting agent.)

REPORT OF SUPERINTENDENT OF WINNEBAGO AGENCY.

WINNEBAGO AGENCY, NEBR., *July 11, 1898.*

SIR: I have the honor to submit the following report of the Winnebago Boarding School for the fiscal year ending June 30, 1898:

School opened September 1 and was filled to its utmost capacity by September 15, after which time the attendance was regular and at no time below 100 until the buildings were destroyed by fire on April 26. School closed June 17 with an attendance of 36. The Christmas vacation, which had been a custom at this agency, was dispensed with, and only in extraordinary cases were children allowed to go home during the year. When they went it was for specific reasons. The visits were short and prompt return exacted. Except during the first months of the year, runaways have not been frequent.

Many improvements were made during the year about the buildings, shop, and farm, for which there remains no showing except the new fencing. About 2½ miles of five-wire fence has been constructed in the best possible manner, providing fine pastures and enabling us to confine the school stock. The road through the school farm has been vacated and a source of much annoyance removed.

In the literary department there has been good work done in the three rooms. The points worthy of special mention have been for the most part covered in efficiency reports or in special communications. An effort to vitalize the schoolroom work by the use of the child's industrial experience in providing lessons in language, drawing, and numbers has met with gratifying success. The teachers responded heartily to suggestions in this line, appreciating the importance of united effort rather more than have those in charge of the industrial departments. I quote from the report of Mrs. M. B. Cone, principal teacher, as follows:

"The work planned in the syllabuses has been studied and followed to a great extent. The work of the evening hour has been varied—singing, drawing, story-telling, news from the daily papers, and reading by the children. The evening hour has been pleasant and profitable. Vertical penmanship has been taught. Regularity of attendance has done much toward accomplishing good results. Marked progress has been made in reading, the pupils speaking out distinctly and giving better expression than ever before. Special emphasis has been placed upon original composition, with gratifying results. Much time has been given to nature study in all the grades. The development of leaves, buds, and plants has been noted with keen interest. A list of the names of implements, furniture, and articles used in the different departments, furnished the teachers by the superintendent, has been of great service and aid in bringing about a correlation of schoolroom and industrial education."

Teachers have been urged to familiarize themselves with farm and shopwork and to know what the pupil has been doing "the other half of the day" in order that they may use his experience in illustrating the new things to be taught him in the schoolroom. It was suggested to teachers that "How to harness a horse" or "How to make bread" made a better subject for a composition than "Beyond the Alps lies Italy." The former class of subjects was used and the results were educative to employees and pupils.

All pupils attended regularly the Sunday school of the Presbyterian Mission and many of the employees assisted in the work of teaching classes. A Christian Endeavor Society has been maintained, with meetings held on Sunday evenings. The attendance at these meetings was voluntary; many of the larger boys and girls attended regularly and took part in the meetings. These older pupils have been much benefited by the work of the missionary, Rev. Mr. Findley, and his wife.

Commendable interest has been maintained in athletic sports and in providing entertainment for the children. Base ball has been provided for the boys and croquet for the girls. Parties or social gatherings for the pupils were provided at intervals of about one month.

The manual training teacher was given a detail of large boys, but was compelled to employ them in making repairs and renovations about the buildings and in making a shop out of the old woodhouse, so that the training was not so systematic as was desired. The new shop was destroyed just after completion.

The farm has been exceptionally well cared for and is in a much improved condition.

The discipline of the school has been good. There has been a general friendliness and sympathy between children and employees that was shown when school closed by many of the children remaining for some time after being told they were at liberty to go, and by their calling on employees to say "good-by," both incidents new to me in the service.

Harmony has prevailed among employees with but few exceptions, and where lack of harmony has existed the employees concerned have been able to suppress their personal antipathy for the sake of the school's welfare. My efficiency report of April 1 will still stand as my best judgment of employees; it shows an unusually large proportion to be deemed worthy of commendation.

The destruction of the principal buildings by fire has had a very depressing effect, but it is encouraging to know that plans are on foot for the rebuilding of the school on an enlarged scale. The sentiment of the tribe has been friendly to the school and does not favor transfers to non-reservation schools, desirable transfers being often impossible for lack of parental consent. The consent for several transfers this fall has, however, been obtained.

An acknowledgment of the courtesy of Acting Agent Capt. W. A. Mercer and of clerks Strong and Morgan is due. This is not a perfunctory statement, but is based upon a degree of support which is rare, and therefore doubly appreciated.

I am, very respectfully,

J. B. BROWN, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.
(Through Capt. W. A. Mercer, acting agent.)

REPORT OF SANTEE AGENCY.

SANTEE AGENCY, NEBR., *November 1, 1898.*

SIR: I have the honor to submit my first annual report of the Santee Agency.

This agency has under its control and supervision the following three tribes: The Santee Sioux, in whose midst the agency is situated; the Poncas, some 18 miles

to the west, with an established subagency to attend to their immediate needs, and the Flandreau Sioux, about 100 miles north of here, having also a subagency. The two former tribes are located in Nebraska, while the latter is in South Dakota.

Population.—The following table shows the number of these Indians by tribe, age and sex for the fiscal year ending June 30, 1898:

| | Under 6 years. | Between | | Above | | Total. |
|------------------------|-------------------|-----------|-----------|-------|-----|--------|
| | | 6 and 18. | 6 and 14. | 18. | 14. | |
| | M. and F. | M. | F. | M. | F. | |
| Santee Sioux | 148 | 136 | 129 | 285 | 321 | 1,019 |
| Flandreaux Sioux | 35 | 30 | 27 | 95 | 110 | 297 |
| Poncas | 43 | 32 | 39 | 54 | 59 | 227 |

Location.—The Santee Agency is located only about $3\frac{1}{2}$ miles east, and in full view of Springfield, S. Dak., yet so completely isolated therefrom as to make visits from either place to the other few and far between, being separated from each other by the Missouri River, and on the Nebraska side by a 3-mile stretch of Missouri River bottom land, known here as "gumbo" land.

The Santee Reservation is located on the south side of the Missouri River, comprising an area of about 32,038 acres, all of which is allotted except about 1,130 acres reserved for school and missionary purposes.

Soil.—The southeast portion of the reservation is the richest portion thereof. A strip of sandy hills from one-half mile to $1\frac{1}{2}$ miles in width traverses the reservation north and south. This is the most worthless portion of the reservation. The balance is none too good, but with proper care, under favorable conditions, will yield a comfortable living.

Agriculture.—Corn is the chief agricultural product of this section of country, and the Santees and Poncas have raised as good crops upon their allotments as their white neighbors on adjoining lands. The wheat crop, however, was rather a failure this year, as the hot winds of last summer have caught the wheat crop before it matured. Garden products are also scarce among my Indians this year, and if not provided for in some way or other, it will go very hard with many of them this winter.

Farming v leasing.—I have been approached by many of the Santees on the subject of leasing their lands to whites, but I have discouraged this practice all I could and shall continue to do so. If the Indian is ever to become self-supporting and self-relying, leasing is, in my opinion, not the proper means to the attainment of that end. On the other hand, I have encouraged farming in every way, and made liberal allowances for those who showed themselves willing to dig a living out of their allotments.

Intemperance.—To the credit of my Indians, I must say that since I have taken charge of this agency, but very few cases of intemperance have come to my notice. Several misfortunes in the past, due to the effects of liquor, have taught these Indians a very stern truth—that liquor is their deadly enemy, and not their warm friend.

Education.—We are blessed upon this reservation with ample educational facilities, and I am glad to report that every educational institution here has its hands full. The Government school, under the management of Supt. Louise Cavalier, is a potent factor in the advancement of the Santee Indians. The Presbyterian Mission has a splendidly equipped school and printing establishment for the benefit of the Indian pupils. We have also a district school attended by Indian pupils. It is a small institution, but is well attended, and has scholars ranging from the first to the eighth grade, all however, taught by only one teacher.

The Ponca Indians have a day school conducted by Mr. Matthew R. Derig, teacher. The Hope Boarding School at Springfield, S. Dak., is a Government school for girls, and under the efficient management of Mr. W. J. Wicks is doing excellent work.

Shops.—The agency blacksmith, harness, and carpenter shops, under the rigid surveillance of Mr. P. B. Gordon, have contributed very much to the welfare of the Santee Indians. Many cupboards, tables, doors, window frames, wagon tires, and numerous other articles of farm and household utility have been turned out by these shops for the Indians; many thousands of dollars' worth of wagons and agricultural implements have been saved to the Indians by timely repairs at these shops, free of charge. The most gratifying feature about these shops is the fact that all the employees therein are Indians, mostly full-bloods.

Grist mill.—The grist mill, also under the supervision of Mr. P. B. Gordon, has, during the past year, converted hundreds of bushels of wheat into flour for the Indians. This mill also supplies the Santee Boarding School and the Hope Boarding School with flour and bran. The flour for the weekly rations is also ground at this mill.

The mill and carpenter shop are supplied with steam power from the boiler and engine room close by. Owing, however, to the fact that the artesian water used here is strongly tinged with iron, the boiler pipes are subjected to excessive corrosion, and being liable to burst, and bursting, at most any time, are therefore a source of much anxiety. An exhaust steam condenser would greatly diminish this danger, and would prevent possible and even probable destruction to life and property.

Stock raising.—The fact that this country yields a superabundance of native hay would carry with it the presumption that stock raising is a leading feature of industry on this reservation. I am sorry to say, though, that such is not the case. The great majority of my Indians have yet to learn that a cow is useful for something else besides the meat and the hide. But as a compensation for this shortcoming, I notice the gradual, but steady, disappearance of the time-honored Indian ponies, their places being rapidly filled by good American horses.

Annuities.—Out of the interest on their funds annuity cash payments amounting to \$6,498.74 were made by me to the three tribes this year, as follows:

| | |
|---|-------------------|
| Interest on Sioux fund, Santees | \$3,105.00 |
| Interest on Sioux fund, Flandreau | 864.00 |
| Interest on Sioux fund, Ponca | 699.00 |
| Interest on Ponca fund, Ponca | 1,830.74 |
| Total | \$6,498.74 |

Health.—Generally speaking, the health of the Indians upon the reservations under my charge has been good, and we were fortunate not to be visited by any epidemic during the fiscal year just past.

Very respectfully,

H. C. BAIRD,
United States Indian Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SANTEE SCHOOL.

SANTEE AGENCY, NEBR., *July 3, 1898.*

SIR: I have the honor to submit my second annual report of Santee Boarding School.

A willing spirit shown by the children as well as by the employees has made the year pass very pleasantly as well as profitably. The children on this reservation seem much more like white than Indian children, as they use the English language entirely.

The capacity of the building is 75. The daily attendance for the past four months has been over 80. There are a great many more girls than boys on this reservation, and more would have attended school this year had there been room for them. Fifty girls were crowded into a dormitory intended for 37. The boys, all that desire to attend school, can be comfortably accommodated.

As there are no means by which the children can be forced to attend school, and as the parents have not yet reached the stage at which they can realize the good the child will derive from an education, I feel quite pleased at the regularity of attendance.

The school has been remarkably free from sickness, which fact I think is partly due to the good ventilation throughout the building.

The facilities in the laundry are very limited. We hope to be able to contrive some way next year by which the labor may be lightened.

The school farm consists of 14 acres. Ten are planted in corn, two in garden, and two in potatoes. Little can be done in this direction, as the boys are all small, 29 out of 35 being under 12 years of age.

The industries taught are farming and gardening, care of stock, sewing, cutting and fitting, cooking, and washing and ironing.

The stock consists of 2 horses, 6 cows (all very poor), 11 hogs, and 72 chickens—the chickens a recent purchase. I regret exceedingly our limited supply of milk. Butter is unknown.

The literary work has been very satisfactory. A new school building is much needed. Also more dormitory room for girls, but this has already been asked for.

The greatest hindrance to our work this year has been the constant change of employees.

I owe special thanks to the inspecting officers who have visited our school, Supervisors Rakestraw and Anderson, for their kindly encouragement and advice. I would also thank Agent Baird for the great interest he has taken in the school.

Very respectfully,

LOUISE CAVALIER, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.
(Through Agent Baird.)

REPORT OF SUPERINTENDENT OF HOPE SCHOOL.

HOPE INDUSTRIAL BOARDING SCHOOL,
Springfield, S. Dak., July 1, 1898.

DEAR SIR: I would respectfully report that Hope Industrial Boarding School has maintained active school work from September 6, 1897, to June 25, 1898, closing on the latter date for summer vacation during the months of July and August.

Our total enrollment during the year has been 63 pupils; our total average attendance has been 55.83 pupils.

The health of the pupils during the year has been very good with two exceptions, Annie Gray and Maggie Spotted Eagle, who developed pulmonary consumption and were sent to their homes at the request of their parents. We happily escaped a visitation of epidemics during the year.

All the pupils have received daily instruction in the schoolroom, our session lasting from 9.15 to 11.40 a. m. and from 1.15 to 4 p. m., with five minutes' recess in middle of each session for changing air of the school rooms. Each pupil was present at about one-half of each session, during the other half being detailed for industrial work. The school has followed the scheme of studies drawn up by the general superintendent, Dr. Hailmann.

The plan of industrial work was the same as heretofore, viz, the monthly detail, assigning each pupil for one month to such department as her physical strength allowed, and changing to another department at the beginning of the following month. Thus a knowledge of each department of household work is secured to each pupil, as well as a better physical development, and monotony in the work is avoided.

The work of the employees has been very satisfactory, and I shall be very glad if we can retain our present force during the coming year. Old employees can do much more efficient work than new ones, other things being equal, because they have personal knowledge of each pupil.

Very respectfully,

WALTER J. WICKS, *Superintendent.*

REPORT OF THE SUPERINTENDENT OF INDIAN SCHOOLS.

OFFICE OF THE SUPERINTENDENT OF INDIAN SCHOOLS,
Washington, D. C., October 20, 1898.

SIR: The annual report of the Superintendent of Indian Schools is respectfully submitted.

I took charge of this office June 20, 1898, and July 12, by your direction, proceeded to Colorado Springs, Colo., for the purpose of holding the Indian School Service Institute.

At the close of this institute, which was in session for three weeks, by your further direction, I visited Indian schools in the West, among them being the Wind River Boarding School, situated 130 miles from the railroad, one of the schools where the present appropriation provides for extensive improvements; the St. Stephen's Mission Boarding School, in Wyoming, 150 miles from the railroad; the Crow Agency School, in Montana; the Shoshone Mission Boarding School, and the Big Horn (subissue) or St. Xavier Mission School, which are also some distance from the railroad.

I have been in office so short a time that I refrain from making recommendations until I can have personal knowledge of the needs of the schools under your charge.

THE INDIAN SCHOOL SYSTEM AND ITS DEVELOPMENT.

The office of Indian School Superintendent was created by Congress in 1882.

Before the Revolution efforts were made to educate Indian boys, and Indians were maintained at the College of William and Mary shortly after 1692. The Continental Congress in 1775 passed a bill appropriating \$500 for the education of Indian youths. In 1794 the first Indian treaty in which any form of education was mentioned was made with the Oneida, Tuscarora, and Stockbridge Indians, who had faithfully adhered to the United States and assisted them with their wars during the Revolution. This treaty provided that the United States should employ one or two persons to keep in repair certain mills which were to be built for the Indians, and to "instruct some young men of the Three Nations in the arts of the miller and sawer."

The second Indian treaty of 1803 provided that—

Whereas the greater part of said tribe has been baptised and received into the Catholic Church, to which they are much attached, the United States will give annually for seven years \$100 toward the support of a priest of that religion who will engage to perform for said tribe the duties of his office, and also to instruct as many of their children as possible in the rudiments of literature.

The first Congressional appropriation for Indian educational purposes was made in 1819, when the President was authorized to employ

capable persons to instruct the Indians in agriculture, and to teach the Indian children reading, writing, and arithmetic. To carry into effect the provisions of this act the sum of \$10,000 was appropriated. The appropriation made for the support of Indian schools for the current fiscal year is \$2,638,390. And thus it will be seen that from the education of a few Indian youths, who were maintained at the College of William and Mary at slight expense, the appropriations for the education of the Indians have been annually increased, until at the present time 24,325 pupils are maintained at a cost of over two and a half million dollars per year.

SUMMER INSTITUTES.

The first summer school or institute of which I have knowledge convened at Puyallup, Wash., in 1884, and consisted of representatives from four boarding and two day schools. Since that time similar gatherings have been held, each with increasing attendance, culminating in the 1898 institute at Colorado Springs, Colo., which was attended by representatives from the East and West, North and South. Aside from the pedagogical value of these institutes they afford opportunity for those most interested in Indian school matters to meet and discuss methods of instruction and make suggestions which may be of value in the development of the Indian school system.

At the institute which convened this year at Colorado Springs, agents, superintendents, principal teachers, disciplinarians, industrial teachers, cooks, field matrons, nurses, and physicians discussed and practically illustrated the methods in use and suggested for use in the schools. The morning classes were largely attended, the afternoons were devoted to round-table discussions, and addresses by prominent men and women were made at the evening gatherings.

INDUSTRIAL EDUCATION.

I desire to emphasize the statements of numerous Indian educators that industrial training should have the foremost place in Indian education, for it is the foundation upon which the Government's desire for the improvement of the Indian is built. The consensus of opinion of the superintendents at the institute last summer showed that too little attention was paid to this field of labor, and it was strongly urged that larger facilities in the way of shops, tools, and teachers be provided, that this work upon which the civilization of the race depends may not suffer. An industrial workers' section was formed, in which the problems arising in industrial and manual features of the school service were discussed. A permanent association for an exchange of ideas and suggestions tending toward the establishment of the industrial work of the schools on a uniform and systematic basis was organized.

Under the head of "Educative and practical value of industrial training in Indian schools," Supt. F. C. Campbell, of Fort Peck, Mont., stated: that "industrial training should be in a line with the work that students will find on their reservations, and the idea of manual training is not so much to prepare the students for working in the Indian school as for earning their own living."

Superintendent Pierce, of Oneida, Wis., said: "I believe more attention should be paid to farming, as it would benefit the boys on their own reservation."

Mr. W. J. Oliver, of Fort Defiance, Ariz., presented a paper on this subject from which the following quotations are made, and it was requested that the entire paper be printed and distributed throughout the service:

The backbone of an education must always be the ability to do something. Another condition that confronts us to-day with the Indians is that a large majority of them must labor with their hands, and that the greatest need of the present is that methods of instruction shall be adopted to help the Indian boy to overcome the prejudice against work and his indisposition to do things carefully, and to enable him to understand things and adapt himself to them.

The condition of the Indian children on the reservation and when they come from our schools makes a demand for manual training. They have been accustomed to a great deal of exercise, yet their energies have not been directed in useful channels. Would not the introduction of a more extensive system of manual training for a part of the time in a freer and purer atmosphere have better results than the time spent over books or over oral or written recitations? The education of the Indian should consist largely in doing.

I have no desire to depreciate other studies, as literature, etc., but should some ask, "How can anything be added, as the schedule even now is overcrowded?" the answer would be: To do it by correlating and coordinating studies, and by eliminating what is utterly valueless in the education of the children. Manual training has been in use in the schools of Philadelphia fourteen years, and it is claimed that it has improved the pupils in deportment, character, and intelligence. The most remarkable testimony is that of the English Child Labor Commission in 1883. This commission was appointed by Parliament to inquire into the condition of child labor in factories. It discovered that children had been employed for twelve hours per day, and were thus kept from school advantages. A law was passed requiring that half of the pupils attend school in the forenoon and half in the afternoon. In a few years medical authorities testified to superior physical growth, police and philanthropists to improved moral tone, and employers to a higher grade of work. But the most surprising fact was that after twelve years of study of 12,000 children, the head of the commission reported that those who were in school half a day and had to work the other half in the factory were doing better work in the school than those who were in school the whole time. Professor Woodward, of the St. Louis Training School, gives the strongest testimony as to its educational value. He says that "one of the strongest arguments is its economic value."

There are some people who think that it is sufficient to condemn a study because it has a bread-winning or bread and butter value. Other things being equal, surely the fact that manual training bears excellent economic results is greatly in its favor. Very few of our Indian boys and girls can hope to compete in the literary world with their white brothers and sisters. But in the economic world, why can not they, if they have a fair literary education and are strong physically? While manual training does not mean to teach the boy a trade, it gives him a training which enables him to learn to get a living and thus become self-dependent and independent. I believe this one of the best means of civilizing the Indian. This feeling of self-dependence will appeal deeply to his manhood, and he will soon begin to realize that he has the ability within himself to compete with his white brother, and he will then begin to imbibe the ideas of civilization.

Young women need industrial education as much as young men. Sewing and cooking and a course of economic housekeeping should be part of every young girl's education. It has been said that the relation of woman to new economic and social conditions calls strenuously for this industrial education. Industrial education is the demand of the time and is fraught with destiny for our country in all its future.

Under the topics of "The most feasible lines for stock raising and farm and dairy work in connection with the schools" and "What should be done with the profits made from the sale of these products?" there was an interesting discussion. It was thought that some plan should be devised by which the children would be enabled to see the benefit to be derived from sales, as it would be an incentive to a greater interest in productions on the farms. The difficulties in the way of systematic instruction on industrial lines were talked over and suggestions made as to overcoming these difficulties.

At the closing meeting the industrial section passed the following resolutions:

Resolved, That we, the members of the Industrial Association, tender our thanks to the managers of the Indian Institute for a profitable session, and to our superintendent for kindly interest in our work.

We ask that a systematic and graded course in industrial training be inaugurated in the Indian schools.

We further ask that the industrial department be given greater recognition.

INDIAN SCHOOL INSTITUTE AT COLORADO SPRINGS.

It would add much to the literature published upon the various phases of the Indian question if the many able and interesting papers and addresses presented before the Indian Institute at its recent meeting at Colorado Springs could be given in full in this report. Limited space, however, will prevent this being done. A brief epitome of the ideas and suggestions advanced will indicate at least the general trend of opinions upon many of the important questions under discussion, and it is hoped will more freely emphasize a concurrent public opinion upon the subjects treated in this report.

President W. T. Slocum, who so ably discussed the subject of Education at the late Mohonk conference, spoke of the phases of the moral idea in this educational movement, and said:

The moral element in this work we are trying to do is of great importance. The only way you can make a boy or girl moral in the highest sense of that word is by approaching the question from the scientific standpoint. I think that the word that will express what I want to say to-night better than anything else is self-control.

The full text of President Slocum's remarks is worthy of careful consideration, and should be given a prominent place in our works of reference.

Rev. J. T. Whitmore addressed the institute upon "The duty of the United States Government to provide water storage for its Indian wards wherever practicable and necessary." He said it was the duty of the Government to establish water storage in the arid regions of the West, as well as in other localities where needed. He declared that if a water-storage system were established the Indians "would be no longer wards of the Government, but in a short time would gladly support themselves and become producers, taxpayers, and valuable citizens." He recited many facts, figures, and experiences in support of his able and logical argument.

Hon. Grace Epsy Patton, State superintendent of public instruction, Colorado, in an address upon the subject, "Progress of the Government in its treatment of the Indian problem," among other things said:

When the Government of the United States had reached a condition of stable equilibrium, statesmen of the nation discovered among the many problems of importance the one regarding what disposition should be made of the Indian. The influence of civilization seemed not always to have the desired effect. To regard education and civilization as synonymous terms is erroneous. Education implies development of the soul powers—I mean the soul itself. * * * The way to civilize is to create a desire for civilization; the way to educate is to create a desire for knowledge.

Right Rev. Abiel Leonard addressed the institute upon the "Indian problem," as he said, from a layman's standpoint, and approached the subject by saying:

We must look at the Indian question in a practical, not a sentimental way. Sometimes we are told that it is impossible to do anything for these people; but I

am sure that my experience has shown me that it is possible to do a great deal for them; that it is possible to educate them; that it is possible to prepare them for the future when they may be able to take their places along with us as citizens in this great Republic.

He spoke of the work of the teachers, whom he regarded as "humanitarians engaged in the uplifting of the oppressed and the ignorant." The address was one to give hope and encouragement to those present.

Mrs. Gilbert McClurg, of Colorado Springs, Colo., gave an interesting and instructive lecture upon the people of the Pueblos. She described the progress in the civilization of the Pueblos and explained their customs and characteristics. She spoke of the race as mentally and morally above the plane of the nomadic tribes, and characterized them as industrious and peaceable.

COMPULSORY EDUCATION.

It is admitted by all that education is the greatest factor in determining the future condition of the Indian, and compulsory education, under the topic of "Reasons for and against requiring the consent of a camp Indian parent before putting his child under the influence of civilization away from home," was discussed by the superintendents at the institute.

All the superintendents agreed that since, under authority from the Indian Office it has become possible to place Indian children on reservations in school without first obtaining parents' consent, those Indians most bitterly opposed to schools and civilization are losing their intense hostility and have reached the conclusion that they want education for their children and willingly send them to school.

Superintendent Nardin, of Warm Springs, Oreg., thought that only in cases where the Indian parents are desirous of having their children abandon Indian ways and become enlightened should their wishes be consulted, and then only as to the school to be selected, age of entrance, etc. The fact that Indians become opposed to schools after receiving allotments, imagining themselves citizens of the United States and independent of agency laws, is the best evidence that compulsory school laws are necessary.

Superintendent Locke, of Fort Hall, Idaho, said that sending children off the reservation to school has proved helpful in filling the reservation school, as the cheerful letters written home by absent children influence the parents to send the younger ones to the reservation school.

Superintendent Harris, of Pipestone, Minn., thought it necessary to have the children in school at an early age, before their parents could have instilled into them the principles of Indian life.

Superintendent Breen, of Fort Lewis, Colo., considered legislation necessary to secure attendance on nonreservation schools outside of the State or Territory in which the children's parents live.

Supervisors Conser and Bauer held that a compulsory school law extending over the day school to the nonreservation school is needed.

Superintendent Viets, of Santa Fe, N. Mex., believed that when the compulsory law is completely enforced with regard to reservation schools, there will be no trouble in sending children to training schools, as they will go notwithstanding their parents' objections.

Superintendent Peairs believed a compulsory law to be necessary to fill both reservation and nonreservation schools.

The following committee, to act with the Superintendent of Indian

Schools in bringing the matter of a compulsory educational law before Congress, was appointed: Supt. C. F. Pierce, Oneida, Wis.; Supt. A. H. Viets, Santa Fe, N. Mex.; Supt. C. W. Goodman, Pawnee, Okla.

COURSE OF STUDY.

In accordance with the request of the superintendents, and in compliance with rule 5 of the Indian Rules, I am at present at work upon the preparation of a course of study for the Indian school service.

RETURNED STUDENTS.

Superintendent Allen, of Albuquerque, N. Mex., in his address, "How shall the educated Indian be held free from and above the degrading influences of camp life?" said:

I have seen an Indian child taken from the camp to an institution that in a few years gave him a faint knowledge of the civilization that is the glory of the Anglo-Saxon race of the nineteenth century, and then sent him back to the agony of the realization that there can be no place for him. Every year this sin is being committed in numerous instances by extremely conscientious people. In many cases the work, however faithfully performed, were better left undone. We indignantly deny, and properly too, the assertion so often made that an educated Indian immediately unlearns all the schools have taught him when he returns to his home; but this notion has not gained currency among the people without some facts to sustain it.

We must better the aims of the young Indian, and to do this we must end the existence of the reservation and its camps. The youth must be brought into and kept in our civilization, unless our civilization is taken to him. In many instances tribes of Indians have been surrounded by a good class of white settlers. In these communities the debasing camp life is ending. You do not need to inquire how to keep an educated Wyandotte away from the camp, for there is no camp. The work there is accomplished, and the time is coming when the Government may well count the task completed; but there is an almost hopeless task before us in the less favored regions of the far west. You might have an Indian child finish all the courses in all the polytechnic schools of the universe and unless some employment is provided for the student when he has returned to the camp he will inevitably be compelled to drop back into the customs of the camp.

To sum up, then, keep him above and free from the debasing influences of the camp by keeping him away from it. There is no other way. Send some one else as a missionary to the tribe to elevate the old. The school boy or girl can not do it. The downpull of the tribe is greater vastly than the uplift of a few unassisted boys and girls. I do not mean by the foregoing to intimate that work on reservations is entirely wasted, but work should be done to remove the camp life wherever it is possible.

In the discussion that followed this paper, Superintendent Collins, of Rapid City, S. Dak., stated that "the children return from school and are willing to work, but there is no work for them, and there is nothing for them to do except to return to camp life. The solution is to give work to the educated and the uneducated, by which a living can be earned, and it is earnestly hoped that the Department can see its way clear to provide such work."

Superintendent Locke, of Fort Hall, Idaho, stated that he had found the weeks spent at home during vacation were detrimental to the children.

Superintendent Breen, of Fort Lewis, Colo., thought that the industrial feature in the education of the Indians should be very much more prominent than the literary, and that they should be taught that labor is not degrading, and should depend upon their resources and not upon any claims on the Government.

Superintendent Viets, of Santa Fe, N. Mex., stated that it was his

observation "that the Indians were ready to do any kind of work provided they received compensation."

Superintendent Hays, of Fort Yates, N. Dak., stated that it had been his experience that the Indian did not return from nonreservation schools unwilling to work, but that he considered the present school system more of a success with the girls than with the boys; that he hoped the Government would find employment for all educated Indian boys for at least five years after returning from school.

Supt. H. J. Curtis, of Ouray, Utah, agreed with Superintendent Allen in thinking that the only way to keep the educated Indian from the influences of camp life is to keep him away from the reservation.

Superintendent Neal, of Fort Defiance, Ariz., hoped to see the day when the Government could provide work for the Indians.

Superintendent Peairs, of Haskell Institute, Kansas, said:

No graduate from Haskell has ever gone back to the blanket. I do not believe there should be an Indian reservation in the United States. I believe in giving the Indian a thorough education and placing him among white people.

Supervisor Charles D. Rakestraw stated that "70 per cent of the returned students are making good records, and less than 15 per cent are failures."

DOMESTIC ECONOMY.

The topics "Best method of preparing food" and "Notes on different kinds of food" were presented and discussed.

Supt. H. B. Peairs, of Haskell, Kans., thought it would be a good plan to hold the Round Table during the year by correspondence, exchanging bills of fare, etc.

The topic "The matron as a character builder" brought out the fact that the majority of people outside the Indian work think that the matron's position is one in which the duty of keeping the building in order and the children clean and disciplined is the main part, whereas the real position is one in which the matron takes the part of mother to the child with all which that implies, and is responsible not only for the care of his body and clothing, but must impart to his youthful mind those traits of character which will make him an upright, honorable, and helpful citizen; and it was the general opinion that more attention should be given to the selection of persons to occupy this most important position.

PHYSICIANS' CONFERENCE.

A very interesting and instructive session was held by the physicians' section of the institute. A society to be known as the "Indian Medical Association" was formed, and it is expected that much good will result from this feature of the medical work.

Dr. J. G. Bullock, Oneida, Wis., spoke on the subject "Are the hygienic conditions of Indian schools satisfactory?" He believes all Indian schools should be carefully visited by the physician, who should give especial attention to the eyes, as defective vision is common among the Indians; and he does not believe in study to any extent in the evening. He dwelt with considerable force upon the unsanitary condition of many schools; said that dormitories are too crowded; regretted that many of the schools have no hospitals, no lavatories, improper drainage, no qualified nurses, no pest houses, no steam disinfectors; consequently when a case of contagious disease arises there

is no place in which the patient can be isolated. In regard to ventilation of buildings, he believed in having a fireplace and a fire burning in every room, and that especial attention should be given to teaching cleanliness as a most powerful civilizing influence.

Dr. Breen, of Fort Lewis, Colo., believes that medicines furnished by the Government to the Indians should be selected by a physician; that the physical condition of mankind as regards cleanliness and sanitation, and the numerous other small things that enter into the hygienic condition of the people, are the incidents if not the actual concomitants of civilization. He spoke of the lack of appliances for treating the sick, and suggested that the list of medicines furnished by the Indian Office should come from a medical division presided over by an intelligent physician. In his opinion, the medical service is neglected, and the agent or superintendent should not be allowed to interpose his opinion against the opinion of the medical advisor whom the Department sends to the school, and without the correction of these evils the medical department would better be wiped out altogether.

Dr. L. F. Michael, of Cheyenne Agency, S. Dak., on the subject of "Tuberculosis," said:

As a practitioner I am often asked, "Why do so many Indians die of consumption?" To which there is but one answer: Unsanitary surroundings. When the Indian roamed the country and slept in open air, tubercular diseases were rare; but as his domain gradually became more restricted, uncleanness was prevalent. The time of the school physician could not be better employed than in instructing students in the real cause of tuberculosis, showing how easy it is to become infected under certain conditions, and the fear of these diseases would lead to better sanitary conditions.

Dr. Westfield, of the Shoshone and Arapaho Agency, Darlington, Okla., speaking on "How best to promote the health of the Indian," said:

I do not think too much stress can be laid on the importance of selecting a proper site for the location of the school, as upon it largely depends the future health of both pupils and employees. Under the heading of "Hygiene" I would include grounds, buildings, water supplies, bathing facilities, sewerage, and everything that influences for good or evil the health of the individual. Very few buildings are properly constructed from a sanitary point of view, and I would urge the Department when any buildings are to be constructed to look carefully after the scientific principle as regards light, heat, ventilation, and sewerage. In regard to bathing facilities, I would adopt the spray system, for unless the "noble red man" is made to observe the laws of hygiene the race will be only a matter of history.

SANITATION.

This subject, from every standpoint, is of the greatest importance. Success in life in all its avocations depends largely upon the physical condition of those who seek it. Without pure air and water we could not reach that plane of physical development so absolutely necessary for the accomplishment of our social or mental ambition. It is in the impure air and in the impure water that the insidious germs of disease are propagated. This subject, therefore, with reference to the conduct of our schools, should receive especial attention. A badly heated, poorly lighted, and improperly ventilated schoolroom will engender physical evils among the scholars that will seriously impair their health and prostrate their energies. The importance of this subject in all its applications should be impressed upon teachers and pupils, and should more generally be a feature in our curriculum.

DRAWING AND MUSIC.

Both of these subjects received careful attention at the Summer Institute, the civilizing influences of both being admitted by all. Much careful instruction was given by Professor Simons, who uses art as a civilizer, "as a promoter of intellectual self-activity and creative inventiveness, hence of progressive evolution." In talking of art and art education in relation to the social welfare of the pupil, Professor Simons stated that "true civilization and social welfare are very closely connected. Art calls for close and strict observation, and thus cultivates the power of seeing." He spoke of the benefits derived from providing a schoolhouse with workshops, where the child can demonstrate the direction in which his abilities lie. His course of lectures covered the entire ground from the first year through the primary, grammar, and high school grades.

An address on vocal culture was given by Miss Bergh, a well-known instructor of New York, who demonstrated the civilizing power of music.

ORNAMENTATION.

One of the best evidences of refinement and culture is the disposition to enjoy the works of nature. A landscape upon canvas is but a feeble reproduction in miniature of mountains that tower in the clouds and of rivulets that sing praises to God on their way to the sea, yet it expresses a mute admiration of nature's beauties and wonders, and thereby becomes a delight to mankind. It is a treasure in the studio of the artist, in the art gallery, and in the luxurious abodes of the wealthy, while it brightens the home of the peasant.

The Indian character is highly endowed with imagination. In the means for the accomplishing of self-adornment the Indian gets his inspiration from the birds, the flowers, the forest, and the stream. Bright, fantastic colors are his admiration, and he is prodigal in their use for self-ornamentation. It would, therefore, seem an easy task to induce the Indian pupil to divert this natural tendency into efforts to beautify his surroundings. To cultivate his proclivities in this direction should be the special care of the teacher.

Landscape gardening would not only be useful, but could be made fascinating for pupils. They would soon learn the necessity of separating the thorns and thistles from the flowers, that their growth and development might not be retarded. They would readily recognize the fact that the beauty of their inclosures would be enhanced by an artistically constructed and well-kept fence; that the schoolroom could be made more cheerful and delightful with beautiful and fragrant flowers, and that cleanliness everywhere should be a dominating virtue.

In his rude and uncultured state the Indian is a novice in works of art. He would exchange a Rembrandt for a highly colored sheet from a yellow journal. Yet, through his native disposition to ornamentation, he can be taught to enjoy higher forms of art than pertain to his primitive state.

Superintendent Ross, Genoa, Nebr.; Superintendent Pierce, Oneida, Wis., and Supervisors Rakestraw, Conser, and Bauer laid great stress upon keeping school grounds clean and in good order, and suggested that wherever possible shade trees and ornamental trees should be planted and shrubbery and flowers cultivated. The moral effect of

well-kept and beautiful grounds upon the pupils and Indians of the reservation is very noticeable, the latter, in imitation, improving their own grounds.

INDIAN EMPLOYMENT.

The employment of Indians is a suggestion of practical economy that should be encouraged, and it is intimately connected with "industrial work," which has already been discussed. It is urged in Mr. Oliver's paper, and in others, that the Indians must be taught and stimulated "to do something." That they must work in the field or in the shop is evidently implied; that their time must be usefully employed; that the Indian is splendidly equipped physically for manual labor; and that in any of the departments of physical industry he will easily become the peer of the white man, while in a literary or professional sense he is apt to be deficient.

The arguments of Mr. Oliver are not only reasonable, but convincing; yet we desire to add that if the Indian is allowed to share in the profits and results of his labor the incentive for him to labor will be obtained. He will learn the lesson that his bread must be earned by the sweat of his brow. He will not only labor for his own comfort and pleasure, but for others dependent upon him. He will learn to understand that "labor omnia vincit;" and the result of his toil will make him independent and happy. He and his will no longer be wards of the nation, but self-respecting members of American society and citizenship, trained and equipped for its local and national duties.

Wherever possible and practical he should be given remunerative employment, and thus be made to realize the great and munificent blessings the Government is bestowing upon him.

APPOINTMENT OF INDIANS AS DISCIPLINARIANS.

Superintendent Avery, of Crow Creek, S. Dak., was opposed to the appointment of Indians as disciplinarians as their sense of justice is largely governed by likes and dislikes. Superintendent Avery's opinion was concurred in by Superintendent Hall, of Idaho, and Superintendent Peairs, of Oneida, Wis. It was the opinion that the appointment of Indians as disciplinarians at Indian schools would be inadvisable and impracticable. The Indian is not fitted by experience or disposition to assume a position requiring executive ability; and, withal, such an appointment would not be congenial to his nature under the surroundings in which he would be placed.

AMUSEMENT FOR INDIANS.

His love for amusement is one of the Indian's most prominent characteristics. Outdoor sports are fascinating to him. He revels in the hunt and is proficient in athletics. Fleet of foot, ingenious in his tactics, he is naturally an adept so far as cunning and brawn are concerned. Indians from the Carlisle School have won a national reputation in our popular game of football, and have achieved many brilliant victories over their white brothers. No better proof that outdoor exercise and amusement are not only entertaining but beneficial to our Indian students could be offered than that furnished by the students of this school. Pupils should not, however, be allowed too many

liberties or opportunities in this direction, but rather be given to understand that these indulgences will be extended only under certain limitations; that outdoor amusement will only be allowed as a privilege following good work and faithful application to school duties. At the institute out-of-door games were particularly recommended as affording pleasant and healthful pastime. Picnic excursions are also occasions of pleasure. The cultivation of flowers was recommended.

ORGANIZATION OF CLASSES IN COOKING, CARPENTRY, ETC.

Superintendent Nardin, of Warm Springs, Oreg., divides these classes into three groups: First, large pupils, apprentices; second, pupils of middle grades, circulating group; third, small pupils, helpers. Apprentices should remain at one kind of work until the trade is acquired. Changes in the other groups should not be made too frequently. The topic was further discussed by Superintendents Locke, Asbury, Curtis, and Nardin, and Supervisors Burton and Conser, who, in the main, indorsed the views of Superintendent Nardin.

CARE OF SCHOOL PROPERTY.

Supervisor Burton, of Santa Fe, N. Mex., was of the opinion that school property should be carefully protected from abuse, and that improvement should constantly be made.

Superintendent Locke, of Fort Hall, Idaho, said that he held each employee responsible for property in his charge.

Superintendent Curtis, Ouray, Utah, stated that he required an inventory of school property to be taken semiannually, and that employees are held responsible for missing or injured property.

HOW SHALL THE EVENING HOUR BE SPENT?

There were many plans and suggestions presented as to the most pleasant and profitable way of filling the evening hour, and the consensus of opinion was that it should not be made arduous by study, but rather more pleasant by reading, story telling, playing innocent games of amusement, and other harmless recreation. Special exercise once a week were suggested. The hour before retiring should be devoted to rest.

SUPPRESSION OF INDIAN TALK IN SCHOOLS.

Superintendent Egbert, Yainax, Oreg.; Superintendent Curtis, Ouray, Utah; and Supervisor Conser, in the discussion of this subject, were of the opinion that using the Indian language in school during the school hour should be prohibited, and children punished for violating the rule.

Superintendent Locke, Fort Hall, Idaho, Supervisor Conser, and Superintendent Curtis, Ouray, Utah, advised that teachers acquire some knowledge of Indian language, as it would be of benefit in their work.

METHODS OF DISCIPLINE IN INDIAN SCHOOLS.

The superintendents agree that, while they do not believe in using corporal punishment, yet in some cases it is beneficial as a means of discipline; but it should not be resorted to unless unavoidable.

Superintendent Asbury, Yakima, Wash., recommended solitary confinement; not to be resorted to except in extreme cases.

Superintendent Nardin, Warm Springs, Oreg., said natural punishment should be adopted.

Superintendent Curtis, Ouray, Utah, and Superintendent Campbell, Fort Peck, Mont., emphasized their opinions in favor of moral suasion.

Superintendent Ross, Genoa, Nebr., said employees should render assistance to the disciplinarian when requested to do so.

There are many things to be considered in the discussion of this subject. It is necessary that the pupils should understand that a violation of the rules of the school, either by word or action, or other conduct detrimental to the welfare of the school, will be followed by a penalty, the character of which will depend upon the character and disposition of the one to be punished; and all the facts and circumstances surrounding the case should be carefully considered. No one is so competent to decide this important question as he who is in daily touch with the pupils.

MORALITY THE BASIS OF PROGRESS.

Morality is the creature of intelligence, and refined and exalted citizenship will ever be found following in its wake. It is not inherent among any of the races of men, but is the result of enlightenment and education, which is the true basis of progress; therefore, if we would make the Indian better we must also make him wiser.

Dr. A. L. Riggs, in an address recently delivered, in discussing this subject, among other things, said:

How may we help the Indian to become a self-regulating and productive factor of our civil life? How can we make him to rise out of the nonvolitional mass, become a self-directing being fit to be a unit in a great moral order? There are a number of means to this end, among them the quickening of his mind, acquainting him with civilization, and training him in the thoughts and ways of the new life. But more than all, and as the basis for all, is the moral quickening and training which shall supply force and control for the ideal man.

The necessity for this moral basis is illustrated in three particulars: First, in regard to personal health; second, thrift, and third, social order. Here let me remark, lest my attitude toward the bright educated Indians who are with us may be misunderstood, that the Indian, as we speak of him as a problem, is a condition and not a race. * * * Now, again, as to the illustrations:

First. Personal health is a necessary factor for progress. The emphasis we put upon all things pertaining to personal health shows how essential it is to life and progress. There is undying need of instruction. The Indian must be made to understand the laws of life and must be continually reminded of them.

Second. Our second illustrative point is the question of thrift. How are we to get an Indian to earn, how to make him care for and keep what he earns, and how shall we teach him to spend it only for the best uses? In short, how shall we change him from a destroyer to be a productive factor in our civilized society?

Two strong influences work against it—the hereditary ideas and customs that have come from a hunter's life, and the universal spirit of gambling.

A hunter is a destroyer. It has taken many years of failure for the former hunter to keep from killing his young stock long enough to let the herd increase. Many can never learn to do it. But from the hunter's life have come ideas and customs that still prevail in regard to what is generous and hospitable and that stand in the way of accumulation or right use of property.

Then there is the universal gambling mania. Betting and gambling are not outgrowths of civilization, as many seem to suppose, but are proofs that our civilization is reverting to barbarism. The excitement of risk and chance and the temptation to gain without labor quickly demoralize a man. What charms has honest labor for one who can capture easily the hard-earned gains of another? And of what use to teach industry and economy to such a one? * * *

Indorsing the views and opinions of Dr. Riggs, whose knowledge of the Indian character has been acquired by an extensive experience which has made him familiar with the habits and customs of the Indians, his conclusions are entitled to careful and prayerful consideration. The problem of how best to accomplish the object desired remains with us for future consideration, which time and experience may eventually and satisfactorily solve.

That the Indian mind is susceptible of mental and moral culture there is no gainsaying; that he has not shown more advancement in education and civilization is due to other causes than mental debasement or infirmity. It is true that he has been a turbulent and troublesome factor in our civilization. But the history of the race, so well understood, is a pathetic and tragical recital of wrong and oppression. It was once the owner, by absolute right of possession and by the universal law of primogeniture, of this great national domain, magnificently endowed with all the riches of nature's bounty, a veritable storehouse from which the nations of the earth continually draw, in large measure, the necessaries and comforts of life. And yet, notwithstanding he was lord of this national manor, the Indian has been ruthlessly forced to yield his valuable possessions and compelled to get out of the way of the juggernaut of civilization, which has driven him from the rising to the setting sun.

Is it, therefore, a matter of surprise that he seeks the solitude of the forest, away from the haunts of the white man, to brood over the wrongs, real and imaginary, imposed upon his people? Therefore, no fair-minded person will say that we do not owe the Indian obligations that should be fairly and honestly paid.

How can we best discharge the obligation we owe this people? is really the Indian problem. In the first place, the Indian must be separated from all traditions and customs, and he must be stimulated by a purer and more invigorating social and moral atmosphere. We must bring him into closer touch with the civilization of the age, into more intimate fellowship with our social and religious customs. He must be induced to abandon the fastnesses of the forest and the dismal monotony of the camp. We should offer him instead new and more profitable avocations, healthier and more substantial pleasures. We should show him the cattle upon a thousand hills. We should point him to the fields rich in cereal treasures and explain to him that these bounties are the result of patient, honest toil and easily within his reach if he has the courage and ambition to obtain them. We should endeavor to strengthen his courage and stimulate his ambition by cultivating his mind and heart.

He must be taught to realize not only his dependence upon society but also his responsibilities.

So long as Indians continue to maintain tribal relations and so long as they are confined to the limits of their reservations, the Indian question will continue to be a problem. They must become more intimate with our citizenship. They must be taught by actual experience and association the important lessons of social economy. They should

no longer be a secluded part of our population; they should be made useful and acknowledged members of our society.

In our efforts to humanize, Christianize, and educate the Indian we should endeavor to divorce him from his primitive habits and customs. He should be induced to emulate the white man in all things that conduce to his happiness and comfort.

The best way to instruct an Indian in agriculture is to locate his land or farm in juxtaposition with that of thrifty and energetic farmers. If his reservation contained a few families of Pennsylvania's thrifty farmers, found among the Quakers or Germans, his soul would be fired with a new ambition heretofore foreign to his nature; his former habits and customs would yield and become subordinate to this better existence; his children would adopt the habits and customs of his more fortunate neighbors, and thus the work of civilization would receive a healthy impetus.

The desire for learning, the ambition to obtain an education naturally follows the van of prosperity. An uneducated man is sensitively embarrassed when associated with those who enjoy the culture of education and refinement. The schools, therefore, when the elementary principles are inculcated, furnish the inspiration and incentive for a higher ambition in this direction.

In connection with the subjects herein discussed, Maj. R. H. Pratt, superintendent of the Indian school at Carlisle, Pa., says:

While it is next to impossible to inculcate the American spirit by theoretical teaching on the reservations, where there are no illustrations of it in the life in these isolated places, it is also impractical to teach it in purely Indian schools away from the reservation, even when surrounded by the best examples of an active, industrious district. The Indian children must in some way be placed under the influence of individual contact with American life and citizenship. The location of every nonreservation school should therefore be where the example in the surrounding country is the best; but precept must be followed by practice. Hence the necessity of this outing system or something akin to it; and then should follow continuous enlargement and extension until all purely Indian schools disappear.

The Indians, in their savage and unlettered condition, possessed an inherent conception of a Creator. They would invoke the help and assistance of the "Great Father" upon all occasions involving the peace, happiness, and success of the tribe. They were fully impressed with the fact that the mountains, the rivers, the birds, and the flowers were the creation of a wonderful being who lived beyond the clouds, and whose home was lighted by the sun by day and by the moon and beautiful stars by night, and that his pleasure or his wrath was visited upon good or bad Indians at will; therefore, in their rude way, they offered him homage and invoked his blessing upon any important undertaking. Differing from other heathen or savage tribes, they were never wholly devoted to the worship of idols. They seemed to have a vague and undefined idea of the existence of a Supreme Being. Therefore the conclusion is reasonable that their idea of a divinity was upon a more advanced plane than that of some other races.

Does not this afford an encouraging hope that the normal attitude of their minds toward religious truth is receptive and that they may easily be taught the ethics of Christianity? They already have a fine sense of right and wrong, and have often manifested forbearance—one of the Christian virtues—under cruel and provoking oppression.

The consensus of information upon the subject induces the belief that with education a better moral and physical condition for the Indian must inevitably result. Mental and moral training, as given

in our well-conducted Indian schools, will enable our Indians to occupy a respectable place in American citizenship. It is through these agencies that the destiny of the race must be achieved. All writers and speakers upon this subject agree as to the methods that should be adopted for the accomplishing of this work. It remains, therefore, to be determined how these methods shall be applied in order to accomplish the greatest good.

Dr. Hailmann, whose essays and lectures upon this theme are always instructive, and who has done much for the Indian school system, in a recent address before the Indian School Service Institute, said:

I think I have noticed right tendencies in the schools in a variety of directions. The next one to which I would direct your attention should perhaps be this: That you are realizing the fact that the last, best, final outcome of our work with the children, that by which our work is to be judged good or bad, or, rather, that by which our work is to be measured, by which the amount of good, the degree of good which is done by us, is to be ascertained is the moral attitude toward each other and toward their environments; that we attend to the physical welfare of the children because it is a physical well-formed, well-developed, healthy, sound human being which, other things being equal, will accomplish the best moral results in life. * * * A charitable person does not in the course of time deserve particular credit for being charitable, as he is charitable unconsciously. That is the thing we are aiming at in educational work. We do not want to make the child self-consciously moral, but unconsciously, automatically moral. •

It is in the schools, as the Doctor has intimated, that the foundation of an Indian's social, mental, and moral edifice must be laid. It is therefore meet and proper that our great nation should in its legislative capacity more extensively provide funds for the conduct and maintenance of institutions already established, as well as to meet a national necessity for the establishment of others. No prouder or more glorious tribute could be paid to American philanthropy and American citizenship than the erection of these monuments to the country's generous and munificent regard for these unfortunate descendants of the aboriginal sons of the forest.

Writers and speakers often are of the opinion that the natural instincts of the Indian are bad; that his nature is entirely divorced from all moral restraint; that he must be humanized and Christianized before he is qualified to take the higher degrees in civilization. That the Indian is naturally depraved is not borne out by the facts of history. That he does possess some virtues that give grace and dignity to mankind can not be successfully denied. In his relations with the Indians in the early settlement of the colonies William Penn found them to be honest and conscientious in their dealings and faithful in the execution of their covenants and contracts. Their confidence in the "pale face," when once established, was strong and sincere and abided the tempests of doubts and misgivings which frequently arose; but once given unmistakable evidence that they had been wronged or deceived, friendship at once ceased and they gave themselves over to revenge and cruel retribution.

Has it ever occurred to those who have spoken and written of the Indian character that had our own people in their intercourse with the Indians been actuated by Christian forbearance and virtue, and had they exhibited those Christian virtues they so generously offer to these uneducated and un-Christianized sons of the forest, these eleemosynary wards of the nation, the Indians would to-day be better qualified, morally and mentally, to receive and profit by the lesson that we so laboriously seek to teach them?

Then let us give them all the opportunities and advantages that a generous country can provide for their social and moral advancement, and let the strong arm of the law be invoked in the protection of all their rights, and the schools will do the rest in preparing them for useful and honorable citizenship. The work is growing in importance, increasing in interest, and beneficial results have been realized.

In conclusion, I thank you for the many courtesies and ready support you have given me in my work.

Very respectfully, your obedient servant,

ESTELLE REEL,
Superintendent of Indian Schools.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORTS OF SUPERINTENDENTS OF INDEPENDENT SCHOOLS.

REPORT OF SCHOOL AT FORT MOJAVE, ARIZ.

FORT MOJAVE, ARIZ., *June 30, 1898.*

SIR: I have the honor to make the following annual report for the Fort Mojave Industrial School, Arizona:

General remarks.—The year just closed has been one of unusual advancement, both intellectually and morally. The conduct of the pupils has been excellent. Many new features have been introduced in the school work, among them being military discipline and drills, both of which have produced a very marked improvement in the carriage, dispositions, and deportment of the pupils, as well as giving them much pleasure.

Much advancement has been made in English speaking. Classes in embroidery, lace making, rug weaving, and cooking have been organized. These classes, under the skillful teaching of Misses Riley and Gross, and Mesdames Newcomb and Curtis have made excellent progress, reflecting much credit upon themselves and their teachers.

A new bath house has been erected, containing fourteen shower baths. It is a model of neatness and convenience, and supplies a long-felt want.

An ice machine has been purchased, and will be erected and in operation soon. The value of this improvement can not be appreciated by a person unacquainted with the climate; but some idea may be gained by reflecting upon climatic conditions when the thermometer registers 127° in the shade, and in the sun—using a slang expression—is “out of sight;” that is, it can not be recorded at all by the standard Government thermometers.

I regret that I have been unsuccessful in getting bids for the other improvements, but hope that, through the kindness and courtesy of the Department, I shall be able to secure them during the next fiscal year.

Attendance.—The attendance has been all that could be desired, and runaways have been unknown. The school was filled very early and promptly; more pupils might have been enrolled had the quota permitted. The capacity of the school should be increased to 200.

Schoolroom work.—A carefully prepared course of study was introduced at the beginning of the year, and the school thoroughly graded. This has resulted in much better and more systematic work. No pupils have been able to finish the grade work, but in another year this will be accomplished easily.

All the holidays have been observed by appropriate exercises of very high order, and those of the closing day were of a very superior character. Much credit is due to both teachers and pupils in this department.

Industrial departments.—The farm and garden have never done so well since my connection with the school as they have this year. The alfalfa and vegetables have made remarkable growth.

In all industrial departments, blacksmithing and engineering, sewing room, laundry, kitchen, and bakery, the work has been very satisfactorily performed, while the class in sloyd deserves especial mention for rapid improvement.

Health.—A reiteration of my last year's report upon this subject would be a correct statement for the present year. The health has been remarkable.

The clerical work has been excellent and “exceptions” few.

I regret to report that a very destructive fire occurred at this school upon June 30, destroying all harness and wagons except one, the sheds, and almost completely burning up the corral, together with a large quantity of hay, hay scales, and some other property stored in the corral. While the loss, as measured in dollars and cents, is light, it will cause a great inconvenience to the school. The origin of the fire is unknown, but it is supposed to have been caused by a traveler dropping a lighted match or cigar in the corral, as a traveler is known to have been there shortly before the fire was discovered. Much credit is due the Indians for valuable assistance given. Indeed, but for them the whole plant would have been entirely consumed, as the employees alone could not have controlled the fire. Much praise is due the employees, both ladies and gentlemen.

Needs of the school.—I very much regret that no provision for the much-needed improvements recommended in my report of last year was made in the appropriation bill for the fiscal year 1899. A dining room and kitchen, with modern appliances for steam cooking and bakery similar to those at Chilocco Indian school, and a four-room school building with assembly room above, are absolutely necessary for the proper conduct of the school.

Needs of the Indians.—The Indians are showing a marked upward tendency—a desire for a higher life. I refer you to my recommendations of last year in their behalf.

Prospect of the school.—The outlook of the school is very encouraging. The Indians are friendly, the pupils teachable, cheerful, and happy. Some little excitement and uneasiness has been created by the transfer of six of the larger pupils to Phenix. I fear it will make the school harder to fill, but trust that the feeling may wear away.

Thanking you for courtesies of the past year, I am, very respectfully,

JNO. J. MCKOIN,

Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FORT YUMA, ARIZ.

FORT YUMA SCHOOL, July 2, 1898.

SIR: I have the honor to submit the following as my annual report for this school for the year ending June 30, 1898:

The year just ended has been one of labor and earnest solicitude for the welfare of the Yuma Indian children placed under my charge, and while in some instances the results obtained have not been entirely satisfactory, it gives promise of an advance along every line of education.

I am inclined to the opinion that the advancement in the studies and the improvement in the mental and moral condition of the pupils exert considerable influence on the older Indians, as evidenced by the marked change for the better in their habits and style of dress. Their mode of living also has improved, and the character of the buildings and the materials used in construction of same testify to an attempt at perfection, and is most favorably commented on by persons conversant with the conditions and houses of ten years ago. However, there yet remains much to be accomplished in improvement and civilization of this tribe, and the fact of existing advancement and promises of future gain should act as an impetus to constant and increased action to achieve new and further results, and to prevent, if possible, the retrograding of the tribe, which would soon be followed by the loss and ruin of the good results thus far obtained.

The influence for evil of the older Indians still remains a fruitful source of trouble in overcoming and combating the strong prejudices of the tribe in general, but I am happy to be able to state that influence is not at present so strong a factor with the younger population of this tribe as in former years.

Various attempts extending over a period of several years have been made to induce the parents of the more advanced pupils attending this school to permit their children on graduation from this to be sent to a larger institution of Indian education, but as yet nothing encouraging has been obtained. For some reason the parents of the Yuma Indian pupils strongly object to their children leaving the vicinity of this reservation under any and all circumstances, giving as a reason for such objection the fear that harm will befall them if away from home. No representation of possible benefit or advantage to the child thus favored seems to be able to change or remove this deep-rooted prejudice of the parent. I regret this exceedingly, as a number of the larger pupils, both boys and girls, graduating from this school within the past few years would be benefited very much by a course of study in a larger institution where the facilities for imparting knowledge of industrial trades are greater and where they could gain the advantages which follow association with new and strange surroundings. The Indian is a copyist, and while he may in his savage state acquire little from imitating the vices of the white man, the value of education for children through travel and comparison can not be overestimated.

The enrollment for the year was 134; of this number 78 were boys and 56 were girls; average attendance for the year, 129.

The work of the past year in the schoolrooms conducted by the same corps of instructors has progressed favorably, the pupils giving close attention to the tasks assigned, and the results in many instances have been quite remarkable.

In the various departments of industrial training the work has made satisfactory

advancement, the children who have been detailed to the several branches entering into their work with cheerfulness and vigor.

The carpenter shop has been in operation during the year, and the repairing of the various buildings, furniture, etc., has been done here by six apprentice boys under the supervision of a competent mechanic. The style of architecture and the change from the old mud hut of the past, on the reservation, to houses at present of poles plastered inside and out can be credited in a measure as a result of this branch of training. It may be true the plastering on the houses may be of mud, the windows lack glass and paint, and the doors swing on leather hinges, but the fact is self-evident that an attempt is being made by these boys to make use of the knowledge acquired in school.

The shoe shop, giving work to six apprentices under the charge of a capable and efficient shoemaker, makes the shoes and does the repairing for the pupils of the entire school.

In addition, a number of boys have been engaged in painting and cleaning the roofs and woodwork of school buildings.

The sewing room has furnished necessary and valuable training to a number of the girl pupils. The making and mending of the clothing for the school has been done here. Quite a number of the women of the tribe from the reservation buy their own material and have their daughters in school make their dresses, of which the parents are very proud, all of which tends to show that the Yuma parents appreciate in a way the advantages of an education, even though it may extend no further than an ability to run a sewing machine.

The domestic work of the school, the sweeping, dusting, making beds, assisting in kitchen and laundry has been performed by the girl pupils detailed for service at different times, directed in their work by the matron of the school. The tasks assigned each have been willingly undertaken and the services cheerfully and well performed.

I have been able during the past year to secure homes in Yuma, Ariz., among white families for a number of the older girl graduates of the school. The reports received from them have been gratifying and testify to their good character and service. I regret to add the field for boys is limited to the reservation, and as the land can not be made productive without irrigation—and the ability to furnish water for such purposes is beyond the power of the Yuma Indian—the outlook for the male graduates is far from promising.

Thanking you for the many courtesies extended by the office of Indian affairs to this school during the year,

I am, very respectfully,

MARY O'NEIL, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT PHOENIX, ARIZ.

PHOENIX, ARIZ., *July 20, 1898.*

SIR: I have the honor to submit herewith the annual report of affairs at the Phenix Indian Industrial School for the fiscal year ending June 30, 1898.

This school has grown during the year from 250 to 450—the average for the year being 418, and the enrollment 480, composed of the following named tribes, viz:

| Tribe. | Old pupils. | | New pupils. | | Total. | |
|-------------------|-------------|---------|-------------|---------|--------|---------|
| | Male. | Female. | Male. | Female. | Male. | Female. |
| Arizona: | | | | | | |
| Pima | 109 | 140 | 41 | 12 | 150 | 152 |
| Maricopa | 28 | 20 | 3 | 2 | 31 | 22 |
| Papago | | | 52 | 20 | 52 | 20 |
| Apache | | | 6 | | 6 | |
| Mojave | | | 1 | 1 | 1 | 1 |
| New Mexico: | | | | | | |
| Pueblo | | | 14 | 5 | 14 | 5 |
| Navajo | | | 6 | 3 | 6 | 3 |
| Oregon: | | | | | | |
| Rogue River | | | 1 | 2 | 1 | 2 |
| California: | | | | | | |
| Ukiah | | | 4 | | 4 | |
| Uki | | | 2 | | 2 | |
| Little Lake | | | 4 | | 4 | |
| Nuakie | | | | 2 | | 2 |
| Con Cow | | | | 1 | | 1 |
| Total | 137 | 160 | 134 | 48 | 271 | 208 |

The good results obtained from introducing advanced pupils from other tribes was immediate and decided. This innovation caused the Pima Indians much uneasiness at first. They had fostered the idea that this school was theirs by divine right and in fee simple. They resented foreign intrusion and glowered at the newcomers. Some ran away. After a while, however, as friendships were formed false conceptions were banished, clans were broken up, cordiality returned, and peace and good fellowship reigned. The intermingling of different tongues is the surest and best way to teach English and broaden the tribal view.

The year has been one of progress. The school has been a veritable beehive of industry. Enthusiasm glowed in every heart and shone on every face. The hum and song of the tools of industry were heard on every hand. All the various trades usually taught at schools of class 2 have been energetically carried on. Besides these our boys have molded, manufactured, and burned nearly 1,000,000 fine brick, doing the work entirely themselves after the first kiln had been burned. With these brick we have built a fine large barn, a bakery, boiler house, bath house, with plunge-bath annex—our boys being taught the trade of bricklaying and doing all the work on the plunge bath. Some 300,000 brick have been sold to the contractors of the new buildings.

These buildings consist of a two-story stone and brick school building of twelve rooms and assembly hall, with steam heat, slate blackboards, electric bells, and all modern improvements; a two-story stone and brick building with basement, to be occupied by cold storage, mess kitchen, and dining hall, children's kitchen and dining hall, and teachers' quarters; a two-story shop building for use of tailor, harness maker, shoemaker, carpenter, blacksmith, and wagon maker.

We are vigorously kicking ourselves free of our swaddling clothes and blooming into masterful manhood. For the fiscal year 1899 we have appropriations for 600 pupils (thus making us the second school in the service in size) for water and sewerage systems, and a large dormitory.

The literary and industrial work have gone hand in hand. They are the Siamese twins of education. The theory learned in the class room is exemplified in the workshop. Indolence is the cankerworm of progress, so our pupils are taught to kill the worm. The various literary teachers are required to visit the industrial teachers often enough to keep familiar with the work, then the arithmetic, the history, the geography are used to elucidate and illumine dull labor. Thus do we maintain the proper correlation between the literary and industrial. A head full of theory is a despicable piece of vainglorious sounding brass, only a little more to be despised than cunning hands yoked to a fool, but when the head and hands are working in harmony then we have a jolly team of irresistible forces.

We pride ourselves on being a working school. No child is permitted to work as he pleases. "Putting in time" is not sufficient. The child is taught how to do a thing, when to do it, and to do it whether he wants to or not. More than this, he is taught to do it with as much skill and speed as any other person could.

After all it is not the size of the buildings, beauty of locality, nor the size of its appropriations that makes the great school. The secret does not lie even in the fame of its instructors, their degrees, or what they have published. The real secret of the success of any school lies in its employees as a corps, and the nearer these teachers are to simple humanity—Christlike humanity—the grander and more enduring the success. In teaching Indians, especially, the teacher must not soar, he must creep and grope. To free him from his prejudices the teacher must use great diplomacy, for the searching after truth is more valuable than the truth for which we search. Our employees have been exemplary examples of right living.

The health of the pupils during the year has been most excellent.

With one exception, this school possesses the finest opportunities in the service for profiting by the so-called "outing system." Arizona is populated by the best of people—people of refinement and means, who have come seeking for health or business openings. There is a demand for 500 of our pupils within 10 miles of the school. This practical home training gives the pupil precisely the training he required. The wages paid range from \$6 to \$20 per month. Owing to the miserable policy of filling this great institution with raw material from the nearby reservations each year, it has been impossible to anywhere meet this demand for our pupils. These pupils are usually small and are absolutely ignorant and inexperienced. The school has been more of a nursery than the training school it should be. This school in the future will be filled with advanced pupils transferred from other schools; then the splendid opportunities in the way of trades and "outings" will be utilized.

During the year about 150 pupils have taken advantage of the "outing system," thus accumulating practical knowledge of modern housekeeping, individual thinking and planning—thus establishing character and independence—besides some hundreds of dollars in cash. The expenditure of the money earned is supervised by the matron, who keeps accounts and helps the girls to save.

Another point in connection with our school: Every year our Eastern and Northern schools are obliged to return many pupils to their homes owing to the development in their cold climate of the child's inherent lung diseases. These children are thus deprived forever of all mental and moral development. Nondevelopment is no hardship to the camp child, who is satisfied because she knows of nothing better. But to the child whose faculties have been fertilized with the pollen of quickened thought, whose eyes have beheld the Canaan of knowledge, whose soul has awakened to a grasp of the infinite, the sudden blighting of all her fond hopes, ambitions, and yearnings is the modern inquisition. Such keen disappointments kill. Instead of sending the child home, why not send her to the Phoenix School? This climate will not create new lungs, but it will heal the organ if there is anything left to heal. The child may then finish her studies while the body is healing.

The location of the Phoenix School is most admirable for valuable practical instruction in two very important industries, viz, farming by irrigation and mining. In all the vast region west of the Rockies these two industries are paramount. Agriculture and horticulture in this vast region and the region east of the Rockies have few elements in common. Our farming is all subject to irrigation, therefore a knowledge of the kind of soil, its elements, porosity, etc., is required in order to know how to irrigate. Then our crops are different in kind. This is especially true of our fruits. Yet our Indian children are sent to Haskell and Carlisle (both most excellent schools) to learn how to farm. All the principles which apply to successful farming by irrigation are taught here, and it is truly surprising how eager the boys are to acquire this knowledge, and how quickly they apply it on their home farms.

Besides the farming proper we give thorough instruction in dairying, flower and fruit culture.

We hope this year to be able to start our mining department. The Indian is the natural prospector. His nature, love of outdoor life, habits, powers of endurance, and knowledge of the country all combine to make this his ideal vocation. Given the proper knowledge of mineral geology, value of ores, and how to work his mining properties, and there is no reason why he should not be an important factor in wealth production, and in a way, too, that does not bring him into direct competition with thousands of equally deserving but less fortunate white people.

It does seem to me to be far wiser to give an Indian the kind of knowledge that will help him develop his natural resources than to push him, half ripe, into positions created for him. By providing places as teachers and clerks for the Indian youth, by paying them salaries largely in excess of what they could earn in outside labor markets, and by favoring them to the extent of admitting them to these positions simply because of color, while other races are subject to crucial examinations, we simply foster the deplorable policy of governmental paternalism.

This school is located in the beautiful Salt River Valley, which is surrounded by mineral-brooding mountains. Gold, silver, copper, lead, granite, sandstone, onyx, etc., are found in abundance within 100 miles. Many of these are also found on every reservation throughout the West. They lie untouched, valueless, while thousands starve because of the Indians' ignorance. The Indian builds his worthless shack on a million-dollar hill while white men beg for work and women for bread. The Indian should be taught to help himself, then to help others—thrift and benevolence, not idleness and greed. I hope soon to teach the theory and practice of mining in all its branches.

Music forms a very large and important part of our school instruction, we considering it an invaluable aid to mental and moral activity and development. Our band is highly appreciated and much sought after. Our orchestra astonishes those who think there is no music in the Indian. The choir and girls' drum corps are pleasant and profitable features.

Thanking you for past favors, I am, very respectfully, your obedient servant,
S. M. McCOWAN, *Superintendent*.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT PERRIS, CAL.

UNITED STATES INDIAN SCHOOL,
Perris, Cal., July 7, 1898.

SIR: I have the honor to submit the following report of the Perris Indian School for the fiscal year 1898, viz:

Attendance.—The school was opened promptly on the 1st day of September, 1897, at 9 o'clock a. m., with a full attendance. The enrollment has been 190 for the year—94 boys and 96 girls—with an average attendance of 171. Agent L. A. Wright

has given his official support to the school, and has thereby materially assisted in furthering the work.

Literary work.—This has evidently been a year of unusual progress in the class rooms. The pupils were assigned to appropriate grades on the first day of school, after a careful examination of their fitness; and notwithstanding the fact that this school has had only three teachers, and limited room space to handle 190 pupils, the work has been well done, and a systematized application of principles and practice, with which more than anticipated results were acquired. Miss Clara D. Allen and Mr. B. N. O. Walker have been especially constant in the faithful performance of their duties, as well as persistent in their individual efforts toward the practical education of their pupils.

In the early part of the year three literary and debating societies were organized among the larger pupils, viz, Helen Hunt Jackson Society, Excelsior Society, and Franklin Society, in which teachers and employees took active part, and brought said societies up to a good standard. The work was varied, so as to include every feature of a practical, educational, and social nature. Nearly every child in school speaks fairly good English.

Sunday school was held regularly during the year, not one Sunday being missed, and the regular international lessons explained and studied, and extracts recited therefrom by the classes. The regular evening chapel exercises received especial attention, and were made a leading feature of our school work, and more than usual interest has been displayed by the pupils, the best of decorum being observed. The singing was executed by the school choir, consisting of twenty-four pupils, the entire school taking part in general song service. The children were also encouraged to study Bible verses, moral and temperance quotations, and recite them during chapel voluntarily.

A circle of the King's Daughters was organized by the matron during the year, the membership now being forty-two girls. Their practical good work, various entertainments and exhibitions, have produced a grand influence over the entire school.

A branch of the Young Men's Christian Association is now about to be organized, at the request of the older male pupils, who desire to take advantage of the example set by the King's Daughters.

Music.—A brass band of twenty-two instruments was organized, the musical instruction being given by W. R. Preston, irregular school engineer, who taught the band in addition to his other work. He is a good musician. A most remarkable progress has been made, third and fourth grade music now being well rendered. The band is already popular in southern California, and during the year accepted invitations to Los Angeles, Riverdale, Redlands, and other places frequently.

A mandolin and guitar club of eighteen girls has also been organized. The popularity of this club ranks with the band, as they also have given public exhibitions, and never fail to elicit great applause. They have made rapid advancement, talent above the average being displayed.

In addition to giving instruction upon stringed instruments, Miss Pearl McArthur, school music teacher, has given lessons upon the piano, organ, and in vocal music, the result of which is that the girls assigned to piano and organ classes have made good progress and are now able to act as school organists at chapel, Sunday school, etc. At our annual school entertainment, before a large and critical audience, music was rendered by pupils of the class, the execution of which was pronounced faultless. Vocal culture has been pursued with a general marked improvement throughout the entire school. The pupils carry all the parts, sing sweetly, and take great interest in their training. In addition to the above, lessons have been given upon the violin. The school orchestra renders choice music at the bimonthly socials.

Industrial.—Limited as the number of departments are at this school, nevertheless a thorough system of details for industrial work was inaugurated and pursued during the year, and every result practicable has been attained. In each department promptness and regular hours of work have been maintained.

The carpenter shop has a detail of eight boys. Cabinets, washstands, bureaus, hat racks, sofas, lockers, wardrobes, cupboards, and various other articles of furniture required, have been manufactured, besides the necessary repairing being done. Their work has been good, substantial, and some of it artistic, suitable for decoration and display anywhere as hand work without the aid of machinery.

Paint shop.—Whenever necessary, a suitable detail of boys was made and assigned to the shop, where chairs, furniture, etc., were painted and repainted; also, many of the buildings, inside and out, have been painted, and the work well done.

Shoe and harness shop.—A detail of ten boys were assigned to the shoe and harness department. They have manufactured 378 pairs of shoes for boys and girls. The

work was good and substantial, and as perfectly finished as the material would permit. A great deal of repairing was also performed upon shoes and harness.

Farming, etc.—The farm and garden have been in charge of Fred Long, farmer, and no pains have been spared in attempting to raise a good crop of barley, alfalfa hay, fruit, and vegetables, besides making and beautifying the lawns, walks, and flower beds and hedges. The greater number of boys have been detailed at this work, and they have given satisfaction by their industry and perseverance. Too much can not be said in commendation of Mr. Long for the all round good work he has accomplished at this school.

Irrigation.—Special effort has been made in instructing the greater number of male pupils in irrigation. The details have been varied, so as to give an equal opportunity to all in this important and necessary work. In connection with farming, gardening, orchard culture, and lawn making, the necessary ditches, cross ditches, laterals, sluice boxes, etc., have been properly constructed by the pupils. Every possible benefit of this line of instruction was derived, with the very limited amount of water that was available for a school plant and 80 acres of very poor and alkali land in a dry climate.

Engineering and plumbing.—During the year four boys have been detailed to work in the pumping plant regularly, under instruction of a competent engineer, who has given these pupils every attention, through which they are now able to handle and care for an electric gasoline engine and pumping apparatus. Also a number of boys have been detailed in repairing the irrigating and domestic water system of pipes, flushers, etc., of the school, putting in new pipes to replace the old ones, and other plumbing required in the various departments and sewer system, all of which, while not especially of such an intricate nature, is of great practical value, and just what boys need in southern California, where so many pumping and irrigating plants are in operation.

Laundry.—Considering the facilities furnished this department, the work therein has given perfect satisfaction. Twenty girls have been detailed regularly, as well as fourteen boys, and as good work done as at the average home, the washing and ironing being as neat and well finished as in many city laundries.

Kitchen.—This department of the school has been especially well conducted and successful as an industrial feature. A departure has been made in that the girls detailed have done the cooking and kitchen work in all its details, following out the prescribed bill of fare accurately at each meal, under the careful and watchful supervision of the schoolcook, Mrs. Lydia Long. Cleanliness, promptness, and good order have prevailed, and very satisfactory results obtained.

Dining room.—The dining room has been in charge of an employee detailed in turn to keep order, teach table manners, and have general supervision of the proper distribution of food by the pupils, who sit at the head of the tables to wait upon the others, grace being repeated morning and night, and chanted at noon. By this means a rapid step has been taken in politeness and behavior.

Bakery.—An Indian boy, with two assistants, has baked all the bread, pies, and cakes used at the school; and I must say that the baking has been equally as good, if not frequently better, at least for an institution, than the average city bakery could furnish; and above all the baking and the bakery have been clean and wholesome.

Matron's department.—This department is in charge of Mrs. Fanny D. Hall, whose great and kind influence over girls, added to her constant and untiring efforts to establish ties of sympathy and affection, and bring about the conditions so necessary to produce the effect of home life, which is always nearest the heart of the child, has succeeded in accomplishing during the year the result desired, in every way practicable under existing conditions. Teaching practical home work by plain methods has been done in all departments, special and individual instruction being given in home cooking, washing, ironing, sewing, cleaning house, arrangement of furniture and draperies, and ornaments, added to the making of rugs, carpets, fancy work of all descriptions, all of which has added to the appearance of the school, as well as being of great value to the pupils in their education. The dormitories, parlor, sitting rooms, hallways and porches, have been made as homelike as could be, the work being done altogether by the girls.

In addition to the above features an interest has been created in flower culture, and both boys and girls instructed in its arrangement in and around the home. It is satisfactory to notice the result of this training. Every morning the parlors, sitting rooms, schoolrooms, and dormitories, are supplied with tastefully arranged bouquets of beautiful flowers, that have been voluntarily picked and placed around by pupils.

The best of conduct prevailed in this department, and there scarcely has been an occasion that has merited discipline during the entire year. The matron has been

a mother to the school, having the confidence of every child therein. Such being the case, and other things being equal, it was impossible for other than excellent work to be obtained.

Sewing room.—Great interest has been taken in this department. The girls detailed therein have been taught to cut, fit, and manufacture their own garments, and shirts, underclothing, etc., for larger boys, as well as the necessary garments required for the smaller girls and boys. In addition to the work of the regular detail, a large number of girls at the school, who have made money by washing and ironing, cleaning, and caring for employees' rooms, etc., purchased goods in Riverside, which they cut, fit, and made into elegant dresses for themselves. The work, which has been seen and inspected by visitors from time to time, has been pronounced excellent, and equally as well done as any work of like nature turned out of a professional dressmaking establishment. All work has been well finished inside and out.

Hospital.—While but very little sickness has prevailed during the year, a detail for instruction in hospital work was made, and a class of boys and girls were instructed in "first aid to the sick." Dr. C. C. Wainwright, agency physician for the Mission Indians, acts as school physician, and has given good attention. He also gave a weekly instructive lecture to the older boys and girls, which has been appreciated by all.

Buildings and grounds.—The buildings have been kept in good repair, but no new ones constructed. Much work has been performed upon the grounds, new lawns laid out, trees, shrubbery, flowers, etc., planted, grass sown, and the entire place beautified.

Military organization and disciplinarian department.—On the first day of school all the pupils were organized into military companies, two of girls and two of boys; officers and noncommissioned officers were appointed and assigned as prescribed by the United States Army Drill Regulations for Infantry. The organization and all pertaining to it, including the school band and field music, were placed in the disciplinarian's department. Mr. J. J. Wickham, the irregular night watchman, who has been employed at this school and has had ten years' service in the United States Army as a noncommissioned officer, was assigned as acting disciplinarian, and placed in charge of the military work in addition to his other duties. Daily drills, morning and evening flag ceremonies, military inspections, dress parades, and regular routine of exercises and duties were instituted, which in no way interfered with the time of regular school duties. The further the pupils advanced into military drill the more they were pleased; instead of getting tired the greater their ambition in that direction.

Too much praise can not be given to the merits of military organization, drill, and routine in connection with the discipline of the school; every good end is obtained thereby. It teaches patriotism, obedience, courage, courtesy, promptness, and constancy; besides, in my opinion, it outranks any other plan or system in producing and developing every good moral, mental, and physical quality of the pupil, when thorough, not only on drill or parade, but in the class room and in every department of school, and on the playground as well, insuring, as it does everywhere and at all times, erect carriage, neatness, cleanliness, and politeness. It is to a great extent through the application of this system in direct connection with the prescribed school discipline that the school has accomplished so much during the brief period of a school year, and stepped forward into the line of the front rank in the eyes of the good people of southern California.

The discipline in general of the school has been, I may say, perfect. The rod and the guardhouse are unknown factors at this institution. What few slight cases of misconduct we have had were tried by military court, the officers of the companies being detailed for that purpose, under instruction of the acting disciplinarian, and both the findings and sentence submitted to the superintendent for approval or disapproval. Quite an interest was manifested by the officers in this line of duty. It proved very instructive and created a consistent practice of good example, as well as an effective method of discipline.

In connection with the above methods, reports were made by the company officers to the disciplinarian and matron in the respective dormitories just prior to the evening relaxing exercises that regularly took place previous to retiring, when the pupils were not encumbered with heavy clothing. These exercises lasted ten minutes, and have proved of great benefit to the health of the school, scarcely a boy or girl being sick during the year. At the conclusion of these exercises the matron and disciplinarian, in their respective dormitories, gave "dormitory talks" to the children, who were seated and listened attentively throughout. The above work as outlined has been carried out constantly and thoroughly, and has made a marked change in the health, appearance, and mental development of the pupils.

General.—Every employee at this school has had the specific duties pertaining to his or her department outlined appropriately, and the work therein has been directly under their charge. The full duties have been accorded and the proper trust and responsibility placed in them, under direction of the superintendent. The mechanical and agricultural industries have been unified, regular inspections have been held in all departments, and perfect harmony existed throughout.

The work in all the industrial departments has held close practical relation to the class rooms. Weekly and monthly lists of work performed, its money value, have been made and handed to the teachers, who placed them in the hands of the pupils, to write upon, compute, explain, or illustrate upon the blackboard appropriately. In other words, the schoolroom and industrial departments are working in close touch with each other.

To say that the school and its pupils have advanced materially during the year is but justice to the merits of the efforts put forth, the work well done, and the actual results that are here evident in the brief period of one year. It seems that from the first day of school to its close every person connected with the school, and particularly the pupils themselves, have "put their shoulders to the wheel." No runaways, no offenses of a serious nature, no discontent, no immorality or even a tendency thereto. The high moral principle of these children is something noble, so much so that I am impressed with the opinion that they are somewhat above the average child in this respect. They are obedient, kind, and respectful in their every action and carriage. All they require is the proper direction to lead them in the path of industry and education.

In addition to the military drill and exercises, the customary playground games have been indulged in by boys and girls and enjoyed. Two good football teams were organized last fall. The members took a good deal of interest in the game and some excellent players were developed. By the next season the larger team will be able to cope with some of the South California teams. Two baseball nines have done considerable and creditable playing, winning from the white teams every time.

In addition to the regular school work on all other lines, every practicable opportunity and effort has been given the important factor, recreation, included in the development of youth, and proper supervision given in every instance. Bimonthly socials, in which employees and pupils mingled, neat dancing, harmless games, proper decorum, and general etiquette were taught; special receptions given by the larger girls, at which social conversation was cultivated; strawberry festivals and short evening parlor entertainments, the latter two usually given by the King's Daughters. These, added to various evening band concerts, as well as musicals by music classes and mandolin and guitar club, monthly entertainments, etc., have gone far toward giving plenty of enjoyment to the pupils.

Closing exercises.—The closing exercises of this school were held on June, 2, 1898. The programme of the day opened with a military full-dress parade and battalion drill by band and companies at 2.30 p. m., which was followed by a band concert. Fully 1,500 people from Los Angeles, San Bernardino, Riverside, Redlands, San Jacinto, and other places were here, among whom were many leading citizens of southern California. In the evening an entertainment by the children was given in the dining hall, where a neat stage had been erected and seats prepared for about 800 persons. But the room was not sufficient, for by the time the doors were opened the crowd had increased to 1,500 people, and hence many were compelled to go away, as there was no room. The entertainment consisted of vocal and instrumental music, speeches, recitations, compositions, physical-culture drills, fancy marches, and a debate by representatives of the Helen Hunt Jackson and Excelsior literary societies upon the subject, "Resolved, That the dish rag is of more benefit to humanity than the hoe." The judges were selected from the audience. A fancy doll waltz was also given by sixteen little girls, and several tableaux representing the current topics of the day.

Fourth of July.—Our school took active part in the Fourth of July celebration at Los Angeles, the band leading the third division. Native Sons, in the parade, and in the afternoon gave a concert at Central Park to a crowd estimated at fully 30,000 people while the mandolin and guitar club and other pupils rendered a musical and literary programme in a large pavilion for the benefit of the 20,000 school children of the city. This trip, of three days' duration, expenses for same being paid by Los Angeles, has been of great value to the pupils and Indian cause generally, and did much to break down prejudice. Santa Monica, a seaside resort, was also visited, and pupils thoroughly enjoyed a plunge in the ocean.

This school should either be enlarged or moved to a better site. No place in the United States presents better advantages for an Indian school by way

of cultivated people, interest manifested by the citizens in the Indian, climate, etc., than southern California, and I would certainly recommend that steps be taken to give the hundreds, I may say thousands, of Indian youth of the Southwest, who have no school facilities, reasonable advantages to secure to them an education.

In spite of the fact that the school is badly located, with meager equipment and the poorest of surroundings, I feel that good, substantial, honest work has been accomplished during the year, and the good people of southern California have been aroused to the necessity of cooperating and lending influence to assist the Indian in his upward struggle, all of which is due to the interest manifested by the pupils and the united effort and hard work performed by employees.

Very respectfully, your obedient servant,

HARWOOD HALL, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FORT BIDWELL, CAL.

INDIAN SCHOOL, *Fort Bidwell, Cal., August 20, 1898.*

SIR: I have the honor to submit the first annual report of this school, it being for the fiscal year ending June 30, 1898.

By a joint resolution of the Senate and House of Representatives, approved January 30, 1897, the Fort Bidwell abandoned military reservation, with all its lands, buildings, water system, and improvements having been turned over to the Department of the Interior, the Secretary of the Interior was authorized to use same for the purposes of an Indian school.

The buildings having been erected for use as a military post, it was necessary that they should be remodeled in order to make them suitable for school purposes. This was done under contract, on plans submitted by myself to and approved by the Indian Department, at a cost to the Government of only \$2,268.39, the converted buildings being ready for occupancy by January 21, 1898. Thus, it will be seen, that at a slight cost—less than \$2,500—we have buildings with good accommodations for from 100 to 150 pupils; and at a further slight cost the accommodations could be doubled.

Besides the buildings, there are within the reservation over 3,000 acres of land, including 600 acres of well-timbered land, and some of the finest farming land in a wonderfully fertile valley.

Owing to the great distance this school is from the nearest railroad station (135 miles), to its being then the winter season, and to other difficulties which had to be surmounted, we did not get the necessary school supplies hauled here to enable us to open the school sooner than on April 4, 1898; consequently it has been in session less than three months of the fiscal year.

This school was established more particularly for the benefit of Indians of the Piute and Pitt River tribes, the former living mostly in Surprise Valley, Modoc County, Cal. (at the head of which Fort Bidwell is situated), the latter in the Pitt River country, not less than 50 miles distant.

We opened school with 16 children—all Piute Indians—10 boys and 6 girls, to which were added during the term 5 boys and 4 girls of the same tribe.

The Pitt River Indians, who have more children of school age than the Piutes, failed to send any of them to the school. This was owing to evil influences of white people, who, for selfish purposes, persisted in advising them not to send their children to the Fort Bidwell school. One, and I think the most potent, of these influences has been removed, and by considerable missionary work I think the advantages the Pitt Rivers will derive from this school have been made very clear to them, the more especially as they sent a delegation of about fourteen of their most influential men to visit the school during the time it was in session. As a result of this visit and work, I am informed that a number of them have decided to send their children next term, which will commence on the 1st proximo.

Instead of the present method of persuading Indians to send their children to the schools provided for them, I would respectfully suggest that the Indian department be legislatively empowered to compel all Indians to send all their children of school age (if in physical condition), to the different schools maintained at considerable expense for their special benefit. Some of the States have compulsory education laws which operate successfully, and I think similar laws for the Indians should be made.

Many superintendents, I am satisfied, meet with the same difficulties I have experienced in getting the children to school. So many of the old Indians, who still

have considerable influence in their respective tribes, are strongly opposed to the idea of education for their children. Among the younger men, though, I have not found the same degree of opposition.

The progress made by the children who have been here has been remarkable, not only as to their scholastic studies, but as to the improvement in their ideas of good manners, neatness, cleanliness, etc.

Coming as they did from "tepees," without the slightest previous training, and not having other pupils here partially trained who could act as guides for them, it required much care, skill, and perseverance to convert such wild specimens of humanity into anything like decent and orderly people.

This remarkable change, accomplished in such a short time, is due to the efficiency, so patiently exercised, of the able corps of employees, with whose assistance in the management of the school I have been favored. Mrs. Nickerson as teacher, Miss Bessie McKenzie as matron, Mrs. Burkhart as seamstress, and Mrs. Chapman as cook, each in her sphere, is entitled to much commendation for the results obtained by their well-directed efforts.

Trusting that the results may be still more satisfactory the coming year,

I am, sir, yours, respectfully,

IRA R. BAMBER,

Farmer, Industrial Teacher, and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT GREENVILLE, CAL.

GREENVILLE INDIAN INDUSTRIAL SCHOOL,
Greenville, Cal., August 8, 1898.

SIR: I have the honor to submit my annual report for the year ending June 30, 1898.

Owing to the limited accommodations of our temporary quarters, the average attendance of pupils has of necessity been small—thirty-five for the year. This attendance, however, has been remarkably regular—no runaways, and very few withdrawn.

Health.—There have been more cases of sickness during the year than ever before. Two have died in the school, one of typhoid fever and one of pneumonia; also two pupils who were withdrawn died at home of the latter disease.

These deaths may deter some of the Indians from sending their children to school, for a time at least.

Schoolroom work.—The advancement of pupils has not been as great as it would have been under more favorable circumstances. The schoolroom being separated from the kitchen, dining room, and sewing room by only a thin board partition, the noise from these departments could be plainly heard in the schoolroom.

Nevertheless, the pupils have made quite good progress, and our teacher, Mary B. Clayton, is deserving of praise for her indefatigable earnestness in the schoolroom work.

Industrial training.—The kitchen, sewing room, and laundry furnished the only industrial training for the girls. The work in the sewing room has been especially good, considering that we have had no regular seamstress during the year. Having had no industrial teacher, the boys have devoted their working hours to sawing and splitting wood, repairing shoes, and doing necessary carpenter work.

New buildings.—The school and dormitory building, to accommodate 100 pupils, is almost completed. When the water and sewer system for the same (now being advertised) shall have been completed, we can resume our labors under more favorable surroundings.

This change I am sure will be an incentive to greater effort on the part of employees and pupils to accomplish more during the coming year than ever before. It is my sincere wish that I may be able at the close of this term to tell of improvements all along the line. We are indeed very fortunate in that the Department has done so much for this school.

Needed improvements.—That we may have the facilities for industrial training, a school farm of 100 acres is much needed; also a barn for horses, cows, hay, etc., a laundry building, and a small carpenter shop.

Thanking you for your kind consideration in the past, I am,

Very respectfully,

EDWARD N. AMENT, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FORT LEWIS, COLO.

FORT LEWIS SCHOOL, COLO., *August 27, 1898.*

SIR: I have the honor to submit the following report for the fiscal year ending June 30, 1898:

Descriptive.—Fort Lewis School is situated at the base of the La Plata Mountains, in southwestern Colorado, 4 miles from Hesperus village and station and 12 miles from Durango, the market town. The La Plata River flows through the reservation, which is about 10 square miles in extent and adjoins the Southern Ute Reservation. The altitude is about 8,000 feet, and people afflicted with heart disease are liable to find it rather injurious. The summers are delightful; the winters usually severe, the snow sometimes reaching a depth of 3 feet.

The plaza, about a quarter of a mile wide by one-half mile long, is in about the middle of the reservation, and most of the twenty-two buildings which were formerly occupied by the military are located along its outer edges. It is bordered by a driveway, rows of fine shade trees, streams of running water, and a good plank sidewalk. Some of the front yards were sodded in the spring and nice lawns started, but owing to my inability to get lawn mowers they do not look as well as I would like to have them. Most of the buildings are old and somewhat dilapidated, but when you authorize the contemplated repairs, which are so urgently needed, they can be made quite serviceable and neat looking as well as healthful.

Attendance.—During the greater part of the year the capacity of the school, 300 pupils, was quite severely taxed. No special efforts were made to secure children, most of them being brought in by parents. Fifteen tribes were represented, the Navajoes, Apaches, and Pueblos being in the majority. If pressure were brought to bear upon the Southern Utes, our next-door neighbors, and the Jicarilla Apaches, only 80 miles away, an attendance of 500 could be secured without any trouble. Very few children of either of these tribes are in attendance here or elsewhere.

The Southern Ute Indians are physically superior to any tribe with which I am acquainted, this being due, perhaps, to their former practice of destroying all deformed or defective children. The children are bright, apt, and quick to learn, and it seems a pity that they are not given educational advantages and that their parents are not made to see the benefits of education in some forcible manner, such as withholding rations, for instance. Fort Lewis has been designated as a Southern Ute Reservation school, for school purposes only, but the Utes do not seem to be very strongly impressed with the fact that this is their school, to which their children should be sent.

The new building which I understand you have decided to have erected here this fall will enable me to accommodate nearly 400 children, and present indications are that it will be urgently needed before long to accommodate those who wish to attend. Perhaps a third of the pupils are of mixed blood, and not as desirable as those of full blood. If rations were withheld, as suggested, I am confident that the school could be filled to overflowing with full-blood Navajoes, Southern Utes, and Jicarilla Apaches without much difficulty.

Schoolroom work.—Greater progress and improvement has been made in this line than ever before, and the teachers and myself are much encouraged thereby. Twenty-two pupils were considered sufficiently advanced to be transferred to Carlisle and Haskell, and I am sure they will be a credit to themselves and to the Indian school service. The beneficial effects of kindergarten training is beginning to be shown and appreciated, one noticeable characteristic of former kindergarten pupils being the absence of that "hang-dog" expression that so many Indian children assume when spoken to.

Industrial work.—Special attention was paid to this branch of school work, farming receiving the most attention, as it is realized that such instruction will prove of the most practical value to a majority of the students. New ditches have been made, old ones enlarged, irrigation has been taught, and several acres of new land broken. A severe and unusual hailstorm worked havoc with our garden this year, so that there is a shortage in the supply of vegetables.

The shoe shop has turned out 385 pairs of shoes, each pair of which will outwear three pairs of those furnished under contract. A great deal of repairing was also done, and I consider the money spent in running the shoe shop a profitable investment for the Government, without taking into account the fact that a valuable trade is taught.

The work of the sewing room and of the tailor shop has been satisfactory. The girls have been encouraged to buy material and make their own dresses, under the direction of the seamstresses, and the results have been gratifying. Sewing and

darning have been taught the girls, and the tailor has kept his apprentices busy in making and repairing coats, pants, vests, underwear, etc. All pupils' underwear, except a few skirts, was made at the school. About 20,000 pieces of clothing, including hosiery, were repaired in the sewing room during the year.

The carpenter and his assistants have been fully occupied in looking after and repairing buildings and making sidewalks and other improvements, such as coal sheds, oil sheds, etc.

I have been unable to secure a competent blacksmith at the salary allowed. It seems to me that it would be a good plan for the large training schools to turn out fewer literary teachers and a greater number of good carpenters, blacksmiths, shoemakers, and other industrial employees, the demand for which is greater than the supply.

The principal work of the printing office has been the publishing of the school paper, *The Outlook*. The press is a dilapidated Gordon, built during the civil war; the type is battered and worn, and there has been no expert printer at the school during the past year, and yet I can safely say that the printing office has been of considerable educational value, not only to those directly connected with it, but to a majority of the other pupils as well. I have refrained from making any requests for the betterment of the plant on account of the small amount of miscellaneous receipts of Class IV at my disposal, but at some future time I intend to ask your assistance in providing the school with facilities for getting out a paper that will be more of a credit to it.

Fire protection.—We have a good small reservoir (another one should be provided and the water filtered, as recommended by your office architect), plenty of piping, hydrants, hose, a good cart, and willing firemen, but the pressure is so light that a stream of water can be thrown only about 6 feet. As long as oil lamps and stoves remain in use there will be great danger of fire, in spite of all precautions that can be taken. A steam pump of a capacity as great as that of the pump in use here when the waterworks system was established should be provided as soon as possible. Plans for such a pump or boiler were loaned to Supervisor Bauer when he visited the school, just after the close of the last fiscal year, and have undoubtedly been forwarded to you by him.

Health.—The health of all pupils, except those coming from the low altitude and hot climate of southern Arizona and New Mexico, has been remarkably good. There has been no epidemic of any kind, although contagious diseases have been raging all about us in places of lower altitude and warmer climate. The rather high death rate among pupils from the locality mentioned should not be charged up to the climate, as the probable cause is the inherited tendency to scrofula and consumption, due to the polygamous practices which formerly prevailed among these southern Indian tribes and the careless habit of lying down on the bare ground, especially in the early spring, a habit which, in this altitude, is almost certain to be followed by serious consequences.

I have recommended that our pupils from southern Arizona and New Mexico be returned to their homes and that no more be sent here, as there are other schools, such as that at Phoenix, where the climatic conditions are similar to those to which they are accustomed. With the assistance of the Indian Bureau there should be no difficulty in securing 1,000 pupils for this school if desired from the near-by Ute, Jicarilla Apache, and Navajo reservations, the climate and altitude of which are similar to Fort Lewis.

Employees.—The employees of this school, almost without exception, have been faithful and loyal. Their duties have been performed with zeal, and it gives me pleasure to thus publicly express my appreciation of their services and the important part they have taken in making the past year so successful. All difficulties and differences (and they have been remarkably few when one considers the wide range of opinion and the various tastes represented) have been settled amicably, without troubling the Department. Nearly half of my last year's employees were of Indian blood, as I am a firm believer in pushing the Indian forward as fast as his ability will allow. Some of my Indian employees were remarkably successful; one was almost a total failure; the remainder gave fair satisfaction and will be given a further trial. I am inclined to the opinion that, as a rule, white employees take more interest in the success and advancement of the Indian race than do the Indians themselves. I have tried to make my employees understand that the fact of their having Indian blood in their veins does not entitle them to any special favors and has no influence either for or against them when I make my recommendations for promotion; that they must do their work faithfully if they expect to be retained in the service, and that their advancement depends upon the manner in which they perform their duties and the proof they show of their ability to fill higher positions.

Thanking your office for the considerate treatment of such suggestions and recommendations as, in the performance of my duty, I have considered it necessary to make, I am,

Very respectfully,

THOS. H. BREEN, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT GRAND JUNCTION, COLO.

GRAND JUNCTION, COLO., *August 26, 1898.*

SIR: I have the honor to submit my eighth annual report of this school.

The work in the schoolroom during the past year has, in the main, been most satisfactory. As I contemplate the work of the schoolrooms three years of the eight stand out more prominently, because of being years of remarkably good work; the last is one of three—but, alas, the Indian Office comes to appreciate some of my good workers when they get to their best, and good boys and good girls, both among employees and pupils, are promoted and shipped. Within the past eight years three of my assistants have reached superintendents' positions, twice as many more have won promotion to higher ranks and gone to new fields, while others have won the promotion, some winning twice, and remained with us. It has come to have the appearance to me that there is no surer road to promotion for the faithful than through the Grand Junction school—except the faithful be the superintendent.

As set forth in my recent report to your office, and for the reasons therein elaborated, we must give early attention to another method of disposing of sewage. Year after year I have delayed, digging cesspool after cesspool, in the hope that the neighboring town on the river below us would seek a supply of mountain water for city use and thus enable us at trifling expense to build a sewer to the river, which runs in less than a mile of us. This will eventually happen, but the delay of the past and the necessary delay of the future will, combined, make a period so long that our present methods, if continued for such a time, would endanger health.

With the conditions submitted filled, no place in the service has greater promise than this. We have demonstrated repeatedly that the southern Indians can be brought here and sustain as good health as in the schools on the southern reservations, while the northern Indians that have come here in good health have never had a single ailment that can be charged either to the climate or their environments.

Conditions that could not be foreseen by your office or mine have forced a delay in attending to the school pasture on the neighboring stock range, though the fact that we have been sorely "grasshoppered" has urged it upon us more this year than ever before.

The average attendance during the year has been in excess of the number for whom an appropriation was made—a fact to which I desire to call special attention, as the capacity of the school has been increased more than 50 per cent since the assertion was made that a school here, or rather the school here, could never be filled. When we had an attendance of eighty-three one of the inspectors assured us that number was wholly because of my good luck in having just been transferred from the reservation. The good luck will continue, and the filling of the school, when we shall have doubled its capacity, will be readily accomplished.

Outings.—This system is growing so rapidly here that during the coming year we must make such preparations for it as have never before been contemplated, and I hope and expect this fall to get some of the Indian children into the public schools of the county, while a system to lessen the clerical work to secure reports of "outers," look more closely after their instruction while out, and lessen the time necessary to make collections of sums due must have early attention. Quite a number of the older girls can find work in good families the year around, and the question of shortening the school term for the sake of the "day work" employment that is offered in the early spring is becoming a matter for serious consideration.

It is my purpose to begin the manufacture of cheese as soon as the implements of the occupation can be gotten on the grounds. From 20 to 25 gallons of milk per day can be so used now and not rob the tables, and that amount can and will be very materially increased during the coming year.

Following is a tabulated statement of school products:

| From the sewing room: | | From the shoe and harness shop: | |
|------------------------|-----|---------------------------------|--------|
| Aprons | 229 | Bridles | 16 |
| Capes | 33 | Shoes— | |
| Chemiloons | 107 | Mens pairs .. | 124 |
| Dresses | 92 | Misses do .. | 39 |
| Drawers pairs .. | 173 | Boys do .. | 65 |
| Napkins | 22 | Womens do .. | 43 |
| Pillowcases | 13 | From the farm: | |
| Towels | 39 | Beef, net pounds .. | 820 |
| Waists | 82 | Beets do .. | 38,200 |
| Caps | 31 | Eggs dozen .. | 50 |
| Cloths, table | 5 | Honey pounds .. | 235 |
| Curtains | 14 | Onions dozen .. | 59 |
| Dresses, night | 67 | Asparagus pounds .. | 360 |
| Gowns | 2 | Calves | 6 |
| Neckties | 63 | Hay tons .. | 89 |
| Shirts | 36 | Lettuce (bunches) doz .. | 40 |
| Undershirts | 76 | Radishes do .. | 54 |
| From the tailor shop: | | From the dairy: | |
| Pants— | | Butter pounds .. | 1,426 |
| Jean pairs .. | 28 | Milk gallons .. | 19,077 |
| Knee do .. | 42 | | |
| Shirts | 91 | | |
| Undershirts | 95 | | |

Thanking your office for courtesies extended, I have the honor to be,
Very respectfully,

THEO. G. LEMMON, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF INDUSTRIAL TEACHER IN CHARGE OF SEMINOLES IN FLORIDA.

FIELD SERVICE, MYERS, FLA., *August 15, 1898.*

SIR: As requested by the circular letter from the Indian Office, dated June 1, 1898, I have the honor to submit the following as my annual report for the past fiscal year of the Seminole Indians in Florida:

When I made my annual report for the fiscal year 1897 I expected it to be my last report for this field, and gave a general review of the origin and carrying forward of the work to the end of that year, June 30, 1897. However, I have continued in the work because the Department decided to make a special effort to secure larger tracts of land for permanent homes for the Florida Seminoles, and it was deemed best that one familiar with the field should remain and assist in this work for the time being, and as the securing or setting apart of a large body of land for these Indians was one of my cherished hopes I the more willingly continued in this field.

The general condition of affairs here is practically the same as last year. No organized school work has been carried on at the station, and the general and individual work which has always been pressed when the Indians visited us for a longer or shorter time was more scattered, on account of the less frequent visits on the part of the Indians. This was owing chiefly to the fact that there was a greater demand for the products of their hunting, so that the Indians have given their time almost entirely to hunting, keeping closely to their hunting grounds and securing their supplies from the traders, who have been among them in greater numbers than ever before, and owing to the limited employee force and funds I could not carry on the much-needed and desired camp work to overcome any adverse influences.

The number of the Indians is about the same—some 565. The few deaths occurring during the year are equalized by the number of births. To give an accurate census of these Indians would involve quite an item of expense and could only be done by the employment of a number of persons to visit them in their permanent as well as in their temporary camps.

The general health has been good during the past year. They have escaped to a large extent the prevailing malarial troubles better than the white people; still I have been called upon to treat them for various diseases.

These Indians are still located in a general way in the three sections heretofore mentioned—the Big Cypress on the west of the Everglades, the Miamis on the east, and the Cow Creek band, the latter having moved farther to the east, nearer to Fort Pierce, not from their own choice, but because of the fencing done by the cattle men, which interferes with the hunting and raising of hogs by the Indians. The Miami band have to a great extent left their camps and fields on the mainland and gone farther into the 'Glades to occupy the islands there, because of the encroachment of white settlers, etc., on the east coast. In the Big Cypress there has been a tendency among the Indians to group a number of camps near the 'Glades, so that there are little settlements instead of so many scattered camps. This seems to be done because of the convenience of having the families together while the men are in the 'Glades hunting, and also because of the easier access to the traders.

I am sorry that, owing to their almost entire devotion to hunting, their fields have, to a great extent, been neglected. This, in my opinion, is a backward step on their part, though we hope it may only be for a season. They are discouraged in their field work, not knowing at what time they may be driven away by some white squatter. This is also the case with their raising of hogs, the latter being stolen from them.

The Episcopal Church still carries on its mission among the Indians, holding occasional services for them and doing some camp work, but with no specially organized school of instruction, as they meet with the same difficulties in a general way as the Government.

During the early part of the year I examined different tracts of land with the view of purchasing some as in the few previous years. Such purchase, however, was deferred, the Department deeming it best to wait, owing to a movement to secure a larger area of land for the Indians before the final cession of the Everglades and other unsurveyed lands to the State of Florida. This was a plan that I had hoped for and recommended, and more particularly at the time that the report reached me of the proposed cession of these lands, when I at once requested the Department to make provision or reserve a portion for the Indians first if possible.

During January, 1898, I was called to Washington for an interview in reference to these land matters, and on my return I accompanied A. J. Duncan, Indian inspector, who visited Florida, specially authorized to make a thorough investigation of these lands and the needs of the Indians. After Col. A. J. Duncan spent some days at the station looking over matters there we, in company with the teamster and a competent guide, went to a northwest point of the Everglades to examine land bordering on the 'Glades, continuing as far south as was practicable. This included a large area of land of various qualities and suitable for these Indians. Not being able to cross the 'Glades at that season of the year we returned and went by rail to Miami on the east coast, examining lands on the border as well as various islands in the Everglades. My fuller report of this trip of investigation was submitted to the honorable Commissioner some time ago.

Col. A. J. Duncan made a thorough investigation and has given a full report to the honorable Secretary of the Interior with such recommendations as will, if carried out, I am sure give justice to the Indians and be a permanent benefit to them.

The general local work at the station has been carried on as usual, caring for the Government property and planting grain and fruit. The crops, however, proved a failure, owing to another disastrous freeze followed by an unprecedented drought.

As during the previous year I again had for over half the time only the teamster as my helper. He as in past years has proved reliable and faithful. For the balance of the year I also had a carpenter who was very efficient in his line of work, but his health failed in this climate and he could not remain.

I hope when the securing of this larger body of land has been accomplished or settled that a more extensive and permanent industrial work can be established among the Seminole Indians in Florida.

I desire to thank the honorable Commissioner of Indian Affairs for the courtesies and kindness shown during the year.

Very respectfully,

J. E. BRECHT,
Industrial Teacher, etc.

The COMMISSIONER OF INDIAN AFFAIRS,

REPORT OF SCHOOL AT FORT LAPWAI, IDAHO.

FORT LAPWAI SCHOOL, IDAHO, *October 20, 1898.*

SIR: Office letter of 7th instant, calling for annual report of this school and addressed to Ed. McConville, superintendent, has been referred to me, since Mr. McConville is in the Philippines and I was in charge at the close of the last fiscal year. Not having charge of the school longer than the closing weeks of the year, I could not give a satisfactory report, as observations offered would be those of a comparative outside observer. I should be compelled to report, however, that the last was but a repetition of previous years' retrogression, owing to the pernicious effect upon the Indian of money paid in large sums for their land. Attendance decreased and the interest of older Indians seemed abolished.

Very respectfully,

O. J. WEST,
Clerk and Physician.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF HASKELL INSTITUTE, AT LAWRENCE, KANS.

HASKELL INSTITUTE, *Lawrence, Kans., August 11, 1898.*

SIR: I have the honor to submit the fifteenth annual report of the Haskell Institute.

The school is located 2 miles south from the city of Lawrence, on a slight elevation, from which point the land slopes in every direction at such a grade as to insure good drainage and sewerage from the building site. The valleys of the Kaw and the Wakarusa rivers, between which the school is located, are beautiful, they having been pronounced by Bayard Taylor, as he stood on Mount Oread, the site of the Kansas State University, just north of the Haskell Institute one-half mile, one of the most beautiful landscape views that he in all of his travels had ever seen.

Farm.—There are now 650 acres of land in the school farm, of which 200 are quite productive, while 200 are swampy, and the remaining 250 are unproductive because of having been cultivated for such a great length of time without proper variation of crops. To make the farm in general productive, the upland must be enriched by the use of fertilizers and by changing crops and the lowland must be well drained. The lowland is fertile, and when properly drained will be very productive.

The school plant, as it existed on April 1, 1898, when I assumed charge, was practically as shown in following table:

| Building. | Nature of construction. | When erected. | Cost of construction. | Condition and capacity. |
|-----------------------------|-------------------------|---------------|-----------------------|---|
| Arch entrance..... | Frame | 1893 | \$150 | Good. |
| Bake shop..... | Stone | 1888 | 1,500 | Poor; struck by lightning; oven cracked and injured. |
| Band stand..... | Frame | 1894 | 150 | Good. |
| Barn, superintendent's..... | do | 1893 | 600 | Good; capacity, 4 horses, 3 tons hay, 3 vehicles. |
| Barn, farm..... | do | 1885 | 2,000 | Fair; capacity, 28 head stock, 50 tons hay, grain bins. |
| Do..... | do | 1885 | 600 | Good; capacity, 4 head stock, 2 tons hay, 1 vehicle. |
| Do..... | do | 1885 | 600 | Poor; capacity, 2 head stock, 2 tons hay, 1 vehicle. |
| Band house..... | do | 1891 | 800 | Fair; needs new roof. |
| Boiler house and laundry. | Stone | 1887-90 | 8,000 | Good; contains boiler room, laundry, harness shop, 5 apprentices; printing office, 4 apprentices; sloyd shop, 30 pupils; laundry has capacity for 350 pupils' work. |
| Cattle shed..... | Frame | 1886 | 450 | Poor. |
| Do..... | do | 1890 | 300 | Do. |
| Chicken house..... | do | 1888 | 100 | Do. |
| Corncrib..... | do | 1886 | 500 | Good. |
| Do..... | do | 1895 | 300 | Do. |
| Dining hall and dormitory. | Stone | 1889 | 40,000 | Good; capacity, 200 girls; dining hall, 500 pupils. |
| Dormitory: | | | | |
| Large boys..... | do | 1884 | 20,000 | Fair; capacity, 150 boys; needs new floors and roof. |
| Small boys..... | do | 1884 | 20,000 | Do. |

| Building. | Nature of construction. | When erected. | Cost of construction. | Condition and capacity. |
|----------------------------|-------------------------|---------------|-----------------------|--|
| Engine and pump house. | Frame | 1897 | 500 | Good. |
| Farm tools and wagon shed. | do | 1894 | 400 | Fair; needs new floor and foundation. |
| Guardhouse | Stone | 1886 | 1,200 | Good. |
| Hay barn and cow stable. | Frame | 1893 | 2,250 | Good; capacity, 100 head cattle and 250 tons hay. |
| Hog house | do | 1890 | 500 | Poor, will have to be rebuilt. |
| Hospital | do | 1886 | 2,500 | Fair; capacity, 20 invalids and attendants; porches and spouting in need of repairs. |
| House, farm | do | 1885 | 1,000 | Fair; capacity for small family. |
| Do | do | 1885 | 1,000 | Fair; capacity for small family; needs new roof, new porches, and painting. |
| Do | do | 1894 | 1,500 | Good; capacity for 2 small families. |
| House, play, girls | do | 1890 | 1,500 | Good. |
| Lumber shed | do | 1885 | 120 | Poor. |
| Office building | Stone | 1891 | 2,156 | Good; 5 office rooms. |
| Outhouse | Frame | 1885 | 110 | Poor. |
| Schoolhouse | Stone | 1884 | 20,000 | Fair; capacity, 350 pupils; needs new roof and ventilating. |

| Shop building | Stone | 1887 | 4,500 | Good; contains shoe shop, 12 apprentices, and tailor shop, 12 apprentices; needs new roof. |
| Do | do | 1891 | 5,845 | Good; capacity, wagon shop, 8 apprentices; blacksmith, 8, and paint shop, 8 apprentices. |
| Shop, carpenter | Frame | 1888 | 1,200 | Good; small room; 5 apprentices. |
| Slaughterhouse | do | 1887 | 100 | Fair. |
| Storehouse | Stone | 1891 | 4,112 | Good. |
| Tool house | Frame | 1884 | 100 | Fair. |
| Wood and coal house | do | 1893 | 350 | Good. |

That the buildings and improvements in general were in such bad state of repair as is shown above is due to the fact that an average of about \$15,000 of the annual appropriation has been allowed to revert to the Treasury during the past few years, instead of using it in general repairs and improvements greatly needed. Fortunately, there was time after April 1 to get authorities and let contracts for a great many repairs and improvements, and thus utilize funds that had been appropriated for the fiscal year 1898. Under these circumstances, it has been possible to make many repairs and improvements and to secure material for others that will be completed during the present year.

Improvements now under way and others arranged for are:

1. An auditorium building.—A two-story stone structure, the upper floor of which, as an assembly room, will accommodate from 650 to 700 people. The terms of the contract for this building do not include the completion of the lower or basement story. However, with an allowance of about \$400 this story can also be properly finished so as to be fairly well adapted for gymnasium purposes. This building will be completed by the middle of October or the 1st of November, and will be of great value to the school.

2. Two lavatory buildings of stone, 23 by 40 feet, built in connection with the two boys' dormitories, the lower stories of which will be supplied with the most modern latrine closet, urinal, and lavatory fixtures, and the upper with ring, shower, and plunge bath conveniences. Similar arrangements in the girls' quarters have been contracted for. These improvements have been greatly needed, and will, when completed, insure very satisfactory sanitary conditions.

3. Steam heating plant.—Arrangements for complete and thorough repairs on the system have been made and the work is well under way. An extension of the system to the new auditorium will be needed when the building is completed, and plans are now being made for the extension.

4. Ventilation.—All of the buildings have been erected without provisions for ventilation. This defect is to be overcome by installing a complete ventilating system, for which plans and specifications are now being prepared.

5. General improvements.—These comprise the building and repairing of sidewalks and fences, repairing and renewing roofing, laying new floors in dormitory buildings, and numerous minor improvements, such as making family tables for dining room, kalsomining rooms, and painting roofs, buildings, etc. Material has been purchased and is now on hand for making wardrobes, for shelving and properly fitting up the commissary, for building stock sheds, for repairing porches, for remodeling a farmhouse, and for many other general repairs.

The proposed repairs and improvements for the present fiscal year, ending June 30, 1899, are as follows:

Proposed repairs:

| | |
|---|---------|
| 1. Renewing roofing, shingles, and tin work on two dormitory buildings and school building..... | \$1,070 |
| 2. Repairing tin roofing, gutters, and down spouts on hospital, shops, and barns | 150 |
| 3. Painting roofing on all buildings | 250 |
| 4. Repairing fencing | 400 |
| 5. Paving and sidewalks | 500 |
| 6. Repairing, remodeling, and rebuilding porches on dormitory buildings and hospital | 1,000 |
| 7. Arching tunnel for steam pipes | 800 |
| 8. Building new flues in blacksmith shop and putting in new forges..... | 150 |

| | |
|-------------|-------|
| Total | 4,320 |
|-------------|-------|

Proposed improvements:

| | |
|--|-------|
| 1. Lighting new auditorium and extension of electric-light system | \$500 |
| 2. Seating of auditorium | 1,350 |
| 3. Heating auditorium (special, \$2,500)..... | |
| 4. Flooring, plastering, and ceiling basement of auditorium building | 400 |
| 5. Residence for superintendent..... | 4,000 |

| | |
|-------------|-------|
| Total | 6,250 |
|-------------|-------|

Improvements needed during fiscal year 1900 are:

- (1) School building.
- (2) Employees' quarters.
- (3) Laundry.
- (4) Additional shop room.

A glance at the descriptive statement of the school plant shows the necessity for these improvements, viz: The enrollment has outgrown the capacity of the school. The school building now in use was built to accommodate 350 pupils. The enrollment since that time has increased to 500.

The need of employees' quarters has long been felt. There are but two small houses for employees, capacity for four families: therefore, employees must occupy rooms in dormitory buildings, and thus decrease the student capacity, or they must live in Lawrence, 2 miles distant, and thus limit their efficiency as school employees. Several cottages and an employees' building should be provided without delay.

The laundry and the additional shop rooms are also imperative needs, the rooms now in use for laundry purposes being entirely too small and in every way unsuitable, and the shop rooms being needed in connection with the carpentering, manual training, and printing departments.

Attendance.—The office records show an enrollment of 619 pupils during the year, and an average attendance of 501½.

The enrollment by tribes was as follows:

| Name of tribe. | Boys. | Girls. | Total. | Name of tribe. | Boys. | Girls. | Total. |
|--------------------|-------|--------|--------|--------------------|-------|--------|--------|
| Alaskan | 1 | --- | 1 | Oneida | 13 | 1 | 14 |
| Arapaho | 9 | 11 | 20 | Osage | 8 | --- | 8 |
| Assiniboline | 1 | 1 | 1 | Ottawa | 12 | 7 | 19 |
| Bannock | 1 | 1 | 1 | Otoe | 2 | --- | 2 |
| Caddo | 10 | 4 | 14 | Pawnee | 8 | 4 | 12 |
| Coast | 1 | --- | 1 | Peoria | 11 | 8 | 19 |
| Callallan | 1 | 1 | 1 | Piegan | --- | 1 | 1 |
| Chehalis | 1 | 1 | 1 | Pottawatomie | 65 | 50 | 115 |
| Cheyenne | 17 | 12 | 29 | Ponca | 2 | 6 | 8 |
| Cherokee | 1 | --- | 1 | Pueblo | --- | 4 | 4 |
| Chippewa | 51 | 34 | 85 | Puyallup | 2 | 2 | 4 |
| Delaware | 7 | 4 | 11 | Quapaw | 2 | --- | 2 |
| Flathead | 3 | --- | 3 | Sac and Fox | 7 | 1 | 8 |
| Iowa | 7 | 12 | 19 | Seneca | 13 | 5 | 18 |
| Kaw | 1 | --- | 1 | Sioux | 26 | 5 | 31 |
| Kickapoo | 2 | 7 | 9 | Shawnee | 14 | 14 | 28 |
| Kiowa | 1 | --- | 1 | Shoshone | 3 | --- | 3 |
| Menomonee | 20 | 12 | 32 | Snohomish | 2 | --- | 2 |
| Miami | 11 | 3 | 14 | Stockbridge | 4 | 1 | 5 |
| Mission | 1 | --- | 1 | Ute | --- | 1 | 1 |
| Muncie | 7 | 11 | 18 | Wichita | 1 | --- | 1 |
| Modoc | 2 | 1 | 3 | Winnebago | 4 | --- | 4 |
| Moqui | 1 | --- | 1 | Wyandotte | 12 | 17 | 29 |
| Navajo | 5 | 2 | 7 | | | | |
| New York | 1 | 1 | 2 | Total | 374 | 245 | 619 |
| Omaha | 4 | --- | 4 | | | | |

Classification of pupils for year ending June 30, 1898, is as follows:

| Grade. | Boys. | Girls. | Total. |
|--|-------|--------|--------|
| Kindergarten | 12 | 10 | 22 |
| First primary | 27 | 18 | 45 |
| Second primary | 30 | 28 | 58 |
| Third primary | 60 | 25 | 85 |
| Fourth primary | 50 | 32 | 82 |
| First advanced | 43 | 22 | 65 |
| Second advanced | 49 | 35 | 84 |
| Third advanced | 38 | 22 | 60 |
| Fourth advanced | 21 | 19 | 40 |
| Ninth grade, or preparatory normal | 12 | 19 | 31 |
| Junior normal | 10 | 5 | 15 |
| Senior normal | 7 | 7 | 14 |
| Junior commercial | 12 | 2 | 14 |
| Senior commercial | 3 | 1 | 4 |
| Total | 374 | 245 | 619 |

Lighting.—The electric-light system, which was installed during the year, is a great improvement, and in general is giving good satisfaction. The system is incomplete and must be extended this year. The incandescent arc lights which are in use on the grounds are not giving good satisfaction, in fact are a failure, and will very soon have to be replaced by groups of incandescent lamps.

Water supply.—The independent water plant, constructed during the early part of the year, at an expense of about \$5,500, is almost an absolute failure. The system of five wells, forming a reservoir of 150,000 gallons, furnishes only water enough to supply the necessary quantity for from four to six days of each month. The supply is entirely inadequate. Almost as much water as was used before the independent plant was constructed is now supplied from the city waterworks system. The quality of water from the city system is quite satisfactory for all purposes except for drinking. Good drinking water must be secured from some other source.

Reorganization.—In addition to the work of making repairs and improvements, much time has been devoted to reorganization of the work in all departments of the institution. The agricultural department at present comprises farming, stock raising, gardening, and fruit culture; the trades department, carpentry, wagon-making, iron smithing, steam fitting and engineering, painting, shoemaking, harness making, tailoring, and printing; the manual-training department, sloyd, wood and iron work, mechanical drawing for boys, and cookery, baking, sewing,

dressmaking, laundering, and general housekeeping for the girls. The literary department comprises the following grades: Kindergarten, four primary, four grammar schools, and one year's preparatory normal, two years' normal course, and two years of normal work.

A definite course of instruction is being prepared for each of the departments. The purpose will be to instruct as carefully and as thoroughly in the industrial departments as in the literary. The course of instruction will be introduced in all departments at the beginning of the next school term, and thereafter a student will, upon completion of any course, whether industrial or literary, be given a certificate of graduation.

Experience has demonstrated that Indian students who complete a course of instruction, whether literary or industrial, are qualified, when they leave school, to take positions of responsibility and compete with other young people. Since the establishment of the normal department at this school, in 1894, there have been twenty-five graduates. With one exception, the graduates of the classes of 1896 and 1897 are holding positions of trust, and have given excellent satisfaction. Many other pupils who have had thorough training in industrial lines are also doing good service in their respective departments.

Pupils from this school who have been appointed to positions before having completed a thorough course of instruction are in many instances failures. After a year's experience in the field, I am convinced the same is true of undergraduates from other schools. In view of this fact, the reorganization of the work in all departments and the establishment of a definite and thorough course of instruction which will demand, on the part of all employees, work and instruction in reality educational, has been given much thought and time in preparation.

Prospects.—The reorganization having been almost completed, and having been announced through the students of the school, the prospects for the ensuing year are very bright. Many pupils who have formerly gone to their homes during vacation have remained at the school this year. The pupils are happy in their work and enthusiastic over the outlook. Applications for enrollment are more numerous than ever before in the history of the school, and the applicants are of a higher grade of pupils.

The employees of the school are working in perfect harmony and as a unit.

In conclusion, I am pleased to be able to report that conditions are now such as to give promise of a very prosperous year.

Respectfully submitted.

H. B. PEAIRS, *Superintendent*.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT MOUNT PLEASANT, MICH.

MOUNT PLEASANT SCHOOL, MICH., *July 20, 1898.*

SIR: I have the honor to submit the annual report for the Mount Pleasant Indian Industrial School for the fiscal year just closed.

The attendance for the year is as follows:

| | |
|--------------------------|-------|
| First quarter | 123.1 |
| Second quarter | 151.2 |
| Third quarter | 158.6 |
| Fourth quarter | 165.9 |
| Average attendance | 149.7 |
| Total enrollment | 222 |

The teachers are to be complimented for the very satisfactory work rendered in their departments during the year. They have taken great interest in their work, both in and out of the schoolrooms, and it is due to their earnest efforts that our literary work is considered up to the average. A radical change was made in the organization of the school during the second quarter, and the work was graded approximately as recommended by the Indian Office, consequently greater progress in number work and language was made than heretofore. Instruction in instrumental and vocal music has received some attention, but in the absence of a regular music teacher little progress has been made.

The work in the industrial department is all that can be desired. Classes are detailed and rotate regularly through every department. The object being to teach the pupils such work as will be of benefit to them when they return to their homes, they are fully instructed as they advance from one department to another; and the

work of those over 14 years of age attests not only to the skill of the Indian boy and girl in industrial work, but also to faithful, intelligent work on the part of their teachers. The adoption of laundry machinery saves the labor of 15 to 20 pupils, and consequently relieves the other departments to a great extent.

The boys are reliable and competent, and take great interest in all work pertaining to the shops and farm. The accompanying statistical report shows the farm products during the past year, per capita cost, etc.

The office is already fully informed regarding necessary improvements for the fiscal year 1899.

The boiler house, dining hall, and school and assembly building have been completed and accepted. The new dormitory will be ready for use about August 1.

Several tests show that good work has been done by the steam-heat contractors. This work will be completed by August 1.

The health of the school has been quite good. One boy died from pneumonia. While the sanitary condition is good now, the new sewerage and water system will make it perfect.

With thanks to your office for the courteous treatment this school has received, also to the force of employees for their faithful and intelligent support during the year, I am,

Very respectfully, your obedient servant,

R. S. GRAHAM, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CLONTARF, MINN.

CLONTARF INDUSTRIAL SCHOOL,
Clontarf, Minn., June 30, 1898.

SIR: I have the honor to submit this, my annual report of the Clontarf Indian Industrial School, for the fiscal year ending this day.

On taking charge of the school, October 28 last, it was found in a very dilapidated condition. The buildings were in a very poor state of repair, mention of which was made in report of superintendent for 1897, and also in report of supervisor, who reported on the advisability of purchasing school.

Only 35 children were in attendance, and, owing to the lack of supplies of all kinds, it had been, and was for some time, impossible to manage the school with any degree of satisfaction to the management or marked advantage to the pupils.

Attendance.—The enrollment for the year was 47; the average attendance 33+. The highest enrollment during any one month was 40, during the month of February. The highest average attendance during any one month was 38, during the months of March, April, and May. The average age of pupils enrolled was 11+ years.

Industries taught at the school were diversified farming and gardening. Owing, however, to the fact that Clontarf is a boys' school, the boys were instructed in general housework as well as outside work. Besides the housework during the past year the work accomplished by the boys under the direction and with the assistance of the employees has been as follows: All supplies of school, including 100 cords of wood and 60 tons of coal, hauled from Clontarf, a distance of 2 miles; 200 tons of hay stowed away in school barns; 100 cords of wood sawed, split, and piled ready for use; stock, consisting of 45 head of cattle, 11 of horses, 29 of sheep, and 8 of hogs cared for; 100 acres of ground prepared and sowed to oats; 5 acres to garden; the grounds in front of buildings plowed, graded, sowed to oats, and seeded to timothy; and about 40 shade trees set out. Besides this, there has been done the necessary work to make things as comfortable and to place premises in as good condition as circumstances would permit. When it is taken into consideration that this has been accomplished with the aid of 38 boys, whose average age is but 11 years, and these spending half their time in the schoolroom, it would seem that the boys deserve considerable praise.

Class-room work.—Owing to the fact that prior to January 1 there were no supplies whatever for this department, except pupils and a teacher, the work here up to that time was not very satisfactory. After that, with the limited supplies furnished, much good work was accomplished and considerable progress manifested. Patriotism and love for the flag were inculcated by the constant presence of the flag in the schoolroom, the daily salute of the same, and frequent talks about it and kindred subjects. Current events were daily discussed in the schoolroom, and the progress of the trouble with Spain by the United States was watched by the pupils, especially the older ones, with considerable interest. Class-room work

occupied five hours each day, five days in the week, together with an evening session of forty-five minutes. Monday and Saturday evenings were devoted to military drill, and considerable proficiency in that direction was noted.

Religion.—With two exceptions our pupils were members of the Catholic Church. Those who cared to do so went to that church at Clontarf on Sunday mornings, and all were required to attend Sunday school and chapel exercises of a strictly undenominational character at the school in the afternoon and evening.

The buildings are in a bad state of repair and do not present the appearance that a Government institution should. I recommend that new floors, roofs, and ceilings be placed in all the buildings, and that they be painted throughout.

In conclusion I wish to thank your office for the kind consideration extended during the past year.

Very respectfully,

W. H. JOHNSON, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT MORRIS, MINN.

MORRIS INDUSTRIAL SCHOOL,

Morris, Minn., July 16, 1898.

SIR: In compliance with instructions, I have the honor to submit this my first annual report of the Morris Industrial School.

Purchase of plant.—The Morris school was purchased from the Sisters of Mercy May 19, 1897, for the sum of \$14,519 for real estate and \$3,757.95 for personal property. The real estate consists of 80 acres of land, with buildings that were formerly used by the sisters for school purposes.

Location.—The plant is located three-fourths of a mile east of the village of Morris, Minn., a place containing about 1,500 inhabitants, situated on the lines of the Great Northern and Northern Pacific railroads. The land purchased is described as follows: NE. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, the SW. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, the NE. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$, the SE. $\frac{1}{4}$ of the NW. $\frac{1}{4}$ of the SW. $\frac{1}{4}$ of sec. 36, T. 125, R. 42, containing 80 acres.

Collection of pupils.—Upon my arrival at the school, January 29, 1897, I found the school deserted of all children and destitute of many things necessary with which to conduct a school, the sisters having sent home the previous September all pupils under their charge. After receiving instructions, I proceeded to make collection of pupils from the White Earth Reservation, which is about 180 miles north of school. At that season collecting pupils was rather difficult, as nearly all pupils that could be obtained had been placed in other schools. However, the work of collecting has continued until 105 pupils have been enrolled, with an average attendance during the year of 78. The expenses for collecting pupils since June 30, 1897, has been \$421.64. The children collected are all Chippewa except one, who is a Sioux from the Sisseton Agency. Twenty were brought from Millelac Lake, Minn.; the others from White Earth Agency, Minn.

Schoolroom work.—Owing to the frequent change of teachers, the work in the schoolroom has not made the progress that it would otherwise have done. Again, too, having nothing in the way of school materials with which to work until the school had been in progress for about two months, was against the work in that department. However, much interest has been taken by the pupils. Note reading, singing, and instrumental music are subjects of noted improvement.

Industrial work.—The industries taught at the school are farming, gardening, stock raising, dairying, sewing (cutting and fitting), cooking, laundering, and general housework. The pride taken by boys in the care of stock is plainly evident. Cleanliness of barns and stables, together with appearance of stock, indicate that the work is done in a thorough and effective manner. The garden, too, is well cared for, evidence of which is found in the fact that for quantity and appearance it surpasses any owned by our white neighbors. The work of the girls has been all that could be desired for neatness and tidiness.

Farm and stock.—The school farm, consisting of 80 acres, will, it is estimated, produce this year 90 tons of hay, 800 bushels potatoes, 10 bushels onions, 12 bushels pease, 12 bushels beans, 400 heads cabbages, 60 bushels turnips, 20 bushels sweet corn, 6 bushels pop corn, and abundance of radishes, lettuce, and cucumbers for table use. The dairy has produced all the milk that was necessary for table use, giving the smaller children what was necessary for them to drink.

Moral and religious influences.—There are three well-attended churches in Morris, namely, Methodist, Congregational, and Catholic. Nearly every Sunday, some

of our pupils, accompanied by employees, attend services at these churches. Pupils are allowed to use their own will with reference to the church which they attend, and the good people of Morris have aided and encouraged their attendance by setting aside certain pews for them and making them feel at home and welcome. Sunday school and chapel exercises have been held at the school throughout the year, in which all children take a part.

Sanitation.—I submit on this subject report of H. L. Hulburd, M. D., school physician.

I have the honor to submit my first annual report for the year closing June 30, 1898. The general health has been fair. Early in the year, at the beginning of my term, there was an epidemic of measles brought to the school by new scholars, which soon favorably terminated. There were also brought into the school several cases of acute chronic conjunctivitis, which it was impossible to confine entirely to the affected ones, owing to the imperfect equipment of the school in respect to separate wash basins and towels, and in the absence of suitable room for a hospital ward. However, all have done well and are convalescent. There has been one death from tuberculosis.

Some of the rooms are in a decayed and unsanitary condition, and unfit for winter use, and very imperfectly heated with stoves.

The water supply comes from the Pondeterre River, a small sluggish stream, and is so heavily loaded with organic matter that it is unsafe for drinking unless boiled.

I would earnestly recommend that a more plentiful and wholesome supply of water be in some way supplied for drinking, bathing, and sanitary closets. There is not a bathroom at the school. I would, therefore, recommend that there be some arrangements for bathing and for sewerage.

Improvements.—There have been no improvements, except in the general appearance, no funds for that purpose having been allowed.

Consolidation of schools.—By direction of the Indian Office, the Clontarf School, pupils, and personal property have been brought to the Morris School, making an enrollment at the present time of 114.

Official visitors.—Our school has been visited during the year by Supervisors Smith and Anderson, to whom many thanks are due for their kindly advice and encouragement.

Employees.—The school has undergone frequent change of employees, which has been very detrimental to the progress of the school work. Employees have in all cases worked together in harmony.

Recommendations and needs.—The school is sadly in need of a system of waterworks and sewerage. Water is hauled a distance of 1 mile from the river—the river water being preferable to that drawn from the wells at the school. This consumes much time, as it keeps a team and boys busy nearly all the time. I recommend that a system of waterworks be placed in the school. There are no sewerage nor drain pipes on the place. I recommend that there be placed at the school at least a thousand feet of tiling for the purpose of draining the refuse water from the buildings.

Health.—The health of the pupils has been excellent. Aside from several cases of sore eyes, but one case, and that not severe, required the attendance of a physician. The expense for medical services rendered to the school during the past nine months has been but \$18.50.

General.—Special exercises were prepared for Christmas, Washington's Birthday, and closing day. At Christmas time pupils and employees in a body visited the Morris School and had a very enjoyable time. Frequent interchange of visits between the two schools, both on the part of the pupils and employees, has been a feature of the school year from which much benefit has been derived. Memorial day the pupils took part in the memorial exercises at Clontarf and Benson, neighboring villages, and many were the favorable comments made upon their bearing.

Employees have for the most part been conscientious and fairly capable in their work, and in the transfers that are to be made in consequence of the discontinuance of the school deserve, without exception, favorable consideration by the Indian Office.

In conclusion I wish to express to you my hearty appreciation of the kindly consideration accorded me at all times and my hope that the consolidation of the Clontarf and Morris schools may be the means of building a school under your charge which shall be successful in every sense of the word.

Very respectfully,

HORACE J. JOHNSON,
Principal Teacher in Charge.

W. H. JOHNSON,
Superintendent Clontarf and Morris Industrial Schools.

Respectfully submitted.

W. H. JOHNSON, *Superintendent.*

REPORT OF SCHOOL AT PIPESTONE, MINN.

PIPESTONE INDIAN TRAINING SCHOOL,
Pipestone, Minn., July 11, 1893.

SIR: I have the honor to report to you the workings of the Pipestone Indian School for the fiscal year 1898.

Attendance.—There have been 123 pupils enrolled during the year. The average daily attendance is 100.4. During the year there were 7 runaways, all of whom were captured and returned within a couple of days.

Health.—The health of the school has been remarkably good. There have been no epidemics of a serious nature, and but few cases of severe illness, all of which readily yielded to treatment.

Literary work.—The schoolroom exercises have been quite successful, and much improvement is noticeable in all the grades of the school. A fair amount of supplementary reading has been done by the pupils in addition to their regular schoolroom work. Desirable books have been furnished the pupils, and their reading has been looked after by the teachers. Pupils who expect to become teachers have been reading on that line in addition to their regular work.

Two of the pupils who had completed the eighth grade have attended the public schools in Pipestone during the year. They have conducted themselves in such a manner as to win the confidence and respect both of their teachers and classmates in the public schools, and in the final examinations stood well toward the head of their classes.

Industrial and farm work.—The industrial work of the farm has been productive of good results. Quite a large amount of produce has been raised and a large supply of vegetables for the use of the table. The dairy has furnished a large supply of milk and butter, and we have had a good supply of eggs from the poultry. At this time the crops on the farm and in the garden are looking well and promise an abundant harvest. Last winter an ice house was built and filled with ice, which is a material advantage to the cooking department. A hand-mangle has been added to the laundry equipment and lessens the fatiguing work materially. A cream separator has been added to the dairy and is a valuable addition to the equipment.

Drainage.—The drainage is excellent and the sewer is in good condition.

Gaslight.—The gas plant has given the best of satisfaction since its installation. The brilliancy of the light and the ease of operation are items in its favor.

Buildings.—The great need of this school at this time is more buildings. But with the appropriations already made, I trust the buildings will be completed during the year.

Employees.—But one employee has been transferred during the year, and that was upon request. They have been faithful and earnest in their work and loyal to the school. The success of the school is largely due to their united efforts.

Thanking you for the cordial and courteous support I have received,
 I am, respectfully,

DE WITT S. HARRIS, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FORT SHAW, MONT.

FORT SHAW SCHOOL, MONTANA, *August 16, 1898.*

SIR: I have the honor to forward the sixth annual report of this school.

The school increased to more than 300 pupils last year. The old school building was remodeled and increased in size so that it is more convenient and commodious. The work was improved in nearly all lines.

There was one weak place in the employee force which made the entire work harder. I refer to the position of disciplinarian. It is one of the most difficult positions to fill, and by some mishap a 17-year-old Indian boy was sent to take charge of 180 boys. His influence was nil, which was a vast improvement over that of the man sent to succeed him.

During the past year we have seen in the manual training work the advantage of a systematic course steadily followed. We have a large number of very creditable pieces of wood carving done by small boys of 11 or 12. They have taken the knife work, have kept up the course in drawing, and easily followed the course of wood carving. Their doing any kind of woodwork is simply a question of

growing large and strong enough. They are growing into the principles of a universal trade. I have been struck with the facility with which they take up and use any kind of tools. For instance, two tailor boys are during vacation plying the carpenter's trade. To see them at work one would suppose that the particular thing in which they were trained.

All lines of industrial work, both for boys and girls, have been carried out systematically and with a definite end in view. It is the first year we have been able to carry out fully the plan of organization of that office. The matron had entire oversight of lady employees engaged in industrial work with the girls. The manual training teacher had general oversight of industrial training of the boys. The principal teacher had charge of schoolroom work.

The entire employee force formed an association and met one evening per week to read papers prepared and have discussions on them. The subjects were of vital interest to the workers. A better general idea of the work was secured in this way, and at the same time the workers were keeping up their own education. Among the subjects considered were sanitation, discipline, amusements, educational value of different branches of industrial training, school management, educational value of drawing, training in gymnasium, music as an educational factor, and nature study. An employee would take some branch of a subject and write a paper. Then there would be a general discussion.

The work of the school could be greatly improved by a few improvements, as a steam-heating plant, electric lighting, barn for horses, machinery for laundry, and hospital building. It would be comparatively easy to secure 400 or 500 pupils for the school if facilities would admit them.

W. H. WINSLOW, *Superintendent*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT GENOA, NEBR.

INDIAN INDUSTRIAL SCHOOL,
GENOA, NEBR., *September 20, 1898.*

SIR: In compliance with the rules and regulations for the Indian service, I have the honor herewith to submit my annual report of the school for the fiscal year of 1898:

The attendance during the past year has exceeded that of any of the previous years, being made up of an excellent class of boys and girls, who have shown by their efforts that they realize the benefits to be derived by the opportunities offered to secure an education and have taken a great interest in everything pertaining to their advancement.

I sincerely hope that the day is not far distant when the sending of solicitors to the different reservations for the purpose of inducing pupils to attend the non-reservation schools, and who are subject to the extortions of persons acting as interpreters and rendering other assistance, will be abolished and other and less expensive means afforded for the securing of pupils for the nonreservation schools.

The health of the pupils during the past year has been very good, no epidemic prevailing, which I think in a great measure is due to the excellent sanitary condition of the school.

The schoolroom work has been successfully carried on, and the work will bear comparison with that of the preceding years.

The industrial departments have taken no backward step from any of the preceding years, and an examination of the work as carried on will show that marked progress has been made all along that line. The work as carried on in the harness and shoeshop and carpenter and tailor shops has been more extensive than any of the past years, and the interest in the industrial departments is increasing from year to year. The great need is more shop room to accommodate those that desire to take up the trades.

Quite a large line of work from the industrial departments has been placed on exhibition at the Trans-Mississippi Exposition at Omaha, Nebr., which has been highly complimented for the superior workmanship which it displays.

The crops upon the farm and garden have exceeded that of any of the previous years, and an abundance of vegetables from the garden and a large supply of potatoes from the farm has amply repaid for the labor placed thereon, and has afforded a sufficient supply for all table use for the pupils. The general farm crops, such as hay, corn, and oats, have been sufficient to supply the needs of the school stock, and the outlook for the present year is equal to that of the last. All

in all, the school farm has not only been made instructive, but self-sustaining to the school.

The water supply of the school is unexcelled, being furnished by the Genoa Town Company. There is always an abundant supply for all uses, and the pressure is sufficient for ample fire protection, as was shown by the extinguishing of a very large fire which had secured a strong foothold in the attic of the boys' dormitory building during the past winter, caused by the explosion of a lamp; and had it not been for the excellent water system a large portion of the plant would have been destroyed.

The sewerage is very good, but should be extended to a more distant point for the opening, and for which I have made a request for an appropriation.

New grounds have been laid out on the school campus, new drives and walks made, and trees planted, looking forward to the further extension of the plant, especially in the line of a suitable building for schoolroom purposes, of which the institution is sadly in need, and I trust that at the coming session of Congress there will be an appropriation set apart therefor.

The improvements and repairs for which appropriations have been made have been pushed forward as rapidly as possible. Appropriations for the completion of the steam-heating plant and the installation of an electric-light plant have been made for the fiscal year of 1899, and I trust that ere long the danger of fires from the use of stoves and lamps will be a thing of the past. An appropriation for the general repair of the school hospital has also been made and, when completed, will make our hospital both convenient and comfortable.

There is great need of a new warehouse for the storing of the large quantity of supplies furnished for the use of the school, which should be made fireproof from the exterior and built in a good, substantial manner for the safe-keeping of all supplies shipped to the school for its general use. When such a building is completed, the building which is now in use for wareroom purposes can be utilized for the use of shops, for which it will be ample in size. Other needed improvements for the school have been given in another communication upon the recommendations for improvements and repairs for the fiscal year of 1900.

All in all, the work of the school has been carried on as efficiently as that of previous years; yet I am sorry to state that at the closing of the school year the perfect harmony which has so long prevailed at the school was disturbed by a visiting official, whose efforts were to make employees feel that his authority was superior and that the Indian service was a place to have a hilarious time, whether the work was efficiently carried on or not, and the formation of cliques against the superintendents, all of which I am pleased to note that your Office does not approve of, by the removal of such officials from the service.

In conclusion, I desire to tender my sincere thanks to your Office for the courteous treatment I have received and the prompt attention to all business matters pertaining to the school during the past year.

I am, as ever, very respectfully,

J. E. ROSS, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CARSON, NEV.

INDIAN INDUSTRIAL SCHOOL,
Carson City, Nev., August 31, 1898.

SIR: I have the honor to submit herewith the annual report of this school and of the Walker River Reservation for the fiscal year 1898:

SCHOOL.

I have been associated with this school something over four years, and during that time, and especially the latter portion of it, I have had ample opportunities to observe the effect of its workings, both upon the pupils and their parents and the Indians in general, who have in any way to deal with the school. I can not truthfully say all the pupils who have had the advantage to be enrolled in the school have accomplished satisfactory results, for there are a few who have not; but I attribute this to two causes:

(1) They were enrolled at too advanced an age and had already the habits of life fixed, and no amount of teaching could, considering the character, change them to any appreciable extent for the better.

(2) Among the number of pupils with whom we have to do it must be expected that some have neither the ambition nor natural inclination and ability to attain

the satisfactory results which others reach with like advantages. This class of pupils, however, is limited in number; while, on the other hand, the most part of our pupils have made a very commendable advancement along all lines tending to a better future.

In regard to the effect the school has had upon the Indians, they are more impressed with it and what it has done for their children; and this is especially true of the Washoe tribe and that portion of the Pah Ute tribe that has not been hampered by reservation life. I find that each succeeding year it is easier to procure pupils for the school, and this year I was surprised at the small effort it required to replace those transferred to nonreservation schools of the second class and others dropped and placed in white families, numbering in all twenty-five. The kindly feeling toward the school is very evident. Still, I do not wish to convey the impression that prejudice against it is entirely eradicated among the tribes, but it is, however, materially softened.

Shortly after the close of the school 18 pupils were transferred to Carlisle and Phoenix. Four years ago this would have been impossible, while at the present it was accomplished with comparative ease.

In the use of the language I have noticed somewhat an improvement. With teachers striving ever so diligently, this improvement must necessarily be slow, as, all Indian pupils have learned to speak in their own tongue before entering school. This language is guttural and agglutinative in structure, and to learn a new language, spoken with the vocal organs in an entirely different position, and with a structure, which if not complicated, is entirely new to them, is a task not accomplished within a few months, or years even. Still, I am of the opinion there would have been a more marked improvement in this direction had the teachers given more attention to phonetic drill in their language exercises; but to accomplish this requires, on the part of the teacher, much patience, a considerable energy, and a deep interest in the work, which qualifications, it seems, all teachers do not possess. However, the results accomplished in the kindergarten during the past year can not be surpassed. The teacher in this department has displayed all these characteristics, and the children's improvement is an evidence of what energy, knowledge, and the proper spirit displayed will do.

In vocal music and drawing our pupils did very well. They were given regular class instruction in these departments, and the advancement made is very commendable. It requires slight energy on the part of the instructor to arouse an interest in the Indian child in music and drawing, as they are children of nature, and the most of whom possess the perceptive to a high degree; and herein lies a tendency to make a hobby of these things to the exclusion of the cultivation of the reflective faculties—a hobby displaying itself somewhat in our school the past year, and especially as to music being carried too far in the day exercises.

Without any attempt to produce special samples for the occasion, we exhibited at the close of the year articles from the various departments, and while the display as a whole was very good, I do not think it was up to the standard of former years. The work from the culinary department, however, was good, and this fact has led to many applications for Indian girls as servants to white families.

Attendance.—The average attendance for the year is 144. Owing to the vacation months the average attendance for the first quarter is materially reduced, and as we can not accommodate a number greatly in excess of 150, it is difficult to hold the average for the year up to 150 pupils. The total enrollment is 182; the highest average for any quarter is 152, and the lowest is 128.

Industries.—I am still able to report the same unenviable condition of our industrial department. However, there is a likelihood of our being able to erect shops this fall, as we have an appropriation of \$3,000 for buildings and repairs. We have very poor facilities for mechanical instruction; still, we have sufficient to demonstrate its feasibility and the further fact that our Indian boys can learn well the use of tools if given an opportunity.

The industries for the girls—sewing, laundry work, cooking, and general housework—are well organized, and in these departments little if any improvement can be made. The work of the sewing department for the past year, exclusive of mending, etc., follows:

| | | | |
|----------------------|-----|-------------------|-----|
| Aprons | 55 | Drawers | 98 |
| Carpet (yards) | 100 | Union suits | 101 |
| Skirts | 39 | Waists | 59 |
| Pillowcases | 136 | Tablecloths | 68 |
| Quilts | 2 | Dresses | 225 |
| Nightdresses | 45 | Garters | 84 |
| Sheets | 99 | Curtains | 27 |
| Napkins | 300 | Towels | 156 |

Farm.—Our farm, like most farms in this vicinity, comprehends considerable barren land. We have approximately 280 acres, but we farm 100 only; not that more can not be brought under cultivation, but, as all crops must be produced by irrigation, we have not the water for more land. The precipitation in the mountains last winter was very slight, resulting in a scarcity of water for irrigation purposes this summer. This scarcity, together with the additional shortage by theft, has done our crops much damage. The first crop of alfalfa was fair, but we had no water to irrigate the second crop, and had it not been for the generosity of the ranchman below us, who gave us quite a quantity of water, all our crops would have suffered, and some did as it is.

We are entitled to 19 per cent of the water from the stream from which we irrigate and are second in right, while a ranchman, ninth in right, farther up the stream, is entitled to 2½ per cent of the stream; still he manages to irrigate about 60 acres of land, taking at times, to my knowledge, 30 per cent of the water. On the 22d instant I brought suit against this trespasser, and while the matter of fine has not been fixed, he has been adjudged guilty.

From an educational point of view, our pupils are learning considerable in the way of caring for crops, the care of stock, etc. We have authority from your office to purchase fertilizer, and each year our boys haul from Carson from 140 to 175 loads. This serves the double purpose of an object lesson to the pupils and the production of much better crops.

The approximate production of the farm this year is as follows:

| | Pounds. | | Pounds. |
|--------------------|---------|------------------------|---------|
| Corn (sweet) | 5,000 | Potatoes | 50,000 |
| Onions | 2,500 | Other vegetables | 4,000 |
| Hay | 50,000 | Beets | 30,000 |
| Carrots | 25,000 | | |

Water supply.—The water supply for irrigation purposes I have already mentioned. That used for domestic purposes is provided by means of a well, or rather reservoir, 10 by 22 feet by 14 feet deep. Within the past year we deepened this 4 feet. While we were never out of water, there were times when the supply was somewhat short. The subsoil is quicksand, and by driving a curbing 4 feet deeper than the original curbing we have an abundance of water; at least, we have not been able to exhaust it with our steam pump. The water is very pure, and does not seem to be impregnated with alkali to any extent, if at all.

Band.—So important a feature is our band that it deserves to be treated under a special caption. Its influence, both upon the pupils and their parents, is no small feature in producing a condition of contentment that is very encouraging. Every pupil in the school seems to take a deep interest in the band, and on such occasions as we participate in public exercises at Carson there is sure to be a large turnout of Indians to hear their children play, and they often come to me and ask when they will play again in Carson.

Sanitary.—The sanitary condition of the school is excellent. All our closets are connected with a cemented salt-glazed sewer, and all other sewage is conveyed by this sewer a distance of 1,400 feet from the school, thus avoiding any possible danger of contaminating the water supply. Other than a stubborn epidemic of eczema, the health of the school has been good.

Conclusion.—I wish to thank your office for the kind consideration it has extended to me and those of the employees who have so materially aided in the advancement of the school.

WALKER RIVER RESERVATION.

Reservation.—This reservation is much like most of the land comprehended in the Great Basin—large in extent and poor in resources. It contains 318,815 acres, and of this vast tract about 1,100 acres are farmed, and from 7,000 to 10,000 acres additional could be brought under cultivation by building a dam in the Walker River and constructing an irrigation ditch from 5 to 6 miles long. It will require the services of one other than a novice to determine the cost of this improvement, but I am of the opinion it can be done for as little as \$12,000, and if this body of land is to remain an Indian reservation it should be done, for there is not sufficient land under the present ditch to support all the Indians who claim this reservation as their home. Again, if this land could be cultivated, tracts could be allotted to Pah-Ute pupils from this school who have made the requisite preparation to work it.

I am of the opinion the plan to water additional land here is feasible; but occasionally there will be a year when there will be a shortage of water. The present is such a year. The precipitation in the mountains last winter was very slight, and

hence there is a scarcity of water for irrigation; however, there was sufficient for the first crop of hay, and the barley and wheat came to maturity very well.

Before putting in this irrigation improvement it should be looked into pretty thoroughly, as Walker River, the stream from which water is taken to irrigate land on this reservation, has its source in California, and after traversing that State for some distance and a large quantity of water taken from it, it then flows through Mason Valley, which it waters. This valley is continually consuming more water, and there may come eventually a time when irrigated lands on the reservation would suffer unless the right to a certain per cent of the water be established, which right, I am of the opinion, is not now decreed. I stated in my last annual report: "There is an abundance of water in this river to properly irrigate all the available land on the reservation." I find I will have to modify this statement in accordance with the above. Last year there was an abundance of water; but owing to changing conditions, as mentioned, there evidently will be seasons when there will be a shortage.

Farming.—Farming on this reservation is carried on in a very primitive manner. In the first place, they have never been supplied with sufficient farming implements, and, like all Indians who have been furnished by the General Government with annuity goods, they look to their foster-father for these things, and make little or no effort to purchase for themselves; and again, they are so much interested in securing jobs from adjoining ranchmen they neglect their own homes.

While every encouragement and inducement possible has been held out to have them abandon Indian-pony raising, and, by the way, some advancement has been made in this direction, yet most of them cling with characteristic Indian tenacity to the idea that their ponies are one of the essentials to their well-being and happiness.

A few have made a start in cattle raising, and from rental from a portion of the reservation I have secured \$275, which I have authority from your office to be expended for young cattle to be distributed among them. They raise quite a quantity of alfalfa hay, and as they are so far from market the price of hay on the reservation is very low; but if they be brought to realize they can raise a good beef animal for as little money and trouble as they can a poor pony, they can feed this hay to cattle and drive them where they choose for market. If they have good beef cattle, a market will seek them instead of their having to seek the market, as cattle here are always a ready sale.

In the spring I issued them considerable garden seeds, but as there is a scarcity of water, and this was predicted, not much of an attempt was made at gardening; and I do not know but that it is as well, as late vegetables would hardly have matured.

Buildings.—The buildings at this agency are not of the first order, yet, excepting the jail and police quarters, they answer the purpose very well. But one was ever painted up to a year ago; but about that time all were given one coat of paint and some slight improvements made, which gave them quite a different appearance. The jail here is constructed of poles one upon the other, and a cell built inside, but a new jail and police quarters will be in course of construction within a few days.

Moral status.—There is a legend among these Indians—and I presume it can be considered a historical fact, for it is verified by citizens of this community—to the effect that virtue among the Pah-Ute women was an established and absolute fact, and should any be weighed in the balance and found wanting, death by stoning was swift and sure; but with the introduction of our high state of civilization and the breaking up of the tribe and the introduction of the heathen Chinese, all their legendary customs, morals among the rest, disappeared. Good-by to all the rest, but we can not help but heave a sigh of regret for their lost morals.

Seven Chinamen are now serving a thirteen-months term in the penitentiary for selling whisky to these Indians, the evidence against them being secured by a pupil from this school and a young attorney by the name of Green, from Hawthorn, Nev.; but as some time has elapsed since they were convicted, other Chinamen are becoming bold and it will soon be time to reap a new harvest.

School.—There is a day school located on this reservation, and three years ago a new school building was erected, but it is too small. There is another building, however, that is carried on the property roll as a school building, and formerly was used for that purpose, and can still be used as such. According to the census roll for this year there are 127 pupils of school age, including none under 6 years of age. As I stated above, there is not land enough cultivated on the reservation to support all who claim it as their home; hence this leads to a nomadic custom and makes it difficult to secure anything like a fair percentage of their children for the school.

The average attendance for the year is 30, but this could be readily increased if the irrigation plant mentioned were put in, and it can be increased as it is; but, as I stated, the new school building is too small, and it will not accommodate any number in excess of that to keep the average much above 30. However, this can be overcome in two ways: (1) By using the other building mentioned and employing a second teacher, or (2) by taking out the kitchen and dining room in the new school building and using the whole as a schoolroom, and build a new kitchen adjoining the second school building, one room of which can be used as a dining room. The school under the present management has done as good work, I presume, as it is possible to do in any day school.

The Indians here are very poor, and their children are not well provided for in the way of clothing. I recommended to your office that each pupil in the school be provided with an outfit—two suits—one to wear to their homes and one to wear at the school, and made requisition for clothing accordingly; but not enough was sent to carry out this idea, and whether or not it would be a success remains to be seen, as there was not clothing enough to issue a single suit all round, and it was not long until they presented about as ludicrous an appearance as before issuing the clothing.

Statistics.—The Indians claiming the Walker River Reservation as their home are shown in the following table:

| | |
|--|------------|
| Males above 18 years of age..... | 184 |
| Females above 14 years of age..... | 226 |
| Males between 6 and 18 years of age..... | 75 |
| Females between 6 and 14 years of age..... | 52 |
| Males under 6 years of age..... | 31 |
| Females under 6 years of age..... | 28 |
| Total..... | 596 |

Very respectfully,

EUGENE MEAD, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT ALBUQUERQUE, N. MEX.

UNITED STATES INDIAN SCHOOL,
Albuquerque, N. Mex., August 23, 1898.

SIR: I have the honor to submit the following, my second annual report of this school:

In my last report, made a short time after my arrival, I recited a few of the many needs. A portion of these have been supplied during the year just closed. New ring baths have taken the place of the worn-out and filthy tubs in the bath house; electric lights have been installed; a new steel tank tower has taken the room formerly occupied by an old wooden one, too low to afford sufficient pressure for fire protection and so nearly ready to fall to pieces as to be extremely dangerous; and new wells, 50 feet in depth, with water-tight connections to the pump, excluding all surface flow, afford us a supply, abundant for both domestic and irrigation uses, of as good water as is to be found anywhere, instead of the alkaline stuff that has in all previous years been a reproach to the school.

Besides these few things accomplished, an appropriation for a sewer system, made by the last Congress upon your recommendation, allows us to indulge in the hope that the time is near when this school will possess none of the drawbacks that have been so well advertised in past years. The climate of the locality is unequaled, and I believe this to be the place for a school that will do really excellent things for the Indian of the Southwest.

Another year has passed without a death among our numbers, and, though scarlet fever afflicted us in September and measles in May and smallpox has threatened us for nine months, our ranks are unbroken. On account of smallpox the outside world has been partially quarantined for most of the year past, and the inmates of the school who have not had the disease have been vaccinated. It is still prevalent in a number of the pueblos, and may cause considerable difficulty in filling the school this fall with the children who are most desired.

An exhibit of school and shop work was made at the Territorial fair last September that attracted a great deal of attention, and a large number of blue ribbons were awarded us; the cash prizes all went to the speed ring.

The industries have not made entirely satisfactory progress, for two reasons—First, the shops are very poorly housed; and, second, there has never been a course

of instruction pursued by which the students could be systematically trained. In most instances the educational value of the shops and the farm has been lost sight of, and the true function of these departments has been degraded to merely turning out a certain amount of work, and the instructors are consequently only foremen. This condition is due chiefly to the lack of any thought of the vital connection between mind and hand training in planning the work. Plans are making to remedy this defect—greatly, if we can secure new shops; considerably, if we can not.

However, a good grade of work has been done in most of the shops, and our farm has achieved wonders in raising from our few acres of alkali more than \$600 worth of produce. We consume all the manufactures, except of the harness shop, and that finds a ready sale to the Government and to dealers in the vicinity.

There has been little change experienced in the difficulty of securing pupils from the pueblos and reservations. From Isleta, where the attendance had dwindled from 60 or more to none in 1896-97, about a dozen were persuaded to join our numbers the past year. At Acoma, one of the largest pueblos, the head-men met in convention this spring, about the time one of their children returned home from the Santa Fe school—the last one, I believe, who was attending school away from home—and decided to oppose the education of their children, and that hereafter none from there should attend any of the boarding schools. Their day school, like most of the others in the neighborhood, is poorly attended.

The number of pupils from the Pueblo and Jicarilla Agency who attend any of the boarding schools is constantly decreasing, while on the Navajo Reservation a mere handful of the thousands of school age are receiving an education, and statistics of last year show that of the 22,000 only 230 can read. Mention is made of these Indians because they are the ones from which this school should obtain most of its pupils, and the existing conditions are of as vital importance to us as is the adoption of some means of ameliorating them.

The duty of civilizing these people can not be performed unless some effective method is taken to bring them under the influence of the institutions established for the purpose. The desires of the Government in the matter have come to be looked upon as something to be zealously opposed, and this opposition is usually successful, as no means are used to show that the United States authorities are stronger than the governor of a pueblo and his self-constituted cabinet of people, usually white-skinned, whose interests lie in the direction of maintaining the ignorance of the Indian intact.

The average attendance for the year was 301, of fairly ambitious, fairly industrious, and fairly honest boys and girls, whom the school is endeavoring to train into more ambitious, more industrious, and more honest young men and women, capable of providing for the natural wants of the civilized life.

Concluding, I desire to express my thanks for the courteous treatment accorded me by your office, and to express my appreciation of the services rendered by those employees who have been faithful in the discharge of their duties.

Respectfully submitted.

EDGAR A. ALLEN, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT SANTA FE, N. MEX.

SANTA FE, N. MEX., *August 22, 1898.*

SIR: I have the honor to submit my annual report for the fiscal year 1898.

The general history of the school has been given in my previous reports, hence I confine myself entirely to the past year.

The attendance has been fully up to the capacity of the buildings, and with sleeping room I could have much increased it, and had to refuse pupils for this reason.

The general health of the school has been fairly good. An epidemic of measles appeared and for a while quite a large number were sick, but fortunately it was of a mild type, which yielded to treatment, and there were but few serious cases. Two only resulted fatally, who had been previously sick with lung trouble. Small-pox also appeared in close vicinity to the school, but the whole school was vaccinated and we had no trouble from it.

The gardens and crops have done well, and the lawns and flowers have flourished nicely, and with addition to our trees and shrubs the outside looks charming and attractive. The greenhouses are also very pretty and the pupils enjoy them extremely.

The educational departments have been conducted satisfactorily, and I observe

marked progress in all the classes. By the transfer of some teachers during the year this work was rather trying to those left, but this caused me to take some classes, and then I was personally able to test the advancement of the pupils.

The moral tone of the school has been good, and the pupils have been happy and contented and have very much advanced in civilization and culture.

Religious exercises have had due attention, and, as all denominations are represented in the school, all joined in our Sunday exercises and enjoyed them.

Contracts have been made for a new school building and improvement and enlargement of the laundry. Both of these are progressing well, and when completed there will be ample capacity for an addition of over 100 more pupils. A new cow stable is nearly completed and will be a great convenience to the school.

The employees now here have been true and loyal, and have been energetic and efficient, and to their hearty cooperation in my work I owe the success of the year.

The industrial departments, under their chiefs, have given entire satisfaction.

The Pueblo Indians are good people, but as they have the rights of citizens, and receive little or nothing from the Government, it takes a great deal of tact to induce them to keep their children in school.

Thanking your office for courtesies and kind and prompt attention to my many appeals.

I remain, very respectfully,

THOS. M. JONES,

Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SUPERINTENDENT OF SCHOOL AT FORT TOTTEN, N. DAK.

UNITED STATES INDIAN INDUSTRIAL SCHOOL,
Fort Totten, N. Dak., September 26, 1898.

SIR: I have the honor to submit my annual report for the fiscal year ending June 30, 1898.

The Fort Totten Indian Industrial School is located on the south shore of Lake Minnewaukan—Devils Lake—14 miles southwest of the town of Devils Lake, which is located on the main line of the Great Northern Railway, and 12 miles east of Oberon, a station on the Jamestown and Northern Branch of the Northern Pacific Railway.

The school plant consists of the abandoned military post of Fort Totten, consisting of 19 brick and 7 frame buildings, and 5 frame school buildings located 1 mile from the post. The institution is conducted in two separate and distinct departments, the school proper being located at the abandoned military post and a branch in the Government buildings situated a mile distant. In the latter sisters of the order of Grey Nuns of Montreal are employed exclusively in all departments, both schools being supported from the one appropriation by Congress.

The average attendance during the past year—including the two departments—has been 265.44, an excess of 15 above the number that is required to be maintained under the terms of the appropriation. I have experienced no difficulty whatever in procuring an attendance of the mixed-blood children, but find considerable difficulty in securing the attendance of the Devils Lake Sioux children. However, I feel confident that a larger number can be induced to attend during the next fiscal year, as their present agent is in hearty accord and agrees with me as to the desirability of their attending school.

This institution is strong in industrial work—too much so, I sometimes think, for the number of students in attendance. Our farm and garden consists of 180 acres, under a good state of cultivation. While our harvest is not yet finished, the crops give evidence of a splendid yield. The following are estimated amounts of the crop that will be harvested:

| | | | | | |
|-----------------------|-----------|-------|-----------------|------------|-------|
| Wheat..... | bushels.. | 400 | Beans | do..... | 20 |
| Barley..... | do..... | 400 | Beets | do..... | 300 |
| Corn | do..... | 475 | Cabbage..... | heads... | 1,200 |
| Oats..... | do..... | 2,625 | Hay, wild | tons..... | 130 |
| Potatoes..... | do..... | 1,600 | Hay, tame | do..... | 25 |
| Turnips and rutabagas | do..... | 400 | Parsnips..... | bushels... | 150 |
| Onions | do..... | 200 | Carrots..... | do..... | 17 |

The hay, with the exception of the tame hay, is procured from the school reservation, cut and cared for by the pupils. I have had 25 acres of wild prairie broken during the season, and this, added to what we already have under cultivation, will

give us over 200 acres for crop next year. None of the products of the farm are disposed of, all being used for subsistence of the students and stock. Having such a bountiful supply of vegetables permits a varied bill of fare and conduces to the good health of the pupils.

Our stock consists of 7 brood mares; 8 work horses, geldings; 3 colts, 3 years old, Hambletonian; 2 colts, 2 years old, work horses; 3 colts, 1 year old, Hambletonian; 2 colts, 4 months old, Hambletonian; 24 cows, milk; 1 steer; 16 calves, well graded; 1 bull, registered Holstein, and 56 hogs and pigs.

All of this stock, with the exception of three horses and the bull, have been raised by the school. Over \$400 worth of stock was sold during the year. Our horses are considered very fine, some of the Hambletonian stock being considered extra fine. Our cattle are very well graded.

Our barn is 140 feet by 40 feet. Connected with the barn we have a root storage room 40 feet square. The first story of the barn is constructed of native stone; the second story, used for hay storage, is constructed of frame and holds about 225 tons of hay. Our barn gives ample accommodation for all our stock. An abundant supply of spring water—under a pressure of 50 pounds to the square inch—is piped to all parts of the barn. Particular attention has been given to the industries of farming and stock raising, as fully 90 per cent of the children tributary and who attend this school must of necessity follow either one or the other of these pursuits as a means of gaining a livelihood.

The following-mentioned additional industries are in successful operation: Carpentering, harness making, shoemaking, tailoring, plastering, kalsomining, stone and brick masonry, painting, engineering, plumbing, manufacturing lime, baking bread, cooking, and dressmaking. We have some excellent workmen in all of these branches.

The schoolroom work has not been successful. The constant changing of teachers, with now and then one so thoroughly incompetent that they should not have the term "teacher" applied to them, is the cause. It is impossible to obtain a close organization and classification, so necessary in this department, when conditions remain as above stated.

The institution is still heated with stoves and lighted with lamps, a dangerous and unsatisfactory method.

Thanking the office for its prompt attention to all matters pertaining to the institution, I am,

Very respectfully, your obedient servant,

WM. F. CANFIELD, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CHILOCCO, OKLA.

INDIAN SCHOOL, CHILOCCO, OKLA., *August 5, 1898.*

SIR: I have the honor to submit herewith my fourth annual report of the Chilocco Indian Training School for the fiscal year ending June 30, 1898.

The year has been rather an eventful one, but notwithstanding the many perplexities which have been forced upon us we closed a very interesting school year. In numbers our school was not so large as last year, which was accounted for by the fact that my help for soliciting pupils was very meager. Our school is supplied from various tribes, principally from those of Oklahoma.

Up to last year I had the assistance of very able principal teachers, who did a large share of gathering pupils. * * *

I will now turn to various industries of our school.

Farm.—The Chilocco farm contains 8,640 acres of excellent grazing and agricultural land. During the past year we have farmed about 800 acres in wheat, corn, and vegetables. Below will be found a tabulated statement exhibiting products of farm, garden, and nursery:

| | | | |
|----------------------------------|---------|---------------------------|---------|
| Beef, "net" pounds.. | 4, 414 | Wheat bushels.. | 2, 180 |
| Pork, fresh do .. | 10, 345 | Beets do .. | 40 |
| Milk gallons.. | 6, 265 | Onions do .. | 126 |
| Corn bushels.. | 6, 336 | Potatoes do .. | 803 |
| Beans do .. | 45 | Pease do .. | 58 |
| Lettuce do .. | 38 | Parsnip do .. | 45 |
| Sweet corn do .. | 140 | Radishes do .. | 29 |
| Peaches do .. | 500 | Hay tons.. | 358 |
| Peach butter gallons.. | 200 | Grapes pounds.. | 12, 000 |
| Oats bushels.. | 4, 401 | | |

There were fabricated in shops:

| | | | |
|---------------------------|-----|-----------------------------|-----|
| Aprons.....number..... | 94 | Pants, jeans.....pairs..... | 373 |
| Curtains.....do..... | 149 | cassimere.....do..... | 142 |
| Coats, jeans.....do..... | 75 | uniform.....do..... | 152 |
| cassimere.....do..... | 136 | Overalls.....do..... | 53 |
| uniform.....do..... | 113 | Skirts.....number..... | 36 |
| Cases, pillow.....do..... | 460 | Shoes.....pairs..... | 433 |
| Dresses.....do..... | 680 | Union suits.....number..... | 104 |
| Drawers.....do..... | 443 | Screens.....do..... | 105 |
| Garters.....pairs..... | 297 | Sheets.....do..... | 226 |
| Gowns.....number..... | 143 | Towels.....do..... | 842 |
| Harness.....sets..... | 3 | Waists.....do..... | 62 |
| Tables.....number..... | 16 | Undershirts.....do..... | 612 |
| Napkins.....do..... | 36 | Nightshirts.....do..... | 66 |
| Tablecloths.....do..... | 58 | | |

From last year's crop we sold 2,000 bushels of wheat, and at this date our large granaries are full of corn and oats, besides our unusually large crop of thrash and gather this year.

Stock.—Our herd consists of about 700 head of good, healthy cattle, from which we get a great deal of our school beef. In a very short time this herd of cattle will furnish the entire amount of beef required for the school. We butcher annually about 150 head of hogs for our school. Many of our horses and mules are getting old and worn out and will soon need the attention of a board of survey.

Nursery and orchard.—Our nursery has been of much value to the Indians of Oklahoma; hundreds of families have been supplied with fruit trees and vines. We have also supplied many schools and agencies throughout the country with fruit and shade trees, vines and shrubbery.

We have about 100 acres in orchard and vineyard, from which annually we get hundreds of bushels of very fine peaches, plums, apricots, cherries, berries, and grapes. Our school grounds four years ago were barren, but are now planted with beautiful shade and ornamental trees, which, if properly cared for, will soon make Chilocco the most desirable school in the service.

Employees.—The employees, with a few exceptions, have done good work. * * *

Conclusion.—I am under special obligations to the inspecting officers who have visited our school during the past year, viz, Inspector C. F. Nesler, Special Agent J. E. Jenkins, and Supervisor R. C. Bauer. Their kind and helpful criticisms were very much appreciated.

I desire to acknowledge my appreciation for the courteous treatment accorded me by your office.

Very respectfully,

BEN. F. TAYLOR,
Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT SEGER COLONY, OKLAHOMA.

SEGER COLONY SCHOOL, *Colony, Okla., August 31, 1898,*

SIR: I have the honor to submit herewith the sixth annual report of this school. School opened the 1st of September with a small attendance the first month, owing to a part of the children enrolled in this school being instructed to go to another school. The matter was soon adjusted and our school was filled up to the usual number. The total enrollment for the year was 115; the average attendance during school session was 102.

Schoolroom work.—The schoolroom work has been very satisfactory. Miss Emma Kane taught the advanced grade. The children all made great progress in their studies and in how to make practical use of what they learned. Mr. E. E. Palmer instructed the primary grade and succeeded admirably in getting his pupils to speak loud enough to be heard. Miss Lettie E. Foley, kindergartner, demonstrated the advantage of this department in gaining the confidence of the little tots, and the stories they would tell her of the things they had seen and heard outside of the schoolroom showed that they were being molded by their environments.

English speaking was insisted on and as a result the children all speak English well. During vacation, while the children were with their parents, they continued to talk English. They came back to school in the majority of cases, and to all appearances had not retrograded in English speaking or in cleanliness.

Industrial work.—The children helped in every department of work carried on in the school, it being very much the same work as in a well-regulated family, only

on a larger scale. The work was apportioned out to the children according to their age and capacity.

The larger girls assisted in making dresses and clothing for the children; a specimen of their work can be seen at the Omaha Exposition in the Oklahoma exhibit. The smaller girls swept and dusted the rooms, darned and mended clothing, sewed carpet rags, scoured knives and forks, etc.

The bakery and dairy are under the charge of Mary Little Bear, a Cheyenne girl, who has had five years' training in this school before occupying her present position. She does this work very satisfactorily under the inspection of the matron and school cook.

The laundry is in charge of Miss Lizzie White, an Indian girl, with one Indian assistant to help her and a detail of boys and girls.

The sewing room is in charge of Miss Bertie Aspley. She has turned out very creditable work with her Indian assistant and detail of girls.

The kitchen is in charge of Miss Barada, a graduate of Carlisle. She has only been in this position a short while.

The farm is in charge of Mr. Peter Ratzlaff. This work will speak for itself; it is done by Indian assistants and a detail of boys.

The carpenter shop is in charge of Mr. J. G. Dixon. This work has included building and repairing, six different buildings being erected during the year, the Indian help doing a large part of the shingling and painting. There is also work at the Omaha Exposition done by Indian assistants both from the carpenter shop and blacksmith shop; it will be found in the Oklahoma exhibit.

The blacksmith shop is in charge of Jason Betzinez, an Apache Indian. Although he is an agency employee, he works in the school shop under the supervision of the superintendent and does the blacksmithing for district No. 10, as well as for the school. I think his work deserves special mention. When he came here he knew very little about woodwork; he can now fill a wagon wheel, set a thimble; in fact, make any part of a wagon, as is shown by a fine carriage which he rides around in and which he put up himself, working at odd times. The mops furnished by the Government were very poor and were constantly breaking. I asked him to invent and make a mop that would be better than those furnished by the Government. He did so, and one of Jason's mops are worth several of those furnished by the Government. He is a good hand at repairing mowing machines. I don't think that I ever took a job to him that he could not do. Some of his work is at the Omaha Exposition.

Stock.—Our cattle have not done as well this year as usual. We lost several last year from a cattle disease that prevailed throughout this section of the country. We had a large amount of hay burned up last year by prairie fires; this compelled us to feed straw largely. The sheep have done well, showing an increase of wool over last year.

Improvements.—During the past year there has been built a fine system of water-works here, costing \$2,975; also a cow barn, an implement house, tool house, wagon shed, ice house, wood shed, and meat shop. Water-closets have been put in both of the dormitories. We sawed at the school sawmill 50,000 feet of cottonwood lumber, which has been mostly used in building picket fences around the garden, barn, and cow lot.

Farm products.—To show the productions of the farm this year I give the following tabular statement:

| | Quantity. | Value. |
|--|--------------------|-----------------|
| Beef slaughtered for the school..... | pounds..... 25,011 | \$1,500.00 |
| Mutton slaughtered for the school..... | do..... 1,225 | 73.00 |
| Pork slaughtered for the school..... | do..... 1,476 | 89.00 |
| Lard furnished for the school..... | do..... 1,058 | 106.00 |
| Milk furnished for the school..... | gallons..... 1,864 | 186.00 |
| Beef hides sold..... | number..... 106 | 178.00 |
| Wool sold..... | pounds..... 1,253 | 153.49 |
| Mule sold..... | number..... 1 | 30.00 |
| Cheese made..... | pounds..... 200 | 24.00 |
| Lumber sawed..... | feet..... 50,000 | 700.00 |
| Total..... | | 3,039.49 |
| Added to this estimated crops on hand: | | |
| Wheat..... | bushels..... 400 | 240.00 |
| Oats..... | do..... 300 | 60.00 |
| Rye..... | do..... 400 | 160.00 |
| Corn..... | do..... 600 | 120.00 |
| Kaffir hay..... | tons..... 50 | 250.00 |
| Total..... | | 3,869.49 |

About a mile and a quarter of picket fence has been built around the garden and barnyard, and a stone tank of 1,000 barrels capacity was built to hold water for irrigating purposes. However, the wet season has made irrigating unnecessary. During the first part of the season the water swept across our garden in a flood and washed out much that was planted. Notwithstanding, we have received much benefit from peas, onions, sweet potatoes, Irish potatoes, melons, beets, etc.

Health.—The health of the school has been good, though during vacation two of our children have died while at home, one with fever and the other with consumption.

In conclusion, I would thankfully acknowledge the kind treatment which the Indian Office has shown this school during the past year.

Very respectfully,

JOHN H. SEGER, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CHEMAWA, OREG.

UNITED STATES INDIAN TRAINING SCHOOL,
Chemawa, Oreg., September 17, 1898.

SIR: I respectfully submit my third annual report of the Salem Indian School for the fiscal year 1898.

Pupils.—The attendance during the year far exceeded the amount appropriated for and it was difficult to prevent too great an overflow of pupils, which always proves more or less detrimental to the best interests of a school. Owing to the large attendance and the great demand of the Indians of the coast States to enter Chemawa, Congress again increased the appropriation to 350 pupils. The pupils in attendance represent 35 different Indian tribes from Alaska to Lower California.

Industries.—Boys are taught carpentering, blacksmithing, wagon making, painting, harnessmaking, shoemaking, plumbing, engineering, printing, baking, gardening, stock raising, farming, and the good, practical results achieved from these important departments have been very gratifying. There were three young men who graduated from the trades departments, viz, Douglas Holt, of Yakima Agency, Wash., from the tailoring department; Warren Brainard, of Hoopa Valley, Cal., from the carpenter department, and Adolph Farrow, of Umatilla, Oreg., from the harness making and saddlery department. When pupils graduate from the trades department of this school, they are not half masters of their trade, but are well qualified and able to hold their own anywhere, and can be relied upon as thorough up-to-date workmen.

Girls receive instruction in various kinds of housework, such as cooking, washing, sewing, fancy work, etc.

While this school has no Bucks County to fall back on for the establishment of an extensive outing system, yet it is a pleasing feature to note the increased demand each year for the labor of the boys and girls in this school from the farmers of the Willamette Valley. They have saved several hundred dollars from the wages earned during the summer vacation.

Schoolroom work.—This important department of the school has made good, steady progress. Pupils have been interested and benefited. The teachers have worked earnestly and faithfully.

A class of four graduated from the ninth grade with honors, viz, Julia Sorter, Warren Brainard, Adolph Farrow, and Oscar Norton.

The establishment of a normal-school department in connection with this school is greatly needed for the graduates of the various schools of the Western and coast States. Sante Fe and Haskell are at present the two nearest schools having normal departments, and one could be conducted here without any additional expense, as we possess about the same facilities as those schools.

Health of pupils.—The sanitary condition of this school has been so greatly improved that Chemawa, instead of being known as a sickly place, might reasonably advertise itself as a great health resort. Only two deaths occurred last year at the school out of an attendance of over 350 pupils, which gives our school a health record second to none in the service. The drainage of Lake Labish and the enlargement and completion of the water and sewerage systems have been great factors in producing this much-desired improvement. Dr. Clark, the school physician, is most efficient, painstaking and faithful in his work, and to him are much thanks also due for the general good health of the school.

Societies.—The school supports a good band and orchestra, two wideawake lit-

erary societies, two Bands of Mercy, a Young Men's Christian Association, a King's Daughters Circle, a Christian Endeavor Society, and a live Sunday school.

Amusements.—The boys contract the football, baseball, basket ball, and tennis fevers at the proper seasons, and the girls have two basket-ball teams which have won several victories from their white sisters in the surrounding colleges of the State.

The social entertainment of the pupils is an important one to keep them contented, happy, and progressive. Therefore only three nights of each week are devoted to study hour exercises. On Thursday evenings the literary and other societies convene. On Friday evenings the school sociable is held, where employees join with the pupils in the innocent games of amusement. On each alternate Saturday night the band, under the able leadership of Prof. Josiah George, gives a concert, which is enjoyed by all. Thus pupils are kept busy with work during work hours and pleasant enjoyment during play hours. They have no time for homesickness, and learn to look upon their school as a happy home and not a prison.

School discipline.—A good system of discipline and order exists at the school. Boys and girls are instructed in drills and calisthenics by the disciplinarian at regular periods. It is our aim to avoid as much as possible the vain pomp and show of a military institution, yet to teach all that is valuable and necessary.

Each summer a large number of the advanced pupils attend the Chautauqua Assembly at Gladstone Park, where they are privileged to meet and mingle for two weeks with many hundreds of the best people of the Western States. This meeting proves mutually beneficial to both the whites and Indians. It tends to greatly destroy the prejudice of the whites, which is to-day probably the greatest obstacle in the road of Indian advancement. Many who look upon the Indians as worthless paupers and savages are surprised to note the gentlemanly and lady-like conduct of the Indian boys and girls camped in their midst, and their opinions of them are thereby changed. The pupils entertain the Chautauqua each year with appropriate addresses, songs, recitations, and music on what is known as "Indian morning," when the whole morning is given over to the pupils of the school. This is very stimulating and helpful to the pupils, who are as much at home before 5,000 Chautauquans as in their own assembly hall.

Conclusion.—It is a great pleasure for me to report that a general good, home-like feeling has prevailed among employees, resulting in harmonious work and united cooperation. Differences and misunderstandings of course arise in this work, but they have always been amicably settled and straightened out before assuming the proportions of a "racket" and general smash up. The school on the whole has had a successful year, and the work accomplished, I believe, will prove lasting and creditable, for which I desire to thank the employees of the school for their faithful work and assistance, as well as the Indian Office for its kind and hearty cooperation.

I have the honor to remain, your obedient servant,

THOS. W. POTTER, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CARLISLE, PA.

CARLISLE, PA., *September 28, 1898.*

SIR: In transmitting to you my nineteenth annual report of this school, covering the fiscal year 1898, I can but reiterate the principles for which the school stands, as given in my former reports, and note our growth along these lines.

We recognize the Indian as a man, and train him in all the lines of our life as other men. There is no resolution or end to his difficulties short of this, and this is his right as well as our duty. While this is purely an Indian school, all the methods used consider the pupils in the light of the true American tenet that "All men are created equal," and aim to give them the opportunities that will fit them to take part in all our affairs, industrial, intellectual, and moral.

Foremost and most vital among our methods to accomplish this result is our outing system. This is the placing of our students in the best white families, most largely in the country and during the summer months, where, removed from the necessary generalization of institution life, each becomes a unit in the school of American citizenship. They thus receive the individual interest found in the civilized home and grow rapidly in capabilities because competing with wide-awake boys and girls of our own race. They get a free use of English and a true

knowledge of the worth of labor and its remuneration, and at the same time the supreme hindrance of prejudice between the races is removed. This outing enabled me to carry 250 pupils above the number for which I received appropriation. An average of 250 remained out during the winter attending the public schools, and 600 were out during the vacation.

Each pupil earned wages according to his or her ability, the boys' earnings aggregating \$13,541.30, of which they saved \$5,208.61, and the girls' earnings aggregating \$8,184.20, of which they saved \$3,098.50, making the total earnings \$21,725.50 and the savings \$8,307.11. The earnings belong to the earners individually. Through a savings system established at the origin of the school each pupil has a bank and account book, and by supervision in its use the pupils are taught the value of money.

The pupils go out at their own request and almost universally have a pride in doing well, so that, through their good records, the demand for pupils each year is multiplied, and we have constantly to deny places at good homes. While these multiplying opportunities are available and the Indian children are in need of just such influences, it seems most lamentable that this opening is not utilized. I have often urged in years past the enlargement of this outing system, both at Carlisle and by its introduction into all Indian schools, and now again invite departmental attention. Seventeen years ago Congress placed a clause in the Indian appropriation bill which has been continued in every bill since, indorsing this movement throughout the service, and providing appropriation to carry it out, so that only executive action is necessary.

Through Carlisle as a preparing place hundreds more of our Indian children can be sent into other healthful, educating homes of the country. If from Carlisle, why not from the other Indian schools? The great hindrance is in yielding to the tribalizers and the multiplying of tribal schools, which only emphasize the false line of races. We can just as easily and more cheaply give the broader and really American training by a general use of schools remote from the tribe, and from them forward the children into the public schools, which will lead out from and disintegrate the tribe and bring individual usefulness as industrious American citizens. The reservation in all its management builds against this, and by its inducements recalls and destroys much that is done, and then often adds calumny to the crime. If the public schools, where all races blend, foster and perpetuate the true American citizenship, if Catholic schools foster and perpetuate Catholicism, what else can we expect than that Sioux schools will foster and perpetuate the Sioux as a separate people to continue an unending drain on the public purse and a perpetual threat to the peace and prosperity of a vast section?

In company with Supervisor Wright I visited recently a number of our out pupils and patrons. One of our most valued and interested patrons among the Friends gave us a detailed statement of her experiences with twenty-five of our girls during the past eighteen years, and what had become of them. I asked her to furnish a brief memorandum of what she gave, and the following is a synopsis. I do not give the tribes of each, as she did, but they came from the Pueblo, Osage, Cheyenne, Winnebago, Pawnee, Oneida, Miami, Iowa, Sioux, Wyandotte, Bannock, Nez Percé, and Seneca tribes. With varied success scores of our patrons could add like testimony:

No. 1 remained one and one-half years in my home. Was teacher at ——. Married happily the disciplinarian, who is an educated white man.

No. 2 remained one and one-half years. Returned to Carlisle, and from there to her home. Married a returned Carlisle pupil, who is temperate and industrious. Are living on their farm. Have a good house, and "my bedrooms are just as nice as your bedrooms."

No. 3 remained three years. Returned home. Deceased.

No. 4 remained nine months. Returned to Carlisle and then to agency. Have no knowledge of her present whereabouts.

No. 5 remained three years, until fitted for teaching. Taught some years in the ——— boarding school; married the industrial teacher, an English Canadian, and is living on a farm of 400 acres. Is an earnest Christian worker, taking active part in Sunday-school and Christian Endeavor work. Is a good, economical housekeeper; raises vegetables and chickens in abundance. Makes and sells butter; does her own and her children's sewing, and still loves her country mother.

No. 6 remained two years. Married while at Carlisle. Is now living on the reservation. Husband has a responsible position.

No. 7 remained three years. A rare girl. Graduated from high school, afterwards at ——— normal. Is now teaching on the ——— reservation.

No. 8 remained one year. Married by Friends' ceremony to a man of her tribe. Was the mother of three children. Now deceased.

No. 9 remained 8 months. Graduated at Carlisle; married a Carlisle graduate. Both are now teaching at ———.

No. 10 was matron at ——— school. Married a good man of her tribe. Is housekeeping, and has a comfortable home.

No. 11 remained four years. Took the Carlisle course with her country mother. Received her diploma. Remained at her country home another year for post-graduate studies. Graduated at ——— normal school. Is now entering her third year as head teacher in a graded school in New England. Studied painting in oils and china while in the country.

- No. 12 remained one year. Has been seamstress at a Western school.
- No. 13 remained five months. Is a Carlisle graduate, and married a Carlisle boy. Lives on their farm. Is a remarkably neat housekeeper.
- No. 14 remained three years. Went South for health. Has been matron of small boys at ——. Took lessons in oil painting.
- No. 15 remained one year. Graduated at Carlisle. Has charge of laundry at ——. Is happily married to one of the white employees. Good needle woman.
- No. 16 remained three months. Has since graduated as nurse at —— hospital.
- No. 17 remained two years. Completed the Carlisle course in the country, except the last six months; returned to the school for that time. Received diploma. Took course in bookkeeping, etc., at Drexel Institute. Is now teaching at ——. Excellent housekeeper.
- No. 18 remained three years. Followed Carlisle course. Returned to school for last six months of senior year. Returned to country home for lessons in embroidery and crayon, meantime teaching two children of the family a few hours each day. Showed much tact as governess. Is now in charge of sewing room at ——.
- No. 19 remained two months. Can not give information concerning this girl.
- No. 20 remained one year. Took senior studies. Returned to Carlisle and died. She was a Christian and one to do good among her people.
- No. 21 remained two years. Not quick with books, but an indefatigable student, studying into the night. Accomplished more than her class. Received Carlisle diploma. Did fairly well in Latin, an extra study. Beautiful bread maker, good cook. Took lessons in crayon heads. Has returned to ——.
- No. 22 remained one year. A junior. Was doing well, but obliged by ill health to go home.
- No. 23 remained two and a half months (summer). Had lessons in embroidery and botany.
- No. 24 is with me now, taking junior lessons.
- No. 25 just arrived.

Realizing that a safe future depends upon the training and intelligence of the youth, almost all of our States have laws for the compulsory education of the young, and the most effective charities, both in help to the individual and the State, are those that, finding children in the squalor and degradation of crime and ignorance, take them to the fresh air of cleanliness and schooling without consulting the creators and older victims of the baneful influences. When, therefore, we find the Indian children eager for education, but the parents ignorant and dependent, why should we lose time in waiting for the parents to waken to the advantages of right education for their children and beg their consent for the children to go away to school? The same laws that work for good to the many nationalities that make up our great Republic should govern in our responsibilities for the 250,000 Indians under our care. Nearly twice this number of foreigners, the majority of whom, with but little higher intelligence than the Indian of to-day, are welcomed into our body politic every year. Through desire for better conditions they come to us, and through necessity they scatter over our vast territory—Swedes, Poles, Germans, Italians, Africans, etc. Mingling with and meeting us on the common ground of the language of our country, and being subjected to the same laws of education and good order, they generally are evolved into full and useful American citizens in one generation.

Justice demands that we start the Indian child with a knowledge of our language, and then he should be compelled to enter the public schools and industries of our country. Given this start, there should be no Indian reservations to return to, nor continued Indian-school nurseries to dwarf the growth. The school might and should be the ship to bear him from his ignorant home hindrances into the widest opportunities for development. What a misfortune, then, to turn the school into a force for holding the children to the slavery of the old, wild life.

From the school standpoint we naturally consider the young, but as the older and ignorant foreign emigrants are successfully lifted by the processes of association and assimilation into the life of our country, so might also the older Indians. Indian men of all ages, even to 60, selected as the most criminal among 800 prisoners in the Indian Territory, and sent under my care to Florida in 1875 to 1878 as prisoners of war, through a sort of outing and liberal contact with the whites learned to speak English and became so imbued with the American spirit, that at the end of three years they petitioned the Government to be allowed to have their families with them and remain to work out their own salvation in the East as individual men; but the Government denied them this privilege. Was it their fault, then, that when forced to return they disappeared in the masses on their reservations?

To learn any special work we must do that work, and while it is next to impossible to inculcate the American spirit by theoretical teaching on the reservations, where there are no illustrations of it in the life in these isolated places, it is also impracticable to teach it in purely Indian schools away from the reservation and surrounded by the many examples of the manufactories and active farming of the district. The location of every nonreservation school should, therefore, not only be such that the example in the life of the surrounding country is the best, but precept must be followed by practice, or the idea can not be lived. Hence the necessity of this outing system, or something akin to it, and then should follow continuous enlargement and extension until all purely Indian schools disappear.

The work in the schoolrooms began September 1, 1897, and lasted to the end of June, 1898. Several of the grades were without teachers at the opening of the year, and temporary supplies had to be used. The lack of promptness with which appointments are made by the civil service to fill teachers' vacancies becomes a source of great loss to the pupils and demoralization to the educational work, while the changes necessary because of the unfitness of many of the appointees is most disheartening.

The work in the schoolrooms shows advancement in methods of teaching, in classification, gradation, and studiousness. The instruction in the main has been rational and enthusiastic, and the pupils are doing more independent reading, study, and research.

Vertical writing is now used throughout the grades, and with excellent results, giving us marked improvement in all written work.

Drawing, under the direction of the special instructor, and with the intelligent cooperation of the grade teachers, has steadily improved and is valuable help to the pupils in their other studies.

Vocal music for all pupils is a requirement. The pupils of the six upper grades are expected to pass in a certain knowledge of the theory of the subject. A graded course of music readers for the other grades will be adopted, each pupil having his own music reader with definite lessons to prepare.

Instrumental music is taught individually to a selected class limited to one teacher. Quite a number of the girls are able to accompany the singing at the different meetings, play, in good time, tunes for the calisthenic exercises, and furnish agreeable entertainment for the various society and other gatherings.

The Sloyd department has had about 120 small boys and girls under instruction, with gratifying results in their habits of industry and in all their school work. I hope to bring the spirit and principles of the Sloyd more into all our work and so have schools and shops reach a better cooperation.

The work of the normal department has continued effective. Ten girls have been under training. Three graduated with the class of 1898. Normal students receive one hour of theoretical instruction daily and two hours of practice.

Owing to the correlation of the grading, the junior and senior classes are yearly better prepared for their work on entering. This enables them to cover more ground each year, but it is not wise to advance the course beyond the grammar grade it now holds in correspondence with the public schools, as all Indian children will profit most by getting into the general and public schools after, and even before, reaching this point.

Teachers experienced in teaching before entering the Indian service are universal in their testimony that, with the exception of hesitation at the beginning because learning the English language, Indian pupils are not more limited in capabilities than white pupils. After graduating them from our limited course, it has been my policy to encourage and help our pupils to other schools, and many have gone into higher schools and held their own with credit. During the past year 2 of our graduates have attended the high school in Carlisle, one graduating; 3 have been in the preparatory department of Dickinson College and 2 in the college proper (one scholarship being given by the college president); 1 of the girls attended Metzger College; and 7 took a business and shorthand course at the Commercial College, all in the town of Carlisle. Drexel Institute, through its president, gives us a continuous scholarship, and has already graduated from its business department 2 of our graduates. The normal school at West Chester, Pa., one of the best schools of its kind in the country, had 3 of our pupils (two of them graduates) under its care during the year, and one of them graduated in June and has since accepted an appointment to teach the public school near her home in Montana. Other pupils and graduates have attended higher schools in other places. I do not know of a single school in the United States, public or private, whose doors are not wide open to receive Indian youth when properly prepared.

The reference library has continued to be most useful. A number of valuable works have been added, and the boys' library has been consolidated with the school library, but there are yet many reference books needed. One of our Indian girl graduates, skilled in library and cataloguing, is in charge.

The weekly teachers' meetings for study of methods, etc., have been continued with their helpful results.

The commencement exercises took place the 1st of March. A class of 24—12 boys and 12 girls—was graduated. The presence of the honorable Commissioner of Indian Affairs, the chairman and seven of the members of the House Committee on Indian Affairs, and a large delegation of other visitors from Washington, New York, Philadelphia, and other points, evidenced the widespread interest in Indian education, and marked the occasion as a helpful factor toward forming public opinion.

The teachers have found much help and inspiration for their work by attending the different teachers' schools scattered throughout the country, some going west to Dr. Parker's Institute at Chicago, some to Chautauqua, and some to other equally progressive and wide-awake summer schools. The association and study with teachers of the country at large has been most profitable, and brings into our work far more helpful comparison and incentive than is to be found in the Indian institutes, where emphasis has been placed on all that is Indian. It is a mistake to parochialize Indian schools into a system, or to consider Indian nature as different from human nature. Indian schools are necessary only as stepping-stones, and in the temporary need for them we should use only what is best in the education of children of any race. The duty of Indian schools is to get the Indians into the masses on an equality, so they may go ahead without special and separate supervision. It is impossible that when they enlarge and strengthen race and other dividing lines they should be else than against the best interests of the Government and the people of both races.

The training of the hand has always been with us of corresponding value with the education of the mind and heart, and the division of the day, allowing each pupil one half day for work and the other half day for the schoolroom, promotes all these interests.

The shop work has been carried on as in former years, with the advantage of improved facilities in the enlarged shop building. A notable feature of the year has been the large number of new hands admitted to the shops and the aptness with which they have picked up enough of their chosen trades to become useful workers.

A helpful variety has been added to the work in the harness shop by orders from the Department for special sets of driving harness, single and double, for use at the different agencies and schools. This has been valuable for the instruction it gives and the opportunities to reward and encourage the best hands with better work.

The orders given by the Department for Concord spring wagons have been the means of putting new life into the blacksmith and wagon shops.

The shoe and tailor shops have been conducted as usual, but owing to the depletion of forces in the spring and early fall by the outing, neither has been able to provide all we need in their respective lines.

The work of the tin shop is instructive in the way of general repairs to roofs, spouting, water pipes, drain pipes, stoves, faucets, bath apparatus, etc. The making of tinware is now carried on only in limited quantities to give the skill needed, and not with the object of producing a large output.

A new and useful feature introduced during the past year is the instruction given to a limited number in bricklaying and plastering. Two days per week were allotted to each class during the winter months. Satisfactory progress was made, the work was popular, and substantial results may be anticipated by following up and enlarging the plan.

The carpenter shop as an instructor is perhaps the most necessary of any, and the continued and varied wants of a large institution like this furnish the necessary practice for all the workers in this department.

The care of the steam plant, laundry, and other machinery, steam cooking apparatus, etc., furnishes a means by which a number of boys, working with the engineer, become competent in caring for boilers, ordinary steam fitting, etc.

The painters are provided with work in the dressing of the many buildings and apparatus of the school.

The printing office is one of the most important training forces of the school, combining as it does its practical lessons in English composition, the dispatch necessary in its mechanical labor, and the business forms and order in mailing to about 10,000 subscribers each week copies of the school paper, The Indian Helper, and a smaller circulation of the larger monthly paper, The Red Man.

The school farms, while, owing to our fortunate location, not especially needed as instructors, are necessary as producers of supplies for school use, and as such serve their purpose, with only the failure that may be incident to the season or special circumstances, as in the shortage of the potato crop last year and this, while of forage and vegetables an abundance was produced.

The dairy is to us the most important of the farming interests. The herd is 40 head of cows, some of pure Guernsey and Jersey, others of graded, and others of ordinary stock. We find the Guernseys the best for our use, and by keeping only thoroughbred bulls of the breed we will in a few years have a Guernsey herd. The milk product is superior in quality. We use ensilage largely, with excellent results. The work of the dairy is done by one skilled man and Indian boys as helpers, using a hand separator for the creaming. So far as the girls' knowledge

of dairying is concerned, they have ample opportunity under our outing system of learning it from the farmers of Pennsylvania, New Jersey, and Maryland.

Special physical culture as a means to build up the health of the pupils has been continued with gratifying results. Encouragement and instruction have been given to the outdoor sports and daily drill is given in the gymnasium during the school year. The football team has not only continued to hold the high record it made, but through the earnings of the games a large and fine athletic field has been added to the school advantages. Ground adjoining the school was bought, leveled off, and a large, oval turf field, with a quarter-mile running track, is now near completion. This gives the out-of-door sports a suitable place to practice and contest, and will be an encouragement to all field athletics, without which no school life is now complete.

Following the special care given, I am glad to report a year of unusual good health among the pupils. We have had but four deaths at the school out of our large number during the year, though a number of students sent to us in bad health have had to be returned to their homes.

The band deserves special notice. This, like the football feature, both of which have done so much toward awakening an understanding of the public toward the Indians, has been of no expense to the Government. Started by help from charitable sources, it has grown in ability, and has always been a source of pleasure in our school life.

Owing to the large number of pupils in the school during the past year, an increase of room in the assembly hall was required. A balcony was therefore erected at one end, and an immense iron girder, serving the double purpose of support to the building and front beam to the balcony, was placed with ends resting on the east and west walls, respectively. This enlarges the seating capacity of the hall by 200. The floor space of the gymnasium was also enlarged by moving the stairway to the entry.

An interesting addition to the population of the school (a tabulated statement of which is appended herewith) was the arrival of a party of 7 Eskimos, 5 girls and 2 boys, under the care of Dr. Sheldon Jackson, commissioner of education for Alaska. These pupils came from Point Barrow, a station of the Congregational Church and the most northern mission on the American continent. They are quick and bright to learn, and by association with the boys and girls of the 73 other tribes here represented they already meet on the common ground of English.

Early in the year, when the first rumors of war electrified our country, our young men were eager to prove their loyalty to the Government, and expressed their wish to enlist should there be a call for volunteer troops. The military government and drill used at the school especially qualified them for such service, and I presented their petition to the Departments. While their willingness was kept in remembrance, it was not deemed necessary to call them out. But the interest they show by asking to take an active part in the grave operations, even to laying down their lives if need be, suggests that if in time of war such a oneness of interest is aroused, then in time of peace universal enlistment can be made in an intelligent and industrious service for the welfare of the nation by adding their energies to its growth of culture and industry.

A tabulated statement of the population of the school is herewith:

| Tribes. | Connected with school at date of last report, July 1, 1897. | | New pupils received during the year. | | Total during year. | Returned to agencies during the year. | | Died. | | Remaining at school July 1, 1898. | | Total. |

With especial gratitude to you and my other superiors, both legislative and administrative, for the enlarged help and consideration I have received during the year, and also for the generally loyal, zealous, and efficient service of very many of my large corps of employees, some of whom have been with me from the beginning of the school, I am,

Very respectfully, your obedient servant,

R. H. PRATT,

Major, First Cavalry, Superintendent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT CHAMBERLAIN, S. DAK.

CHAMBERLAIN, S. DAK., *August 15, 1898.*

SIR: I have the honor to submit my second annual report of the Chamberlain Indian training school.

Location.—The school is located about one mile north of Chamberlain, S. Dak., on the east bank of the Missouri River. From a sanitary standpoint the location is all that could be desired.

Buildings.—The main building was completed and received from the contractor December 29, 1897. It is in good condition. At present four new buildings, the hospital, laundry, workshop, and stable, are in course of construction.

Water and sewer.—The water and sewer systems were completed and accepted August 9, 1898. I think that we have one of the best and cheapest water plants in the service. The power for pumping water from the Missouri River to the reservoirs is furnished by an artesian well; so our running expenses will be nothing except repairs. Fire protection excellent.

Schoolroom work.—On the 5th of May Miss Minnie E. Lincoln began work in the class room with 36 pupils. Owing to the serious illness of her mother, Miss Lincoln was called home June 9, and the term was finished by Miss Lizzie Stevens. The work in the schoolroom has been satisfactory.

Industrial work.—All work of this character was attended to by Don Cushman, farmer. Mr. Cushman, with the assistance of the boys, cultivated a garden of about 12 acres, and erected all the fences required so far.

Domestic work.—The matron has been fortunate in having such valuable assistance as has been rendered by Miss Anasteria Anderia, seamstress, Miss Annie J. Paulson, laundress, and Miss Mary Mashek, cook. The work in each of the departments, namely, sewing room, laundry, and kitchen, has been well and faithfully executed. Mrs. Marie Dowdell, cook, recently transferred from Rosebud boarding school, has charge of the kitchen now, and is doing nicely.

Farming land.—But very little of our 160 acres is suited for farming purposes, owing to it being so hilly and rolling. At the most there are not over 20 acres that can be successfully tilled. At the proper time I shall request that adjacent land of 160 acres be purchased, thus giving us enough tillable land to raise all necessary feed, required for stock, and hay, etc. We need the land in the present school farm, which is not suitable for farming purposes, or for pasturage.

Stock.—We have at present 3 good milch cows and 1 heifer calf. We should have a herd of at least 10 good milch cows. We have one good team of work horses; but we need another team suitable for driving and general work.

New buildings and improvements.—We should have a girls' dormitory building, a schoolhouse, a warehouse, an ice house, a harness shop, and a tin shop. This will be the subject of another communication at the proper time.

An electric-light plant is now required, and considering the fact that there will be no expense connected with the running of a dynamo other than the usual wear and tear and necessary repairs, as the power will be furnished by the artesian well, I respectfully ask that your office give this matter favorable consideration when authority is requested for the installing of an electric-light plant.

As we have an excellent supply of sand and gravel, I am very much in favor of putting down cement walks instead of wooden walks. I think we can put in cement walks at the same, or possibly less, than the cost of wooden walks.

We will need some board fences and paling fences to divide the boys' and girls' grounds and to inclose the school yard. The above matters are simply mentioned in this report, as the details will be given when request for authority is forwarded.

In closing, I desire to thank the Indian Office for the prompt and businesslike manner in which all matters pertaining to this school have been attended to; also for sending us an excellent corps of employees and for the many favors shown us during the past year.

Very respectfully,

JOHN FLINN, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT FLANDREAU, S. DAK.

UNITED STATES INDIAN INDUSTRIAL SCHOOL,
Flandreau, S. Dak., August 8, 1898.

SIR: I have the honor to submit herewith the fifth annual report of the Flandreau Indian industrial school for the fiscal year ending June 30, 1898.

The encouraging prospects for the school noted in my last report were fully realized by the successful prosecution of the work here during the year just closed. The actual daily attendance of pupils during the year was more than 200, and the work of these pupils was more satisfactory than in any former year in the school's history. This is true as well of the industrial as of the literary departments.

At the close of the term a class of twelve pupils, who had completed the specified course for schools of our class, were granted diplomas of graduation—a class that would be a credit to any school in the service. All members of this class will enter schools of higher grade than ours, to fit themselves for the duties of teachers, business men, etc.

With one or two exceptions, the employees of the school gave entire satisfaction by the prompt and efficient discharge of their duties. No changes in the personnel of the force was found necessary or advisable during the school year, but two changes have already been suggested by me to your office. The said changes would certainly result in great good to the school. Three additional employees are allowed us this year, which puts our corps of employees in satisfactory condition.

A fine brick and stone dining hall and kitchen building, a large new brick building for large boys' quarters, and a large, well-arranged annex to the girls' quarters, were added to the school plant during the year, immensely relieving the former crowded condition of the school. Plans and specifications for a large new building for school and assembly purposes are now being prepared, and it is expected work on this building will be begun in the course of a month or six weeks. With this building completed the school will have ample capacity every way for at least 300 pupils. An appropriation of \$20,000 for this building has already been secured, as there have also been provided funds for the erection of two or three other and smaller structures. When the new building for school and assembly purposes shall be completed it is the intention to utilize the present school building for industrial purposes—for shops of various kinds for teaching several mechanical trades to the pupils.

An additional half section of excellent land has been purchased recently and added to the school farm, giving us now 480 acres of land in the school reservation. This increased acreage will enable the school to do more in the line of farming and stock raising than has been possible heretofore, and will enable us to greatly improve the table fare of the pupils by affording more varieties of vegetables and dairy products for this purpose.

The sanitary condition of the school continues satisfactory. There was considerable sickness among the pupils during the year, but most of the cases were mild disorders, and the more serious cases were brought safely through and restored to health. No death occurred at the school during the year.

The prospects for the future of the school continue brighter as it becomes better known to the Indian tribes from which the attendance is recruited, and there will be no difficulty in always keeping the institution filled with pupils, even with a largely increased accommodation. All in all, the fiscal year 1898 was the most successful and satisfactory in the history of the institution.

I have to thank your office for the universally kind and considerate treatment I have received from yourself and from those of your office force with whom I have had business communication.

I am, sir, very respectfully,

LESLIE D. DAVIS, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT PIERRE, S. DAK.

UNITED STATES INDIAN INDUSTRIAL SCHOOL,
Pierre, S. Dak., July 27, 1898.

SIR: I herewith submit my eighth annual report of the Pierre Indian Industrial School for the fiscal year 1898. The history of the school has several times been given in previous reports. The experience of the past year offers nothing further of importance in this respect.

The capacity of the school is 150 and the average attendance for the past year was 147. The general health of the pupils has been excellent, and the advancement in scholarship and the various industries taught satisfactory.

Probably the most noticeable gain has been in the success of the "outing system." For several years past I have endeavored to find employment for our larger boys with the neighboring farmers and ranchmen during the vacation months. This was not easy to do, as the farmers were generally distrustful of Indian help, and the boys not especially enthusiastic on the subject. I succeeded, however, in finding places for a few of our most trusty boys each year, and this finally brought about so good an understanding and acquaintance between the farmers and the school boys that this year I find myself unable to supply all the help called for. The rate of wages, also, has advanced nearly one-half. This is very encouraging to me, as, in my opinion, no course of training could be devised that would be as valuable to Indian boys as this practical labor among our farmers and small ranchmen.

My experience up to the present, however, has apparently settled one point. The "outing system" can not be made a success unless the pupils are a long distance from home. A part of our pupils are from Minnesota and other distant localities, while others are from adjacent Sioux reservations, 25 to 50 miles from the school. I have never yet been able to get one of these South Dakota boys to accept a position in the country. No matter what promises or resolutions he may make, when the vacation arrives he hurries away to his home reservation, where he usually spends his time in idleness or worse. Yet these South Dakota boys are just as capable, and if they were 500 miles from home would probably prove as efficient help as the Minnesota boys who generally accept the positions. In my opinion, in Minnesota, with Minnesota boys, the "outing system" would fail, while with South Dakota boys it would succeed.

Respectfully,

CROSBY G. DAVIS, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT RAPID CITY, S. DAK.

UNITED STATES INDIAN SCHOOL,
Rapid City, S. Dak., September 13, 1898.

SIR: I reported here for duty the 19th of November, 1897. Found the walls of the main building just getting above ground; the work of construction has progressed very slowly, but now it is finished. The plant now consists of the main building of stone and brick; the hospital, workshop, laundry, and stable, all frame structures, and the water and sewer systems. All these buildings are nicely finished and painted and, situated in a beautiful location, constitute a very nice, healthy, and attractive small boarding-school plant. The water and sewer systems are perfect and the heating and ventilation systems give promise of being most satisfactory.

On the 1st of April an industrial teacher was employed and a team and wagon purchased and a small acreage of oats and potatoes put in, but dry weather and no water for irrigation have prevented maturing a good crop. The oats and wild hay have been cut, securing ample hay for use during the entire year.

I have been furnished equipments necessary for feeding and sleeping the pupils, and these are all in place, and we were ready to take pupils on the day the building was fully completed, but we have no schoolroom furniture as yet and no seats for pupils' sitting rooms or assembly hall. The gas plant for lighting the buildings is not yet in place, but is under contract and will soon be in order.

I now have about twenty applications for admission to the school from mixed-blood citizens of the Sioux. Since these applications are voluntary it would indicate a considerable desire to send their children here to school, but I am not yet informed as to whether or not the consent of the agent that they be transferred can be had.

All of the employees necessary for starting the school are now here and seem well suited to their respective work.

Very respectfully,

RALPH P. COLLINS, *Superintendent.*

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT ONEIDA, WIS.

ONEIDA INDIAN INDUSTRIAL SCHOOL,
Oneida, Wis., August 31, 1898.

SIR: I have the honor to submit the sixth annual report of the Oneida Indian industrial and day schools, of the Oneida Reservation, Wis.

Attendance.—The attendance at the school has been all that the buildings could accommodate; in fact, the school has been crowded all of the year. The capacity of the buildings is rated at 120 pupils, but at all times more than that number have been in attendance. The following table shows the average, by quarters:

Quarter ending—

| | |
|-------------------------|-------|
| September 30, 1897..... | 121.7 |
| December 31, 1897..... | 128.4 |
| March 31, 1898..... | 125.4 |
| June 30, 1898..... | 124.5 |

The average attendance for the year has been 125 pupils, five more than the rated capacity of the school.

Schoolroom Work.—This work has been fully up to the usual good work heretofore accomplished in this department. A change of teachers in two rooms was made early in the year in order to add musical ability to the force. However, but little was gained by the transaction. During the Christmas holidays another change was made by the promotion of one of the teachers to the Carlisle Indian school and a new face appeared in the class rooms. Yet, in spite of the numerous changes, I feel that the work has been satisfactory and trust that no further changes may be made in these departments. About 20 of the largest pupils will drop out of this school, being promoted to the different schools of class 2, their places being filled by a kindergarten class.

Industrial work.—This has been carried on as heretofore, the boys having been engaged in farming, caring for stock, etc., and the girls in the different lines of domestic work.

In addition to the school farm, which is small, 75 acres have been leased from Indians and cultivated. An attempt was made to purchase more land for school purposes from Indians, but as the same was allotted to them the Department held that they could not relinquish to the school or Government. If this opinion is held as correct, the school will not be able to possess a good farm for many years, and will be obliged to lease different tracts of land in order successfully to teach the boys agriculture.

A fine addition to the school stock was made early in the spring by the purchase of six heifers and a young bull, all of the Holstein breed. Lumber is on the ground for an addition to the school barn, and it is my intention to give more attention to dairy interests as fast as we can get in good condition for so doing.

The girls have received instruction in all branches of housework, and many of them have become quite proficient in the different lines of work. All employees of the industrial departments have taken an interest in their work, and, as a consequence, have obtained satisfactory results.

Buildings.—The buildings of the school, five brick and eleven frame, are in good condition. During the year an 8-room cottage has been erected as quarters and office for the physician, who was added to our force.

The electric-light plant, provided for in the Indian appropriation bill for 1898, has been installed and is giving entire satisfaction. By means of pressure regulator and back-pressure valves, so that the steam from the engine is returned to the heating system, we find that the additional expense for running the light plant during the winter months is but slight. During the months of June, September, and October, when the heating plant is not needed, the expense for pumping water and electric lights will not exceed \$1 per day, outside of regular salary of engineer.

Health.—The general health of the pupils and employees has been good. No contagious disease, except a doubtful case of measles, has prevailed among pupils or employees. There has been one death, that of a little girl who had pneumonia while at her home during the Christmas holidays and afterwards developed tuberculosis at the school. As soon as it was found that she could not recover she was sent to her home, where she died a few weeks later.

The following is taken from the report of the school physician, Dr. J. G. Bulloch:

This school has been fortunate in the past year in having had but one death, and that occurred in a child sent home with tuberculosis. A few accidents have occurred and cases of sickness, though only one case of measles, and no other disease of serious import, although a great many of these Indians are affected with scrofula or tuberculosis, and erysipelas prevails among them, the latter probably due to diseased fat pork, put up and apparently cured by saltpeter.

As we are liable to have all the contagious diseases here, and as scrofula is now considered a manifestation of tuberculosis, and the presence of these diseases becomes a source of danger to all, and as the sick can not receive proper and adequate attention, I wish to impress upon the Department the absolute necessity for a hospital and a nurse, with a small steam apparatus to disinfect all clothing.

Our sewerage system is positively dangerous to all concerned, the cesspool holding the matter from the closets being filled to the brim with a mass of reeking, putrid material, and if something is not done with this I apprehend an epidemic of some sort.

We should have a small crematory to burn other refuse matter and privy contents. I also consider that the stables and hogpens are too near the school, and would recommend their removal to a more distant spot. We are badly in need of a suitable lavatory.

General condition and needs of the school.—In other reports I have advanced the subject of increasing the capacity of the school, and not long ago plans and estimates therefor were forwarded your Office. Consequently, it is unnecessary to again discuss this subject. However, I would only say that statistics show that money expended for educating Oneida Indians has produced better results than with any other tribe. Therefore, money to be expended for Indian education could not be used to better advantage than at this place.

In addition to the enlargement of the plant, there are several other matters that need attention:

First. Sewerage should be extended to the river, or to a greater distance from the buildings. The estimated cost of such extension will not be far from \$800.

Second. A hospital is badly needed, in order that the sick pupils may receive proper care and that others may be taught to properly care for them. It is impossible to give either proper care to the sick or instruction to others as to the care of the same when the patient must be kept in a large dormitory with other pupils, with none of the necessary conveniences for caring for the sick.

Third. Enlargement and extension of the water system. The school has an abundant supply of pure water, which is pumped by steam into an elevated tank of about 5,000 gallons capacity. This tank is not large enough, and another, with 20,000 gallons capacity, should be erected on a 50-foot steel trestle, so as to provide better fire protection.

Fourth. The school farm should be enlarged. If no land can be acquired from Indians under existing laws, Congressional aid should be invoked, in order that lands adjoining the school and not utilized by Indians might be added to the school property.

Day schools.—The condition of the day schools is not as satisfactory as I would have it. As in other years, the chief obstacle in the way of their success is irregular attendance. In the winter season many are obliged to remain away from school on account of the poverty of parents, who are unable to properly clothe their children. Others, living within easy reach of a day school, do not send with regularity, not appreciating the work of the day school.

Another factor that works against the day school is the soliciting of pupils for nonreservation schools. I have endeavored not to allow pupils to be taken away that were within easy reach of a day school, but occasionally it occurs. The Indians fully appreciate the care of their children in the boarding schools, and take every opportunity of gaining admission to some of them. Probably four-fifths of the pupils of the day schools would be entered in some boarding school within one week if they were given an opportunity. I am of the opinion that this will continue to be the case so long as there are schools of both classes on the reservation and the difference in care and appearance of the pupils is so plainly apparent.

However, the actual work in the schools has been good; especially has this been the case in Nos. 1 and 2 schools. At No. 3 the work has not been so satisfactory, owing to a lack of adaptability on the part of the teacher. The attendance at this school has decreased 25 per cent during the year. School No. 4 has suffered from lack of regular attendance, but much good has been accomplished. No. 5 was discontinued early in December, owing to poor attendance. This school is located in an unprogressive, poverty-stricken locality, and a majority of the pupils can not attend school during cold weather for want of suitable clothing. The following statement shows the enrollment and average attendance, also average for year 1897:

| School. | Enroll- ment. | Average attend- ance, 1898. | Average attend- ance, 1897. |
|---------|------------------|--------------------------------------|--------------------------------------|
| No. 1 | 44 | 20 | 15 |
| No. 2 | 28 | 15.2 | 15 |
| No. 3 | 37 | 16.2 | 22 |
| No. 4 | 22 | 10.6 | 13 |
| No. 5 | 25 | 9.5 | 9.7 |

Employees.—All employees connected with the school during the past year have labored for its success. No "family jars" have occurred, and the year has passed very pleasantly and profitably. I fully appreciate the kindly feeling that has prevailed, and attribute much of the success of the work to this harmonious feeling.

Thanking your Office for favors rendered, I am,

Very respectfully, yours,

CHAS. F. PEIRCE,

Superintendent and Special Disbursing Agent.

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT TOMAH, WIS.

TOMAH INDIAN SCHOOL,

Tomah, Wis., August 25, 1898.

SIR: I have the honor to submit my second annual report of this school. I am glad to report a very successful year. The work has been characterized by unusual harmony among employees and pupils. There has been an entire absence of trouble among or between employees, which so often mars the good effect of work done.

Attendance for the year was 125 and a fraction. The pupils were all carefully graded at the beginning of the year by the principal teacher, and all set to work at once along lines laid out in the course of study. Unusual progress was made in the schoolroom, and I can not say too much in praise of the untiring efforts of the teachers, and as much should be said of the work in the different industrial departments.

Under the direction of the matron and assistant matron, the pupils have kept the building in splendid condition, so that we were ready for inspection at any time. Being so near the city, we have a great many visitors, and all have been surprised to see the work done in the school.

The sewing room has been efficiently managed, and the girls have made splendid progress.

The work in the laundry has not been as satisfactory as might have been desired, owing, in part, to lack of equipment.

The farm work has been ably managed; boys have received thorough instruction in the use of farm machinery and the care of stock.

The carpenter has had from six to eight boys in the shop all the year, and they have been kept very busy in making minor improvements, such as a wagon shed, hog house, fencing, laying floors, painting, etc. Some of the boys have become very proficient in the use of tools. All of the pupils, both boys and girls, have been very willing and ready to do the work to which they were assigned, and all have made marked improvement.

Many substantial improvements have been made, among which are fire escapes; Wilkes heater and tank for supplying hot water to bathroom; standpipe erected in the center of the building and fire hose connected to it on each floor; several radiators have been put in where rooms were not properly heated. All this work has been done in a thorough and substantial manner and is giving satisfaction. The work on the new school building will soon be completed, and the shop building was finished last week. These two buildings will add greatly to the school, as we had no suitable schoolrooms, no assembly hall, and a very poor carpenter shop. The upper story of the frame building will be used for a wareroom, and all of our supplies can be kept together instead of being scattered about in different rooms.

We need a new pump very much. Our water is furnished by a windmill and pump, and there have been times this summer that we have had no water in the tank for three weeks. This affords us no adequate fire protection, and I shall submit the matter of procuring a steam pump in another communication.

I have the same report to make of the Winnebago Indians living in this vicinity as I made last year. They have little interest in the school and have given it very little support since it was established. They are classed as citizens, and have no agent. They buy all the whisky they want, when they have money for it, and the greater portion of the annuity money that is paid them by the Government is spent for whisky. There are more than 400 children of school age, and of this number I think that less than 80 have been in school. I have communicated with the county superintendents of the counties where they reside, and they tell me that no Indian children are or have been attending the public schools. The Winnebago Indians here are nearly all full-bloods, and they are about as far from civilization as they were fifty years ago, and this condition will continue unless we can manage in some way to force these children into school.

In closing, I will state that too much praise can not be given to the force of employees, whose efforts and sincere devotion to duty have insured the success of the year's work.

Thanking you and the members of the Indian Office for the many favors shown through the year, I am,

Very respectfully,

L. M. COMPTON, *Superintendent.*

The COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF SCHOOL AT WITTENBERG, WIS.

UNITED STATES INDIAN INDUSTRIAL SCHOOL,
Wittenberg, Wis., July 21, 1898.

SIR: I have the honor to submit my annual report of the Wittenberg Indian school for the fiscal year 1898. The year just passed, closing on the 30th of June with an entertainment at which a large number of visitors were present, has been one of the most successful school years in the history of this school. The attendance during the year, by quarters, is as follows: First quarter, 87 $\frac{2}{5}$; second quarter, 108 $\frac{3}{5}$; third quarter, 126 $\frac{1}{5}$; fourth quarter, 123 $\frac{1}{5}$. Average for the year 115 $\frac{1}{5}$.

The tribes represented here are: Winnebagos, 38; Oneidas, 50; Omaha, 1; Chipewas, 21; Menominees, 5; Stockbridges, 13.

Three Winnebago boys have been transferred to Haskell Institute, Kansas, during the year. The attendance has been regular, except as to the Winnebago children. We have, however, through a great deal of persuasion and exertion, been able to keep an attendance of about 40 Winnebago children. There are, however, in the neighborhood of 25 Winnebago children in this vicinity who are of school age and ought to attend school, but their parents are true subjects of the medicine man and very much averse to school and civilization. It is to be hoped that the progressive element of these Indians would prevail in the near future, and that these backward and uncivilized Indians would abandon their Indian war and medicine dances and become interested in the schooling of their children.

It would, in my opinion, be a wise move in the case of these Indians that their annuity money be placed with the respective superintendents of the schools in their neighborhood, and where indifference as to schooling or welfare of children manifested itself that said annuities be withheld from such negligent parents, as in the case at other agencies and schools. This placing of their annuities with the superintendents would also have a salutary effect upon the older Indians as to improving their farms more industriously.

A movement was on foot last spring to have a class of our larger and advanced pupils attend the public high school erected last year about 40 rods from our school, but through the inability of the village to furnish the text-books at the time the idea was abandoned for the present. The matter will, however, be submitted for your honored consideration the coming fall, when the village school board hope to have matters arranged satisfactorily to all parties. The idea of having our Indian pupils mingle and compete with the white children in school is indeed feasible, and I hope the plan will consummate in the near future.

Literary work.—The literary work has been carried on successfully by the same three competent teachers as last year. The examinations held at intervals, together with public entertainments given during the year, proves that very good work has been performed in this department. The teachers have also acquired a better insight into the methods of instruction, as outlined by the Dr. W. N. Hailmann, in language, number, and form work. Splendid results have also been attained in music and singing. Evening classes have been conducted by all teachers, especially entertaining and instructive.

Industrial work.—Work in this department has proceeded with the usual regularity. The carpenter shop, ably managed, has afforded a number of boys an opportunity to acquire skill in woodwork, the making of household furniture, and making and repair of different implements used on school farm. Regular instruction has been given to the older boys in drawing and figuring necessary in this profession.

The farm has been ably cared for by the school farmer and the boys. A good crop was raised last year and the crop for the present year promises better than for many years past. All timber on the school 80 is now cut and the process of getting all stumps out is progressing fast, so the time is not far distant when our boys can commence to use machinery to harvest hay and grain instead of the scythe and cradle. The boys are given regular training in the care of all stock, hogs, etc., on farm.

The girls have been given practical lessons in all pertaining to housewifery, cooking, baking, sewing, washing, etc.

Buildings.—The buildings are all in good repair. A superintendent's dwelling and barn was erected last fall, at a cost of \$1,600, relieving a long-felt want for better accommodations for employees at school.

Health.—Undivided health has been enjoyed through the year, no contagious diseases of any kind appearing at school. One death occurred during the year—that of a Chippewa boy, who died from pulmonary tuberculosis. Few cases have been confined to hospital, and those confined but for a few days. Two pupils were returned to their homes owing to continued ill health.

Social and ethical.—A brass band of sixteen pieces, singing societies, football and baseball teams have furnished the required amusement for pupils. Games, plays, and military drill have been kept up and encouraged by teachers and assistants, proving very beneficial to the interest of the school. Public entertainments and concerts have been given during the year, bringing great credit to teachers and pupils of the school. All legal holidays have been appropriately observed, inculcating patriotism.

Pupils have been taught the simple rules of Christianity, and attend church or ethical exercises at the school every Sunday during the year.

It is a gratification to state that but few changes in school employees have been made during the year, and no doubt to this is due the very satisfactory work of the past school year. I take this opportunity to express my appreciation of the faithful work performed by my assistants, without whose earnest cooperation such good results could not have been attained.

Supervisor Smith visited us during the year and his suggestions and encouragement were thankfully received by the employees and myself.

In conclusion I wish to express my gratitude for courteous treatment and kind consideration tendered me during the past year.

Very respectfully,

AXEL JACOBSON,
Superintendent and Special Disbursing Agent.

THE COMMISSIONER OF INDIAN AFFAIRS.

REPORT OF NORMAL AND AGRICULTURAL INSTITUTE, HAMPTON, VA.

SIR: It was twenty years ago that 17 young Indian men, ex-prisoners of war, were landed at midnight upon our shores and proceeded to demonstrate to the Government that had allowed them the privilege, and to the friends who had aided them in obtaining it, the fact that they had both the will and the ability to put aside the old tribal customs and enter in earnest upon a civilized, Christian life.

Since then Hampton has received young men and women from 45 tribes and from 15 States and Territories, keeping up a yearly quota of about 135 and sending back annually 25 or 30 to their homes among their own people or to positions in the Indian schools of the West. A few have settled permanently in the East.

The enrollment of Indians for the past school year has been 135—50 girls and 85 boys. The following tribes have been represented:

| | | | |
|-------------------|----|--------------------------------|----|
| Arickaree | 5 | Seneca, Indian Territory | 3 |
| Sioux | 21 | Wichita | 1 |
| Omaha | 3 | Navajo | 1 |
| Winnebago | 5 | Apache | 1 |
| Oneida | 42 | Cherokee | 18 |
| Stockbridge | 11 | Tuscarora | 3 |
| Chippewa | 4 | Onondaga | 3 |
| Ponca | 2 | Seneca, New York | 13 |
| Cayuga | 1 | | |

They have been classified as follows:

| | Girls. | Boys. | | Boys. |
|-------------------------------------|--------|-------|-----------------------------|-------|
| Classes: | | | Industrial departments: | |
| Normal | 3 | 0 | Harness maker | 1 |
| Senior | 3 | 5 | Carpenters | 25 |
| Middle | 5 | 5 | Blacksmiths | 15 |
| Junior | 15 | 19 | Upholsterer | 1 |
| Junior preparatory | 17 | 44 | Shoemakers | 5 |
| Night school | 0 | 1 | Turner | 1 |
| Trade school | 0 | 2 | Bricklayers | 5 |
| Preparatory trade school | 0 | 3 | Farmers and gardeners | 7 |
| Agricultural | 0 | 2 | Machinists | 5 |
| Training | 1 | 0 | Painters | 12 |
| At the North | 6 | 4 | Tailors | 3 |
| | | | Wheelwrights | 3 |
| Industrial departments: | 50 | 85 | | |
| Housework and industrial room | 44 | ----- | | |

During the summer 54 boys have practical training in agriculture in Northern homes.

Greater care than ever has been exercised in the selection of Indians. Coming to Hampton is held out as a reward of merit to the members of the Western schools, and instead of taking students from the blanket we are able to select those who have had good opportunities in Government and missionary schools. Instead of being obliged to have separate Indian preparatory classes, it is hoped that soon all Indian students will be sufficiently advanced to enter the regular academic classes.

The throwing together of the two dining rooms has resulted in marked improvement in discipline. While separate tables and quarters for the Indian and colored are desirable, as those of both races naturally associate with one another, comingling in the shop and schoolroom is most desirable and helpful, especially to the Indians, who make much more rapid progress in English and the industries when thrown with the colored students.

Our thanks are due to the Secretary of the Interior, Hon. Cornelius N. Bliss, for allowing a company of New York Indians to come to Hampton this year. Some of our best workers, not only in that State, but in the West, have come from the New York reservations. The position of these Indians, hemmed in as they are by white civilization, is in some respects more difficult than that of the Western tribes.

An interesting feature of the new parties this year was the arrival of six Arickarees from Fort Berthold, N. Dak. They were sent by one Hampton graduate, now field matron there among her own people, and escorted by another graduate of the Winnebago tribe. The eldest of these 'Rees, a former Carlisle pupil, came to fit herself to be a nurse among the Indians, and is taking the course at the Dixie Hospital. One of the boys who had never been to school off the reservation passed a good examination for the junior class.

The advance in Western schools seems to make it desirable to send out to their graduates or other Indian students asking to come to Hampton application blanks, that they may more clearly understand not only the rules of the school to which they are expected to conform, but the needful qualifications of age, scholarship, character, etc.

More than half of the Indians have this year been in the regular academic course, and it is gratifying that less and less are they a drag on their classes, through lack of interest or of responsiveness, while not a few are among the best scholars in their sections. We feel it is decidedly a point gained when an Indian can know that an honor or privilege is given him not because he is an Indian, but because he has fairly won it in honorable competition.

The Indian boys have been quick to appreciate the advantages afforded them by manual-training and trade school courses. Making the manual training a part of the regular academic course has dignified it in the minds of the students. The fact that they are working out their mathematics and science in the shops, on the farm, in the laundry, cooking school, or sewing room is stimulating, because giving reality and purpose to schoolroom life, which is very apt to be lacking in the ordinary school.

Every academic day student has some form of manual training in connection with each year of the course. For the young men the course includes bench work, mechanical drawing, wood turning, and ironwork; for the young women a short course in bench work, a course in cooking, and one in sewing, which

includes the various forms of plain sewing, cutting, and fitting dresses. It is to be understood that manual training for both boys and girls is a part of the regular academic training, and is not intended to make trade students out of either boys or girls.

The trade school.—The productive industries where the boys and girls learned their trades, under the apprentice system, at the same time that they earned their own board, turned out a limited number of skilled workmen, and the farm sent out some excellent farmers. But with the improvement of the colored and Indian races it was clear that if Hampton was to hold its lead a more thorough and scientific training must be given and a much larger number each year be sent out. It was in response to this call for better trade teaching that the Armstrong and Slater Memorial Trade School Building was erected.

With some 75 per cent of the negro race living in the one-room cabin on rented land under the lien system of crops, and with the Indians of the west in much the same condition, Hampton seems justified in devoting much of its thought to preparing those who shall lead in getting of land, the building of homes, and the proper cultivation of the soil. It is clear that unless young people of the negro and Indian races can go out thoroughly trained and open up fields of labor for those of their own race the criminal population must continue to increase and the reservation system be perpetuated.

The trade school has now been in operation for a year, and is giving thorough training in blacksmithing, wheelwrighting, carpentry, woodturning, machine work, bricklaying, plastering, and painting; at the same time the boys receive regular lessons in physics, mathematics, and mechanical drawing.

The school's productive industries, which were formerly used as the stepping stone to the academic department, are now to be thrown open only to those who have finished a year in the trade school, and will thus afford them practice in actual business with work for the market. This is necessary in the case of the colored and Indian boys, because opportunities afforded white boys for learning the ways of business and the methods of trade are largely denied them. To each student being trained in the shops thorough instruction is given in the academic department. The thought insisted upon through the whole course is that each student shall be not only a good mechanic himself but one capable of teaching his trade to others.

Domestic science.—While the trade school is making skilled industrial teachers from among the boys, better facilities are needed for the industrial and home training of the girls. The gift of a generous friend has made possible a new building, where cooking, sewing, dressmaking, laundering, and the care of the home will be taught more satisfactorily than heretofore. A fear has been expressed lest by offering opportunities to the girls for learning these industries we should draw them away from their work as teachers. Emphasis is still to be laid upon the fact that they are to be teachers, and in case they show aptitude may become industrial teachers. Nothing is more essential at this period in the history of the race than the development of the home. If woman is to assume her proper place, the home must be strengthened. It must not only be a lodging place but a center of attraction and interest.

The technical training that the Indian girls receive in this new building gives nicety, finish, and thoroughness to their work. The actual every-day housework in Winona Lodge under careful supervision, the making, mending, and laundering of their own clothes and bedding, and the summer experiences in Northern kitchens and households teach the work of real life, when things must be done and only so much time is given to do them in. The union of the two we hope will make our girls better prepared than ever to be the mistresses of their own homes, or for the Government positions of matron, cook, seamstress, laundress, or their assistants—positions which a number of returned Hampton students are already occupying.

Agriculture.—This new building also supplies a home for an agricultural department whose work becomes each year more important. With its laboratories, dairies, class-rooms, and museums, it offers unsurpassed opportunities for this important study—opportunities which it is intended shall be extended to the girls as well as to the boys. Instruction in the preparation of food should be closely connected with the raising of food. Hampton is bending all its energies to create an enthusiasm for country life. In order to do this it is necessary to dignify the common things of life. The girls must be interested in agriculture as well as in cooking and the care of the homes. A small model farm has already been started, where with 4 acres of land, a small barn, and a house it is intended to show what can be done with a little land in the raising of food supplies, in beautifying the place with flowers, and in the inexpensive furnishing and decoration of the house.

Discipline and military instruction.—The eighty-five Indian boys have been organized into a separate company of the school battalion, which is better drilled and presents a better appearance than ever before. This is largely due to the thorough instruction and helpful criticism of Lieut. George H. McManus, U. S. A., stationed at Fort Monroe, whose service we have had an hour once a week on the day for battalion drill, and to the careful supervision of the daily drills.

Besides the regular routine drills and the system of guard duty, the three companies of day-school boys have had a systematic course in light gymnastics. It was found necessary to divide each company into two sections, because those boys who went through the first course last year were, for the most part, able to do more advanced work. The six classes have had about one forty-minute period of exercise per week after school.

The heartiness with which the young men have entered upon the gymnastic work is evidenced by the fact that a great many wish to come every day. We have been able to allow only a few of such to come, however, and they are selected from those who were required to make up some deficiency, discovered by the physical examination given early in the year.

Occasionally the six classes have had exercises together on the lawn, taking up two series (single and double) of wand drill, which we arranged to suit the music that was recently introduced into the United States Army for gun drill. The wand drill given in this way makes a very pleasant and acceptable change, the music, of course, always giving accuracy and precision of execution.

I think the young men as a whole and as individuals are better "set up" than for a long time.

In order to arrive at an intelligent idea of his physical condition, every boy in the day school has been carefully examined, and about 80 per cent of them have been accurately measured according to the Sargent system. These measurements reveal the physical irregularities and deficiencies of each individual, and as far as physical training could remedy, suggestions were made and simple and proper exercises prescribed. The result in the majority of cases has been most satisfactory.

The whole tone of the boys in and out of the buildings has been perceptibly raised. We have had stricter observance of rules with a more willing spirit this year than for several years, consequently fewer cases of discipline, as compared with last year. There has been very little tobacco used, and fewer cases than ever of going off without permission. This is due to two causes, viz, the general improvement of the students, and a more strenuous effort to insist upon the careful observance of the rules.

Health.—It is evident that Indians coming from a free life, approaching civilized conditions, especially those who for many years have been free from the ration system and have been self-supporting, have nearly the vitality and endurance of white boys and girls. The contrast between Indians who have come from different conditions of life is manifested most clearly in the convalescence of two Indians who have been equally ill. The one coming from civilized life will recuperate soundly and quickly, while months may elapse before the camp Indian is himself again.

The Oneida Indians from Wisconsin afford a striking illustration of the physical superiority of Indians who have passed the transition period. Out of 110 Oneidas—71 returned and 39 now present at the school—not one has died at Hampton, and only one has died at home during the period which has elapsed since the first Oneida came to the school, a period of thirteen years.

No Indian boy or girl has been sent home this year on account of health. One case of an Indian boy, unsound on arrival, has been very unsatisfactory. Repeated pulmonary hemorrhages have occurred in his case, and an application for his return home has been made.

The almost entire absence of scrofulous disease during the past year has been unusual and remarkable. The general health of all students almost invariably improves during their first year, which may account in considerable degree for the diminished complaint in regard to eye strain and other troubles in subsequent years.

Social and religious life.—The gatherings at Winona for both boys and girls, social, literary, musical, etc., which often take place Saturday evenings, and the debates of the boys at the wigwam, give some practice in what begins to be an important item in the life of the more advanced reservations. Already organized associations for mutual improvement and innocent recreation, or more informal gatherings at the boarding school of the agency, are waking up the young children to better things, and here returned students can be of no small help.

The wigwam sitting room affords a place for the boys to meet the lady in charge

and other teachers, to play quiet games, or to read the papers. This last occupation has often been of absorbing interest during the past year, and the latest news from the *Maine*, the possibility of war with Spain, caused the evening paper to be the center of an eager group at the close of study hour.

At Christmas time, besides the boxes sent out to Western teachers by the Lend-a-Hand Circles, a simple but dainty little Hampton calendar was sent to each returned Indian student. The letters of thanks called forth by this remembrance, often from the pupils of long ago, brought many expressions of love and loyalty for the old Hampton Home.

The Rev. Mr. Bryan, of St. John's Church, Hampton, who is associated with the chaplain in the care of the Indians, writes:

The quality of our Indian school seems finer this year than at any time since my connection with it. The most kindly and appreciative spirit is shown, a marked earnestness.

In the Sunday school this year we have been using the Blakeslee Lessons on the Life of our Lord, which give a more comprehensive view than we have been able to get in the study of the Gospels singly heretofore. I have had some very satisfactory talks with a number of the young people severally on the great questions of religion, and was much pleased to have six of the boys who were not communicants come to me of their own accord to speak of joining in public confession of Christ, and to make preparation therefor. I found them earnest and single minded, and they and others whom I approached on the subject are making good progress in the way of Christian living.

Returned students.—In the earlier days students returning to their homes had many grave difficulties to face. They had come from the camp to Hampton and were not able physically or intellectually to avail themselves of all that was offered them here. Very often they went home broken down in body, and in many ways ill prepared to cope with the unfriendly conditions that confronted them. Yet with only a tithe of the training we now consider necessary they struggled on and laid the foundation of a new public sentiment in both West and East, from which has sprung the whole system of Indian education.

To-day, if one visits the Oneidas in Wisconsin, or the Sioux and other tribes along the Missouri River, where most of the Hampton returned students are located, he will find that the educated young Indians are filling some of the most responsible positions at the agency, that the shops are filled with workmen who have learned something of their trades at school, and that the neat little farm-houses scattered out over the reservation are owned and cared for either by educated young men and women themselves or by those who have come directly under their influence. He will find, among the Sioux especially, that the dance has become rather a dull affair, no longer patronized by the first families, and that the public sentiment created and fostered by the Christian young men has done more than the Government rule to break down what has become only a very demoralizing pastime.

A glimpse into the better class of homes shows what an intelligent use of money can do. There you will find that the head of the family holds some position that brings him in a more reliable income than that of the farmer. If he is a carpenter, his home will show it in its exterior decoration and its interior comforts. If a clerk, or interpreter, or mechanic, his salary gives him the means to furnish his house more to his taste, and his home is likely to be a far more comfortable place than that of his white neighbor or the local hotel. The blot on this fair page is that the fact is soon discovered, and friends multiply with wonderful rapidity, especially at mealtime—which with the Indian is translated daytime—and a reasonably hospitable soul must be reconstructed before it can realize the virtue of thrift.

Scattered among the Indian camps one will find the little day school, over which presides an educated couple, who teach in the class room, give the boys lessons in carpentry and the girls practical training in sewing and cooking. In the boarding schools Indian young men and women will be found in almost all the subordinate positions and in many as teachers, matrons, and seamstresses. In the larger non-reservation schools a goodly number are filling positions as teachers, disciplinarians, or instructors in various trade and industrial departments.

The following will show how our returned students have been employed this past year:

| | |
|--|----|
| Attending higher schools | 4 |
| Attending other schools | 15 |
| Self-supporting off the reservation (engineers and machinists, 7; printers, 2; blacksmith, 1; painter, 1; trained nurse, 1; servants and farm hands, 4 girls and 9 boys, 13) | 25 |
| Teachers, academic (camp, 5; boarding, 12; district, 2) | 19 |
| Teachers, industrial | 31 |
| Field matrons | 3 |
| Church work (catechists, 12; missionaries, 11) | 23 |

| | |
|--|-----|
| Agency employees (interpreters, 5; clerks, 5; police, 9; carpenters and wheelwrights, 19; blacksmiths, 13; millers, 3; agency farmers, 5) | 59 |
| United States employees (surveyors, 2; postmaster, 1; soldier, 1) .. | 4 |
| Independent workers in the West (physicians, 2; trained nurse, 1; lawyer, 1; contractors, 3; storekeepers, 5; clerks, 5; carpenter, 1; blacksmiths, 4; painters, 5; loggers, 10; stock raisers, over 100-head farms, 23; good farms, 98) | 158 |
| Girls making good homes | 88 |

As in past years, we have kept as perfect a record as possible of the character of the work accomplished and the influence each student seems to have exerted. The 500 now living are graded in this respect as follows:

| | |
|--|-----|
| Excellent (those of unusual ability, influence, and opportunity) .. | 111 |
| Good (those living civilized, Christian lives) | 246 |
| Fair (the sick and unfortunate, from whom nothing can be expected) | 103 |
| Poor (those not actively bad, but exerting an unfavorable influence) | 31 |
| Bad (those doing wrong while knowing better) | 9 |

Thus, according to the most reliable information we have been able to obtain, we have a very fair margin to our claim that three-fourths of our returned students are doing well—346 excellent and good records to 40 poor and bad.

Respectfully submitted.

H. B. FRISSELL, *Principal*.

The COMMISSIONER OF INDIAN AFFAIRS.

INDIAN LEGISLATION PASSED DURING THE SECOND SESSION OF THE FIFTY-FIFTH CONGRESS.*

CHAP. 4. An Act To amend an Act granting to the Gila Valley, Globe and Northern Railway Company a right of way through the San Carlos Indian Reservation, in Arizona. January 13, 1898.
Vol. 30, p. 227.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section five of the Act entitled "An Act granting to the Gila Valley, Globe and Northern Railway Company a right of way through the San Carlos Indian Reservation, in the Territory of Arizona," approved February eighteen, eighteen hundred and ninety-five, be, and the same is hereby, amended so that said section shall read as follows:

"SEC. 5. That the right herein granted shall be forfeited by said company unless the road be constructed through the said reservation on or before February eighteenth, nineteen hundred."

Approved, January 13, 1898.

CHAP. 10. An Act To amend section twenty-two hundred and thirty-four of the Revised Statutes. January 27, 1898.
Vol. 30, p. 234.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section twenty-two hundred and thirty-four of the Revised Statutes of the United States is hereby amended so as to read as follows:

"SEC. 2234. There shall be appointed by the President, by and with the advice and consent of the Senate, a register of the land office and a receiver of public moneys for each land district established by law, who shall have charge of and attend to the sale of public and Indian lands within their respective districts, as provided by law and official regulations, and receivers shall be accountable under their official bonds for the proceeds of such sales, and for all fees, commissions, or other moneys received by them under any provision of law or official regulation."

Approved, January 27, 1898.

CHAP. 18. An Act Authorizing the Muscogee Coal and Railway Company to construct and operate a railway through the Indian Territory and Oklahoma Territory, and for other purposes. February 14, 1898.
Vol. 30, p. 241.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Muscogee Coal and Railway Company, a corporation created under and by virtue of the laws of the Territory of Oklahoma, be, and the same is hereby, authorized, invested, and empowered with the right of locating, constructing, owning, equipping, operating, using and maintaining a railway, telegraph, and telephone line through the Indian and Oklahoma Territories, beginning at a point to be selected by said railway company at or near Red Fork, in the Creek Nation, Indian Territory, and running thence over the most practicable and feasible route, through the Creek Nation, Indian Territory, thence

* This does not include items of appropriations for the Indian service unless they involve new legislation.

through the Territory of Oklahoma to Guthrie, in said Territory, with the right to construct, use, and maintain such tracks, turn-outs, sidings, and extensions as said company may deem to its interests to construct and maintain along and upon the right of way and depot grounds herein provided for: *Provided*, That nothing in this Act shall be so construed as to give said company any right to use or occupy the lands herein granted, except land belonging to the United States, without paying the owner thereof a reasonable and just compensation therefor.

Proviso.

Compensation
for land taken.

Land for sta-
tions.

Provisos.

Limit.
Lands not to
be sold by the
company, etc.

SEC. 2. That said corporation is authorized to take and use for all purposes of a railway, for its main line, and for no other purpose, a right of way one hundred feet in width through said Indian Territory and Territory of Oklahoma, and to take and use a strip of land one hundred feet in width, with a length of two thousand feet, in addition to right of way, for stations, for every ten miles of road, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the roadbed, not exceeding fifty feet in width on each side of said right of way, or as much thereof as may be included in said cut or fill: *Provided*, That no more than said addition of land shall be taken for any one station: *Provided, further*, That no part of the lands herein authorized to be taken shall be sold by the company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railway, telegraph, and telephone lines; and when any portion thereof shall cease to be used such portion shall revert to the nation or tribe of Indians or individual Indian from which the same shall have been taken.

Compensation
to occupants of
land, etc.

SEC. 3. That before said railway shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of any of the Indian nations or tribes through which it may be constructed, or by allotments under any law of the United States or agreement with the Indians, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisement of three disinterested referees, to be appointed one (who shall act as chairman) by the President, one by the chief of the nation to which said occupant belongs, or, in case of an allottee, by said allottee or by his duly authorized guardian or representative, and one by said railway company, who, before entering upon the duties of their appointment, shall take and subscribe, before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member, after due notice.

Appraisal by
referees.

Appointment
of.

Failure to ap-
point, etc.

Hearings.

Compensation
for services.

Witnesses.

Appeal.

And upon the failure of either party to make such appointment within thirty days after the appointment made by the President the vacancy shall be filled by the district judge of any United States court in the Indian Territory or the Territory of Oklahoma, upon the application of the other party. The chairman of said board shall appoint the time and place for all hearings within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of any case submitted to them under this Act, with mileage at five cents per mile. Witnesses shall receive the usual fees allowed by the courts of said nations and the courts of Oklahoma Territory. Costs, including compensation of the referees, shall be made a part of the award, and be paid by such railway company. In case the referees can not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after making the award and notice of the same, to appeal by original petition to any district court in the Indian Territory or Oklahoma Territory, which court shall have jurisdiction to

hear and determine the subject-matter of said petition. If, upon the hearing of said appeal, the judgment of the court shall be for a larger sum than the award of the referees, the cost of said appeal shall be adjudged against the railway company. If the judgment of the court shall be for the same sum as the award of the referees, then the cost shall be adjudged against the appellant. If the judgment of the court shall be for a smaller sum than the award of the referees, then the costs shall be adjudged against the party claiming damages. When proceedings have been commenced in court, the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of the railway.

Costs on appeal, etc.

SEC. 4. That said railway company shall not charge the inhabitants of said Territories a greater rate of freight than is charged by competing roads operated in the same territory: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway, and of messages on said telegraph and telephone lines, until a State government or governments shall exist in said Territories within the limits of which said railway, or a part thereof, shall be located; and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights within their respective limits by said railway; but Congress expressly reserves the right to fix and regulate, at all times, the cost of such transportation by said railway or said company whenever such transportation shall extend from one State into another, or shall extend into more than one State: *Provided, however*, That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And provided further*, That said railway company shall carry the mail at such prices as Congress may bylaw provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation.

Freight rates.
Provisos.
Passenger rates.

Limit.

Rates for mail.

SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes or individuals through whose lands said line may be located, the sum of fifty dollars, in addition to compensation provided for in this Act, for property taken and damages done to individual occupants by the construction of the railway for each mile of railway that it may construct in said Territories, said payments to be made in installments of five hundred dollars as each ten miles of road is graded: *Provided*, That if the general council of either of the nations or tribes through whose land said railway may be located shall, within four months after the filing of maps of definite location, as set forth in section six of this Act, dissent from the allowance provided for in this section, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this Act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of lands, with the right of appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further*, That the amount awarded or adjudged to be paid by the said railway company for dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the foregoing provisions, except as to annual tax. Said company shall also pay, so long as said Territories are owned and occupied by the Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in the said Territories. The money paid to the Secretary of the Interior under the provisions of this Act shall be apportioned by him in accordance with the laws and treaties now in force among the different nations and tribes according to the number of miles of railway that may be constructed by said railway company through their lands: *Provided*, That Congress shall have the right, so long as said lands are occupied and possessed by said nations or tribes, to impose such additional taxes upon said railway as it may deem just and proper for their benefit; and any

Payment to Secretary of the Interior for benefit of occupants of land taken, etc.

 Assignment of right of way.

Territory or State hereafter formed through which said railway shall have been established may exercise the like power as to such part of said railway as may lie within its limits. Said railway company shall have the right to survey and locate its railway immediately after the passage of this Act: *Provided further*, That a map showing the entire line of the road in the Indian Territory shall be filed with and approved by the Secretary of the Interior before the work of construction shall commence.

SEC. 6. That said company shall cause maps showing the route of its located lines through said Territories to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chiefs of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portion of said railway company's located line is filed as herein provided for, said company shall commence grading said located line within six months thereafter, or such location shall be void; and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before construction of any such section shall be begun.

SEC. 7. That the officers, servants, and employees of said company necessary to the construction and management of said railway shall be allowed to reside, while so engaged, upon such right of way, but subject to the provisions of the Indian intercourse laws and such rules and regulations as may be established by the Secretary of the Interior in accordance with said intercourse laws.

SEC. 8. That said railway company shall build at least fifty miles of its railway in said Territory within three years after the passage of this Act, and complete the remainder thereof within three years thereafter, or the rights herein granted shall be forfeited as to that portion not built; that said railway company shall construct and maintain continually all fences, road and highway crossings, and necessary bridges over said railway wherever said roads and highways do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.

SEC. 9. That the said Muscogee Coal and Railway Company shall accept this right of way upon the express condition, binding upon itself, its successors and assigns, that they will neither aid, advise, nor assist in any effort looking toward the changing or extinguishing the present tenure of the Indians in their lands, and will not attempt to secure from the Indian nations or tribes any further grant of land or its occupancy than is hereinbefore provided for: *Provided*, That any violation of the conditions mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this Act.

SEC. 10. That all mortgages executed by said railway company, conveying any portion of its railway, with its franchises, that may be constructed in said Indian Territory and Oklahoma Territory, shall be recorded in the Department of the Interior, and the record thereof shall be evidence and notice of their execution and shall convey all rights and property of said company as therein expressed.

SEC. 11. That Congress may at any time amend, add to, alter, or repeal this Act; and the right of way herein and hereby granted shall not be assigned or transferred in any form whatever prior to the construction and completion of the railway except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

Approved, February 14, 1898.

CHAP. 87. An Act To grant the right of way through the Indian Territory to the Denison, Bonham and New Orleans Railway Company for the purpose of constructing a railway, and for other purposes.

March 23, 1898.

Vol. 30, p. 341.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Denison, Bonham and New Orleans Railway Company, a corporation created under and by virtue of the laws of the State of Texas, be, and the same is hereby, invested and empowered with the right of locating, constructing, owning, equipping, operating, using, and maintaining a railway and telegraph and telephone line through the Indian Territory, beginning at a point to be selected by said railway company on Red River, near Denison, in Grayson County, in the State of Texas, and running thence by the most practicable route through the Indian Territory in a northerly direction to the southern boundary of the State of Kansas, at some point in the south line of Chautauqua County, in said State, with the right to construct, own and maintain, and operate a branch line of railway, beginning at a point not exceeding thirty-five miles north of Red River, on the main line, thence in a northwesterly direction to Fort Sill, in Oklahoma Territory, with the right to construct, use, and maintain such tracks, turn-outs, branches, sidings, and extensions as said company may deem it to their interest to construct.

Denison, Bonham and New Orleans Railway Company granted right of way through Indian Territory.

SEC. 3. That before said railway, telegraph, or telephone line shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of any of the Indian nations or tribes through which it may be constructed, or by allotments under any law of the United States or agreement with the Indians, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway, telegraph, or telephone line. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisement of three disinterested referees, to be appointed, one (who shall act as chairman) by the President of the United States, one by the chief of the nation to which such occupant belongs, or in case of an allottee, by said allottee, or by his duly authorized guardian or representative, and one by said

Referees, appraisal by.

—appointment of.

- oath, etc. railway company, who, before entering upon the duties of their appointment, shall take and subscribe, before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member, after due notice.
- majority may act. And upon the failure of either party to make such appointment within thirty days after the appointment made by the President of the United States the vacancy shall be filled by the district judge of any United States court in the Indian Territory, upon the application of the other party. The chairman of said board shall appoint the time and place for all hearings within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars for each day they are engaged in the trial of any case submitted to them under this Act, with mileage at five cents per mile actually traveled. Witnesses shall receive the usual fees allowed by the United States courts in the Indian Territory. Costs, including compensation of the referees, shall be made a part of the award, and be paid by said railway company. In case the referees can not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the findings of the referees shall have the right, within ninety days after making of the award and notice of the same, to appeal by original petition to any district court in said Territory, which court shall have jurisdiction to hear and determine the subject-matter of said petition. If upon hearing said appeal the judgment of the court shall be for a larger sum than the award of the referees, the cost of said appeal shall be adjudged against the railway company. If the judgment of the court shall be for the same sum as the award of the referees, then the cost shall be adjudged against the appellant. If the judgment of the court shall be for a smaller sum than the award of the referees, then the costs shall be adjudged against the party claiming damages. When proceedings have been commenced in court the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and to proceed with the construction of the railway.
- filling vacancies. SEC. 4. That said railway company shall not charge the inhabitants of said Territory a greater rate for freight than the rate authorized by the laws of the State of Texas for services or transportation of the same kind: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway, and messages on said telegraph and telephone lines, until a State government or governments shall exist in said Territory within the limits of which said railway, or part thereof, shall be located, and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights, within their respective limits, by said railway; but Congress expressly reserves the right to fix and regulate, at all times, the cost of such transportation by said railway or said company whenever such transportation shall extend from one State to another, or shall extend into more than one State or Territory: *Provided, however*, That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And further provided*, That said railway company shall carry the mail at such prices as Congress may by law provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation.
- Hearings, etc. Compensation of referees. Witness fees. Costs. Appeal. Costs of appeal. Work may begin on depositing double award. Freight charges. *Provisos.* Passenger rates. Regulations. Interstate, etc., transportation, limit. Mails. Additional compensation to tribes.
- SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said line may be located, the sum of fifty dollars, in addition to the compensation provided for in this Act for property taken and damages done to individual occupants by the construction of the railway, for each mile of railway that it may construct in said Territory, said payments to be made in install-

ments of five hundred dollars, as each ten miles of road is graded: *Provided*, That if the general council of either of the nations or tribes through whose land said railway may be located shall, within four months after the filing of maps of definite location, as set forth in section six of this Act, dissent from the allowance provided for in this section, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to such dissenting nation or tribe under the provisions of this Act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of lands, with the right to appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further*, That the amount awarded or adjudged to be paid by the said railway company to said dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the foregoing provisions. Said company shall also pay, so long as said Territory is owned and occupied by Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in said Territory. The money paid to the Secretary of the Interior under the provisions of this Act shall be apportioned by him in accordance with the laws and treaties now in force among the different nations and tribes, according to the number of miles of railway that may be constructed by said railway company through their lands: *Provided*, That Congress shall have the right, so long as said lands are occupied and possessed by said nations and tribes, to impose such additional taxes upon said railway as it may deem just and proper for their benefit; and any Territory or State hereafter formed, through which said railway shall have been established, may exercise the like power as to such part of said railway as may lie within its limits. Said railway company shall have the right to survey and locate its railway immediately after the passage of this Act.

SEC. 6. That said company shall cause maps showing the route of its located lines in the Territory and through the Territory to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chiefs of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portion of said railway's located line is filed as herein provided for, said company shall commence grading said located line within six months thereafter, or said location shall be void; and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before the construction of any such section shall be begun.

SEC. 7. That the officers, servants, and employees of said company necessary to the construction and management of said railway shall be allowed to reside, when so engaged, upon such right of way, but subject to the provisions of the Indian intercourse laws and such rules and regulations as may be established by the Secretary of the Interior in accordance with said intercourse laws.

SEC. 8. That said railway company shall build at least fifty miles of its railway in said Territory within three years after the passage of this Act and complete the remainder thereof within three years thereafter, or the rights herein granted shall be forfeited as to that portion not built; that said railway company shall construct and maintain continually all fences, road and highway crossings, and necessary bridges over its railway wherever said roads do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.

SEC. 9. That the said Denison, Bonham and New Orleans Railway Company shall accept this right of way upon the express condition, binding upon itself, its successors and assigns, that it will neither aid, advise, nor assist in any effort looking toward the changing or extinguishing the present tenure of the Indians in their lands, and will not attempt to secure from the Indian Nation any further grant of land, or its occupancy, than is hereinbefore provided: *Provided*, That any violation of the condition mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this Act.

CHAP. 100. An Act Granting the right to the Omaha Northern Railway Company to construct a railway across, and establish stations on, the Omaha and Winnebago reservations, in the State of Nebraska, and for other purposes.

March 26, 1898.

Vol. 30, p. 344.

Omaha Northern Railway granted right of way across Omaha and Winnebago Indian reservations, Nebr. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there is hereby granted to the Omaha Northern Railway Company, a corporation organized and existing under and by virtue of the laws of the State of Nebraska, and its successors and assigns, the right of way for the construction of its proposed railroad through the Omaha and Winnebago Indian reservations in said State. Such right of way shall be fifty feet in width on each side of the center line of said railroad, except where such width shall be insufficient for the construction of said line of railroad, or the materials thereon shall be insufficient or objectionable for use in the construction of said railroad, the said company shall have the right to occupy, or to take from, any lands adjacent to the line of said railroad, any material, stones and earth necessary for the construction, maintenance or operation of said railroad; also grounds adjacent to such right of way, for station buildings, depots, machine shops, side tracks, turn-outs and water stations, not to exceed in amount one hundred feet in width and two thousand feet in length for each station, to the extent of two stations within the limits of said reservation.

SEC. 2. That before said railroad shall be constructed through any land, claim, or improvement held by individual occupants, according to any treaties or laws of the United States, compensation shall be made to such occupant for all property to be taken or damage done by reason of the construction of said railroad. In case of failure to make satisfactory settlement with any such claimant, the just compensation shall be determined as provided for by the laws of the State of Nebraska enacted for the settlement of like controversies in such cases. The amount of damage resulting to the Omaha and Winnebago tribes of Indians in their tribal capacity by reason of the construction of said railroad through such lands as are not occupied in severalty shall be ascertained and determined in such manner as the Secretary of the Interior shall direct, and be subject to his final approval; but no right of any kind shall vest in said railway company in or to any part of the right of way herein provided for until plats thereof, made upon the actual survey for the definite location of such railroad, including grounds for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, shall have been approved and filed with the Secretary of the Interior, and until the compensation aforesaid shall have been fixed and paid, and the consent of the Indians on said reservations to the provisions of this Act shall have been obtained in a manner satisfactory to the President of the United States. Said company is hereby authorized to enter upon such reservations for the purpose of surveying and locating its line of railroad: *Provided*, That such railroad shall be located, constructed, and operated with due regard to the rights of the Indians and the rules of the Secretary of the Interior: *Provided further*, That said railway shall construct and maintain continually all fences, roads and highways, crossings, and necessary bridges over said railway wherever said roads and highways do now or may here-

after cross said railway's right of way, or may be by the proper authorities laid out across the same: *Provided further*, That said railway shall be constructed through said reservations within three years after the passage of this Act, or the rights herein granted shall be forfeited as to that portion of the road not constructed.

Construction.

SEC. 3. That Congress may at any time alter, amend, or repeal this Act; and the right of way hereby granted shall not be assigned or transferred in any form whatever, except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

CHAP. 104.—An Act Authorizing the Nebraska, Kansas and Gulf Railway Company to construct and operate a railway through the Indian Territory, and for other purposes.

March 30, 1898.

Vol. 30, p. 347.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Nebraska, Kansas and Gulf Railway Company, a corporation created under and by virtue of the laws of the State of Kansas, be, and the same is hereby, invested and empowered with the right of locating, constructing, owning, equipping, operating, using, and maintaining a railway, telegraph, and telephone line through the Indian and Oklahoma Territories, beginning at a point to be selected by said railway company along the south line of the county of Harper, State of Kansas, and running thence in a south and southeasterly direction, by way of Kingfisher, over the most practicable route, through the Indian Territory and the Territory of Oklahoma, to a point at or near Denison, State of Texas, thence to the city of Galveston, said State, with the right to construct, use, and maintain such tracks, turn-outs, sidings, and extensions as said company may deem it to their interest to construct along and upon the right of way and depot grounds herein provided for.

- convenient operation of said railroad, telegraph, and telephone lines; and when any portion thereof shall cease to be so used such portion shall revert to the nation or tribe of Indians, or individual Indians, from which the same shall have been taken.
- reversion.
- Damages. SEC. 3. That before said railway and telegraph and telephone line shall be constructed through any lands held by individual occupants, according to the laws, usages, and customs of any of the Indian tribes or nations through which it may be constructed, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway and telegraph and telephone line. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisement of disinterested referees, to be appointed, one (who shall act as chairman) by the President, one by the principal chief of the nation to which said occupant belongs, and one by said railway company, who, before entering upon the duties of their appointment, shall take and subscribe, before a judge or clerk of a United States court or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award to, and filed with, the Secretary of the Interior within sixty days from the completion thereof; and upon the failure of either party to make such appointment within thirty days after the appointment made by the President, the vacancy shall be filled by the judge of the United States court for the central district of the Indian Territory upon the application of the other party. A majority of said referees shall be competent to act in case of the absence of a member after due notice. The chairman of such board shall appoint the time and place for all hearings: *Provided*, That the hearings shall be within the county where the property is situated for which compensation is being assessed for the taking thereof or damages thereto, and at a place as convenient as may be for said occupant, unless the said occupant and said railway company agree to have the hearing at another place. Each of said referees shall receive for his services the sum of four dollars per day for each day he is engaged in assessing compensation, with mileage of five cents per mile for each mile necessarily traveled in the discharge of his duties. Said board of referees shall have power to call for and examine witnesses under oath, and said witnesses shall receive the usual fees allowed witnesses by the laws of the Territory or nation to which they belong. Costs, including compensation of the referees, shall be made a part of the award and be paid by the said railway company. In case the referees can not agree, then any two of them are authorized to make the award.

- Appeal. SEC. 4. That either party being dissatisfied with the findings and award of the referees shall have the right, within sixty days after the filing of the award, as hereinbefore provided, and notice of the same, to appeal by original petition to the United States district court for the central district of the Indian Territory, sitting at the place nearest and most convenient to the land and property which is sought to be condemned, and said court shall then proceed, for determining the damage done to the property, in the same and like manner as other civil actions in the said court. The said court shall have jurisdiction to hear and determine the subject-matter of said petition, and the same shall be heard and determined by said court in accordance with the laws now in force or hereafter enacted for the government of said court; and the measure of damages in condemning property authorized by this Act shall be that prescribed by the laws of the State of Arkansas, in so far as the same are not inconsistent with the laws now in force or hereafter enacted for the government of the United States courts in said Territories in such cases. If the judgment of the court shall be for a larger sum than the award of the referees, the costs of the litigation shall be adjudged against the railway company; and if the judgment of the court shall be for the same as the award of the referees, then the costs shall be adjudged against the appellant. If the judgment of the court shall be for a smaller sum than the award of the referees, then the costs shall be adjudged against the party claiming damages.
- to district courts, Indian Territory.
- Measure of damages.
- costs.

When proceedings shall have been commenced in court, the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then shall have the right to enter upon the property sought to be condemned, and proceed with the construction of the railroad and telegraph and telephone line. If such appeal is not taken as hereinbefore set forth, the award shall be conclusive and final, and shall have the same force and effect as a judgment of a court of competent jurisdiction.

Work may begin on depositing double award.

SEC. 5. That said railway company is authorized, and hereby given the right, to connect or cross with its tracks the tracks and railroad of any other company or person owning or operating a railway in the said Territories. In case of failure to make amicable settlement with any such corporation or person for such crossing, such compensation shall be determined in the same manner as hereinbefore provided for determining the compensation for land and other property taken and damaged.

Crossing the tracks of other roads.

SEC. 6. That said railway company shall not charge the inhabitants of said Territories a greater rate of freight than the rate authorized by the laws of the State of Arkansas for services or transportation of the same kind: *Provided*, That passenger rates on said railway shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railway and messages on said telegraph and telephone lines until a State government or governments shall exist in said Territories within the limits of which said railway, or a part thereof, shall be located; and then such State government or governments shall be authorized to fix and regulate the cost of transportation of persons and freights within their respective limits of said railway; but Congress expressly reserves the right to fix and regulate at all times the cost of such transportation by said railway or said company whenever such transportation shall extend from one State into another, or shall extend into more than one State: *Provided, however*, That the rate of such transportation of passengers, local or interstate, shall not exceed the rate above expressed: *And provided further*, That said railway company shall carry the mail at such prices as Congress may by law provide; and until such rate is fixed by law the Postmaster-General may fix the rate of compensation.

SEC. 7. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said line may be located, the sum of fifty dollars, in addition to the compensation provided for in this Act, for property taken and damages done to individual occupants by the construction of the railway, for each mile of railway that it may construct in said Territories, said payments to be made in installments of five hundred dollars as each ten miles of road is graded: *Provided*, That if the general council of either of the nations or tribes through whose lands said railway may be located shall, within four months after the filing of maps of definite location, as herein-after set forth, dissent from the allowance hereinbefore provided for, and shall certify the same to the Secretary of the Interior, then all compensation to be paid to said nations or tribes under the provisions of this Act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of lands, with the right of appeal to the courts upon the same terms, conditions, and requirements as therein provided: *Provided further*, That the amount awarded or adjudged to be paid by said railway company for said dissenting nation shall be in lieu of the compensation that said nation would be entitled to receive under the foregoing provision. Said company shall also pay, so long as said Territories are owned and occupied by the Indians, to the Secretary of the Interior the sum of fifteen dollars per annum for each mile of railway it shall construct in the said nation. The money paid to the Secretary of the Interior under the provisions of this Act shall be disbursed by him in accordance with the laws and treaties now in force with said nations or tribes: *Provided*, That Congress shall have the right, so long as said lands are occupied and possessed by said nations or tribes, to impose such additional taxes upon said railway as it may deem just and proper for the benefit of

CHAP. 298. An Act Authorizing the Campbell-Lynch Bridge Company to construct a bridge across the Arkansas River at or near Webbers Falls, Indian Territory.

May 14, 1898.

Vol. 30, p. 407.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be lawful for the Campbell-Lynch Bridge Company, a corporation organized under the laws of the State of Arkansas, its successors or assigns, to build, construct, and maintain a bridge and approaches thereto for the passage of wagons, cars, and vehicles of all kinds, for animals, horseback and foot passengers, across the Arkansas River at or near Webbers Falls, in said Cherokee Nation, Indian Territory, upon and from the land owned, claimed, and occupied by William W. Campbell and Susan F. Lynch, members and citizens of the Cherokee tribe of Indians, and the owners, claimants, and occupants of the land on both sides of the Arkansas River at the point where said bridge is to be built.

Campbell-
Lynch Bridge
Company may
bridge Arkan-
sas River, In-
dian Territory.

SEC. 2. That said bridge shall be built with such length of spans and at such elevation as the Secretary of War may require, and the said company shall, at its own expense, build and maintain such dikes, wing dams, booms, and other work as may, in the opinion of the Secretary of War, be necessary to maintain the channel of the river within the draw or main span of the bridge: *Provided,* That if said bridge be built as a drawbridge it shall be opened promptly upon reasonable signal for the passage of boats and other water craft; and whatever kind of bridge is constructed the company shall maintain thereon, at its own expense, such lights and other signals as the Light-House Board may prescribe: *Provided also,* That said bridge shall be recognized and known as a post route, upon which no higher charge shall be made for the transmission over the same of the mails, troops, and munitions of war of the United States than the rate per mile paid for their transportation over the railroads or highways leading to said bridge, and the United States shall have the right of way for a postal telegraph across said bridge: *And provided further,* That the company availing itself of the privilege of this Act shall submit to the Secretary of War for his approval drawings showing the plan and location of the said bridge, and until he has approved the said plan and location the bridge shall not be com-

- Right of way for highway. SEC. 3. That said Campbell-Lynch Bridge Company, its successors and assigns, is hereby authorized to take and use for all purposes of a highway or approaches to said bridge a right of way not exceeding one hundred feet in width on each side of the Arkansas River over the lands owned, occupied, and claimed by individuals under the laws and usages of the Cherokee Indians, or under the laws of the United States, and may contract for and obtain the same from such Indian or Indians by purchase: *Provided*, That no part of the lands herein authorized to be taken be leased or sold by the said Campbell-Lynch Bridge Company, and they shall not be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said highway; and when any portion thereof shall cease to be used such portion shall revert to the individual Indian or Indians from which the same shall have been taken.
- Proviso.*
—limitations. SEC. 4. That before said highway shall be constructed through any lands held by individual occupants according to the laws, customs, and usages of the Cherokee Nation, full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such highway. In case of failure to make amicable settlements with any occupant, such compensation shall be determined by the appraisement of three disinterested referees, to be appointed, one, who shall act as chairman, by the President of the United States, one by the chief of the nation to which said occupant belongs, and one by the said Campbell-Lynch Bridge Company, who, before entering upon the duties of their appraisements, shall take and subscribe before a district judge, clerk of a district court, or United States commissioner, an oath that they will faithfully and impartially discharge the duties of their appraisement, which oath, duly certified, shall be returned with their award to and filed with the Secretary of the Interior within sixty days from the completion thereof; and a majority of said referees shall be competent to act in case of the absence of a member after due notice.
- reversion. And upon the failure of either party to make such appointment within thirty days after the appointment made by the President, the vacancy shall be filled by the district judge of the United States court held at Muskogee, Indian Territory, upon the application of the other party. The chairman of said board shall appoint the time and place of all hearings within the nation to which such occupant belongs. Each of said referees shall receive for his services the sum of four dollars per day for each day he is engaged in the trial of any cause submitted to him under this Act, with mileage at five cents per mile.
- Compensation for land taken. Witnesses shall receive the usual fees allowed by the court of said nation. Costs, including compensation of said referees, shall be made a part of the award, and be paid by the said Campbell-Lynch Bridge Company. In case the referees do not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to the district court held at Fort Smith, Arkansas, which court shall have jurisdiction to hear and determine the subject-matter of the petition, according to the laws of the State of Arkansas for determining the damage when property is taken for railroad purposes. If, upon the hearing of said appeal, the judgment of the court shall be for a larger sum than the award of the referees, the costs of said appeal shall be adjudged against the said Campbell-Lynch Bridge Company. If the judgment of the court shall be for the same or a less sum than the award made by the referees, then the costs shall be adjudged against the party claiming damages. When proceedings have been commenced in court the said Campbell-Lynch Bridge Company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of said bridge.
- Referees.
- appointment.
- failure to appoint.
- Hearings.
- Costs.
- Appeal.
- Construction to proceed on payment of double the award, etc.

- SEC. 5. That the bridge authorized to be constructed under this Act shall be built and located under and subject to such regulations for the security of the navigation of said river as the Secretary of War shall prescribe. The jurisdiction is hereby vested in the United States court at Muskogee or Tahlequah, or in any United States court which may hereafter be established nearer to said bridge, over all controversies between the owners of said bridge, or between the owners and individuals, or between the members of any company which may hereafter be organized to own and operate said bridge, without regard to the race of the parties and the amount in controversy. Regulations.
Jurisdiction of controversies.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby granted to the Washington Improvement and Development Company, a corporation organized and existing under the laws of the State of Washington, and to its assigns, a right of way for its railway, telegraph, and telephone lines through the Colville Indian Reservation, in the State of Washington, beginning at a point on the Columbia River, near the mouth of the Sans Poil River; running thence in a northerly direction to a point in township thirty-seven north, of range thirty-two east, Willamette meridian; thence northerly to a point near the mouth of Curlew Creek; thence northerly to the international boundary line between British Columbia and the State of Washington; with the right to construct, use, and maintain such branches, spurs, switches, and side tracks as said company may deem necessary for the operation of said railway, together with all the rights granted to railroads by the Act of Congress entitled "An Act granting to railroads a right of way through the public lands of the United States," approved March third, eighteen hundred and seventy-five. Such right of way shall be fifty feet wide on each side of the center line of said railroad, and said company shall have the right to take from the lands adjacent to the line of said road material, stone, earth, and timber necessary for the construction of said railroad; also grounds adjacent to such right of way for station buildings and for necessary side tracks and switch tracks, not to exceed in amount two hundred feet in width and two thousand feet in length for each station, and to an extent not exceeding one station for each ten miles of road within the limits of said Colville Reservation.

Damages to Indian allottees. SEC. 2. That it shall be the duty of the Secretary of the Interior to fix the amount of compensation to be paid to any Indian allottees

whose lands may be taken by said company under this Act, and to provide the time and manner of payment thereof.

SEC. 3. That said company shall cause maps showing the route of its located lines through said Colville Reservation to be filed in the office of the Secretary of the Interior; and after the filing of said maps no claim for a subsequent settlement and improvement upon the right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portion of said railway company's located line is filed herein as provided for, said company shall commence grading said located line within six months thereafter, or such location shall be void, and said location shall be approved by the Secretary of the Interior in sections of twenty-five miles before the construction of any such section shall be begun.

SEC. 4. That said company is hereby authorized to enter upon said reservation for the purpose of surveying and locating its line of railroad.

SEC. 5. That the right herein granted shall be forfeited by said company unless at least twenty-five miles of said railroad shall be constructed through the said reservation within two years after the passage of this Act.

SEC. 6. That Congress reserves the right to alter, amend, or repeal this Act in whole or in part.

Approved, June 4, 1898.

CHAP. 391. An Act To amend section eight of the Act of Congress approved March second, eighteen hundred and ninety-six, granting a right of way to the Fort Smith and Western Coal Railroad Company through the Indian Territory, and for other purposes.

June 7, 1898.

Vol. 30, p. 433.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section eight of the Act of Congress approved March second, eighteen hundred and ninety-six, granting a right of way to the Fort Smith and Western Coal Railroad Company through the Indian Territory, and for other purposes, be, and the same is hereby, amended so as to read as follows:

"SEC. 8. That said railway company shall build and complete its said railway on or before December thirty-first, nineteen hundred, or this grant shall be forfeited; that said railway company shall construct and maintain, continually, all road and highway crossings and necessary bridges over said railway whenever said roads and highways do now or may hereafter cross said railway's right of way, or may be by the proper authorities laid out across the same.

Approved, June 7, 1898.

CHAP. 465. An Act Granting to the Kettle River Valley Railway Company a right of way through the north half of the Colville Indian Reservation in the State of Washington.

June 18, 1898.

Vol. 30, p. 475.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there be, and is hereby, granted to the Kettle River Valley Railway Company, a corporation organized under the laws of the State of Washington, a right of way for a railroad, to the extent of one hundred feet on each side of the center line thereof, across the said north half of the said Colville Indian Reservation, and also a right of way to the extent of one hundred feet on each side of the center line of any branches of said line, commencing at a point on the line of the Spokane Falls and Northern Railway, in Stevens County, Washington, crossing the Columbia River, and running thence westerly and northwesterly by the most feasible route through the north half of said reservation, said line or branches to connect at one or more points on the international boundary line with any road organized under the laws of the Dominion of Canada or Province of British Columbia, together with all the rights granted to railroads by the Act of Congress entitled "An Act granting to railroads a right of way through the public lands of the United States," approved March third, eighteen hun-

CHAP. 502. An Act To authorize the Missouri, Kansas and Texas Railway Company to straighten and restore the channel of the South Canadian River, in the Indian Territory, at the crossing of said railroad.

Preamble.

Whereas the Missouri, Kansas and Texas Railway Company, heretofore, under and pursuant to authority conferred upon it by an act of Congress of the United States, built and constructed its line of railroad through the Indian Territory and through the Creek and Choctaw nations, and pursuant to said Congressional authority, as a part of its said line of railroad, many years since, at great expense, built and constructed a railroad bridge across the South Canadian River; and

Whereas the said South Canadian River, at the point it is crossed by said railroad bridge, and for a long distance on both sides, forms the established boundary line between the said Creek and Choctaw nations; and

Whereas recently unprecedented floods occurred in the South Canadian Valley, resulting in that river overflowing its banks at many points and flooding the contiguous territory and also resulting in the diversion of that river from its old channel at the point it was so bridged by the Missouri, Kansas and Texas Railway Company and for some distance above and below, and the formation of a new course some distance to the north of said bridge, washing away the railroad and railroad bed for a distance of about two miles, seriously interrupting and impeding the transportation of the mails, troops, munitions of war, and interstate commerce generally; and

Whereas it is important that the course of said river be restored

to the old channel at and below the bridge of said Missouri, Kansas and Texas Railway Company, and so established immediately above said bridge as to prevent as far as practicable any further shiftings of the channel of the river and breaking of the railway embankments and overflows of adjoining farm lands, and make possible the continued and uninterrupted use of said railroad and said railroad bridge: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That said Missouri, Kansas and Texas Railway Company be, and it is hereby, authorized, at its sole expense, to restore the said river to its original channel, under and below said railroad bridge, and to that end to straighten and shorten the river above said bridge by excavating and constructing a channel for the river, commencing at said bridge and extending thence across sections twenty-eight and twenty-nine of township nine north, of range fifteen east, to the South Canadian River, at or near the northwest corner of said section twenty-nine, and for that purpose the said railway company is authorized to enter upon lands adjacent to said railroad.

Missouri, Kansas and Texas Railroad may restore South Canadian River to its original channel.

—location.

SEC. 2. That before said channel shall be excavated and constructed through any lands held by individual occupants according to the laws, customs, and usages of the Creek and Choctaw nations, full compensation shall be made to such occupants for all property to be taken or damaged by reason of the construction of said channel. In case of failure to make amicable settlements with any occupant, the railway company may file its petition in the United States court in the Indian Territory for the district in which the lands lie, reciting its failure to make such amicable settlement, and thereupon said court shall appoint a commission of three disinterested persons, having the qualifications of jurors in said court, to view the premises and appraise the damages to be sustained by such occupant, who, before entering upon their duties, shall take and subscribe before said courts or the clerk thereof an oath that they will faithfully and impartially discharge the duties imposed by their appointment, which oath, duly certified, shall be returned with their award. The award of a majority of said commissioners shall be the award of the commission, and such award shall be filed within ten days after the appointment of said commission. Either party being dissatisfied with the award may file exceptions in said court thereto within ten days from the filing of the same, and a trial of the issues raised by such exceptions shall be had in said court as in other cases. If neither party files exceptions the railway company shall pay into court, before entering upon the land condemned, the amount of said award, together with all costs, assessed as in ordinary cases in said court: *Provided*, That said commissioners shall be allowed and paid four dollars per day, with mileage at five cents per mile. If either party files exceptions, then the railway company shall pay into court double the amount of the award to abide the judgment thereof, and may at once proceed with the construction of said channel.

appears in the criminal laws heretofore extended over and put in force in said Territory, shall include all officers of the several tribes or nations of Indians in said Territory.

SEC. 2. That when in the progress of any civil suit, either in law or equity, pending in the United States court in any district in said Territory, it shall appear to the court that the property of any tribe is in any way affected by the issues being heard, said court is hereby authorized and required to make said tribe a party to said suit by service upon the chief or governor of the tribe, and the suit shall thereafter be conducted and determined as if said tribe had been an original party to said action.

SEC. 3. That said courts are hereby given jurisdiction in their respective districts to try cases against those who may claim to hold as members of a tribe and whose membership is denied by the tribe, but who continue to hold said lands and tenements notwithstanding the objection of the tribe; and if it be found upon trial that the same are held unlawfully against the tribe by those claiming to be members thereof, and the membership and right are disallowed by the commission to the Five Tribes, or the United States court, and the judgment has become final, then said court shall cause the parties charged with unlawfully holding said possessions to be removed from the same and cause the lands and tenements to be restored to the person or persons or nation or tribe of Indians entitled to the possession of the same: *Provided always*, That any person being a noncitizen in possession of lands, holding the possession thereof under an agreement, lease, or improvement contract with either of said nations or tribes, or any citizen thereof, executed prior to January first, eighteen hundred and ninety-eight, may, as to lands not exceeding in amount one hundred and sixty acres, in defense of any action for the possession of said lands show that he is and has been in peaceable possession of such lands, and that he has while in such possession made lasting and valuable improvements thereon, and that he has not enjoyed the possession thereof a sufficient length of time to compensate him for such improvements. Thereupon the court or jury trying said cause shall determine the fair and reasonable value of such improvements and the fair and reasonable rental value of such lands for the time the same shall have been occupied by such person, and if the improvements exceed in value the amount of rents with which such persons should be charged the court, in its judgment, shall specify such time as will, in the opinion of the court, compensate such person for the balance due, and award him possession for such time unless the amount be paid by claimant within such reasonable time as the court shall specify. If the finding be that the amount of rents exceed the value of the improvements, judgment shall be rendered against the defendant for such sum, for which execution may issue.

SEC. 4. That all persons who have heretofore made improvements on lands belonging to any one of the said tribes of Indians, claiming rights of citizenship, whose claims have been decided adversely under the Act of Congress approved June tenth, eighteen hundred and ninety-six, shall have possession thereof until and including December thirty-first, eighteen hundred and ninety-eight; and may, prior to that time, sell or dispose of the same to any member of the tribe owning the land who desires to take the same in his allotment: *Provided*, That this section shall not apply to improvements which have been appraised and paid for or payment tendered by the Cherokee Nation under the agreement with the United States approved by Congress March third, eighteen hundred and ninety-three.

SEC. 5. That before any action by any tribe or person shall be commenced under section three of this Act it shall be the duty of the party bringing the same to notify the adverse party to leave the premises for the possession of which the action is about to be brought, which notice shall be served at least thirty days before commencing the action by leaving a written copy with the defendant, or, if he can not be found, by leaving the same at his last known place of residence or business with any person occupying the premises over the age of twelve years, or, if his residence or

business address can not be ascertained, by leaving the same with any person over the age of twelve years upon the premises sought to be recovered and described in said notice; and if there be no person with whom said notice can be left, then by posting same on the premises.

SEC. 6. That the summons shall not issue in such action until the chief or governor of the tribe, or person or persons bringing suit in his own behalf, shall have filed a sworn complaint, on behalf of the tribe or himself, with the court, which shall, as near as practicable, describe the premises so detained, and shall set forth a detention without the consent of the person bringing said suit or the tribe, by one whose membership is denied by it: *Provided*, That if the chief or governor refuse or fail to bring suit in behalf of the tribe then any member of the tribe may make complaint and bring said suit.

Chief of tribe, etc., to file complaint, etc.

Proviso.
—refusal or failure.

SEC. 7. That the court in granting a continuance of any case, particularly under section 3, may, in its discretion, require the party applying therefor to give an undertaking to the adverse party, with good and sufficient securities, to be approved by the judge of the court, conditioned for the payment of all damages and costs and defraying the rent which may accrue if judgment be rendered against him.

Bond on continuance of case.

SEC. 8. That when a judgment for restitution shall be entered by the court the clerk shall, at the request of the plaintiff or his attorney, issue a writ of execution thereon, which shall command the proper officer of the court to cause the defendant or defendants to be forthwith removed and ejected from the premises and the plaintiff given complete and undisturbed possession of the same. The writ shall also command the said officer to levy upon the property of the defendant or defendants subject to execution, and also collect therefrom the costs of the action and all accruing costs in the service of the writ. Said writ shall be executed within thirty days.

Judgment for restitution.

—issuance of writ.

—costs, etc.

SEC. 9. That the jurisdiction of the court and municipal authority of the city of Fort Smith for police purposes in the State of Arkansas is hereby extended over all that strip of land in the Indian Territory lying and being situate between the corporate limits of the said city of Fort Smith and the Arkansas and Poteau rivers, and extending up the said Poteau River to the mouth of Mill Creek; and all the laws and ordinances for the preservation of the peace and health of said city, as far as the same are applicable, are hereby put in force therein: *Provided*, That no charge or tax shall ever be made or levied by said city against said land or the tribe or nation to whom it belongs.

Extension of police powers, etc., of Fort Smith to contiguous land, Indian Territory.

Proviso.
No tax on tribe to be levied.

SEC. 10. That all actions for restitution of possession of real property under this Act must be commenced by the service of a summons within two years after the passage of this Act, where the wrongful detention or possession began prior to the date of its passage; and all actions which shall be commenced hereafter, based upon wrongful detention or possession committed since the passage of this Act must be commenced within two years after the cause of action accrued. And nothing in this Act shall take away the right to maintain an action for unlawful and forcible entry and detainer given by the Act of Congress passed May second, eighteen hundred and ninety (Twenty-sixth United States Statutes, page ninety-five).

Time within which actions for restitution of real property must be commenced.

Actions for forcible entry, etc.

Vol. 26, p. 95.

Allotments.

SEC. 11. That when the roll of citizenship of any one of said nations or tribes is fully completed as provided by law, and the survey of the lands of said nation or tribe is also completed, the commission heretofore appointed under Acts of Congress, and known as the "Dawes Commission," shall proceed to allot the exclusive use and occupancy of the surface of all the lands of said nation or tribe susceptible of allotment among the citizens thereof, as shown by said roll, giving to each, so far as possible, his fair and equal share thereof, considering the nature and fertility of the soil, location, and value of same; but all oil, coal, asphalt, and mineral deposits in the lands of any tribe are reserved to such tribe, and no allotment of such lands shall carry the title to such oil, coal, asphalt, or mineral deposits; and all town sites shall also be reserved to the several tribes, and shall be set apart by the commission heretofore mentioned as incapable of allotment. There shall also be reserved from

—reservations from allotment.

- allotment a sufficient amount of lands now occupied by churches, schools, parsonages, charitable institutions, and other public buildings for their present actual and necessary use, and no more, not to exceed five acres for each school and one acre for each church and each parsonage, and for such new schools as may be needed; also sufficient land for burial grounds where necessary. When such allotment of the lands of any tribe has been by them completed, said commission shall make full report thereof to the Secretary of the Interior for his approval: *Provided*, That nothing herein contained shall in any way affect any vested legal rights which may have been heretofore granted by Act of Congress, nor be so construed as to confer any additional rights upon any parties claiming under any such Act of Congress: *Provided further*, That whenever it shall appear that any member of a tribe is in possession of lands, his allotment may be made out of the lands in his possession, including his home if the holder so desires: *Provided further*, That if the person to whom an allotment shall have been made shall be declared, upon appeal as herein provided for, by any of the courts of the United States in or for the aforesaid Territory, to have been illegally accorded rights of citizenship, and for that or any other reason declared to be not entitled to any allotment, he shall be ousted and ejected from said lands; that all persons known as intruders who have been paid for their improvements under existing laws and have not surrendered possession thereof who may be found under the provisions of this Act to be entitled to citizenship shall, within ninety days thereafter, refund the amount so paid them, with six per centum interest, to the tribe entitled thereto; and upon their failure so to do said amount shall become a lien upon all improvements owned by such person in such Territory, and may be enforced by such tribe; and unless such person makes such restitution no allotments shall be made to him: *Provided further*, That the lands allotted shall be nontransferable until after full title is acquired and shall be liable for no obligations contracted prior thereto by the allottee, and shall be nontaxable while so held: *Provided further*, That all towns and cities heretofore incorporated or incorporated under the provisions of this Act are hereby authorized to secure, by condemnation or otherwise, all the lands actually necessary for public improvements, regardless of tribal lines; and when the same can not be secured otherwise than by condemnation, then the same may be acquired as provided in sections nine hundred and seven and nine hundred and twelve, inclusive, of Mansfield's Digest of the Statutes of Arkansas.
- SEC. 12. That when report of allotments of lands of any tribe shall be made to the Secretary of the Interior, as hereinbefore provided, he shall make a record thereof, and when he shall confirm such allotments the allottees shall remain in peaceable and undisturbed possession thereof, subject to the provisions of this Act.
- SEC. 13. That the Secretary of the Interior is hereby authorized and directed from time to time to provide rules and regulations in regard to the leasing of oil, coal, asphalt, and other minerals in said Territory, and all such leases shall be made by the Secretary of the Interior; and any lease for any such minerals otherwise made shall be absolutely void. No lease shall be made or renewed for a longer period than fifteen years, nor cover the mineral in more than six hundred and forty acres of land, which shall conform as nearly as possible to the surveys. Lessees shall pay on each oil, coal, asphalt, or other mineral claim at the rate of one hundred dollars per annum, in advance, for the first and second years; two hundred dollars per annum, in advance, for the third and fourth years, and five hundred dollars, in advance, for each succeeding year thereafter, as advanced royalty on the mine or claim on which they are made. All such payments shall be a credit on royalty when each said mine is developed and operated and its production is in excess of such guaranteed annual advanced payments: and all lessees must pay said annual advanced payments on each claim, whether developed or undeveloped; and should any lessee neglect or refuse to pay such advanced annual royalty for the period of sixty days after the same becomes due and payable on any lease, the lease on which default is

—allowance for improvements.

Rate of royalty, how fixed.

SEC. 14. That the inhabitants of any city or town in said Territory having two hundred or more residents therein may proceed, by petition to the United States court in the district in which such city or town is located, to have the same incorporated as provided in chapter twenty-nine of Mansfield's Digest of the Statutes of Arkansas, if not already incorporated thereunder; and the clerk of said court shall record all papers and perform all the acts required of the recorder of the county, or the clerk of the county court, or the secretary of state, necessary for the incorporation of any city or town, as provided in Mansfield's Digest, and such city or town government, when so authorized and organized, shall possess all the powers and exercise all the rights of similar municipalities in said state of Arkansas. All male inhabitants of such cities and towns over the age of twenty-one years, who are citizens of the United States or of either of said tribes, who have resided therein more than six months next before any election held under this Act, shall be qualified voters at such election. That mayors of such cities and towns, in addition to their other powers, shall have the same jurisdiction in all civil and criminal cases arising within the corporate limits of such cities and towns as, and coextensive with, United States commissioners in the Indian Territory, and may charge, collect, and retain the same fees as such commissioners now collect and account for to the United States; and the marshal or other executive officer of such city or town may execute all processes issued in the exercise of the jurisdiction hereby conferred, and charge and collect the same fees for similar services, as are allowed to constables under the laws now in force in said Territory.

Incorporation of towns.

Qualified voters.

Powers of mayors.

Marshal.

All elections shall be conducted under the provisions of chapter fifty-six of said digest, entitled "Elections," so far as the same may be applicable; and all inhabitants of such cities and towns, without regard to race, shall be subject to all laws and ordinances of such city or town governments, and shall have equal rights, privileges, and protection therein. Such city or town governments shall in no

Elections, how conducted.

Equal rights, regardless of race.

Taxation.

case have any authority to impose upon or levy any tax against any lands in said cities or towns until after title is secured from the tribe; but all other property, including all improvements on town lots, which for the purposes of this Act shall be deemed and considered personal property, together with all occupations and privileges, shall be subject to taxation. And the councils of such cities and towns, for the support of the same and for school and other public purposes, may provide by ordinance for the assessment, levy, and collection annually of a tax upon such property, not to exceed in the aggregate two per centum of the assessed value thereof, in manner provided in chapter one hundred and twenty-nine of said digest, entitled "Revenue," and for such purposes may also impose a tax upon occupations and privileges.

Free schools.

Such councils may also establish and maintain free schools in such cities and towns, under the provisions of sections sixty-two hundred and fifty-eight to sixty-two hundred and seventy-six, inclusive, of said digest, and may exercise all the powers conferred upon special school districts in cities and towns in the State of Arkansas by the laws of said State when the same are not in conflict with the provisions of this Act.

Laws of Arkansas in force.

For the purposes of this section all the laws of said State of Arkansas herein referred to, so far as applicable, are hereby put in force in said Territory; and the United States court therein shall have jurisdiction to enforce the same, and to punish any violation thereof, and the city or town councils shall pass such ordinances as may be necessary for the purpose of making the laws extended over them applicable to them and for carrying the same into effect:

Provisos.

Intoxicating liquor prohibited.

Provided, That nothing in this Act, or in the laws of the State of Arkansas, shall authorize or permit the sale, or exposure for sale, of any intoxicating liquor in said Territory, or the introduction thereof into said Territory; and it shall be the duty of the district attorneys in said Territory and the officers of such municipalities to prosecute all violators of the laws of the United States relating to the introduction of intoxicating liquors into said Territory, or to their

Leases, etc., transferable.

sale, or exposure for sale, therein: *Provided further*, That owners and holders of leases or improvements in any city or town shall be privileged to transfer the same.

Commission to lay out town sites.

SEC. 15. That there shall be a commission in each town for each one of the Chickasaw, Choctaw, Creek, and Cherokee tribes, to consist of one member to be appointed by the executive of the tribe, who shall not be interested in town property, other than his home; one person to be appointed by the Secretary of the Interior, and one member to be selected by the town. And if the executive of the tribe or the town fail to select members as aforesaid, they may be selected and appointed by the Secretary of the Interior.

Surveys, etc.

Said commissions shall cause to be surveyed and laid out town sites where towns with a present population of two hundred or more are located, conforming to the existing survey so far as may be, with proper and necessary streets, alleys, and public grounds, including parks and cemeteries, giving to each town such territory as may be required for its present needs and reasonable prospective

Filing of plats.

growth; and shall prepare correct plats thereof, and file one with the Secretary of the Interior, one with the clerk of the United States court, one with the authorities of the tribe, and one with the town

Appraisal of lands.

authorities. And all town lots shall be appraised by said commission at their true value, excluding improvements; and separate appraisements shall be made of all improvements thereon; and no such appraisement shall be effective until approved by the Secretary of the Interior, and in case of disagreement by the members of such commission as to the value of any lot, said Secretary may fix the value thereof.

Preference right of purchase of lot to owner of improvements.

The owner of the improvements upon any town lot, other than fencing, tillage, or temporary buildings, may deposit in the United States Treasury, Saint Louis, Missouri, one-half of such appraised value; ten per centum within two months and fifteen per centum more within six months after notice of appraisement, and the remainder in three equal annual installments thereafter, depositing with the Secretary of the Interior one receipt for each payment,

and one with the authorities of the tribe, and such deposit shall be deemed a tender to the tribe of the purchase money for such lot.

If the owner of such improvements on any lot fails to make deposit of the purchase money as aforesaid, then such lot may be sold in the manner herein provided for the sale of unimproved lots; and when the purchaser thereof has complied with the requirements herein for the purchase of improved lots he may, by petition, apply to the United States court within whose jurisdiction the town is located for condemnation and appraisal of such improvements, and petitioner shall, after judgment, deposit the value so fixed with the clerk of the court; and thereupon the defendant shall be required to accept same in full payment for his improvements or remove same from the lot within such time as may be fixed by the court.

—failure to purchase, how sold.

—payment for improvements.

All town lots not improved as aforesaid shall belong to the tribe, and shall be in like manner appraised, and, after approval by the Secretary of the Interior, and due notice, sold to the highest bidder at public auction by said commission, but not for less than their appraised value, unless ordered by the Secretary of the Interior; and purchasers may in like manner make deposits of the purchase money with like effect, as in case of improved lots.

Unimproved lots, appraisal and sale.

The inhabitants of any town may, within one year after the completion of the survey thereof, make such deposit of ten dollars per acre for parks, cemeteries, and other public grounds laid out by said commission with like effect as for improved lots; and such parks and public grounds shall not be used for any purpose until such deposits are made.

Parks, cemeteries, etc.

The person authorized by the tribe or tribes may execute or deliver to any such purchaser, without expense to him, a deed conveying to him the title to such lands or town lots; and thereafter the purchase money shall become the property of the tribe; and all such moneys shall, when titles to all the lots in the towns belonging to any tribe have been thus perfected, be paid per capita to the members of the tribe: *Provided, however*, That in those town sites designated and laid out under the provisions of this Act where coal leases are now being operated and coal is being mined there shall be reserved from appraisal and sale all lots occupied by houses of miners actually engaged in mining, and only while they are so engaged, and in addition thereto a sufficient amount of land, to be determined by the appraisers, to furnish homes for the men actually engaged in working for the lessees operating said mines and a sufficient amount for all buildings and machinery for mining purposes: *And provided further*, That when the lessees shall cease to operate said mines, then, and in that event, the lots of land so reserved shall be disposed of as provided for in this Act.

Deeds of conveyance.

Per capita payment of proceeds of sales.

Provisos.

Reservation of coal miners houses, lands, etc.

—sale on cessation of mining.

SEC. 16. That it shall be unlawful for any person, after the passage of this Act, except as hereinafter provided, to claim, demand, or receive, for his own use or for the use of anyone else, any royalty on oil, coal, asphalt, or other mineral, or on any timber or lumber, or any other kind of property whatsoever, or any rents on any lands or property belonging to any one of said tribes or nations in said Territory, or for anyone to pay to any individual any such royalty or rents or any consideration therefor whatsoever; and all royalties and rents hereafter payable to the tribe shall be paid, under such rules and regulations as may be prescribed by the Secretary of the Interior, into the Treasury of the United States to the credit of the tribe to which they belong: *Provided*, That where any citizen shall be in possession of only such amount of agricultural or grazing lands as would be his just and reasonable share of the lands of his nation or tribe and that to which his wife and minor children are entitled, he may continue to use the same or receive the rents thereon until allotment has been made to him: *Provided further*, That nothing herein contained shall impair the rights of any member of a tribe to dispose of any timber contained on his, her, or their allotment.

Royalties and rents to be deposited in Treasury to credit of tribe.

Provisos.
Continuance until allotment of reasonable share of land.

Sale of timber on allotments.

SEC. 17. That it shall be unlawful for any citizen of any one of said tribes to inclose or in any manner, by himself or through another, directly or indirectly, to hold possession of any greater amount of lands or other property belonging to any such nation or tribe than that which would be his approximate share of the lands

Excessive holdings of land or property.

belonging to such nation or tribe and that of his wife and his minor children as per allotment herein provided; and any person found in such possession of lands or other property in excess of his share and that of his family, as aforesaid, or having the same in any manner inclosed, at the expiration of nine months after the passage of this Act, shall be deemed guilty of a misdemeanor.

Penalty.

SEC. 18. That any person convicted of violating any of the provisions of sections sixteen and seventeen of this Act shall be deemed guilty of a misdemeanor and punished by a fine of not less than one hundred dollars, and shall stand committed until such fine and costs are paid (such commitment not to exceed one day for every two dollars of said fine and costs), and shall forfeit possession of any property in question, and each day on which such offense is committed or continues to exist shall be deemed a separate offense. And the United States district attorneys in said Territory are required to see that the provisions of said sections are strictly enforced and they shall at once proceed to dispossess all persons of such excessive holding of lands and to prosecute them for so unlawfully holding the same.

Dispossession.

No further payment to tribal governments.

SEC. 19. That no payment of any moneys on any account whatever shall hereafter be made by the United States to any of the tribal governments or to any officer thereof for disbursement, but payments of all sums to members of said tribes shall be made under direction of the Secretary of the Interior by an officer appointed by him; and per capita payments shall be made direct to each individual in lawful money of the United States, and the same shall not be liable to the payment of any previously contracted obligation.

Per capita payments, how made.

Clerical assistance for commission, etc.

SEC. 20. That the commission hereinbefore named shall have authority to employ, with approval of the Secretary of the Interior, all assistance necessary for the prompt and efficient performance of all duties herein imposed, including competent surveyors to make allotments, and to do any other needed work, and the Secretary of the Interior may detail competent clerks to aid them in the performance of their duties.

Commission to Five Civilized Tribes.
—enrollment of Cherokee citizens, etc.

SEC. 21. That in making rolls of citizenship of the several tribes, as required by law, the Commission to the Five Civilized Tribes is authorized and directed to take the roll of Cherokee citizens of eighteen hundred and eighty (not including freedmen) as the only roll intended to be confirmed by this and preceding Acts of Congress, and to enroll all persons now living whose names are found on said roll, and all descendants born since the date of said roll to persons whose names are found thereon; and all persons who have been enrolled by the tribal authorities who have heretofore made permanent settlement in the Cherokee Nation whose parents, by reason of their Cherokee blood, have been lawfully admitted to citizenship by the tribal authorities, and who were minors when their parents were so admitted; and they shall investigate the right of all other persons whose names are found on any other rolls and omit all such as may have been placed thereon by fraud or without authority of law, enrolling only such as may have lawful right thereto, and their descendants born since such rolls were made, with such intermarried white persons as may be entitled to citizenship under Cherokee laws.

—of Cherokee freedmen.

It shall make a roll of Cherokee freedmen in strict compliance with the decree of the Court of Claims rendered the third day of February, eighteen hundred and ninety-six.

—of citizens by blood of all other tribes.

Said commission is authorized and directed to make correct rolls of the citizens by blood of all the other tribes, eliminating from the tribal rolls such names as may have been placed thereon by fraud or without authority of law, enrolling such only as may have lawful right thereto, and their descendants born since such rolls were made, with such intermarried white persons as may be entitled to Choctaw and Chickasaw citizenship under the treaties and the laws of said tribes.

—to determine identity of Choctaws claiming rights in Choctaw lands.

Said commission shall have authority to determine the identity of Choctaw Indians claiming rights in the Choctaw lands under article fourteen of the treaty between the United States and the Choctaw Nation concluded September twenty-seventh, eighteen hun-

dred and thirty, and to that end they may administer oaths, examine witnesses, and perform all other acts necessary thereto and make report to the Secretary of the Interior. Vol. 7, p. 335.

The roll of Creek freedmen made by J. W. Dunn, under authority of the United States, prior to March fourteenth, eighteen hundred and sixty-seven, is hereby confirmed, and said commission is directed to enroll all persons now living whose names are found on said rolls, and all descendants born since the date of said roll to persons whose names are found thereon, with such other persons of African descent as may have been rightfully admitted by the lawful authorities of the Creek Nation. —to enroll Creek freedmen.

It shall make a correct roll of all Choctaw freedmen entitled to citizenship under the treaties and laws of the Choctaw Nation, and all their descendants born to them since the date of the treaty. —Choctaw freedmen.

It shall make a correct roll of Chickasaw freedmen entitled to any rights or benefits under the treaty made in eighteen hundred and sixty-six between the United States and the Choctaw and Chickasaw tribes and their descendants born to them since the date of said treaty and forty acres of land, including their present residences and improvements, shall be allotted to each, to be selected, held, and used by them until their rights under said treaty shall be determined in such manner as shall be hereafter provided by Congress. —Chickasaw freedmen. Vol. 14, p. 769.

The several tribes may, by agreement, determine the right of persons who for any reason may claim citizenship in two or more tribes, and to allotment of lands and distribution of moneys belonging to each tribe; but if no such agreement be made, then such claimant shall be entitled to such rights in one tribe only, and may elect in which tribe he will take such right; but if he fail or refuse to make such selection in due time, he shall be enrolled in the tribe with whom he has resided, and there be given such allotment and distributions, and not elsewhere. Claim of citizenship in two or more tribes, etc.

No person shall be enrolled who has not heretofore removed to and in good faith settled in the nation in which he claims citizenship: *Provided, however,* That nothing contained in this Act shall be so construed as to militate against any rights or privileges which the Mississippi Choctaws may have under the laws of or the treaties with the United States. Settlement necessary to enrollment. *Proviso.* Mississippi Choctaws.

Said commission shall make such rolls descriptive of the persons thereon, so that they may be thereby identified, and it is authorized to take a census of each of said tribes, or to adopt any other means by them deemed necessary to enable them to make such rolls. They shall have access to all rolls and records of the several tribes, and the United States court in Indian Territory shall have jurisdiction to compel the officers of the tribal governments and custodians of such rolls and records to deliver same to said commission, and on their refusal or failure to do so to punish them as for contempt; as also to require all citizens of said tribes, and persons who should be so enrolled, to appear before said commission for enrollment, at such times and places as may be fixed by said commission, and to enforce obedience of all others concerned, so far as the same may be necessary, to enable said commission to make rolls as herein required, and to punish anyone who may in any manner or by any means obstruct said work. Aids to commission in making rolls, etc. —census. —access to tribal rolls.

The rolls so made, when approved by the Secretary of the Interior, shall be final, and the persons whose names are found thereon, with their descendants thereafter born to them, with such persons as may intermarry according to tribal laws, shall alone constitute the several tribes which they represent. —enforced appearance for enrollment, etc.

The members of said commission shall, in performing all duties required of them by law, have authority to administer oaths, examine witnesses, and send for persons and papers; and any person who shall willfully and knowingly make any false affidavit or oath to any material fact or matter before any member of said commission, or before any other officer authorized to administer oaths, to any affidavit or other paper to be filed or oath taken before said commission, shall be deemed guilty of perjury, and on conviction thereof shall be punished as for such offense. Force of rolls when approved. Powers of commission.

Agreement with Choctaw and Chickasaw tribes of Indians.

SEC. 22. That where members of one tribe, under intercourse laws, usages, or customs, have made homes within the limits and on the lands of another tribe they may retain and take allotment, embracing same under such agreement as may be made between such tribes respecting such settlers; but if no such agreement be made the improvements so made shall be appraised, and the value thereof, including all damages incurred by such settler incident to enforced removal, shall be paid to him immediately upon removal, out of any funds belonging to the tribe, or such settler, if he so desire, may make private sale of his improvements to any citizen of the tribe owning the lands: *Provided*, That he shall not be paid for improvements made on lands in excess of that to which he, his wife, and minor children are entitled to under this Act.

SEC. 23. That all leases of agricultural or grazing land belonging to any tribe made after the first day of January, eighteen hundred and ninety-eight, by the tribe or any member thereof shall be absolutely void, and all such grazing leases made prior to said date shall terminate on the first day of April, eighteen hundred and ninety-nine, and all such agricultural leases shall terminate on January first, nineteen hundred; but this shall not prevent individuals from leasing their allotments when made to them as provided in this Act, nor from occupying or renting their proportionate shares of the tribal lands until the allotments herein provided for are made.

SEC. 24. That all moneys paid into the United States Treasury at Saint Louis, Missouri, under provisions of this Act shall be placed to the credit of the tribe to which they belong; and the assistant United States treasurer shall give triplicate receipts therefor to the depositor.

SEC. 25. That before any allotment shall be made of lands in the Cherokee Nation, there shall be segregated therefrom by the commission heretofore mentioned, in separate allotments or otherwise, the one hundred and fifty-seven thousand six hundred acres purchased by the Delaware tribe of Indians from the Cherokee Nation under agreement of April eighth, eighteen hundred and sixty-seven, subject to the judicial determination of the rights of said descendants and the Cherokee Nation under said agreement. That the Delaware Indians residing in the Cherokee Nation are hereby authorized and empowered to bring suit in the Court of Claims of the United States, within sixty days after the passage of this Act, against the Cherokee Nation, for the purpose of determining the rights of said Delaware Indians in and to the lands and funds of said nation under their contract and agreement with the Cherokee Nation dated April eighth, eighteen hundred and sixty-seven; or the Cherokee Nation may bring a like suit against said Delaware Indians; and jurisdiction is conferred on said court to adjudicate and fully determine the same, with right of appeal to either party to the Supreme Court of the United States.

SEC. 26. That on and after the passage of this Act the laws of the various tribes or nations of Indians shall not be enforced at law or in equity by the courts of the United States in the Indian Territory.

SEC. 27. That the Secretary of the Interior is authorized to locate one Indian inspector in Indian Territory, who may, under his authority and direction, perform any duties required of the Secretary of the Interior by law, relating to affairs therein.

SEC. 28. That on the first day of July, eighteen hundred and ninety-eight, all tribal courts in Indian Territory shall be abolished, and no officer of said courts shall thereafter have any authority whatever to do or perform any act theretofore authorized by any law in connection with said courts, or to receive any pay for same; and all civil and criminal causes then pending in any such court shall be transferred to the United States court in said Territory by filing with the clerk of the court the original papers in the suit: *Provided*, That this section shall not be in force as to the Chickasaw, Choctaw, and Creek tribes or nations until the first day of October, eighteen hundred and ninety-eight.

SEC. 29. That the agreement made by the Commission to the Five Civilized Tribes with commissions representing the Choctaw and Chickasaw tribes of Indians on the twenty-third day of April, eighteen hundred and ninety-seven, as herein amended, is hereby

ratified and confirmed, and the same shall be of full force and effect if ratified before the first day of December, eighteen hundred and ninety-eight, by a majority of the whole number of votes cast by the members of said tribes at an election held for that purpose; and the executives of said tribes are hereby authorized and directed to make public proclamation that said agreement shall be voted on at the next general election, or at any special election to be called by such executives for the purpose of voting on said agreement; and at the election held for such purpose all male members of each of said tribes qualified to vote under his tribal laws shall have the right to vote at the election precinct most convenient to his residence, whether the same be within the bounds of his tribe or not: *Provided*, That no person whose right to citizenship in either of said tribes or nations is now contested in original or appellate proceedings before any United States court shall be permitted to vote at said election: *Provided further*, That the votes cast in both said tribes or nations shall be forthwith returned duly certified by the precinct officers to the national secretaries of said tribes or nations, and shall be presented by said national secretaries to a board of commissioners consisting of the principal chief and national secretary of the Choctaw Nation, the governor and national secretary of the Chickasaw Nation, and a member of the Commission to the Five Civilized Tribes, to be designated by the chairman of said commission; and said board shall meet without delay at Atoka, in the Indian Territory, and canvass and count said votes and make proclamation of the result; and if said agreement as amended be so ratified, the provisions of this Act shall then only apply to said tribes where the same do not conflict with the provisions of said agreement; but the provisions of said agreement, if so ratified, shall not in any manner affect the provisions of section fourteen of this Act, which said amended agreement is as follows:

—to be voted on;
proclamation.

Provisos.

flict with agree-
ment.

Ante p 499.

This agreement, by and between the Government of the United States, of the first part, entered into in its behalf by the Commission to the Five Civilized Tribes, Henry L. Dawes, Frank C. Armstrong, Archibald S. McKennon, Thomas B. Cabaniss, and Alexander B. Montgomery, duly appointed and authorized thereunto, and the governments of the Choctaw and Chickasaw tribes or nations of Indians in the Indian Territory, respectively, of the second part, entered into in behalf of such Choctaw and Chickasaw governments, duly appointed and authorized thereunto, viz: Green McCurtain, J. S. Standley, N. B. Ainsworth, Ben Hampton, Wesley Anderson, Amos Henry, D. C. Garland, and A. S. Williams, in behalf of the Choctaw Tribe or Nation, and R. M. Harris, I. O. Lewis, Holmes Colbert, P. S. Mosely, M. V. Cheadle, R. L. Murray, William Perry, A. H. Colbert, and R. L. Boyd, in behalf of the Chickasaw Tribe or Nation.

ALLOTMENT OF LANDS.

Allotment of
lands.

Witnesseth, That in consideration of the mutual undertakings, herein contained, it is agreed as follows:

That all the lands within the Indian Territory belonging to the Choctaw and Chickasaw Indians shall be allotted to the members of said tribes so as to give to each member of these tribes so far as possible a fair and equal share thereof, considering the character and fertility of the soil and the location and value of the lands.

That all the lands set apart for town sites, and the strip of land lying between the city of Fort Smith, Arkansas, and the Arkansas and Poteau rivers, extending up said river to the mouth of Mill Creek; and six hundred and forty acres each, to include the buildings now occupied by the Jones Academy, Tushkahoma Female Seminary, Wheelock Orphan Seminary, and Armstrong Orphan Academy, and ten acres for the capitol building of the Choctaw Nation; one hundred and sixty acres each, immediately contiguous to and including the buildings known as Bloomfield Academy, Lebanon Orphan Home, Harley Institute, Rock Academy, and Collins Institute, and five acres for the capitol building in the Chickasaw Nation, and the use of one acre of land for each church house now erected outside of the towns, and eighty-acres of land each for J. S. Morrow, H. R. Schermerhorn, and the widow of R. S. Bell, who have been laboring as missionaries in the Choctaw and Chickasaw

nations since the year eighteen hundred and sixty-six, with the same conditions and limitations as apply to lands allotted to the members of the Choctaw and Chickasaw nations, and to be located on lands not occupied by a Choctaw or a Chickasaw, and a reasonable amount of land, to be determined by the town-site commission, to include all court-houses and jails and other public buildings not hereinbefore provided for, shall be exempted from division. And all coal and asphalt in or under the lands allotted and reserved from allotment shall be reserved for the sole use of the members of the Choctaw and Chickasaw tribes, exclusive of freedmen: *Provided*, That where any coal or asphalt is hereafter opened on land allotted, sold, or reserved, the value of the use of the necessary surface for prospecting or mining, and the damage done to the other land and improvements, shall be ascertained under the direction of the Secretary of the Interior and paid to the allottee or owner of the land by the lessee or party operating the same, before operations begin. That in order to such equal division, the lands of the Choctaws and Chickasaws shall be graded and appraised so as to give to each member, so far as possible, an equal value of the land: *Provided further*, That the Commission to the Five Civilized Tribes shall make a correct roll of Chickasaw freedmen entitled to any rights or benefits under the treaty made in eighteen hundred and sixty-six between the United States and the Choctaw and Chickasaw tribes and their descendants born to them since the date of said treaty, and forty acres of land, including their present residences and improvements, shall be allotted to each, to be selected, held, and used by them until their rights under said treaty shall be determined, in such manner as shall hereafter be provided by act of Congress.

That the lands allotted to the Choctaw and Chickasaw freedmen are to be deducted from the portion to be allotted under this agreement to the members of the Choctaw and Chickasaw tribe so as to reduce the allotment to the Choctaws and Chickasaws by the value of the same.

That the said Choctaw and Chickasaw freedmen who may be entitled to allotments of forty acres each shall be entitled each to land equal in value to forty acres of the average land of the two nations.

That in the appraisement of the lands to be allotted the Choctaw and Chickasaw tribes shall each have a representative, to be appointed by their respective executives, to cooperate with the commission to the Five Civilized Tribes, or any one making appraisements under the direction of the Secretary of the Interior in grading and appraising the lands preparatory to allotment. And the land shall be valued in the appraisement as if in its original condition, excluding the improvements thereon.

That the appraisement and allotment shall be made under the direction of the Secretary of the Interior, and shall begin as soon as the progress of the surveys, now being made by the United States Government, will admit.

That each member of the Choctaw and Chickasaw tribes, including Choctaw and Chickasaw freedmen, shall, where it is possible, have the right to take his allotment on land, the improvements on which belong to him, and such improvements shall not be estimated in the value of his allotment. In the case of minor children, allotments shall be selected for them by their father, mother, guardian, or the administrator having charge of their estate, preference being given in the order named, and shall not be sold during his minority. Allotments shall be selected for prisoners, convicts, and incompetents by some suitable person akin to them, and due care taken that all persons entitled thereto have allotments made to them.

All the lands allotted shall be nontaxable while the title remains in the original allottee, but not to exceed twenty-one years from date of patent, and each allottee shall select from his allotment a homestead of one hundred and sixty acres, for which he shall have a separate patent, and which shall be inalienable for twenty-one years from date of patent. This provision shall also apply to the Choctaw and Chickasaw freedman to the extent of his allotment.

Selections for homesteads for minors to be made as provided herein—for minors.
 in case of allotment, and the remainder of the lands allotted to said
 members shall be alienable for a price to be actually paid, and to include no former indebtedness or obligation—one-fourth of said Lands alien-

 other land, and the acceptance of his patents by such allottee shall be —acceptance of
 operative as an assent on his part to the allotment and conveyance patent.
 of all the lands of the Choctaws and Chickasaws in accordance
 with the provisions of this agreement, and as a relinquishment of
 all his right, title, and interest in and to any and all parts thereof,
 except the land embraced in said patents, except also his interest in
 the proceeds of all lands, coal, and asphalt herein excepted from
 allotment.

That the United States shall provide by law for proper records of Records of
 land titles in the territory occupied by the Choctaw and Chickasaw land titles.
 tribes.

RAILROADS.

Railroads.

The rights of way for railroads through the Choctaw and Chick-
 asaw nations to be surveyed and set apart and platted to conform
 to the respective acts of Congress granting the same in cases where
 said rights of way are defined by such acts of Congress, but in cases
 where the acts of Congress do not define the same then Congress is
 memorialized to definitely fix the width of said rights of way for
 station grounds and between stations, so that railroads now con-
 structed through said nations shall have, as near as possible, uni-
 form rights of way; and Congress is also requested to fix uniform
 rates of fare and freight for all railroads through the Choctaw and
 Chickasaw nations; branch railroads now constructed and not built
 according to acts of Congress to pay the same rates for rights of
 way and station grounds as main lines.

Town sites.

TOWN SITES.

Commission to lay out.

It is further agreed that there shall be appointed a commission for each of the two nations. Each commission shall consist of one member, to be appointed by the executive of the tribe for which said commission is to act, who shall not be interested in town property other than his home, and one to be appointed by the President of the United States. Each of said commissions shall lay out town sites, to be restricted as far as possible to their present limits, where towns are now located in the nation for which said commission is appointed. Said commission shall have prepared correct and proper plats of each town, and file one in the clerk's office of the United States district court for the district in which the town is located, and one with the principal chief or governor of the nation in which the town is located, and one with the Secretary of the Interior, [to] be approved by him before the same shall take effect. When said towns are so laid out, each lot on which permanent, substantial, and valuable improvements, other than fences, tillage, and temporary houses, have been made, shall be valued by the commission provided for the nation in which the town is located at the price a fee-simple title to the same would bring in the market at the time the valuation is made, but not to include in such value the improvements thereon. The owner of the improvements on each lot shall have the right to buy one residence and one business lot at fifty per centum of the appraised value of such improved property, and the remainder of such improved property at sixty-two and one-half per centum of the said market value within sixty days from date of notice served on him that such lot is for sale, and if he purchases the same he shall, within ten days from his purchase, pay into the Treasury of the United States one-fourth of the purchase price, and the balance in three equal annual installments, and when the entire sum is paid shall be entitled to a patent for the same. In case the two members of the commission fail to agree as to the market value of any lot, or the limit or extent of said town, either of said commissioners may report any such disagreement to the judge of the district in which such town is located, who shall appoint a third member to act with said commission, who is not interested in town lots, who shall act with them to determine said value.

—failure to purchase, sale of.

If such owner of the improvements on any lot fails within sixty days to purchase and make the first payment on same, such lot, with the improvements thereon, shall be sold at public auction to the highest bidder, under the direction of the aforesaid commission, and the purchaser at such sale shall pay to the owner of the improvements the price for which said lot shall be sold, less sixty-two and one-half per cent of said appraised value of the lot, and shall pay the sixty-two and one-half per cent of said appraised value into [the] United States Treasury, under regulations to be established by the Secretary of the Interior, in four installments, as hereinbefore provided. The commission shall have the right to reject any bid on such lot which they consider below its value.

Sale of unappraised lots.

All lots not so appraised shall be sold from time to time at public auction (after proper advertisement) by the commission for the nation in which the town is located, as may seem for the best interest of the nations and the proper development of each town, the purchase price to be paid in four installments as hereinbefore provided for improved lots. The commission shall have the right to reject any bid for such lots which they consider below its value.

Payments.

All the payments herein provided for shall be made under the direction of the Secretary of the Interior into the United States Treasury, a failure of sixty days to make any one payment to be a forfeiture of all payments made and all rights under the contract: *Provided*, That the purchaser of any lot shall have the option of paying the entire price of the lot before the same is due.

—*Proviso*, before due.

Taxes.

No tax shall be assessed by any town government against any town lot unsold by the commission, and no tax levied against a lot sold, as herein provided, shall constitute a lien on same till the purchase price thereof has been fully paid to the nation.

The money paid into the United States Treasury for the sale of all town lots shall be for the benefit of the members of the Choctaw and Chickasaw tribes (freedmen excepted), and at the end of one year from the ratification of this agreement, and at the end of each year thereafter, the funds so accumulated shall be divided and paid to the Choctaws and Chickasaws (freedmen excepted), each member of the two tribes to receive an equal portion thereof.

Disposition of proceeds of sale of town lots.

That no law or ordinance shall be passed by any town which interferes with the enforcement of or is in conflict with the laws of the United States in force in said Territory, and all persons in such towns shall be subject to said laws, and the United States agrees to maintain strict laws in the territory of the Choctaw and Chickasaw tribes against the introduction, sale, barter, or giving away of liquors and intoxicants of any kind or quality.

Conflicting laws, etc.

Intoxicants.

That said commission shall be authorized to locate, within a suitable distance from each town site, not to exceed five acres to be used as a cemetery, and when any town has paid into the United States Treasury, to be part of the fund arising from the sale of town lots, ten dollars per acre therefor, such town shall be entitled to a patent for the same as herein provided for titles to allottees, and shall dispose of same at reasonable prices in suitable lots for burial purposes, the proceeds derived from such sales to be applied by the town government to the proper improvement and care of said cemetery.

Cemeteries, location of, etc.

That no charge or claim shall be made against the Choctaw or Chickasaw tribes by the United States for the expenses of surveying and platting the lands and town sites, or for grading, appraising, and allotting the lands, or for appraising and disposing of the town lots as herein provided.

Expenses of surveying, etc.

That the land adjacent to Fort Smith and lands for court-houses, jails, and other public purposes, excepted from allotment shall be disposed of in the same manner and for the same purposes as provided for town lots herein, but not till the Choctaw and Chickasaw councils shall direct such disposition to be made thereof, and said land adjacent thereto shall be placed under the jurisdiction of the city of Fort Smith, Arkansas, for police purposes.

Disposition of lands excepted from allotment.

There shall be set apart and exempted from appraisement and sale in the towns, lots upon which churches and parsonages are now built and occupied, not to exceed fifty feet front and one hundred feet deep for each church or parsonage: *Provided*, That such lots shall only be used for churches and parsonages, and when they cease to be used shall revert to the members of the tribes to be disposed of as other town lots: *Provided further*, That these lots may be sold by the churches for which they are set apart if the purchase money therefor is invested in other lot or lots in the same town, to be used for the same purpose and with the same conditions and limitations.

Exemption of church lands.

Provisos.
—limitations.

—sale by churches.

It is agreed that all the coal and asphalt within the limits of the Choctaw and Chickasaw nations shall remain and be the common property of the members of the Choctaw and Chickasaw tribes (freedmen excepted), so that each and every member shall have an equal and undivided interest in the whole; and no patent provided for in this agreement shall convey any title thereto. The revenues from coal and asphalt, or so much as shall be necessary, shall be used for the education of the children of Indian blood of the members of said tribes. Such coal and asphalt mines as are now in operation, and all others which may hereafter be leased and operated, shall be under the supervision and control of two trustees, who shall be appointed by the President of the United States, one on the recommendation of the Principal Chief of the Choctaw Nation, who shall be a Choctaw by blood, whose term shall be for four years, and one on the recommendation of the Governor of the Chickasaw Nation, who shall be a Chickasaw by blood, whose term shall be for two years; after which the term of appointees shall be four years. Said trustees, or either of them, may, at any time, be removed by the President of the United States for good cause shown. They shall each give bond for the faithful performance of their duties, under such rules as may be prescribed by the Secretary of the Interior. Their salaries shall be fixed and paid by their

Coal and asphalt, property in.

—revenues for education.

—trustees to supervise mines.

- report, etc. respective nations, each of whom shall make full report of all his acts to the Secretary of the Interior quarterly. All such acts shall be subject to the approval of said Secretary.
- Royalties payable into the Treasury, etc. All coal and asphalt mines in the two nations, whether now developed, or to be hereafter developed, shall be operated, and the royalties therefrom paid into the Treasury of the United States, and shall be drawn therefrom under such rules and regulations as shall be prescribed by the Secretary of the Interior.
- Confirmation of former contracts for operating. All contracts made by the National Agents of the Choctaw and Chickasaw Nations for operating coal and asphalt, with any person or corporation, which were, on April twenty-third, eighteen hundred and ninety-seven, being operated in good faith are hereby ratified and confirmed, and the lessee shall have the right to renew the same when they expire, subject to all the provisions of this Act.
- Avoidance of agreements with Indians individually for right to operate. All agreements heretofore made by any person or corporation with any member or members of the Choctaw or Chickasaw nations, the object of which was to obtain such member or members' permission to operate coal or asphalt, are hereby declared void: *Provided*, That nothing herein contained shall impair the rights of any holder or owner of a leasehold interest in any oil, coal rights, asphalt, or mineral which have been assented to by act of Congress, but all such interests shall continue unimpaired hereby and shall be assured by new leases from such trustees of coal or asphalt claims described therein, by application to the trustees within six months after the ratification of this agreement, subject, however, to payment of advance royalties herein provided for.
- Proviso.*
Leaseholds sanctioned by Congress unimpaired. All leases under this agreement shall include the coal or asphaltum, or other mineral, as the case may be, in or under nine hundred and sixty acres, which shall be in a square as nearly as possible, and shall be for thirty years. The royalty on coal shall be fifteen cents per ton of two thousand pounds on all coal mined, payable on the 25th day of the month next succeeding that in which it is mined. Royalty on asphalt shall be sixty cents per ton, payable same as coal: *Provided*, That the Secretary of the Interior may reduce or advance royalties on coal and asphalt when he deems it for the best interests of the Choctaws and Chickasaws to do so. No royalties shall be paid except into the United States Treasury as herein provided.
- Leases, extent of, etc. All lessees shall pay on each coal or asphalt claim at the rate of one hundred dollars per annum, in advance, for the first and second years; two hundred dollars per annum, in advance, for the third and fourth years; and five hundred dollars for each succeeding year thereafter. All such payments shall be treated as advanced royalty on the mine or claim on which they are made, and shall be a credit as royalty when each said mine is developed and operated, and its production is in excess of such guaranteed annual advance payments, and all persons having coal leases must pay said annual advanced payments on each claim whether developed or undeveloped: *Provided, however*, That should any lessee neglect or refuse to pay such advanced annual royalty for the period of sixty days after the same becomes due and payable on any lease, the lease on which default is made shall become null and void, and the royalties paid in advance thereon shall then become and be the money and property of the Choctaw and Chickasaw nations.
- asphalt.
Proviso.
Reduction, etc., royalties, etc. In surface, the use of which is reserved to present coal operators, shall be included such lots in towns as are occupied by lessees' houses—either occupied by said lessees' employees, or as offices or warehouses: *Provided, however*, That in those town sites designated and laid out under the provision of this agreement where coal leases are now being operated and coal is being mined, there shall be reserved from appraisement and sale all lots occupied by houses of miners actually engaged in mining, and only while they are so engaged, and in addition thereto a sufficient amount of land, to be determined by the town-site board of appraisers, to furnish homes for the men actually engaged in working for the lessees operating said mines, and a sufficient amount for all buildings and machinery for mining purposes: *And provided further*, That when the lessees shall cease to operate said mines, then and in that event the lots of land so reserved shall be disposed of by the coal trustees for the benefit of the Choctaw and Chickasaw tribes.
- Advance annual royalty on claim. *Proviso.*
—failure to pay. Surface, what included. *Provisos.*
Reservation of land for coal miners' homes on town sites. —buildings, etc. —sale of on cessation of mining.

That whenever the members of the Choctaw and Chickasaw tribes shall be required to pay taxes for the support of schools, then the fund arising from such royalties shall be disposed of for the equal benefit of their members (freedmen excepted) in such manner as the tribes may direct. School taxes etc.

It is further agreed that the United States courts now existing, or that may hereafter be created, in the Indian Territory shall have exclusive jurisdiction of all controversies growing out of the titles, ownership, occupation, possession, or use of real estate, coal, and asphalt in the territory occupied by the Choctaw and Chickasaw tribes; and of all persons charged with homicide, embezzlement, bribery, and embracery, breaches, or disturbances of the peace, and carrying weapons, hereafter committed in the territory of said tribes, without reference to race or citizenship of the person or persons charged with such crime; and any citizen or officer of the Choctaw or Chickasaw nations charged with such crime shall be tried, and, if convicted, punished as though he were a citizen or officer of the United States. Jurisdiction of United States courts.

And sections sixteen hundred and thirty-six to sixteen hundred and forty-four, inclusive, entitled "Embezzlement," and sections seventeen hundred and eleven to seventeen hundred and eighteen, inclusive, entitled "Bribery and Embracery," of Mansfield's Digest of the laws of Arkansas, are hereby extended over and put in force in the Choctaw and Chickasaw nations; and the word "officer," where the same appears in said laws, shall include all officers of the Choctaw and Chickasaw governments; and the fifteenth section of the act of Congress, entitled "An Act to establish United States courts in the Indian Territory, and for other purposes," approved March first, eighteen hundred and eighty-nine, limiting jurors to citizens of the United States, shall be held not to apply to United States courts in the Indian Territory held within the limits of the Choctaw and Chickasaw nations; and all members of the Choctaw and Chickasaw tribes, otherwise qualified, shall be competent jurors in said courts: *Provided*, That whenever a member of the Choctaw and Chickasaw nations is indicted for homicide, he may, within thirty days after such indictment and his arrest thereon, and before the same is reached for trial, file with the clerk of the court in which he is indicted, his affidavit that he can not get a fair trial in said court; and it thereupon shall be the duty of the judge of said court to order a change of venue in such case to the United States district court for the western district of Arkansas, at Fort Smith, Arkansas, or to the United States district court for the eastern district of Texas, at Paris, Texas, always selecting the court that in his judgment is nearest or most convenient to the place where the crime charged in the indictment is supposed to have been committed, which court shall have jurisdiction to try the case; and in all said civil suits said courts shall have full equity powers; and whenever it shall appear to said court, at any stage in the hearing of any case, that the tribe is in any way interested in the subject-matter in controversy, it shall have power to summon in said tribe and make the same a party to the suit and proceed therein in all respects as if such tribe were an original party thereto; but in no case shall suit be instituted against the tribal government without its consent. "Embezzle, ment."
"Bribery and embracery."
"Officer," defined.
Vol. 25, p. 786.

Indians competent as jurors.
Proviso.

Indians indicted for murder, change of venue.

Equity powers United States courts.

It is further agreed that no act, ordinance, or resolution of the council of either the Choctaw or Chickasaw tribes, in any manner affecting the land of the tribe, or of the individuals, after allotment, or the moneys or other property of the tribe or citizens thereof (except appropriations for the regular and necessary expenses of the government of the respective tribes), or the rights of any persons to employ any kind of labor, or the rights of any persons who have taken or may take the oath of allegiance to the United States, shall be of any validity until approved by the President of the United States. When such acts, ordinances, or resolutions passed by the council of either of said tribes shall be approved by the governor thereof, then it shall be the duty of the national secretary of said tribe to forward them to the President of the United States, duly certified and sealed, who shall, within thirty days after their reception, approve or disapprove the same. Said acts, ordinances, or resolutions, when so approved, shall be published in at least two newspapers having a—publication. Tribe to be made party where interested, etc.
Acts, ordinances, etc., to be approved by the President.

bona fide circulation in the tribe to be affected thereby, and when disapproved shall be returned to the tribe enacting the same.

Duration of agreement.

It is further agreed, in view of the modification of legislative authority and judicial jurisdiction herein provided, and the necessity of the continuance of the tribal governments so modified, in order to carry out the requirements of this agreement, that the same shall continue for the period of eight years from the fourth day of March, eighteen hundred and ninety-eight. This stipulation is made in the belief that the tribal governments so modified will prove so satisfactory that there will be no need or desire for further change till the lands now occupied by the Five Civilized Tribes shall, in the opinion of Congress, be prepared for admission as a State to the Union. But this provision shall not be construed to be in any respect an abdication by Congress of power at any time to make needful rules and regulations respecting said tribes.

—intent.

Per capita payments to be made to Indians individually.

That all per capita payments hereafter made to the members of the Choctaw or Chickasaw nations shall be paid directly to each individual member by a bonded officer of the United States, under the direction of the Secretary of the Interior, which officer shall be required to give strict account for such disbursements to said Secretary.

Appropriation for arrears of interest under treaty.

That the following sum be, and is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, for fulfilling treaty stipulations with the Chickasaw Nation of Indians, namely:

Vol. 10, p. 974.

For arrears of interest, at five per centum per annum, from December thirty-first, eighteen hundred and forty, to June thirtieth, eighteen hundred and eighty-nine, on one hundred and eighty-four thousand one hundred and forty-three dollars and nine cents of the trust fund of the Chickasaw Nation erroneously dropped from the books of the United States prior to December thirty-first, eighteen hundred and forty, and restored December twenty-seventh, eighteen hundred and eighty-seven, by the award of the Secretary of the Interior, under the fourth article of the treaty of June twenty-second, eighteen hundred and fifty-two, and for arrears of interest at five per centum per annum, from March eleventh, eighteen hundred and fifty, to March third, eighteen hundred and ninety, on fifty-six thousand and twenty-one dollars and forty-nine cents of the trust fund of the Chickasaw Nation erroneously dropped from the books of the United States March eleventh, eighteen hundred and fifty, and restored December twenty-seventh, eighteen hundred and eighty-seven, by the award of the Secretary of the Interior. under the fourth article of the treaty of June twenty-second, eighteen hundred and fifty-two, five hundred and fifty-eight thousand five hundred and twenty dollars and fifty-four cents, to be placed to the credit of the Chickasaw Nation with the fund to which it properly belongs: *Provided*, That if there be any attorneys' fees to be paid out of same, on contract heretofore made and duly approved by the Secretary of the Interior, the same is authorized to be paid by him.

Proviso.
Attorneys' fees.

Decision in pending case against United States and Wichita Indians to be basis of settlement for "Leased District" lands.

Vol. 11, p. 613.

It is further agreed that the final decision of the courts of the United States in the case of the Choctaw Nation and the Chickasaw Nation against the United States and the Wichita and affiliated bands of Indians, now pending, when made, shall be conclusive as the basis of settlement as between the United States and said Choctaw and Chickasaw nations for the remaining lands in what is known as the "Leased District," namely, the land lying between the ninety-eighth and one hundredth degrees of west longitude and between the Red and Canadian rivers, leased to the United States by the treaty of eighteen hundred and fifty-five, except that portion called the Cheyenne and Arapahoe country, heretofore acquired by the United States, and all final judgments rendered against said nations in any of the courts of the United States in favor of the United States or any citizen thereof shall first be paid out of any sum hereafter found due said Indians for any interest they may have in the so-called leased district.

Per capita payment of tribal trust funds.

It is further agreed that all of the funds invested, in lieu of investment, treaty funds, or otherwise, now held by the United States in trust for the Choctaw and Chickasaw tribes, shall be capitalized within one year after the tribal governments shall cease, so far as

the same may legally be done, and be appropriated and paid, by some officer of the United States appointed for the purpose, to the Choctaws and Chickasaws (freedmen excepted) per capita, to aid and assist them in improving their homes and lands.

It is further agreed that the Choctaws and Chickasaws, when their tribal governments cease, shall become possessed of all the rights and privileges of citizens of the United States. Acquisition of United States citizenship.

ORPHAN LANDS.

Orphan lands.

It is further agreed that the Choctaw orphan lands in the State of Mississippi, yet unsold, shall be taken by the United States at one dollar and twenty-five cents (\$1.25) per acre, and the proceeds placed to the credit of the Choctaw orphan fund in the Treasury of the United States, the number of acres to be determined by the General Land Office. —to be acquired by the United States.

In witness whereof the said commissioners do hereunto affix their names at Atoka, Indian Territory, this the twenty-third day of April, eighteen hundred and ninety-seven.

H. M. JACOWAY, Jr.,
Secretary, Five Tribes Commission.

SEC. 30. That the agreement made by the Commission to the Five Civilized Tribes with the commission representing the Muscogee (or Creek) tribe of Indians on the twenty-seventh day of September, eighteen hundred and ninety-seven, as herein amended, is hereby ratified and confirmed, and the same shall be of full force and effect if ratified before the first day of December, eighteen hundred and ninety-eight, by a majority of the votes cast by the members of said tribe at an election to be held for that purpose; and the executive of said tribe is authorized and directed to make public proclamation that said agreement shall be voted on at the next general election, to be called by such executive for the purpose of voting on said agreement; and if said agreement as amended be so ratified, the provisions of this Act shall then only apply to said tribe where the same do not conflict with the provisions of said agreement; but the provisions of said agreement, if so ratified, shall not in any manner affect the provisions of section fourteen of this Act, which said amended agreement is as follows: Agreement with Muscogee or Creek tribe of Indians.

This agreement, by and between the Government of the United States of the first part, entered into in its behalf by the Commission to the Five Civilized Tribes, Henry L. Dawes, Frank C. Armstrong, Archibald S. McKennon, Alexander B. Montgomery, and Tams Bixby, duly appointed and authorized thereunto, and the government of the Muscogee or Creek Nation in the Indian Territory of the second part, entered into in behalf of such Muscogee or Creek government, by its commission, duly appointed and authorized thereunto, viz, Pleasant Porter, Joseph Mingo, David N. Hodge, George A. Alexander, Roland Brown, William A. Sapulpa, and Conchartie Micco,

Witnesseth, That in consideration of the mutual undertakings herein contained, it is agreed as follows:

Act not to conflict with agreement.

Ante p. 499.

General allotment of land.

GENERAL ALLOTMENT OF LAND.

1. There shall be allotted out of the lands owned by the Muscogee or Creek Indians in the Indian Territory to each citizen of said nation one hundred and sixty acres of land. Each citizen shall have the right, so far as possible, to take his one hundred and sixty acres so as to include the improvements which belong to him, but such improvements shall not be estimated in the value fixed on his allotment, provided any citizen may take any land not already selected by another; but if such land, under actual cultivation, has on it any lawful improvements, he shall pay the owner of said improvements for same, the value to be fixed by the commission appraising the land. In the case of a minor child, allotment shall be selected for him by his father, mother, guardian, or the administrator having charge of his estate, preference being given in the order named, and shall not be sold during his minority. Allotments shall be selected for prisoners, convicts, and incompetents by some suitable person akin to them, and due care shall be taken that all persons entitled thereto shall have allotments made to them.
- selection for minor.
- prisoners, etc.
- Appraisal, etc.
2. Each allotment shall be appraised at what would be its present value, if unimproved, considering the fertility of the soil and its location, but excluding the improvements, and each allottee shall be charged with the value of his allotment in the future distribution of any funds of the nation arising from any source whatever, so that each member of the nation shall be made equal in the distribution of the lands and moneys belonging to the nation, provided that the minimum valuation to be placed upon any land in the said nation shall be one dollar and twenty-five cents (\$1.25) per acre.
- minimum valuation.
- Indians to be represented.
3. In the appraisal of the said allotment, said nation may have a representative to cooperate with a commission, or a United States officer, designated by the President of the United States, to make the appraisal. Appraisements and allotments shall be made under the direction of the Secretary of the Interior, and begin as soon as an authenticated roll of the citizens of the said nation has been made. All citizens of said nation, from and after the passage of this Act, shall be entitled to select from the lands of said nation an amount equal to one hundred and sixty acres, and use and occupy the same until the allotments therein provided are made.
- Use of land pending allotment.
- Controversies as to allotments.
4. All controversies arising between the members of said nation as to their rights to have certain lands allotted to them shall be settled by the commission making allotments.
- Possession.
5. The United States shall put each allottee in unrestricted possession of his allotment and remove therefrom all persons objectionable to the allottee.
- Equalizing allotments.
6. The excess of lands after allotment is completed, all funds derived from town sites, and all other funds accruing under the provisions of this agreement shall be used for the purpose of equalizing allotments, valued as herein provided, and if the same be found insufficient for such purpose, the deficiency shall be supplied from other funds of the nation upon dissolution of its tribal relations with the United States, in accordance with the purposes and intent of this agreement.
7. The residue of the lands, with the improvements thereon, if any there be, shall be appraised separately, under the direction of the Secretary of the Interior, and said lands and improvements sold in tracts of not to exceed one hundred and sixty acres to one person, to the highest bidder, at public auction, for not less than the appraised value per acre of land; and after deducting the appraised value of the lands, the remainder of the purchase money shall be paid to the owners of the improvement.
- Sale of residue of land, etc.
8. Patents to all lands sold shall be issued in the same manner as to allottees.
- Patents.

Special allotments.

SPECIAL ALLOTMENTS.

9. There shall be allotted and patented one hundred and sixty acres each to Mrs. A. E. W. Robertson and Mrs. H. F. Buckner (nee Grayson) as special recognition of their services as missionaries among the people of the Creek Nation.

10. Harrell Institute, Henry Kendall College, and Nazareth Institute, in Muscogee, and Baptist University, near Muscogee, shall have free of charge, to be allotted and patented to said institutions or to the churches to which they belong, the grounds they now occupy, to be used for school purposes only and not to exceed ten acres each.

RESERVATIONS.

Reservations.

11. The following lands shall be reserved from the general allotment hereinbefore provided:

All lands hereinafter set apart for town sites; all lands which shall be selected for town cemeteries by the town-site commission as hereinafter provided; all lands that may be occupied at the time allotment begins by railroad companies duly authorized by Congress as railroad rights of way; one hundred sixty acres at Okmulgee, to be laid off as a town, one acre of which, now occupied by the capitol building, being especially reserved for said public building; one acre for each church now located and used for purposes of worship outside of the towns, and sufficient land for burial purposes, where neighborhood burial grounds are now located; one hundred sixty acres each, to include the building sites now occupied, for the following educational institutions: Eufaula High School, Wealaka Mission, New Yaka Mission, Wetumpka Mission, Enchee Institute, Coweta Mission, Creek Orphan Home, Tallahassee Mission (colored), Pecan Creek Mission (colored), and Colored Orphan Home. Also four acres each for the six court-houses now established.

TITLES.

Titles.

12. As soon as practicable after the completion of said allotments the principal chief of the Muscogee or Creek Nation shall execute under his hand and the seal of said nation, and deliver to each of said allottees, a patent, conveying to him all the right, title, and interest of the said nation in and to the land which shall have been allotted to him in conformity with the requirements of this agreement. Said patents shall be framed in accordance with the provisions of this agreement and shall embrace the land allotted to such patentee and no other land. The acceptance of his patent by such allottee shall be operative as an assent on his part to the allotment and conveyance of all the land of the said nation in accordance with the provisions of this agreement, and as a relinquishment of all his rights, title, and interest in and to any and all parts thereof, except the land embraced in said patent; except, also, his interest in the proceeds of all lands herein excepted from allotment.

Patents to allottees.

—form, etc.

—acceptance of patent.

13. The United States shall provide by law for proper record of land titles in the territory occupied by the said nation.

Record of land titles.

TOWN SITES.

Town sites.

14. There shall be appointed a commission, which shall consist of one member appointed by the executive of the Muscogee or Creek Nation, who shall not be interested in town property other than his home, and one member who shall be appointed by the President of the United States. Said commission shall lay out town sites, to be restricted as far as possible to their present limits, where towns are now located. No town laid out and platted by said commission shall cover more than four square miles of territory.

Commission to lay out.

15. When said towns are laid out, each lot on which substantial and valuable improvements have been made shall be valued by the commission at the price a fee-simple title to the same would bring in the market at the time the valuation is made, but not to include in such value the improvements thereon.

Appraisal of improved lots.

16. In appraising the value of town lots, the number of inhabitants, the location and surrounding advantages of the town shall be considered.

Town lots, considerations of value.

17. The owner of the improvements on any lot shall have the right to buy the same at fifty per centum of the value within sixty days from the date of notice served on him that such lot is for sale, and

Purchase of improvements by the owner.

if he purchase the same he shall, within ten days from his purchase, pay into the Treasury of the United States one-fourth of the purchase price and the balance in three equal annual payments, and when the entire sum is paid he shall be entitled to a patent for the same, to be made as herein provided for patents to allottees.

Failure of appraisers to agree.

18. In any case where the two members of the commission fail to agree as to the value of any lot they shall select a third person, who shall be a citizen of said nation and who is not interested in town lots, who shall act with them to determine said value.

Failure of owner of improvements to purchase same.—sale of lot, etc.

19. If the owner of the improvements on any lot fail within sixty days to purchase and make the first payment on the same, such lot, with the improvements thereon (said lot and the improvements thereon having been theretofore properly appraised), shall be sold at public auction to the highest bidder, under the direction of said commission, at a price not less than the value of the lot and improvements, and the purchaser at such sale shall pay to the owner of the improvements the price for which said lot and the improvements thereon shall be sold, less fifty per centum of the said appraised value of the lot, and shall pay fifty per centum of said appraised value of the lot into the United States Treasury, under regulations to be established by the Secretary of the Interior, in four installments, as hereinbefore provided. Said commission shall have the right to reject a bid on any lot and the improvements thereon which it may consider below the real value.

—payment to owner of improvements.

Rejection of bids.

20. All lots not having improvements thereon and not so appraised shall be sold by the commission from time to time at public auction, after proper advertisement, as may seem for the best interest of the said nation and the proper development of each town, the purchase price to be paid in four installments, as hereinbefore provided for improved lots.

Preference right of purchase.

21. All citizens or persons who have purchased the right of occupancy from parties in legal possession prior to the date of signing this agreement, holding lots or tracts of ground in towns, shall have the first right to purchase said lots or tracts upon the same terms and conditions as is provided for improved lots, provided said lots or tracts shall have been theretofore properly appraised, as hereinbefore provided for improved lots.

Rejection of bids.

22. Said commission shall have the right to reject any bid for such lots or tracts which is considered by said commission below the fair value of the same.

Failure to make payments.

23. Failure to make any one of the payments as heretofore provided for a period of sixty days shall work a forfeiture of all payments made and all rights under the contract; provided that the purchaser of any lot may pay full price before the same is due.

Taxes.

24. No tax shall be assessed by any town government against any town lot unsold by the commission, and no tax levied against a lot sold as herein provided shall constitute a lien on the same until the purchase price thereof has been fully paid.

Conflicting laws, etc.

25. No law or ordinance shall be passed by any town which interferes with the enforcement of or is in conflict with the constitution or laws of the United States, or in conflict with this agreement, and all persons in such towns shall be subject to such laws.

Cemetery, location, etc.

26. Said commission shall be authorized to locate a cemetery within a suitable distance from each town site, not to exceed twenty acres; and when any town shall have paid into the United States Treasury for the benefit of the said nation ten dollars per acre therefor, such town shall be entitled to a patent for the same, as herein provided for titles to allottees, and shall dispose of same at reasonable prices in suitable lots for burial purposes; the proceeds derived therefrom to be applied by the town government to the proper improvement and care of said cemetery.

Expenses of surveying, etc.

27. No charge or claim shall be made against the Muscogee or Creek Nation by the United States for the expenses of surveying and platting the lands and town site, or for grading, appraising and allotting the land, or for appraising and disposing of the town lots as herein provided.

Reservation of church lands.

28. There shall be set apart and exempted from appraisement and sale, in the towns, lots upon which churches and parsonages

are now built and occupied, not to exceed fifty feet front and one hundred and fifty feet deep for each church and parsonage. Such lots shall be used only for churches and parsonages, and when they cease to be so used, shall revert to the members of the nation, to be disposed of as other town lots.

29. Said commission shall have prepared correct and proper plats of each town, and file one in the clerk's office of the United States district court for the district in which the town is located, one with the executive of the nation, and one with the Secretary of the Interior, to be approved by him before the same shall take effect. Filing of town plats.

30. A settlement numbering at least three hundred inhabitants, living within a radius of one-half mile at the time of the signing of this agreement, shall constitute a town within the meaning of this agreement. Congress may by law provide for the government of the said towns. Town, minimum population, etc., necessary of government of.

CLAIMS.

Claims.

31. All claims, of whatever nature, including the "Loyal Creek Claim" made under article 4 of the treaty of 1866, and the "Self Emigration Claim," under article 12 of the treaty of 1833, which the Muscogee or Creek Nation, or individuals thereof, may have against the United States, or any claim which the United States may have against the said nation, shall be submitted to the Senate of the United States as a board of arbitration; and all such claims against the United States shall be presented within one year from the date hereof, and within two years from the date hereof the Senate of the United States shall make final determination of said claim; and in the event that any moneys are awarded to the Muscogee or Creek Nation, or individuals thereof, by the United States, provision shall be made for the immediate payment of the same by the United States. Arbitration by the Senate.
Vol. 14, p. 787.
Vol. 7, p. 367.

JURISDICTION OF COURTS.

Jurisdiction of courts.

32. The United States courts now existing, or that may hereafter be created in the Indian Territory, shall have exclusive jurisdiction of all controversies growing out of the title, ownership, occupation, or use of real estate in the territory occupied by the Muscogee or Creek Nation, and to try all persons charged with homicide, embezzlement, bribery and embracery hereafter committed in the territory of said Nation, without reference to race or citizenship of the person or persons charged with any such crime; and any citizen or officer of said nation charged with any such crime shall be tried and, if convicted, punished as though he were a citizen or officer of the United States; and the courts of said nation shall retain all the jurisdiction which they now have, except as herein transferred to the courts of the United States. —United States courts.
—Indian courts.

ENACTMENTS OF NATIONAL COUNCIL.

Enactments of national council.

33. No act, ordinance, or resolution of the council of the Muscogee or Creek Nation in any manner affecting the land of the nation, or of individuals, after allotment, or the moneys or other property of the nation, or citizens thereof (except appropriations for the regular and necessary expenses of the government of the said nation), or the rights of any person to employ any kind of labor, or the rights of any persons who have taken or may take the oath of allegiance to the United States, shall be of any validity until approved by the President of the United States. When such act, ordinance, or resolution passed by the council of said nation shall be approved by the executive thereof, it shall then be the duty of the national secretary of said nation to forward same to the President of the United States, duly certified and sealed, who shall, within thirty days after receipt thereof, approve or disapprove the same, and said act, ordinance, or resolution, when so approved, shall be published in at least two newspapers having a bona fide circulation throughout the territory occupied by said nation, and when disapproved shall be returned to the executive of said nation. Acts, etc., to be approved by the President.
—publication.

MISCELLANEOUS.

Miscellaneous.

Lands not subject to debts contracted prior to patent.
Payments.

34. Neither the town lots nor the allotment of land of any citizen of the Muscogee or Creek Nation shall be subjected to any debt contracted by him prior to the date of his patent.

35. All payments herein provided for shall be made, under the direction of the Secretary of the Interior, into the United States Treasury, and shall be for the benefit of the citizens of the Muscogee or Creek Nation. All payments hereafter to be made to the members of the said nation shall be paid directly to each individual member by a bonded officer of the United States, under the direction of the Secretary of the Interior, which officer shall be required to give strict account for such disbursements to the Secretary.

Intoxicants.

36. The United States agrees to maintain strict laws in the territory of said nation against the introduction, sale, barter, or giving away of liquors and intoxicants of any kind or quality.

United States citizenship.

37. All citizens of said nation, when the tribal government shall cease, shall become possessed of all the rights and privileges of citizens of the United States.

Existing treaties.

38. This agreement shall in no wise affect the provisions of existing treaties between the Muscogee or Creek Nation and the United States, except in so far as it is inconsistent therewith.

In witness whereof, the said Commissioners do hereunto affix their names at Muscogee, Indian Territory, this the twenty-seventh day of September, eighteen hundred and ninety-seven.

CHAP. 542. An Act To ratify the agreement between the Dawes Commission and the Seminole Nation of Indians.

Vol. 30, p. 567.

Agreement
with Seminole
Nation of In-
dians.

Whereas an agreement was made by Henry L. Dawes, Tams Bixby, Frank C. Armstrong, Archibald S. McKennon, Thomas B. Needles, the Commission of the United States to the Five Civilized Tribes, and Allison L. Aylesworth, secretary, John F. Brown, Okchan Harjo, William Cully, K. N. Kinkehee, Thomas West, Thomas Factor, Seminole Commission, A. J. Brown, secretary, on the part of the Seminole Nation of Indians on December sixteenth, eighteen hundred and ninety-seven, as follows:

AGREEMENT BETWEEN THE UNITED STATES COMMISSIONERS TO NEGOTIATE WITH THE FIVE CIVILIZED TRIBES, AND THE COMMISSIONERS ON THE PART OF THE SEMINOLE NATION.

This agreement by and between the Government of the United States of the first part, entered into in its behalf by the Commissioners, and the Seminole Nation of the second part, entered into in its behalf by the Commission to the Five Civilized Tribes, Henry L. Dawes, Tams Bixby,

Frank C. Armstrong, Archibald S. McKennon, and Thomas B. Needles, duly appointed and authorized thereunto, and the Government of the Seminole Nation in Indian Territory,, of the second part, entered into on behalf of said Government by its Commission, duly appointed and authorized thereunto, viz, John F. Brown, Okchan Harjo, William Cully, K. N. Kinkehee, Thomas West, and Thomas Factor;

Witnesseth, That in consideration of the mutual undertakings herein contained, it is agreed as follows:

All lands belonging to the Seminole tribe of Indians shall be divided into three classes, designated as first, second, and third class; the first class to be appraised at five dollars, the second class at two dollars and fifty cents, and the third class at one dollar and twenty-five cents per acre, and the same shall be divided among the members of the tribe so that each shall have an equal share thereof in value, so far as may be, the location and fertility of the soil considered; giving to each the right to select his allotment so as to include any improvements thereon, owned by him at the time; and each allottee shall have the sole right of occupancy of the land so allotted to him, during the existence of the present tribal government, and until the members of said tribe shall have become citizens of the United States. Such allotments shall be made under the direction and supervision of the Commission to the Five Civilized Tribes in connection with a representative appointed by the tribal government; and the chairman of said Commission shall execute and deliver to each allottee a certificate describing therein the land allotted to him.

Appraisal.

Allotment.

All contracts for sale, disposition, or encumbrance of any part of any allotment made prior to date of patent shall be void.

Encumbrances prior to patent void.

Any allottee may lease his allotment for any period not exceeding six years, the contract therefor to be executed in triplicate upon printed blanks provided by the tribal government, and before the same shall become effective it shall be approved by the principal chief and a copy filed in the office of the clerk of the United States court at Wewoka.

Leases.

No lease of any coal, mineral, coal oil, or natural gas within said Nation shall be valid unless made with the tribal government, by and with the consent of the allottee and approved by the Secretary of the Interior.

Lease of minerals, etc.

Should there be discovered on any allotment any coal, mineral, coal oil, or natural gas, and the same should be operated so as to produce royalty, one-half of such royalty shall be paid to such allottee and the remaining half into the tribal treasury until extinguishment of tribal government, and the latter shall be used for the purpose of equalizing the value of allotments; and if the same be insufficient therefor, any other funds belonging to the tribe, upon extinguishment of tribal government, may be used for such purpose, so that each allotment may be equal in value as aforesaid.

Division of royalties, minerals on allotments, etc.

The townsite of Wewoka shall be controlled and disposed of according to the provisions of an act of the General Council of the Seminole Nation, approved April 23d, 1897, relative thereto; and on extinguishment of the tribal government, deeds of conveyance shall issue to owners of lots as herein provided for allottees; and all lots remaining unsold at that time may be sold in such manner as may be prescribed by the Secretary of the Interior.

Wewoka townsite, control, etc., of.

Five hundred thousand dollars (\$500,000) of the funds belonging to the Seminoles, now held by the United States, shall be set apart as a permanent school fund for the education of children of the members of said tribe, and shall be held by the United States at five per cent interest, or invested so as to produce such amount of interest, which shall be, after extinguishment of tribal government, applied by the Secretary of the Interior to the support of Mekasuky and Emahaka Academies and the district schools of the Seminole people; and there shall be selected and excepted from allotment three hundred and twenty acres of land for each of said academies and eighty acres each for eight district schools in the Seminole country.

School fund.

There shall also be excepted from allotment one-half acre for the use and occupancy of each of twenty-four churches, including those

Reservations from allotment.—school lands.

—churches.

already existing and such others as may hereafter be established in the Seminole country, by and with consent of the General Council of the Nation; but should any part of same, at any time, cease to be used for church purposes, such part shall at once revert to the Seminole people and be added to the lands set apart for the use of said district schools.

—schools for children of non-citizens.

One acre in each township shall be excepted from allotment and the same may be purchased by the United States upon which to establish schools for the education of children of non-citizens when deemed expedient.

Deeds, force of, etc.

When the tribal government shall cease to exist the principal chief last elected by said tribe shall execute, under his hand and the seal of the Nation, and deliver to each allottee a deed conveying to him all the right, title, and interest of the said Nation and the members thereof in and to the lands so allotted to him, and the Secretary of the Interior shall approve such deed, and the same shall thereupon operate as relinquishment of the right, title, and interest of the United States in and to the land embraced in said conveyance, and as a guarantee by the United States of the title of said lands to the allottee: and the acceptance of such deed by the allottee shall be a relinquishment of his title to and interest in all other lands belonging to the tribe, except such as may have been excepted from allotment and held in common for other purposes. Each allottee shall designate one tract of forty acres, which shall, by the terms of the deed, be made inalienable and nontaxable as a homestead in perpetuity.

Homestead.

Per capita payment of residue of funds, etc.

All moneys belonging to the Seminoles remaining after equalizing the value of allotments as herein provided and reserving said sum of five hundred thousand dollars for school fund shall be paid per capita to the members of said tribe in three equal installments, the first to be made as soon as convenient after allotment and extinguishment of tribal government, and the others at one and two years, respectively. Such payments shall be made by a person appointed by the Secretary of the Interior, who shall prescribe the amount of and approve the bond to be given by such person; and strict account shall be given to the Secretary of the Interior for such disbursements.

Loyal Seminole claim.

The loyal Seminole claim shall be submitted to the United States Senate, which shall make final determination of same, and, if sustained, shall provide for payment thereof within two years from date hereof.

United States court at Wewoka.

There shall hereafter be held at the town of Wewoka, the present capital of the Seminole Nation, regular terms of the United States court as at other points in the judicial district of which the Seminole Nation is a part.

Intoxicants.

The United States agrees to maintain strict laws in the Seminole country against the introduction, sale, barter, or giving away of intoxicants of any kind or quality.

Existing treaties.

This agreement shall in no wise affect the provisions of existing treaties between the Seminole Nation and the United States, except in so far as it is inconsistent therewith.

Jurisdiction United States courts.

The United States courts now existing, or that may hereafter be created, in Indian Territory shall have exclusive jurisdiction of all controversies growing out of the title, ownership, occupation, or use of real estate owned by the Seminoles, and to try all persons charged with homicide, embezzlement, bribery, and embracery hereafter committed in the Seminole country, without reference to race or citizenship of the persons charged with such crime; and any citizen or officer of said nation charged with any such crime, if convicted, shall be punished as if he were a citizen or officer of the United States, and the courts of said nation shall retain all the jurisdiction which they now have, except as herein transferred to the courts of the United States.

—Indian courts.

When this agreement is ratified by the Seminole Nation and the United States the same shall serve to repeal all the provisions of the Act of Congress approved June seventh, eighteen hundred and ninety-seven, in any manner affecting the proceedings of the general council of the Seminole Nation.

Repeal. Laws, 1st sess., 55th Congress, p. 72.

It being known that the Seminole Reservation is insufficient for allotments for the use of the Seminole people, upon which they, as citizens, holding in severalty, may reasonably and adequately maintain their families, the United States will make effort to purchase from the Creek Nation, at one dollar and twenty-five cents per acre, two hundred thousand acres of land, immediately adjoining the eastern boundary of the Seminole Reservation and lying between the North Fork and South Fork of the Canadian River, in trust for and to be conveyed by proper patent by the United States to the Seminole Indians, upon said sum of one dollar and twenty-five cents per acre being reimbursed to the United States by said Seminole Indians; the same to be allotted as herein provided for lands now owned by the Seminoles.

Purchase of
land from Creek
Indians for
Seminoles.

This agreement shall be binding on the United States when ratified by Congress and on the Seminole people when ratified by the general council of the Seminole Nation.

Ratification.

In witness whereof the said Commissioners have hereunto affixed their names at Muskogee, Indian Territory, this sixteenth day of December, A. D. 1897.

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the same be, and is hereby, ratified and confirmed, and all laws and parts of laws inconsistent therewith are hereby repealed.

Agreement
confirmed.
Inconsistent
laws repealed.

Approved, July 1, 1898.

CHAP. 545. An Act Making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June thirtieth, eighteen hundred and ninety-nine, and for other purposes.

July 1, 1898.

Vol. 30, p. 571.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and they are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, for the purpose of paying the current and contingent expenses of the Indian Department and in full compensation for all offices the salaries for which are specially provided for herein, for the service of the fiscal year ending June thirtieth, eighteen hundred and ninety-nine, and fulfilling treaty stipulations for the various Indian tribes, namely:

Indian De-
partment ap-
propriations.

* * * * *

CHIPPEWAS OF MINNESOTA, REIMBURSABLE.

* * * * *

[Vol. 30, p. 576.]

For completing the necessary surveys within the Chippewa Indian Reservation in Minnesota, including expenses of examining and appraising pine lands, under the provisions of the Act approved January fourteenth, eighteen hundred and eighty-nine, to be reimbursed to the United States out of proceeds of the sale of their lands, fifty thousand dollars; *Provided*, That all lands heretofore or

Surveys.

Proviso.

Aids to navigation. hereafter acquired and sold by the United States under the "Act for the relief and civilization of the Chippewa Indians in the State of Minnesota." approved January fourteenth, eighteen hundred and eighty-nine, shall be subject to the right of the United States to construct and maintain dams for the purpose of creating reservoirs in aid of navigation, and no claim or right of compensation shall accrue from the overflowing of said lands on account of the construction and maintenance of such dams or reservoirs. And the Secretary of War shall furnish the Commissioner of the General Land Office a list of such lands, with the particular tracts appropriately described, and in the disposal of each and every one of said tracts, whether by sale, by allotment in severalty to individual Indians, or otherwise, under said Act, the provisions of this paragraph shall enter into and form a part of the contract of purchase or transfer of title.

* * * * *

SIOUX OF DIFFERENT TRIBES, INCLUDING SANTEE SIOUX OF NEBRASKA.

* * * * *

[Vol. 30, p. 583.] Schools. For support and maintenance of day and industrial schools, including purchase, erection, and repairs of school buildings, in accordance with article seven of the treaty of April twenty-ninth, eighteen hundred and sixty-eight, which article is continued in force for twenty years by section seventeen of the Act of March second, eighteen hundred and eighty-nine, two hundred and twenty-five thousand dollars; in all, one million four hundred and eighty-seven thousand dollars: *Provided*, That the Secretary shall cause patents to issue to the Santee Sioux Indians who were assigned lands in the State of Nebraska under the Act approved March third, eighteen hundred and sixty-three, entitled "An Act for the removal of the Sisseton, Wahpeton, Medawakanton, and Wahpakoota bands of Sioux or Dakota Indians, and for the disposition of their lands in Minnesota and Dakota," which assignments were approved by the President May eleventh, eighteen hundred and eighty-five. Said patents shall be of the form and legal effect prescribed by the fifth section of the Act approved February eighth, eighteen hundred and eighty-seven, entitled "An Act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes."

* * * * *

Sisseton and Wahpeton Indians.

SISSETON AND WAHPETON INDIANS.

* * * * *

[Vol. 30, p. 583.] Leases to be approved by Secretary of the Interior, etc. That all leases hereafter made of lands belonging to the Sisseton and Wahpeton Indians in the State of South Dakota shall, before they become valid, be approved by and filed with the Secretary of the Interior, and all subleases made by the persons leasing said lands shall be void.

* * * * *

SUPPORT OF SCHOOLS.

* * * * *

[Vol. 30, p. 587.]

Contracts.

That the Secretary of the Interior may make contracts with contract schools, apportioning as near as may be the amount so contracted for among schools of various denominations, for the education of Indian pupils during the fiscal year eighteen hundred and ninety-nine, but shall only make such contracts at places where non-sectarian schools can not be provided for such Indian children and to an amount not exceeding thirty per centum of the amount so used for the fiscal year eighteen hundred and ninety-five: *Provided further*, That the foregoing shall not apply to public schools of any State, Territory, county, or city, or to schools herein or hereafter specifically provided for.

Public schools not included.

For construction, purchase, lease, and repair of school buildings and purchase of school sites, two hundred thousand dollars. Buildings and sites.

* * * * * [Vol. 30, p. 589.]

For support and education of three hundred and fifty pupils at the Indian school, Salem, Oregon, at one hundred and sixty-seven dollars per annum each, fifty-eight thousand four hundred and fifty dollars; for pay of superintendent at said school, one thousand eight hundred dollars; to purchase sixty acres of land at not exceeding eighty dollars per acre, and eleven acres of bearing orchard at not exceeding one hundred and fifty dollars per acre, six thousand four hundred and fifty dollars; for remodeling school building into dining hall and kitchen, three thousand dollars; for general repairs and improvements, five thousand dollars; in all, seventy-four thousand seven hundred dollars. Salem, Oreg. Purchase of land. Cost thereof.

* * * * * [Vol. 30, p. 590.]

For the erection and equipment of one school building on the Kickapoo Reservation, in Brown County, Kansas, fifteen thousand dollars, to be immediately available: *Provided, however,* That said building shall be erected on said reservation as near as possible to the railway station of Germantown. For the erection at the Puyallup Indian Agency school, Washington, of a new boys' dormitory and a building for dining room, kitchen, and laundry, ten thousand dollars; and for water system, sewerage, and minor changes and improvements, ten thousand dollars; in all, twenty thousand dollars. Kickapoo Reservation, Brown County, Kans. erection of building. *Proviso.*—site. Puyallup Agency, Wash.

* * * * *

MISCELLANEOUS. [Vol. 30, p. 591.]

* * * * *

Appeals shall be allowed from the United States courts in the Indian Territory direct to the Supreme Court of the United States to either party, in all citizenship cases, and in all cases between either of the Five Civilized Tribes and the United States involving the constitutionality or validity of any legislation affecting citizenship, or the allotment of lands, in the Indian Territory, under the rules and regulations governing appeals to said court in other cases: *Provided,* That appeals in cases decided prior to this Act must be perfected in one hundred and twenty days from its passage; and in cases decided subsequent thereto, within sixty days from final judgment; but in no such case shall the work of the Commission to the Five Civilized Tribes be enjoined or suspended by any proceeding in, or order of, any court, or of any judge, until after final judgment in the Supreme Court of the United States. In case of appeals, as aforesaid, it shall be the duty of the Supreme Court to advance such cases on the docket and dispose of the same as early as possible. Appeals in citizenship cases, etc., to Supreme Court. *Proviso.* Time to perfect appeals. Work of commission not to be retarded, etc. Cases to be advanced.

* * * * * [Vol. 30, p. 591.]

For construction of ditches and reservoirs, purchase and use of irrigating tools and appliances, and purchase of water rights on Indian reservations, in the discretion of the Secretary of the Interior and subject to his control, forty thousand dollars: *Provided,* That the time for the completion of the canal, or any part thereof, authorized by an Act entitled "An Act granting to the Columbia Irrigation Company a right of way through the Yakima Indian Reservation, in Washington," be, and is hereby, extended two years from July twenty-fourth, eighteen hundred and ninety-eight. Works of irrigation, etc. *Proviso.* Extension of time to complete canal. Yakima Reservation, Wash. Vol. 28, p. 119.

That the Secretary of the Interior be, and he hereby is, directed, through an Indian inspector, to cause an investigation to be made of the kind, extent, character, and value of the improvements made by certain white men, citizens of the United States, since eighteen hundred and sixty-eight, upon tracts of land settled upon, occupied, and improved prior to the date of the treaty creating the Wind River or Shoshone Indian Reservation, in the State of Wyoming, which embraced within said reservation the tracts of land so previously settled upon, and to report to Congress at the beginning of the next regular session the just and equitable value of said improvements made by the respective claimants thereof, who have been compelled —report.

to abandon the same and to remove from the said reservation, and such other facts respecting such settlement as may be of value in the adjustment of any claim arising from such removal.

[Vol. 30, p. 592.]
—negotiation
for relinquish-
ment by Indians
of right to reser-
vation, etc.

* * * * *
To enable the Secretary of the Interior, who is hereby authorized and directed to negotiate through an Indian inspector with said Klamath Indians for the relinquishment of all their right and interest in and to any part of said reservation, and also to negotiate with them as respects any and all matters growing out of their occupation of said reservation under said treaty, and the Secretary of the Interior shall also ascertain what portion of said reservation is occupied by citizens of the United States, and for what purpose and under what title, and to pay the necessary expenses incident to such negotiation and examination, two thousand dollars, or so much thereof as may be necessary, any agreement made hereunder to be submitted to Congress for its approval.

Cheyenne
River and
Standing Rock
reservations, S.
Dak., survey,
etc.

For the survey of lands in the Cheyenne River and Standing Rock Indian reservations in South Dakota, and to survey and mark the boundary line between said reservations, twenty thousand dollars, to be immediately available.

[Vol. 30, p. 593.]

Colville Reser-
vation, Wash.,
mineral lands
subject to
entry.

* * * * *
That the mineral lands only in the Colville Indian Reservation, in the State of Washington, shall be subject to entry under the laws of the United States in relation to the entry of mineral lands: *Provided*, That lands allotted to the Indians or used by the Government for any purpose or by any school shall not be subject to entry under this provision.

Proviso.
—reserved from
entry.
—right to cut
timber.

The right is hereby granted to cut timber for mining and domestic purposes, at such prices and subject to such regulations as may be prescribed by the Secretary of the Interior, from that portion of the Colville Indian Reservation in the State of Washington, which was vacated and restored to the public domain by the Act of July first, eighteen hundred and ninety-two, entitled "An Act to provide for the opening of a part of the Colville Reservation in the State of Washington and for other purposes," and the net proceeds arising from the disposition of said timber shall be set apart and disposed of according to the provisions of section two of said Act of July first, eighteen hundred and ninety-two, but primarily the expense incident to disposing of said timber, including compensation of such special agent as the Secretary of the Interior shall appoint, shall be paid out of any existing appropriation for the survey and allotment of said lands and shall be reimbursed and replaced from the proceeds arising from the disposition of the timber. The Indian allotments in severalty provided for in said act shall be selected and completed at the earliest practicable time and not later than six months after the proclamation of the President opening the vacated portion of said reservation to settlement and entry, which proclamation may be issued without awaiting the survey of the unsurveyed lands therein. Said allotments shall be made from lands which shall at the time of the selection thereof be surveyed, excepting that any Indian entitled to allotment under said Act who has improvements upon unsurveyed land may select the same for his allotment, whereupon the Secretary of the Interior shall cause the same to be surveyed and allotted to him. At the expiration of six months from the date of the proclamation by the President, and not before, the non-mineral lands within the vacated portion of said reservation which shall not have been allotted to Indians as aforesaid, shall be subject to settlement, entry and disposition under said Act of July first, eighteen hundred and ninety-two: *Provided*, That the land used and occupied for school purposes at what is known as Tonasket School, on Bonapart Creek, and the site of the sawmill, gristmill, and other mill property on said reservation, are hereby reserved from the operation of this Act, unless other lands are selected in lieu thereof as provided in section six of the aforesaid Act of July first, eighteen hundred and ninety-two.

Reservations
from allotment.

Southern Ute
Reservation,
Colo., irrigation
of, etc.

That the Secretary of the Interior shall make investigation as to the practicability of providing a water supply for irrigation purposes, to be used on a portion of the reservation of the Southern

Utes in Colorado, and he is authorized, in his discretion, to contract for, and to expend from the funds of said Southern Utes in the purchase of, perpetual water rights sufficient to irrigate not exceeding ten thousand acres on the western part of the Southern Ute Reservation, and for annual charges for maintenance of such water thereon, such amount and upon such terms and conditions as to him may seem just and reasonable, not exceeding one hundred and fifty thousand dollars for the purchase of such perpetual water rights, and not exceeding a maximum of fifty cents per acre per annum for the maintenance of water upon land irrigated, provided that after such an investigation he shall find all the essential conditions relative to the water supply and to the perpetuity of its availability for use upon said lands, such as in his judgment will justify a contract for its perpetual use: *Provided*, That the Secretary of the Interior, upon making all such contracts, shall require from the person or persons entering into such contract a bond of indemnity, to be approved by him, for the faithful and continuous execution of such contract as provided therein.

Proviso.
Contractors' bond.

to purchase.
Reservation
from town site.

For ascertaining the depth of the bed rock at a place on the Gila River in Gila County, Arizona, known as The Buttes, and particularly described in Senate Document Numbered Twenty-seven, Fifty-fourth Congress, second session, and for ascertaining the feasibility, and estimating in detail the cost, of the construction of a dam across the river at that point for purpose of irrigating the Sacaton Reservation, and for ascertaining the average daily flow of water in the river at that point, twenty-thousand dollars, or so much thereof as may be necessary, the same to be expended by the Director of the United States Geological Survey, under the direction of the Secretary of the Interior: *Provided*, That nothing herein shall be construed as in any way committing the United States to the construction of said dam. And said Director shall also ascertain and report upon the feasibility and cost of the Queen Creek project mentioned in said Senate Document.

Indian service as he may designate, and that such lands shall then be sold, at the reappraised value, as provided for in the Act of Congress of March second, eighteen hundred and eighty-nine, chapter three hundred and ninety-one, Twenty-fifth Statutes at Large, page eight hundred and seventy-one.

SEC. 10. That the Secretary of the Interior be, and he is hereby, directed to send an inspector of his Department to the reservation of the Northern Cheyenne Indians, in the State of Montana, and said agent shall be instructed to make a full and complete report to the Secretary of the Interior upon the conditions existing upon said reservation, said report to be available for use on or before the fifteenth day of November, eighteen hundred and ninety-eight.

It shall be the duty of the said inspector to ascertain if it is feasible to secure the removal of said Northern Cheyenne Indians from the present reservation to some portion of the Crow Indian Reservation, in the State of Montana. He shall also ascertain and report in detail the number and names of the white settlers legally upon the Northern Cheyenne Reservation, the number of acres of land owned by them, its location and the value thereof and of the improvements thereon. Also the number and names of white settlers who are alleged to be illegally settled upon the reservation, the circumstances attending their settlement thereon, and their location. He shall also enter into negotiations with the white settlers upon said reservation, who have valid titles, for the sale of their lands and improvements to the Government; and he is hereby authorized and empowered to make written agreements with such settlers, which agreements shall not be binding until ratified and approved by the Secretary of the Interior. He shall also make recommendations as to the settlement of the claims of such white settlers as have gone upon said reservation under circumstances which give them an equitable right thereon.

He shall investigate the subject of fencing in the said reservation and shall indicate the lines such fence should follow and the estimated cost of same, and shall report upon the number of cattle and sheep which may safely be pastured within the limits recommended to be fenced. He shall further report upon and make recommendations with reference to any and all matters which in his judgment have any bearing upon the question of securing an equitable adjustment of the difficulties now existing upon said reservation and with especial reference to bringing about a satisfactory settlement with the white settlers, both as to the sale of their lands to the Government and the adjustment of the reservation limits.
